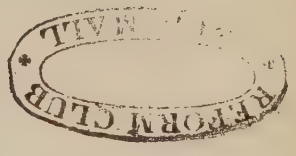
REPORT

AND

SPECIAL REPORT

FROM THE

SELECT COMMITTEE



ON THE

PILOTAGE BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
8 and 12 *July* 1870.

Thursday, 24*th February* 1870.

Ordered, That the Pilotage Bill be read a second time, and committed to a Select Committee.

Wednesday, 9*th March* 1870.

Ordered, That the Select Committee do consist of Nineteen Members.

Committee nominated—

Mr. Childers.
Mr. Graves.
Mr. Stevenson.
Mr. Cave.
Mr. Norwood.
Sir Henry Selwin-Ibbetson.
Mr. Grieve.
Mr. Pemberton.
Sir Charles Wingfield.
Mr. Charles Turner.
Mr. Philip Wykeham Martin.
Mr. John Stewart Hardy.
Mr. Thomas Brassey.
Mr. Malcolm.
Mr. William Philip Price.
Sir John Hay.
Mr. Gourley.
Colonel Bourne.
Mr. Shaw Lefevre.

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Ordered, That Five be the Quorum of the Committee.

Thursday, 17*th March* 1870.

Ordered, That all Petitions presented during the present Session in favour of or against the Pilotage Bill be referred to the Select Committee on the Bill.

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Friday, 8*th July* 1870.

Ordered, That the Committee have power to report the Minutes of Evide nce taken before them to The House, and that leave be given to the said Committee to make a Special Report.

REPORT - - - - - - - - - - - - p. iii
SPECIAL REPORT - - - - - - - - - - p. iii
PROCEEDINGS OF THE COMMITTEE - - - - p. xxxi
MINUTES OF EVIDENCE - - - - - - - - p. 1
APPENDIX - - - - - - - - - - - p. 507

REPORT.

THE SELECT COMMITTEE to whom the PILOTAGE BILL was referred, have considered the said Bill and taken Evidence thereon, and which they have agreed to Report to The House; and have gone through the Bill, and made Amendments thereunto.

SPECIAL REPORT.

THE SELECT COMMITTEE to whom the PILOTAGE BILL was referred, have agreed to the following SPECIAL REPORT:—

YOUR Committee have taken evidence as to the present state of the law from the Permanent Secretary to the Board of Trade, and from Sir Frederick Arrow, the Deputy Master of the Trinity House, speaking in his individual capacity. They have also taken evidence from the different ports at which compulsory pilotage exists, for and against the Bill; and, finally, they have before them the evidence taken by the Committee of 1860, and from ports where pilotage is totally voluntary, in favour of the Bill.

By compulsory pilotage is meant a system which, partly in order to provide for the safety of ships and partly in order to secure employment and remuneration for pilots, requires that all ships, or certain classes of ships, frequenting the port, shall employ them. It is difficult, without going into great detail, to give a complete and accurate account of the extent to which this system has prevailed, or still prevails, since not only does it exist in some ports and not in others, but where it does exist the exemptions vary in many different ways. In fact, the existence or non-existence of the obligation and the nature and extent of the exemptions from it differ in such an arbitrary and capricious manner as to show that they must have arisen from local and special legislation without reference to general principles of any kind. Generally speaking, however, compulsory pilotage exists in its most complete form at Liverpool, Dublin, on the Upper Clyde, at Bristol, and at some other smaller ports. In the London Trinity House districts, including the Thames, and most of the out-ports on the south coast, in Hull, and in some other ports, the system has been very largely modified by exemptions of different kinds; whilst in all the ports on the east coast north of Hull, at Cork, Cardiff, Newport, and Gloucester, as well as at many other smaller ports, there is no compulsory pilotage whatever. A Return of the compulsory and non-compulsory districts has been laid before your Committee, by which it appears that the number of licensed pilots employed in districts where there is some kind of compulsion is 1,828; whilst in those where there is no compulsion whatever the number is 1,066. Appendix A., No. 20.

When steamers first began to take a large part in the short trades, and from that time till after the repeal of the Navigation Laws, complaints Farrer, 12 *et seq.*

were made against compulsory pilotage, especially on the part of coasting steamers. In 1848 an Act, 12 & 13 Vict. c. 88, was passed, enabling pilotage authorities at their own discretion to examine masters and mates, and, if they should be found competent, to give them certificates authorising them to pilot their own ships. This Act being permissive only, was acted on by the Trinity House and some other bodies, but to no great extent, and the complaints against compulsory pilotage still continued. In 1853 another Act, 16 & 17 Vict. c. 129, was passed, by which the Board of Trade was enabled, in case of refusal by any pilotage authority to examine masters or mates for pilotage certificates, to examine them itself, and to grant certificates exempting them from compulsory pilotage. These enactments were re-enacted in 1854, in Clauses 340 to 344 of the Consolidated Merchant Shipping Act of that year, and still remain law. They are limited, however, in their operations by provisions that the certificates granted under them shall only apply to ships owned by the same owner, and that the names of the ships shall appear on the certificate ; and every master or mate has to pay to the pilotage fund of the ports for which he is licensed the same fees upon the grant or renewal of his license which a regular pilot has to pay. Under these clauses a good many masters and mates have been examined. In a Return of this Session (No. 88, Parliamentary Paper, 1870), the numbers of masters and mates examined under this Act at the different ports and receiving certificates in the years 1868, 1869, are given. From these numbers it seems that the practice at the different ports differs largely. Thus the numbers of the largest ports for 1869 are as follows :—

Trinity House of London (including London and outports)	240
Liverpool	10
Glasgow	133
Hull	283
Bristol	30
Dublin	34

Since 1859, when the present pilotage authority was constituted in Liverpool, in most cases the pilotage authorities, acting with the knowledge of the power possessed by the Board of Trade, have themselves conducted the examination.* In a few cases the Board of Trade have had to examine.†

At Liverpool the pilotage authority for long refused to examine at all ; and only gave way upon the resolute expression of intention on the part of the Board of Trade to examine themselves. It appears that the Board have examined all applicants ; but very few masters have obtained certificates, as will be seen from the above figures.

There can be no doubt, however, that the effect of these clauses has been restricted by the conditions above referred to, and still more by the operation of the law of liability referred to below.

A further alteration of the law, having an opposite tendency, was made in the same year, 1854. In 1851 a compulsory examination of masters and mates in the foreign-going trade was first introduced. In 1853–4 the question arose, whether to extend this examination to the home (or short foreign and coasting) trade. It was determined to do so with respect to passenger vessels only. The question then arose, to what the examination should extend. Seamanship was of course to be required, but as regards navigation, the thing needed was rather local than general knowledge. To meet this, it was determined to make all home trade passenger ships subject to compulsory pilotage in all ports where there are licensed pilots, unless the master or mate should obtain certificates enabling them to pilot their own vessels, either under the clauses above referred to, or under a special provision inserted for the purpose of enabling the Board of Trade more easily to grant certificates when the local authorities should make difficulties. (*See* Clauses 354, 355 of the Merchant Shipping Act.) A new species

* Parliamentary Paper, 455, 1862, Nos. 102, 103, 104; Parliamentary Paper, 532, 1864, Nos. 50 to 59; in these Papers the question of compulsory pilotage is discussed at some length between the pilotage authority at Liverpool and the Board of Trade.

† At Arundel, Waterford, and Boston. *See* Parliamentary Paper, 455, 1862, Nos. 138 to 166.

species of compulsory pilotage was thus introduced, with a new form of exemption.

The Act of 1854 further provided, with respect to compulsory pilotage, that pilotage should continue compulsory where it was then compulsory (section 353); and that all existing exemptions should continue in force (section 353); and that every pilotage authority should have power, with the consent of Her Majesty in Council, to exempt any ships, or classes of ships, from compulsory pilotage (section 332). These clauses, coupled with those relating to the Trinity House pilotage, are full of apparent inconsistencies, and have led to much doubt and litigation. The tendency of the courts has been on the whole to favour the exemptions.* And some bye-laws have been passed removing some of the inconsistencies by extending the exemptions.†

Compulsory pilotage is enforced by virtue of section 353. If a ship which is not exempted fails to employ a pilot who offers, the master is liable to a penalty of double the pilotage, which is recoverable, not by civil process, but under the rules of law applicable to criminal proceedings. This has been the cause of great complaints and gross hardship, especially in the Thames. A pilot alleges that a ship has refused his services at Gravesend. The ship has gone (say) to Shields. He gets a warrant from the magistrates there, and sends it down to Shields with a policeman to arrest the captain. The captain, to avoid being carried up to Gravesend as a prisoner, is forced to pay whatever is asked.‡ Farrer, 30 *et seq.*

The only alteration in the law since made is by the Act 25 & 26 Vict. c. 63, s. 41 (1862), which was intended to exempt ships from compulsory pilotage when merely calling for orders or otherwise passing through a pilotage district without loading or discharging. It is however so worded that in the opinion of the law officers it does not exempt a ship calling for orders where the ultimate port of destination is not known at the time when she calls. It is construed as exempting a ship which puts into Falmouth in distress, or which passes through the Downs or Yarmouth Roads on her way to Hull or Newcastle, or through the Solent on her way to London. But it is supposed not to exempt a ship which puts into Falmouth in order to learn where she is to go.

In order to complete this outline of the law of compulsory pilotage, it is necessary to notice one of its most important consequences, viz., the exemption of the shipowner from liability for damage done by his ship when the ship is placed in charge of a pilot by compulsion of law. Farrer, 39 *et seq.* Squarey, 2376 *et seq.*

The first enactment on the subject was the 52 Geo. 3, c. 39, s. 30 (in 1812):—

"No owner or master of any ship shall be answerable for any loss or damage for or by reason or means of any neglect, default, or incompetency of any pilot *taken* on board of any such ship, *under or in pursuance of any of the provisions of this Act.*"

The Pilot Act of 1825–6, Geo. 4, c. 125, which repealed the former Act, contained a section (sec. 55) in nearly the same terms. It exempted the owner from responsibility, not only when the fault was that of a pilot employed by compulsion of law, and also when the fault was that of a pilot acting in charge of the ship in pursuance of the Act, as explained in Lucey *v.* Ingram, 6 Meeson and Welsby, 302.

This enactment was repealed by the Merchant Shipping Act Repeal Act of 1854 (17 & 18 Vict. c. 120), and was replaced by the 388th section of the Merchant Shipping Act of that year, which is in the following words:—

"No owner or master of any ship shall be answerable to any person whatever for any loss or damage occasioned by the fault or incapacity of any qualified pilot acting in charge of such ship within any district where the employment of such pilot is compulsory by law."

The immunity of the shipowner is confined by that section to cases in which the damage is occasioned by the fault of the pilot acting in charge, where the employment of such pilot is compulsory by law. All doubt was also removed as to the immunity being applicable throughout the United Kingdom.

Before

* *See* R. *v.* Stanton, quoted in Dr. Lushington's judgment in Earl of Auckland, Parliamentary Report, 455, 1862, No. 92.

† *See* Parliamentary Paper, No. 455, 1862, Nos. 1 to 17.

‡ *See* Parliamentary Paper, No. 455, 1862, sections 37 to 41, pp. 39 to 46, case of the "Chase." *See* same Paper, sections 78 to 84, case of "Martha Alida."

Before the first of these enactments, it appears that the Courts of Admiralty had always held the ship doing the damage responsible, notwithstanding that she was in charge of a compulsory pilot. And after the passing of the Act 52 Geo. 3, c. 39, Lord Stowell and Sir John Nichol, feeling the hardship caused by the exemption, refused to apply it on grounds which have been repudiated by later decisions.

These decisions have proceeded on the principle that where the law takes the ship out of the charge of the owner and his servants, and places her in charge of another person, it is a just and logical consequence that the owner should be relieved from responsibility for the acts of that person; and it has been laid down by high authority, that this consequence would follow from a mere legal obligation to employ a pilot, even if there were no express statutory provision exempting the owner from liability; but at the same time the courts have felt the hardship of the exemption as against the ship suffering damage, and have confined its application, by a very strict application of the principle adopted by them. They have held, that the employment of the pilot must be compulsory at the time. They have also held, that wherever the casualty could be traced in any degree to the act of the master and crew, the owner was liable, and they have thrown on the owner the burden of proving that the casualty was caused by the pilot. These decisions have narrowed the injustice caused by the section, but have probably increased litigation, since the question whether a mistake was due to the pilot or the captain or crew is one extremely difficult to determine, and very likely to be productive of false evidence.

At any rate, the effect of this law, coupled with the frequency of collisions arising from the more crowded state of our channels and harbours, and the speed of steamers, is very remarkable. If a vessel, navigated by a pilot, but commanded by a master who has passed his pilotage examination, does damage, the owner is responsible. If a vessel navigated by a pilot whom, for any other reason, the owner is not obliged to employ, does damage, the owner is responsible. But if the vessel is navigated by a pilot whom the law requires him to employ, then, whether the owner would or would not, for his own sake, have employed the pilot, he is free from responsibility, and there is, practically, no remedy whatever for the injured party. The consequences, when followed out, are most absurd and most injurious. The following are some of the practical absurdities and inconveniences of this state of the law:—

Appendix A., Nos. 1, 2, 3, and 4.

The whole class of smaller vessels which frequent our ports, and which never need a pilot, are deprived of all remedy when in collision with a ship which is compelled by law to employ a pilot.

The Admiralty Court is occupied with collision cases in which the question is, not which of two ships was in the wrong, and how much she ought to pay, but whether the one ship or the other, or both, was in charge of a compulsory pilot, and whether that pilot was or was not in actual charge at the time, and committed the fault which caused the collision.* This last question is one upon which it is most difficult to get at the truth.

Two ships, A and B, both of the same size and description, come into London, A from the North Sea, B from the Channel. Both employ a pilot. They get into collision. If A is in fault, B has a remedy; if B is in fault, A has none.

Two ships, A and B, say from Leith to London, both take a pilot at Orfordness. A has passengers; B has none. They get into collision. If A is in fault, B has no remedy against A: if B is in fault, A has a remedy against B.

Two ships again, A and B, bound from Havre to London, take pilots at Dungeness. The master of A has taken pains to pass a pilotage examination, and he has a pilotage certificate. The master of B has, perhaps purposely, avoided doing so. They come into collision. A has no remedy against B, whilst B has a remedy against A.

The object of the legislation of 1854 concerning passenger ships, viz. that of requiring, through the medium of compulsory pilotage, that masters shall learn to pilot their own ships, is thus defeated. Your Committee are informed that there has actually been a case in which the master of a Scotch passenger steamer

* *See*, for an instance of the questions raised, Dr. Lushington's judgment in "Earl of Auckland," Parliamentary Paper, 455, 1862, No. 94.

steamer asked the Board of Trade to contract the limits of a certificate which they had granted him, because his ability to pilot his own vessel exposed his owner to liability when in charge of a pilot.

Again, a ship bound to London takes a London pilot at Scilly or the Lizard; a very common case. For damage by collision westward of Dungeness, the owner is liable. For damage done eastward of Dungeness he is not.

Again, take the Bristol Channel. As above stated, ships bound to or from Bristol are bound to take a pilot up and down Channel. Ships bound to or from Cardiff, Newport, and Gloucester are not. A Bristol ship gets into collision with a Newport, Cardiff, or Gloucester ship, both having pilots. The Bristol ship has a remedy; the Cardiff, Newport, or Gloucester ship has none.

A further consequence of this exemption from responsibility, coupled with the doctrines laid down by the Courts concerning the relation between the master and the pilot, is to remove the responsibility from the master of the ship, and to prevent him from attempting to interfere with the management of the pilot, however bad that management may be. The following is an extract from the judgment of the Privy Council, in the case of Hammond *v.* Rogers, in the case of the "Christiana;" Moore's Rep. p. 171. Baron Parke, says, "The duties of the master and the pilot are in many cases clearly defined. Under ordinary circumstances we think that the pilot's commands are to be implicitly obeyed. To him belongs the whole conduct of the navigation of the ship, to the safety of which it is important that the chief direction should be vested in one only. It was never intended that, under ordinary circumstances, the master was to exercise any discretion whether he could obey the pilot or not. There may be extraordinary occasions when the master would be justified in disobeying the commands of the pilot. If from sudden illness or intoxication he becomes incompetent to command, the supreme authority would revert to the master during the pilot's temporary incapacity. It may be the same in the case of manifest incapacity of a permanent character; but any opinion upon these questions is unnecessary for the decision of the present case, as none of these circumstances occurred. The pilot has unquestionably the sole direction of the vessel in those respects whereon his local knowledge is presumably required." The same doctrine has been laid down by Dr. Lushington, and was relied on by the Court of Inquiry, in the recent case of the "Spindrift," as a reason for exempting the master from blame. The obvious tendency of such a state of the law is to induce the captain to abstain from all interference with the pilot, however necessary. If, in order to prevent obvious danger, he interferes, according to the above doctrines, he makes his owner liable for the consequences. If he goes below, or stands by and sees the pilot run his ship into danger, he knows that the law will free him and his owner from all blame or liability.

Your Committee have the strongest evidence of the mischievous tendency and bad effects of such a state of the law. All parties are agreed that, as a general rule, the master is the person who ought to be responsible for the navigation of his own ship, and that the pilot ought to be his adviser only, to point out to him the peculiarities of the local navigation. The captain knows the qualities of his own vessel and of his crew, which the pilot does not, and he acts under a stimulus which it is impossible to apply to a pilot. So much do many of the best and most careful shipowners feel this, that, in spite of the law and of the possible consequences to themselves, they direct their captains never to give up charge to the pilot, but to use him as a local adviser only; whilst others say that they think this the safe and proper course, but hesitate to adopt it for fear of making themselves liable for damage.

Duncan, 9565 and 9711 *et seq.*
Inman, 10363 *et seq.*
Lamport, 3598-9 and 3668.
Squarey, 2379 *et seq.*
Bouch, 10906 *et seq.*
Galloway, 4093-4153.

In confirmation of the above opinion concerning the state of the law, your Committee would refer to the Admiralty regulations on this point. The following is the 7th section of the Navigation and Pilotage Regulations: "The captain is to order everything that relates to the navigation of the ship to be performed as the pilot shall require; but, nevertheless, he and the master (that is, the navigating officer) are to attend particularly to his conduct, and if, from his or his mate's observations, he shall have reason to believe the pilot not qualified to conduct the ship, or that he is running her into danger, he is to remove him from his charge and to take such measures for the safety of the ship as the circumstances may require, noting the time of the pilot being so removed in the ship's log-book; and if the ship be damaged at any time through the ignorance or negligence of the pilot, but where a common degree

Holt, 11095.

of attention on the part of the captain and master would have prevented the disaster, those officers will be deemed to have neglected their duty."

Farrer, 84 *et seq.* Squarey, 2386 *et seq.*

Your Committee have also had evidence of the law of several foreign maritime nations on the question of exemption from liability where pilotage is compulsory. It appears that in New York pilotage is compulsory; but it has been decided by the Supreme Court that the owner is not thereby exempted from liability. In France, Holland, and Belgium, the law is the same as in the United States.

In the North German Confederation, the law is like our own, *i. e.*, compulsory pilotage carries with it exemption from liability.

This point is the more important, since, as will be seen below, some of the strongest supporters of compulsory pilotage are yet strongly of opinion that the present exemption from responsibility should be done away with.

The above are the most important features of the law of compulsory pilotage, generally. But it is difficult to understand its bearing without entering at some length upon the nature of the pilotage service at the different principal ports.

Your Committee have had before them detailed evidence from the following districts in which compulsory pilotage prevails :—

1. The districts under the Trinity House of Deptford Strond, comprising the Thames and all outports, for which special provision has not been made by private Act or Charter. These districts are situated for the most part on the southern, south-eastern, and south-western coasts of England and Wales.

2. The Mersey.
3. The Clyde.
4. The Humber.
5. The Bristol Channel.
6. Dublin.
7. Belfast.

The Trinity House District.

The Trinity House of Deptford Strond has the most extensive pilotage jurisdiction in the United Kingdom. It licenses pilots for the London district, extending from Orfordness on the north, to Dungeness on the south, and governs the pilots within these limits without the intervention of Sub-Commissioners. In 1853, the inward pilots from Dungeness to London, who had formerly been under the management of the Court of Loadmanage of the Cinque Ports, were transferred to the Trinity House, and now form with the outward pilots from London one joint service.

The Trinity House have from time to time shown readiness to meet the views of the Government, and the consequence is that their system, whilst still retaining the principle of compulsion, has been rendered more than usually anomalous by the number and extent of the exemptions.

Parliamentary Paper, 88, 1870.

They have always examined masters and mates of vessels fairly and liberally; and it appears that in 1869 there were 171 masters and 69 mates possessing certificates granted by them

The statutory exemptions to compulsory pilotage, as determined by the Merchant Shipping Act, 1854, s. 379, are as follows :—

(1.) Ships employed in the coasting trade of the United Kingdom.

(2.) Ships of not more than 60 tons burden.

(3.) Ships trading to Boulogne, or to any place in Europe north of Boulogne.

(4.) Ships from Guernsey, Jersey, Alderney, Sark, or Man, which are wholly laden with stone being the produce of those islands.

(5.) Ships navigating within the limits of the port to which they belong.

(6.) Ships passing through the limits of any pilotage district on their voyages between two places both situate out of such limits, and not being bound to any place within such limits, nor anchoring therein.

These

These exemptions are considerably wider than those which existed under former Acts.

As has been stated, all coasters are exempt, and all vessels from or to ports in Europe north of Boulogne. This last exemption originally applied to the London district only, and was extended for the Merchant Shipping Act, 1854, to the Trinity House outport districts. Some years ago, the Trinity House asked to have the exemption confined as before, but the Board of Trade refused to attempt to confine any existing exemption. (*See* Parliamentary Paper 455, 1862, Nos. 13 and 14. There is no consistent principle in these exemptions. Even as regards coasters the exemption is obsolete. In former times it may have been the case that coasters were a separate class, making shorter voyages, and consequently better acquainted with local navigation. This is not the case now. The shortest and most frequent voyages are in many cases those to the ports in neighbouring foreign countries, and vessels which one day are employed on a coasting voyage may the next day sail for a foreign port. The other exemptions are even less reasonable. A vessel from St. Petersburgh is as likely to need a pilot either in London or the outports as one from Havre; and a vessel from Antwerp or Havre is as little likely to require a pilot as one from Liverpool or Glasgow.

The Trinity House have also, with the sanction of the Queen in Council, exempted from compulsory pilotage all vessels which, having come to this country from foreign ports, proceed in ballast to load at another port; and they have so reduced the compulsory rates on ships passing through Yarmouth Roads as to make it not worth the while of pilots to force their services on vessels which do not want them; two grievances which were much complained of have thus been put an end to.

In the London District the appointment and service of pilots is extremely complicated, and this complication, coupled with the system of compulsory pilotage, and the numerous exceptions which have been made from it, has produced serious anomalies.

The different classes of pilots are very numerous.

1.—The Old Cinque Port Pilots.

Of these there are 59 now remaining. They are licensed to conduct vessels from Dungeness to London Bridge, and *vice versâ*, by the South Channel; and they have a system of contributions, and of pensions and allowances, distinct from those of the other Trinity House pilots.

Though licensed to conduct vessels out as well as in, their employment is practically confined to the inward pilotage. They meet inward-bound ships at Dungeness or the Downs, and are there put on board in rotation from cutters which are the property of the Trinity House and under Trinity House management, and which have their regular cruising ground at the above-named places.

2.—Inward Pilots by the South Channel, Licensed by the Trinity House since 1854.

Of these there are now 59. They have the same functions and position as the Old Cinque Ports pilots, except that they are only licensed as far as Gravesend, and are under the same rules so far as regards contributions and pensions as other Trinity House pilots.

3.—Trinity House, London, Outward Pilots, Licensed for the South Channel.

These live in London, and take ships from London Bridge or Gravesend to the Downs or Dungeness. Though licensed for inward as well as outward pilotage, they are practically confined to the latter, because it is not worth their while to wait at Dungeness in the cutters until their turn in rotation arrives. They are 52 in number; 43 of them are licensed for the outward pilotage in the North Channel also. Some of those licensed before 1854 have licenses for the whole of the waters between London Bridge and the sea, whilst all licensed since that time are confined to the waters below Gravesend.

4.—Pilots Licensed from Orfordness Inwards by the North Channel.

These are only licensed for inward pilotage, and they go as far as London. They are 62 in number. They cruise in cutters of their own, but under the control of the Trinity House Those licensed before 1854 pilot vessels up to London. Those licensed since that time only go as far as Gravesend: 43 of them are, as above mentioned, also licensed for the South Channel.

5.—Pilots Licensed Outwards by the North Channel.

These go from London to Orfordness. These licensed before 1854 take ships from London, whilst those licensed since that time go from Gravesend only.

6.—River or Mud Pilots.

These have been licensed since 1854, and pilot ships up and down between London and Gravesend. They are in number. The restriction of this pilotage to a distinct class was introduced in 1854 in consequence of application from the shipowners of London, who were then of opinion that a distinct body of men was needed for the service. Besides these, 50 of the North and South Channel pilots were licensed for this pilotage before 1854.

7.—Pilots for Home-Trade Passenger Ships.

The licenses of these pilots are confined to this class of ships. They were introduced in or shortly after 1854, when the employment of pilots by home-trade passenger ships was made obligatory, as above mentioned. Certain coasting steamers had previously been in the habit of employing unlicensed watermen to pilot them on the upper waters of the Thames, and, on their application, the Trinity House granted special licenses to these men. They are 22 in number.

The above pilots are all licensed after examination; are subject to the control of the Trinity House; may be deprived of their licenses for misconduct, and are bound to charge certain fixed rates, neither more nor less. In the case of outward pilotage generally, and also in the case of inward pilotage at Orfordness and Gravesend, the shipowner is not bound to take the pilot who offers in rotation, but may, if the circumstances permit, choose his pilot. At Dungeness the ship is obliged to take the first pilot who offers, and the pilots are compelled to offer themselves in rotation.

But besides the above body of licensed pilots there are large bodies of men who live altogether, or in part, by the pilotage of vessels trading to and from London, who are wholly unlicensed, are subject to no special rules, and have no special privileges. These consist of—

Duncan, 9570.

First.—The Deal Boatmen.—Of their capacity to handle large ships the licensed pilots speak disparagingly; but the shipowners state that they often receive valuable services from these men, and that they find them in places and under circumstances where the licensed pilots, sure of employment at their Dungeness station, are not to be found. The experience of the Board of Trade, in the recent cases of the "North" and the "Olivia," shows that some of these men, now under no control whatever, are capable, not only of making extortionate demands for salvage, but of pillage of wrecked property, and fraudulent collusion with captains for the purpose of getting up false and fraudulent claims.

Parliamentary Papers, 389 and 539, 1867.

Duncan, 9691 *et seq.*

Secondly.—Unlicensed men who take ships by the North Channel to or from the sea, or to or from the northern ports. No complaints are made of these by shipowners; and the Chairman of the Shipowners' Society says that some of these men are first-rate pilots and very clever men; and he points out that whereas a licensed pilot would cost a ship of 1,500 tons 50 *l.*, one of these men performs the service admirably for 12 *l.*

Thirdly.—Unlicensed watermen who pilot ships between London and Gravesend.—These men are freemen of the Watermen's company, and, like all other freemen of that Company, must have passed an apprenticeship of seven years on the river. But the number of free watermen employed in this pilotage is only a fraction of the whole number of free watermen employed on the river, and they are subjected to no special examination or test as to their capacity for this pilotage service. The number so employed is from 400 to 500, whilst the

the number of pilots licensed between London and Gravesend is only 70. Indeed it appears that on the Thames above Gravesend scarcely any captain ever takes his ship up or down without a pilot of some kind; and that as the number of licensed pilots is wholly inadequate for such a service, the unlicensed free watermen perform the greater part of it.

No complaints are made of the conduct of these men; and though some of the licensed pilots state that more collisions happen to vessels in their charge than to those in charge of licensed pilots, they have brought no figures to sustain the assertion. On the other hand, the Deputy Chairman of the Shipowners' Association of London, states that there are more accidents with licensed pilots than with watermen; the principal complaints by bargeowners have been of damage caused to them by collisions with steamers in charge of licensed and compulsory pilots, for which the injured bargeowner can obtain no redress. And even if collisions were more frequent with vessels when in charge of watermen, the fact would not be surprising, considering that the number of vessels piloted by watermen is greater than of those piloted by licensed pilots, and that watermen take vessels at all times of day and night, whilst the licensed pilots as a rule only go in the daytime. But the competency of the watermen for the navigation of the Thames is best shown by the facts of their employment. When the Trinity House licensed 23 watermen in 1854 for home-trade passenger ships, one of the reasons, as stated to your Committee by a licensed pilot, was that those steamers were in the habit of starting at all times of day and night, and at all times of tide; and that the licensed pilots would not undertake the responsibility of navigating ships unless free to choose their own time of starting. Again, it appears that two of the unlicensed free watermen were selected to pilot Government ships, and were afterwards licensed as pilots; that one of them earns 900 *l.* a year, and is employed largely in ships owned or managed by one of the Elder Brethren of the Trinity House; that another earns 500 *l.* a year, and is largely employed by two of the members of your Committee; that 25 of them earn 200 *l.* a year each, and that about 400 earn 50 *l.* each. And it is also proved that, whilst the licensed pilots' charges range, in the case of steamers or vessels towed by steam, from 18 *s.* for a ship drawing seven feet, to 3 *l.* 1 *s.* 6 *d.* for a vessel drawing 15 feet, and to 9 *l.* for a vessel drawing 23 feet, with intermediate charges in proportion, the charges of the watermen range only from 1 *l.* 5 *s.* to 2 *l.* A screw collier making 70 voyages a year would pay 420 *l.* for a licensed pilot, whilst she only pays 170 *l.* for a waterman; and yet this waterman makes 500 *l.* a year. It is further shown that some owners, when obliged to take licensed pilots, take also one of these unlicensed watermen.

Robinson, 12871.

Farrer, 59 *et seq.*, 409 *et seq.* App. A., No. 1, 2, 3, and 4.

Hinton, 9499. Robinson, 12772.

Pattison, 8754 to 8761.

Hinton, 9303.

See Scale of Trinity House rates, App. A., No. 14.

Hinton, 9244 to 9249. Spedding, 9053. Hinton, 9414 to 9416. Hinton, 9250. Duncan, 9701.

These watermen are liable at any time to be superseded by licensed pilots. But the pilots are clearly insufficient in numbers for the work, and they find practical difficulties in enforcing the law against vessels not subject to compulsory pilotage. As a matter of fact, whilst they do supersede the watermen when engaged in piloting foreign vessels trading to and from the Baltic, they do not interfere with them when employed in coasting steamers, or in sailing vessels not subject to compulsory pilotage, which, in consequence of the time they require, are much less profitable than steamers. These watermen, however, though so largely employed, are unable to get licenses under the present rules of the Trinity House, because they have not served 12 months at sea in charge of a vessel, or two years as mate.

Robinson, 12764.

Hinton, 9279 to 9297.

Under these circumstances it is not surprising that there should be many complaints.

The shipowners complain that at Dungeness they have no choice of pilots, and that if pilotage were less hampered by restrictions they would find the pilots at the places they want them, and be able to select the pilots they prefer, or at any rate to refuse to employ those to whom they object; and they point to the pilotage in the North Channel, and in the Thames about Gravesend, as showing that greater freedom produces equally good or better service at a lower price.

Duncan, 9568 to 9570. Robinson, 12754. 12767. 12887.

Some shipowners also complain of being obliged to take pilots at all when they do not want them, and of the harsh modes by which the pilots have enforced their right to employment.

Farrer, 30 *et seq.* Robinson, 12757.

The owners of small craft complain of the injury done them by vessels in charge of compulsory pilots, for which they have no redress.

App. A., No. 1, 2, 3, 4.

The Cinque Ports pilots, whilst alarmed at the prospect of the abolition of compulsory pilotage, and anxious to retain their present legal right to pilot inward-bound ships under compulsion, and to be protected against the Deal boatmen, desire that the cutters shall be placed under their own management, free from Trinity House control.

Millen, 7406. 7659.

The pilots who are licensed for the waters below Gravesend, whilst anxious to retain compulsory pilotage as against the shipowner, and their exclusive privileges as against unlicensed pilots, are anxious to have their own licenses extended to the waters between London and Gravesend; and they point out that the effect of the present change of pilots at Gravesend is to delay a ship often for some hours, and to impose on the shipowner a charge amounting in large vessels to 20 or 25 per cent. greater than is payable where the pilot's service is continuous from London to the sea, or *vice versâ*.

Spedding, 9004.

Spedding, 9123 to 9125.

The London pilots complain that, by requiring them to place their names on the list, and to serve in rotation at Dungeness, they are practically precluded from sharing in the inward pilotage of the South Channel, since it is not worth their while to stop at Dungeness for the purpose.

Spedding, App. A., No. 10.

The pilots by the North Channel urge that there is no reason why they should not be allowed to pilot ships both ways, *i. e.*, both inwards and outwards.

Spedding, 9009.

The Gravesend pilots, whilst desiring to retain Gravesend as a station, and to prevent the pilots between London and the sea from encroaching on the waters between London and Gravesend, also complain of the pilots licensed for home-trade passenger ships, and are anxious for greater powers to prevent the employment of unlicensed watermen by other vessels.

Hinton, 9316--18. 9341.

The unlicensed free watermen are perfectly satisfied with their voluntary employment, and with their present rates of payment; but they complain of the power of the licensed pilots to supersede them, a power which, if this Bill passes, will, they fear, be more largely exercised than it has hitherto been, since the licensed pilots may, if deprived of the power of making vessels pay for them which do not want them, seek to compensate themselves by superseding the watermen on vessels now left in the watermen's hands.

Wood, 12424 *et seq.*
Luton, 12545 *et seq.*

Amongst all these complaints there have been none, except on the part of pilots themselves, against the existing exemptions; nor has any evidence been given to show that either in the North Channel, where pilotage is practically voluntary, or in the upper waters of the Thames, where the greater proportion of vessels are free to employ a pilot or not, the principle of voluntary pilotage has worked unsatisfactorily either to shipowners or pilots. On the other hand, it appears that both in the North Channel and in the waters above Gravesend, the supply of voluntary pilots is ample and good, and that the voluntary pilots are well paid, and satisfied with their earnings. It is out of that part of the system which is compulsory, and not out of that part which is voluntary, that the complaints and difficulties above noticed have arisen.

Some of those complaints are, in the opinion of your Committee, well founded, and some are ill founded; but in both cases the conclusion to be drawn from them seems to be that the greater the freedom of contract and employment, the greater the prospect of satisfaction to employer and employed.

To what extent this freedom should go, and by what steps it should be introduced, are matters well deserving of consideration.

They are, however, with the exception of the obligation to employ a pilot, matters which it is in the power of the Trinity House to deal with, and in making the following suggestions, your Committee feel that much must be left to that body and to the Board of Trade.

It appears to your Committee that, so far as regards the Thames above Gravesend, little or no interference or control is wanted beyond the grant of a license to any man who may prove himself, either by long and successful practice or by examination, competent to conduct ships in those waters, with a power to withdraw the license in case of misconduct. From the experience of the free watermen, it seems that it is even unnecessary to fix a price, and that where, as in the Thames, a shipowner or captain has ample time and opportunity to make his bargain, absolute freedom in this respect has produced lower charges, more satisfactory service, and more ample remuneration to the best men, than a fixed charge. Your Committee, therefore, have inserted a clause in the Bill enabling the Trinity House, or, in the event of their refusing, the Board of Trade,

Trade, to license persons for this part of the river, without insisting upon the present conditions as to age, and service at sea.

But great consideration is due to the pilots who have undertaken their present licenses on the faith of the present system, and it will be necessary to proceed cautiously and by degrees.

As regards the rates, it is clear that, if they are to be fixed at all, they ought ultimately to be fixed at a rate not higher than that which compensates the skilled watermen; and as a step towards this end, the restriction which prevents a licensed pilot from demanding less than a fixed amount should be at once done away with. It is obvious that a licensed pilot is at a great disadvantage in competition with the watermen when he is not only authorised, but compelled, to charge twice as much as the waterman.

As regards the sea pilots, whether by the North Channel or the South Channel, your Committee see no reason why all of them, if competent to pilot vessels between Gravesend and London, should not be licensed for the whole distance between London Bridge and the sea. It is obvious that any unnecessary limitation in the employment of competent men, and any unnecessary change of pilots, must add to the cost of pilotage, and in this case it is proved to do so.

Applying this to the pilots of the North Channel, your Committee see no reason why the same licenses should not in all cases extend both to the outward and the inward pilotage, as has since 1853 been the case with licenses for the South Channel.

As regards the pilots of the North Channel, it is clear that whilst there is no want of employment for the 62 licensed pilots, who make incomes averaging 274 *l.* a year against 340 *l.* made by those in the South Channel, and no complaint, either concerning their inefficiency or the insufficiency of the service, yet that the number would be insufficient for the wants of the trade if it were not supplemented by a large number of competent but unlicensed men. The fact that there is ample employment for the licensed pilots, and the still more important fact that the pilotage in this channel is not compulsory, are, no doubt, circumstances which facilitate the employment of these unlicensed persons, and prevent the monopoly of an insufficient number of licensed pilots being felt as a grievance. It would, in the opinion of your Committee, be an improvement if the Trinity House were, by degrees, to enlarge the number of licensed pilots by this channel, so as eventually to embrace all the competent men; taking care, at the same time, that the rates do not exceed those which will command efficient service. Miller, 7322.

The most difficult questions arise with respect to the South Channel. It appears to your Committee, that the following questions deserve the careful consideration of the Trinity House, viz.:—

Whether some freer system should not be established with respect to the cruising ground of the pilots, so that if, as has been stated, pilots are often needed further down the channel, pilots may be encouraged to cruise and seek them there.

Whether, having in the meantime due regard to existing interests, steps should not be ultimately taken for granting licenses to all such Deal boatmen, or other boatmen, as may prove themselves to be competent and of good character,—This seems desirable not less for the purpose of completing the pilotage service, than for the purpose of preventing extortionate demands on the part of the boatmen.

As regards pilotage rates for all the sea-going pilots, it appears to your Committee that a maximum but not a mininum rate should be fixed: The evidence of the free watermen shows that a low charge with constant employment, whilst most advantageous to the shipowner, also produces the largest income to the pilot, and the licensed pilots should be as free in this respect as the watermen.

There is one point in the Trinity House system which calls for special remark, since it is in itself questionable, and also stands in the way of the various improvements suggested above. There is a large pension fund to which all Trinity House pilots, both in the London District and in the Outport District, contribute, and from which all on retirement receive pensions; but it is managed neither purely as a charity, nor on the strict principles of a benefit fund or insurance society. Each pilot contributes annually poundage, *i. e.* 2½ per cent. of his earnings, and each pilot on retirement receives a pension, not proportioned Trinity outport pilotage not yet referred to. Sir F. Arrow, 1435.

to what he has paid but to his length of service, and the highest rate of pension is 28 *l.* a year. In order to receive this pension, pilots in the London District must prove that they have not 75 *l.* a year of their own, and those in the Outport Districts that they have not 50 *l.* There is an accumulated capital of 88,000 *l.*

The principle of this fund is obviously unjust, since it makes the pilots who earn much contribute in proportion to their earnings, whilst it gives them only the same small pension as those who earn and contribute little, and deprives them even of this small pension if they have laid by a moderate sum for themselves.

The operation of the fund is also mischievous in impeding such reforms as those suggested above, since the vested interests of the existing pilots in the fund has to be considered when there is any question of adding to the number of existing pilots, or of altering their status and remuneration. Your Committee are of opinion that this system should be altered by winding up the present fund. In what manner this should be done—whether it should be made the basis of a new fund, founded on sound principles of insurance, or whether the pilots should in the Trinity House Districts be left to provide for their own retirement, as is the case in many other districts, are questions of detail, into which, as they do not materially or directly affect the subject of compulsory pilotage, your Committee do not think necessary to enter; and they content themselves with stating that they deserve the serious consideration of the Trinity House and of the Board of Trade.

As regards the principal question, viz., that of compulsory pilotage, your Committee reserve the general arguments affecting the Thames, as well as other ports, for a subsequent part of this Report. As regards the evidence specially affecting the Port of London, it has been proved to your Committee that whilst in 1854, and even as late as at the time of Mr. Lindsay's Committee in 1860, the principal owners of sailing ships in London were in favour of compulsory pilotage, not only have no London shipowners taken any active part against the present Bill, but at the same time, the Committee of the Shipowners' Society, representing many of the principal shipowners of London, have petitioned in favour of the abolition of compulsory pilotage; and their chairman, Mr. Duncan, and deputy chairman, Mr. Robinson, have given strong evidence in support of that petition, and have urged upon your Committee that much more freedom is required than is given by this Bill.

Farrer, 204 *et seq.*, 221 *et seq.*

Miller, 7360.

Duncan, 9550 *et seq*
Robinson, 12740 *et seq*

The steamship owners of the Port of London, daily increasing in importance, are and always have been against compulsory pilotage.

The Trinity House, who so lately as 1862 remonstrated with Mr. Milner Gibson against any relaxation of compulsory pilotage, have made no sign against this Bill, whilst they have, in the course of the last winter, officially suggested to the Board of Trade that the exemption from compulsory pilotage in those districts, hitherto confined to coasters, should be extended to vessels trading between the North Cape and Brest.

Almost the only evidence against the abolition of compulsory pilotage in the Port of London proceeds from the pilots who now derive supposed benefit from it. Even these witnesses limit their arguments rather to the amount of compensation they ought to receive than to the greater question whether compulsory pilotage should be retained; and some of the most intelligent of them have stated to your Committee that they have no apprehension of any loss of employment to themselves or their brother pilots if this Bill should pass.

Under these circumstances, and apart from the more general question, it is obvious that no case has been made for continuing compulsory pilotage in the Port of London; and it also appears to your Committee that the first step to be taken in order to remove the anomalies above referred to, and to place the system on a sound footing, is to free the shipowner from all obligation to take a pilot when he does not require one.

When this is done, and not till then, will it be possible to work out experimentally the further steps above referred to.

A considerable amount of evidence has been tendered to the Committee to show that the pilotage system of the Thames is in a very unsatisfactory state, and that it is expedient to create a distinct pilotage authority for the Port of London representing its trade and commerce, and your Committee concur in the necessity for such a change.

Your

Your Committee have also received evidence from the Chamber of Commerce of Falmouth, one of the outport districts of the Trinity House, who are unanimously in favour of the abolition of compulsory pilotage at that port. Fox, 12024.

Falmouth is an excellent natural harbour, and a great port of call. The harbour has no outlying difficulties, and masters who know the port can enter and leave it without difficulty. The mail packets which call there find the pilots so useless, that they pay for them without allowing them to come Fox, 12043. on board, and collisions frequently occur from the inexperience of pilots 12047. managing large vessels. On the other hand, there are many foreign vessels, which would take pilots, even in fine weather, and in bad weather they 12040. are much wanted for inward-bound vessels. Complaints are frequent that they are not to be found when and where they are wanted, whilst they force themselves on board when they are not. 12025. 12033. 12075.

The Mersey.

Next to the Trinity House districts, the most important pilotage district in the United Kingdom is that of Liverpool. One witness estimates the value of Danson, 3130. the property in ships and cargoes passing in and out of the Mersey in a year 3134. at 400,000,000 *l.*, and the number of lives at 400,000. It is also the port at which the question of retaining or abolishing compulsory pilotage has raised the greatest difference of opinion, and from which, in consequence, your Committee have received the largest amount of evidence.

The present Liverpool pilotage system dates from 1765, and a further Act Squarey, 2349. was passed in 1797. The regulation of pilots was entrusted to a committee appointed by a body of commissioners representing, or supposed to represent, the Corporation and various interests at the port. Under these Acts pilots were licensed, pilotage rates were fixed, and pilotage was made compulsory. In 1824 the Acts were consolidated and the system of owning pilot boats described below was first introduced. Subject to the general alterations in the pilotage laws of the United Kingdom mentioned above, these matters remained in this Squarey, 2351, condition until 1858. In that year the Mersey Dock Board, which had been 2352. constituted by an Act of the previous Session, brought in a consolidating Bill, and in pursuance of directions in the Act which created them, included in that 21 & 22 Vict. c. 90. Bill provisions concerning pilotage, and by the Consolidation Bill as passed, the local pilotage of Liverpool is now regulated.

The Mersey Dock Board themselves, elected by the dock and harbour rate- 2353. payers, with four members nominated by the Government, are the ultimate authority; but the immediate management is in the hands of a committee called the Pilotage Committee. It is appointed annually by the Dock Board, and consists of 12 members; four of them are required by the Act of Parliament to be persons who are not members of the Board, but who are familiar with the duties and qualifications of pilots, and the other eight members, making up the 12, are selected from the members of the Dock Board.

The pilotage district of the Mersey extends from Point Lynas, in Anglesey, to Fleetwood.

By the Mersey Docks Act, 1868, s. 129 (Pilotage), all inward-bound vessels are bound to take a pilot on arriving at the pilot station, and all outward-bound vessels are bound to take a pilot until they reach the Bell Buoy. If they do not take a pilot, they are, by the Local Act, compelled to pay pilotage; and by the Merchant Shipping Act, s. 353, the penalty of double 3. pilotage attaches. An opinion has been expressed that the Liverpool Act Squarey, 2404 *et* does not compel a master to employ a pilot or to put the ship in his *seq.* charge; but only compels payment of pilotage rates. It is, however, clearly 2496 *et seq.* proved to your Committee, not only that the general penal enactment in the Merchant Shipping Act applies to Liverpool, but that it has been decided by the highest authority, that the Liverpool Act itself makes the employment of the Farrer, 42 *et seq.* pilot compulsory; takes the ship out of the hands of the master and places her in those of the pilot; and relieves the owner from liability for damage done by his ship when under the charge of the pilot.

The exemptions from compulsory pilotage in Liverpool under the Local Act extend to coasting vessels under 100 tons, and to coasting vessels in ballast. Coasters pay only half pilotage. But vessels are not considered coasters if they have made a voyage to a foreign port within six months. Under this clause there are considerable anomalies. If a vessel under 100 tons has been engaged in trading (say) to Aberdeen or Newcastle, she is exempt. If such a vessel has been trading to those ports, or to nearer ports, such as Dublin or Bristol, and within six months has been to Brest or Havre, she becomes liable. If a large coasting steamer has any cargo on board she is liable. If she has no cargo, but has a full load of passengers, she is not, so far as the Local Act is concerned.

Simpson, 4483 to 4488.

A further practical exemption has been made in the case of coasting passenger ships. These ships, as conveying cargo, were subject to compulsory pilotage under the Local Act. This was much complained of, and in 1853 an arrangement was made with the pilots to the effect that those ships should be exempted altogether from outward pilotage; and as regards inward pilotage, that they should not be compelled to employ pilots so long as they paid 1 *s.* a foot to the pilots. They have since continued to do this, and do not as a rule take pilots; and pay the pilots a sum, which in 1869 was about 1,500 *l.*, for no service whatever. Their ships have been safely navigated by their own officers without casualties. This arrangement was confirmed by Order in Council, under the old Pilotage Committee, has continued under the present Mersey Board, and still exists.

Farrer, 143. Watson, 10696 to 10699. Simpson, 4474. 4482. Bremner, 4755.

The exemptions arising from examinations and licenses of masters and mates are very few at Liverpool. Only 10 possessed such licenses in 1869. Since 1859 only 36 have applied, and only 22 have passed. The reasons for this given by the different parties, differ. The officers of the Mersey Board state that the examinations are freely and fairly conducted, and that any competent man could pass; and the reason they allege for the paucity of applications is that the obtaining a certificate of exemption from compulsory pilotage would render the owner liable for damage. And in this they are supported by the evidence of some of the large owners of foreign-going shipping.

Parliamentary Paper, No. 70. Simpson, 4254. Hills, 2734. 2738. Squarey, 2397. Leyland, 9971. 10056.

On the other hand, it is clear that the former pilotage authorities in Liverpool long refused to examine at all under the Act, alleging as a reason the grave responsibility for life and property under which they laboured; an allegation which is curiously inconsistent with the arrangement which, as above stated, they had made with the coasting steamers; and the owners and captains of coasting steamers still appear afraid of applying to the Mersey Board. In fact, as the 1*s.* per foot is a small charge, they do not care much about the obligation; but as their ships, when carrying passengers, are, under the 354th section of the Merchant Shipping Act, required to take pilots, and as the Board of Trade have in some recent cases declined to grant certificates exempting from this obligation, and have referred the officers and employers to the Mersey Board, the question of examination by the latter is likely, if the law remains in its present state, to arise again.

Farrer, 148 to 154. Watson, 10695. 10757. Reynolds, 11030. Farrer, 150.

Under this system and its exemptions, it appears that there are about 48,000 vessels passing through the channels in and out of the Mersey, of which about 15,000 take pilots and 33,000 do not. The latter comprise the coasting steamers and a large number of small flats and coasters.

Hills, 2790.

The principal feature of Liverpool pilotage is founded on the importance of having the pilots stationed at given points in the approaches to Liverpool. There are 12 boats, of which six are cruising at one time. The one furthest out is near Point Lynas, in Anglesey, and the inner boats near the North-west Light Ship. So soon as she has discharged all her pilots into inward-bound ships she returns to port; the next boat takes her place, and so on, and another boat from Liverpool replaces the inner boat. Great pains seem to be taken to keep the boats on their stations. The pilots are put on board inward-bound ships in rotation, and their masters have no choice whatever. Even if a pilot has previously misconducted himself, and brought loss on the owner, he cannot refuse to employ him; nor can a vessel find a licensed pilot beyond the above stations.

Simpson, 4202 *et seq.* Couch, 10884.

As regards outward pilotage, the general rule is, that the pilot who brought the

the ship in takes her out; but this is not universal. If the pilot is ordered to go out, he must go; and if a shipowner particularly desires to have any particular pilot the choice is, under certain conditions, allowed him; but it does not appear that this choice is readily given, or much made use of. Simpson, 4246.

Compulsory pilotage ceases at the Bell Buoy, outside the Bar, and there was formerly a penalty for taking pilots further. But it was found very inconvenient that pilotage should cease at this point, which is often the point of the greatest difficulty, and consequently the penalty has been relaxed, and vessels are allowed to take pilots outwards as far as Point Lynas, and two pilot boats now cruise between the Bell Buoy and the North-west Light Ship to supply pilots to ships which, having got rid of their outward pilot, still find themselves in need of one. This pilotage is quite voluntary, has arisen out of the demand, and is much made use of. Hills, 2865 to 2884. Simpson, 4442.

A further important exception from the strict cruising system has been made in the case of the large and regular steamers trading to America, which call at Irish ports. In these cases the pilotage authorities have allowed the owners to select a pilot, who is attached exclusively to these steamers, and who goes out to Queenstown or Londonderry with one vessel, and returns in the next inward-bound vessel belonging to the same owner. There are at present 14 of such pilots attached to the vessels of seven different owners. The practice commenced in consequence of the dissatisfaction of Mr. Inman with the pilots he was obliged to employ, and was suggested by the superintendent of pilots himself; and it appears from the evidence of the superintendent of pilots, that the practice is extending, and that the pilotage authorities are willing to extend it. Simpson, 4247 to 4253. 4312 to 4315. Appendix (F.) Inman, 10240. 10244.

The pilots so employed, however, get no more than other pilots, and pay their earnings into the fund of the boat to which they are attached. Mr. Inman pays each of his three choice pilots 340 *l.* a year, of which only 180 *l.* goes to the pilot himself, the remainder going to the pilots who have not earned it, and to the boatowners as after mentioned. Simpson, 4314, 4321. Inman, 10256.

The number of pilots at Liverpool, including licensed apprentices, is 284, and there are beside 34 unlicensed apprentices. Their aggregate earnings in 1869 were 67,500 *l.* The average earnings of a first-class pilot are now 215 *l.* to 218 *l.*, being less by 30 *l.* than they were some years ago, and considerably less than the earnings at ports where the pilotage is voluntary. It will be reduced in 1872 by about 30 *l.* per man, in consequence of the cessation of the compensation for differential rates on foreign ships, a compensation which was given up by the Trinity House in 1825, but which was only put an end to in Liverpool and other outports by an Act of 1862. The falling off now perceptible is due partly to the larger size and smaller number of vessels, whilst the greater employment of steam, either in the vessels themselves or as tug power, and the consequent regularity in arrivals, enables a smaller number of pilots to do the duty. The pilotage authorities are now reducing the number of apprentices, allowing only six to a boat, instead of 10 as formerly; and the chairman of the Pilotage Committee states that whereas the present number is 318, only half of them are at sea at one time, and that from 250 to 280 would be sufficient for the port. Moss, 3825. Moss, 3821. Moss, 3832. 3841. Moss, 3834. 3831. 4015.

The earnings of the pilots in each boat are appropriated to that boat. They are paid to the treasurer of the pilots, who pays over 2½ per cent. to the Dock Board, on account of the Annuity Fund. The remainder is appropriated to the boat which has earned it, and is divided, according to the bye-laws, in the following proportions: Squarey, 2362. Holt, 11143. App. A., No. 15.

„ 3rd Class	⅔
„ 4th Class	⅔

As given in more detail by the superintendent of pilots, this will be:

Simpson, 4173-4.

To boat-owners	Boat's share	2½
	4 licensed apprentices	2⅔
	– unlicensed „	1½
	To boat-owners	6⅔
3 masters		3
To pilots:		
16 first-class pilots		16
1 second-class pilot		–⅚
1 third-class pilot		–⅔
	Whole earnings	27⅙

Consequently, of the earnings, about one-fourth goes to the boat-owners, one-eighth to the masters, and the remainder to the pilots themselves, amongst whom it is divided in the above proportions. The aggregate earnings for 1869 were 67,500 *l.*, out of which 49,600 *l.* was paid to pilots and apprentices, and 16,000 *l.* to boat-owners. The average net earnings of each pilot for 1869 was 195 *l.*, the highest net earnings of any one pilot 210 *l.* This, as above mentioned, is considerably less than it has been in former years, and it will be diminished further next year.

Simpson, 4447.

Parliamentary Paper, 88, 1870.

Squarey, 2367. Simpson, 4175 *et seq.*

The system of boat-owning is very peculiar. They are owned in shares by pilots and superannuated pilots, in the following proportions:

34 Masters own	330 shares.
40 Acting pilots	200 „
20 Superannuated pilots	238 „
TOTAL	768

Out of the earnings of each boat, about one-fourth part as above mentioned goes to the boat-owners, who, on the other hand, have to pay the expense of working the boat, of maintaining her in good condition, and of replacing her when worn out. When the owner of any share dies, his share is put up to auction among the pilots or superannuated pilots, at a price fixed by the Mersey Board. If not bought at that price, the Mersey Board can allow the representatives to hold it for a year, and so on. The price and value of the shares depends, not on the cost and expense of the boat, but on the proportion of pilotage earnings allotted to her, which is the interest on the money thus invested. The average price per share paid for the last five years has been 118 *l.* The aggregate price paid by the pilots is thus, 90,700 *l.*, or according to the pilot's solicitor, 92,160 *l.* The aggregate value of the boats when originally built was about 30,000 *l.*; and as they have been built at different times from 1847 downwards, their present actual value must be much less. The working expenses of the boats are estimated at 5,000 *l.* Depreciation and insurance, that is, the cost of repairing and insuring, are estimated at 12½ per cent. on the actual value. Interest on 30,000 *l.*, at 5 per cent., would be 1,500 *l.*

Simpson, 4179. Appendix (J). Bremner, 4652. Simpson, 4194. 4449.

The actual sum paid to the boat-owners in 1869 was, as above stated, 16,000 *l.* Assuming the value of the boats to be 30,000 *l.*, the account would stand as follows:

	£.	£.
Sum paid to boat-owners		16,000
Actual expenses:		
Interest on capital	1,500	
Depreciation and insurance	3,750	
Working expenses	5,000	
		9,350
Leaving	£.	6,650

as

as a sum which is deducted from the earnings of the working pilots in order to pay interest at the rate of 9 or 10 per cent. to those of the pilots who have invested in the boat shares. But as the actual value of the boats is much less than 30,000 *l.*, this latter sum is, in truth, considerably higher. This practice was first established in 1824, and has been continued ever since, though pointedly condemned by the Royal Commission of 1836, and loudly complained of by many of the pilots. It is obvious that under it money earned by the pilots is devoted from the legitimate objects, viz., payment for services rendered, and that it is either an improper deduction from well-earned wages, or an unnecessary burden on the shipowner. It has also the effect of creating the opposition of a vested interest to any change in the system of cruising and of employing pilots, an effect which, under the present circumstances of the Liverpool pilotage, may be a very serious evil.

Squarey, 2367. Farrer, 714.

There is a pension or annuity fund arising from 2½ per cent. contributed by the pilots out of their earnings; the interest on 10,691 *l.* of invested capital, and certain balances from fees or licenses, and from penalties, making an income in 1869 of 2,306 *l.* The pensions are paid to superannuated pilots, their widows and orphans, making in the aggregate of payments in 1869, of 2,074 *l.* The pensions to pilots are about 27 *l.* per annum.

Simpson, 4270 *et seq.* Bremner, 4637.

Under these circumstances, very different opinions have been expressed by the Liverpool witnesses with respect to the present system.

Many of them are well satisfied with it as a whole, but wish for certain amendments, noticed below; whilst all admit that among the pilots are excellent men, that the remuneration of these men is too low rather than too high, and that the rates are very moderate.

On the other hand there are many complaints.

Some shipowners, even of those who support the present system, and some of the pilots, wish that the pilots should cruise further outwards in search of ships.

Most seem to be of opinion that the present boat-owning system is an evil, and some of the pilots complain bitterly of it.

It appears also to be admitted on all hands that the number of pilots is too large.

Some of the steam-ship owners, and others, are extremely dissatisfied with the results of the discipline administered by the pilotage committee. They say that complaints are not attended to, that pilots are inadequately punished, and that no system of regulation and discipline can have the same effect in procuring good service as free employment and free choice.

As regards the present Bill, the following are the points in the Liverpool evidence which seem worthy of remark.

The Mersey Dock Board passed no resolution on the subject, and were much divided in opinion. The Pilotage Committee of the Mersey Dock Board, a body composed of persons elected by the dock ratepayers, have sent up their secretary to give evidence against the extension of the Bill to Liverpool.

Squarey, 2537 *et seq.*

The Shipowners' Association of Liverpool, which represents the sailing shipowners, have passed a unanimous resolution in favour of the present system.

Squarey, 2571–73. Shallcross, 3428.

A Committee of the Steam-Ship Owners' Association of Liverpool have passed a unanimous resolution in favour of that part of the Bill which abolishes compulsory pilotage.

Squarey, 2574. Leyland, 9962.

As regards these two interests, it is to be observed that whilst the total entries and clearances of sailing tonnage in Liverpool have increased from 3,070,104 in 1850 to 3,867,697 in 1868, the tonnage of steamers has increased in the same period from 192,570 to 2,572,297, and is still increasing, and likely to increase in a still greater proportion.

The owners of small coasting vessels complain of having to employ pilots when they do not want them, and they also complain of the mode in which the rates are fixed, as unfair to small vessels.

The pilots are divided in opinion. Some of them are of opinion that the present system should stand, whilst others think that the change proposed by this Bill, whilst it may cause injury to the less efficient pilots, will in the end benefit those who are more efficient.

As a general rule, those who are in favour of compulsory pilotage, as well as those who are opposed to it, think the immunity from liability for damage when

Squarey, 2443. 2520.

the ship is in charge of a compulsory pilot to be a greater evil, on the grounds that it is unjust; that it causes litigation; that it tends to induce masters to give up the command of their ships to pilots; and that it tends to induce the pilot to collude with the master of the vessel to take undeserved blame upon himself. All, also, are agreed that the pilot should be the adviser of the captain and not his substitute. But there is a great difference of opinion as to whether it would be right to do away with the immunity without also doing away with the obligation to employ a pilot. On the one hand, Mr. Squarey, the able and experienced solicitor to the Dock Board, argues strongly from the practice of foreign countries in favour of retaining the compulsion and doing away with the immunity, and he is supported by Mr. Danson, Mr. Lamport, and Mr. Galloway. On the other hand, the whole of the witnesses who are opposed to compulsory pilotage, and the steam-ship owners generally, as well as some of the supporters of compulsory pilotage, argue with great force, that if a shipowner is compelled to employ a pilot he cannot justly be made liable for the acts of that pilot.

Danson, 3183. Lamport, 3581 *et seq.* Moss, 3868. Galloway, 4091. Leyland, 9962 *et seq.* 10184. Inman, 10243. Bouch, 10907 *et seq.* Squarey, 2376 *et seq.* Lamport, 3597, &c. Galloway, 4094. Leyland, 9968. Inman, 10253. Bouch, 10910. Judkins 2149. Ballantine, 3118. Shallcross, 3454. Squarey, 2400, &c.

A second point on which opponents of compulsory pilotage are agreed, but upon which its supporters are at variance, is as to the proper meaning and effect of compulsory pilotage. Mr. Squarey represents the view that compulsory payment is all that is required; that the obligation to pay is the important element; that this payment is like light or harbour dues, a tax is levied generally upon the trade of the port for the maintenance of a service which is at times necessary for, and is always available by all. And in this view he is supported by Mr. Lamport. On the other hand, Mr. Danson, Mr. Moss, and Mr. Galloway think that the more important element is the compulsory employment, for the sake not only of the vessel itself, but of other vessels and of the channels of the port.

Lamport, 3566. Danson, 3138. Moss, 3865. Galloway, 4094.

A further point on which there is great difference of opinion is that of the existing exemptions. The witnesses in favour of the Bill are of course for doing away with exemptions, by making them universal. The witnesses in favour of the present system are not equally unanimous. They are all, in principle, against the proposed exemptions, feel the anomalies they create, and would do away with them if they could. But the more cautious know that this is impracticable, and admit the necessity, if compulsory pilotage is continued, of continuing those anomalies.

Judkins, 2049. Squarey, 2456. Ballantine, 2980. Danson, 3139. 3232. Lamport, 3636. Moss, 3924. Simpson, 4241. 4361. Bremner, 4769. Leyland, 10017. Inman, 10263. Bouch, 10947 *et seq.*

Another point on which the opponents of compulsory pilotage are agreed, but on which there is not the same apparent agreement among its supporters, is connected with the boats' stations and cruising ground of the pilots. The opponents are agreed that the pilots are often needed much farther out than they are now found, and say that if the system were a free one they would be found on the coast of Ireland, would be largely employed, and would earn much more than they do at present. And they are fortified in this by the case of the 14 choice pilots employed by the North American steamers. Many of the pilots themselves are of the same opinion. Mr. Lamport, a supporter of compulsory pilotage, is also of opinion that the pilots should cruise farther. But the chief strength of the case in favour of compulsory employment of pilots is vested on the absolute necessity for maintaining in its integrity the present system of cruising stations, a thing which it is scarcely possible to do if a number of the pilots are to seek employment elsewhere. And it is to be observed that two of the strongest nautical witnesses in favour of this system, are Captains Judkins and Ballantine, of the North American Mail Steamers, who never make use of these stations, and who voluntarily take and pay extra for pilots from Cork and Londonderry.

Jones, 10581–3. Lamport, 3595.

Putting aside these differences, the main arguments of those who support compulsory payment of pilots, as distinguished from compulsory employment, are,—

1. That the approaches to Liverpool are exceptionally dangerous, and require exceptional treatment.

2. That if the employment of pilots is voluntary, they will be taken in bad weather, but not in good weather.

3. That under such circumstances, they will not keep the sea or look for vessels in bad weather.

4. That

4. That discipline and regulations, coupled with the knowledge that they must obtain employment, are more effective stimulants to energy and good conduct, than competition, and the expectation of good pay for good service. Lamport, 3570 *et seq.*

To these the advocates of compulsory employment, as well as compulsory payment, add that it is necessary pilots should be employed as well as paid. Danson, 3138. Moss, 3794.

1. For the safety of the ship herself, of the lives of those on board, and of her cargo.

2. For the safety of other ships which she may meet.

3. To prevent her from being wrecked and blocking up the channels.

Of these arguments, most are general, and are discussed below. As regards the special case of Liverpool, it seems desirable to make one or two observations. Comparatively little argument has been directed to the outward pilotage. The reason is probably twofold. First, the opponents of compulsory pilotage having to a certain extent a choice of pilots in Liverpool, and being for the most part owners who would under any circumstances employ a pilot, do not care so much about it as about the inward pilotage. Secondly, that part of the outward pilotages which is most dangerous, viz., that which is outside the Bell Buoy, is now entirely voluntary, is well maintained, and causes no complaints. This latter reason is one which in the opinion of your Committee has an important bearing on the whole system of compulsion. Hills, 2865.

As regards the statement that Liverpool is exceptionally dangerous; your Committee have the most positive evidence from a number of witnesses, not only that Liverpool is the most dangerous port in the kingdom, but that exceptional danger is a special reason for compulsion. Judkins, 2077; Hill, 2669; Ballantine, 2983; Danson, 3135; Lamport, 3645; Moss, 3886; Galloway, 4106; Simpson, 4166.

But it is not a little remarkable that most, if not all, of these witnesses, when pressed, expressly state that they know little or nothing of the nautical dangers of other ports, and that they are absolutely ignorant of the working of the pilotage systems at the numerous ports when it is voluntary. Judkins, 2151. 2075. 2127. 2199. 2244. 2256; Hill, 2840 *et seq.*; Ballantine, 3026. 3059; Danson, 3279. 3327. 3345; Shallcross, 3478; Lamport, 3641. 3650. 3771; Moss, 3888; Galloway, 4125; Simpson, 4527. 4529.

And, on the other hand, your Committee have strong evidence, from Liverpool shipowners and others, that the dangers of Liverpool have been much exaggerated, and that captains used to the port can, and do, bring their vessels in and out in safety. Leyland, 9985. 9969; Watson, 10703 *et seq.* 10745 *et seq.*; Bouch, 10914; Reynolds, 11021. Reynolds, 11016; Arrow, 1844; Castle, 7736; Tillman, 7774; Robinson, 12797.

And your Committee have also evidence of the most trustworthy kind, that the difficulties of the Thames are fully as great as, if not greater than, those of the Mersey. But even supposing the Mersey to be the more dangerous, the consequence, according to all experience, would seem to be, not that compulsion is requisite, but that pilots will, under a voluntary system, be the more needed there, and therefore the more employed.

The Humber.

The Committee have also received evidence from Hull. The pilotage of the district extends from Dimlinton, on the north of the mouth of the Humber, to Donnanook, on the south, up the Humber as far as Hull, and farther upwards up to Goole and Gainsborough. The pilots are licensed by the Trinity House of Hull, and are controlled by Pilotage Commissioners, consisting of representatives from the Trinity House, the Hull Corporation, the merchants, and the shipowners. There are 68 pilots between the sea and Hull, and 21 apprentices; and the number of pilot boats is seven, of which three are always cruising at the mouth of the Humber. The Trinity House have always examined masters and mates freely. The number possessing licenses in 1869 was 283; in fact, almost all the vessels belonging to Hull shipowners are thus exempt from compulsory pilotage. The earnings of the pilots are thrown into a common fund, and, after payment for boats, the office, and other expenses, are divided amongst them. The average amount received by each pilot for the last five years has been 148 *l.* All coasters are exempt, and all foreign-going vessels Bannister, 5549. 5542, 5543. 5546, 5547. 5589. Lumsden, 6221. Bannister, 5782. 5593. Brewis, 6069.

vessels drawing less than 6 feet of water; so that, practically, almost the only vessels subject to compulsory pilotage are foreign-going vessels, whose owners are not represented on the Hull Pilotage Commission.

Your Committee have received evidence from the Pilotage Commissioners, the shipowners, and pilots of Hull, in favour of retaining compulsory pilotage, and urging that the pilotage is exceptionally difficult, and that compulsory pilotage is necessary for the safety of the foreign ships which frequent the port; but in this case, as in that of Liverpool, it is remarkable that these witnesses know nothing of pilotage at ports where it is voluntary, and are not even aware that, in the North Channel of the Thames, the same class of ships, which in the Humber are obliged to take pilots, do as a matter of fact employ a large and well paid body of pilots without any compulsion whatever; and in the case of the Humber there is the additional fact, that the witnesses who advocate compulsory pilotage are themselves exempt from it.

App. A., No. 19. Josse, 12082 *et seq.* Oates, 12181 *et seq.* Arrow, 11860.

On the other hand, your Committee have had loud complaints of the incidence of pilotage rates on small foreign-going vessels trading to Goole and Gainsborough, and also from all the representatives of shipping at the port of Grimsby; and your Committee have also had conclusive evidence that there is nothing exceptional in the pilotage of the Humber.

Oates, 12229. Josse, 12112. 12138.

Your Committee have also had evidence that there is considerable dissatisfaction amongst the pilots. That the younger pilots wish to have an opportunity of earning more. That the seven cutters are far more than sufficient, and that establishment charges are large. That many of the pilots themselves would wish the pilotage thrown open, supposing that it would lead to larger employment of the better men.

12201 *et seq.*

Finally, your Committee have had evidence that whilst the Humber pilots, whose service is compulsory, and who cruise in numerous and expensive vessels under the pilotage authority, are often not to be found when wanted, there also a set of pilots licensed by the Trinity House of Hull, for the purpose of piloting vessels from the sea to Lynn, Boston, and Wisbeach, whose service is voluntary, and who cruise in all weathers in small and comparatively cheap but efficient vessels, and that these pilots are always to be found at sea when wanted, cruising from Flamborough Head to the Deeps, so that they not unfrequently bring even Humber vessels to the place when they can find a regular Humber pilot. In conclusion your Committee are of opinion that there is no substantial difference between the case of Hull or that of the North Channel of the Thames. The vessels frequenting both are of the same class and character, and in the case of the latter are already exempted from compulsory pilotage without any evil result whatever. Practically, compulsory pilotage in the Humber is confined to foreign vessels, and British vessels belonging to other ports, and for the most part these vessels, when navigating the North Channel of the Thames, take pilots without compulsion. There is, therefore, no good reason for retaining compulsion in the Humber.

See Parliamentary Paper, 70, 1870. Clegram, 1031 *et seq.* Drew, 6396 *et seq.*

Your Committee have also taken evidence from Bristol, and from the neighbouring ports in the Bristol Channel.

The Clyde.

Turner, 4775 *et seq.* Henderson, 4890 *et seq.* Allan, 5209 *et seq.* M'Kelvey, 5392 *et seq.* Alexander, 5436 *et seq.*

Your Committee have also received evidence from Glasgow against the Bill. It appears that pilotage is compulsory on all vessels above 60 tons burthen from Newark Castle above Port Glasgow to Glasgow. For a large part of the way the course of the river is tortuous, narrow, and artificial, and it is encumbered by an enormous traffic, and is being constantly dredged. According to all the witnesses, the assistance of a person accustomed to the navigation is necessary, not only for the vessel itself, but in order to prevent injury and obstruction to other vessels, to the navigation and to the works of the Clyde Trustees. The masters and mates of steamers navigating the Clyde are freely licensed to pilot their own vessels. In 1869, 125 were so licensed. An exception has been made by Order in Council in favour of vessels of a somewhat larger size when towed by steam tugs; but the exception has not been made use of. The evidence from Glasgow is strong and unanimous in favour of the present system, whilst it is equally

equally unanimous in favour of voluntary pilotage below Greenock. The case is a very peculiar one, and is more in the nature of harbour police and regulations than of pilotage.

The assistance of some person skilled in the navigation appears to be generally desirable, if not necessary. At the same time there seems to be little room to doubt that, without compulsion, vessels which require such assistance would, as a matter of course, take it. And the apprehension expressed by Glasgow witnesses that foreign vessels, ignorant of the dangers, would not do so, receives little countenance from the fact so distinctly proved to your Committee, that foreign vessels in non-compulsory pilotage waters do, as a matter of course, generally take a pilot; and that even in coming to Glasgow these vessels are in the habit of taking a pilot in the outer waters where no British vessel would think of taking one.

The Bristol Channel.

Pilotage within the Bristol Channel to the eastward of Lundy Island may be divided into two classes, viz.:

(*a*) Pilotage on the waters of the Channel itself, or Channel pilotage.

(*b*) Pilotage within local limits of, and adjacent to, ports and rivers of the Channel; or local pilotage. Rosser, 6882 *et seq.* Johnson, 12240 *et seq.*

As regards Channel pilotage, by the Act 47 Geo. 3, c. 33, s. 19, it was made compulsory on all ships bound to or from ports in the Channel to employ pilots licensed by the town council of Bristol.

This enactment placed the whole of the Channel pilotage of the Bristol Channel in the hands of Bristol pilots, hereinafter referred to as "Pill" pilots, from the name of the village at which they reside.

As regards local pilotage, Bristol had jurisdiction in certain ports under the Act 47 Geo. 3, whilst Acts were from time to time passed giving to certain authorities powers of compulsory pilotage within local limits, *e.g.*:

Gloucester	Obtained sub-commissioners under the Trinity House in London.	(Compulsory.)
Newport	The same.	(Ditto.)
Neath	The same.	(Ditto.)
Bridgwater	The same.	(Ditto.)
Port Talbot	Compulsory Act, 4 Will. 4.	
Llanelly	A Compulsory Act, 21 & 22 Vict.	
Swansea	A Compulsory Act, 17 & 18 Vict.	
Porthcawl	A Compulsory Act, 6 Geo. 4.	

In 1861, the year to which, for present purposes, it is necessary specially to advert, the ports of Gloucester and Newport (Monmouthshire), which had down to that year possessed compulsory local pilotage systems of their own, combined together and with Cardiff to throw off the Bristol yoke, the first and second as regarded the general Channel pilotage of ships proceeding to or from those ports, and the third as regarded local as well as Channel pilotage.

The result was that, under the Bristol Channel Pilotage Act of 1861, ships navigating the Bristol Channel, and bound to or from a port other than Bristol, became free of Pill pilots, so far as Channel pilotage was concerned, and in the three ports last named, voluntary local pilotage was established. In other ports of the Channel, compulsory local pilotage was continued.

At the present moment the only ships required by law to take a Channel

pilot when navigating the Bristol Channel are ships bound to or from Bristol; and, as regards local pilotage, the compulsory system is retained at

Bristol,	Swansea,
Bridgwater,	Neath,
Llanelly,	Port Talbot (formerly Aberavon),

whilst the voluntary system is established at

Cardiff, including Penarth,	Newport, Mon.,
Gloucester,	Porthcawl.

Not only was pilotage to and from Newport, Cardiff, and Gloucester, made voluntary by the Act of 1861, but these ports were enabled to license their own pilots for the Channel, certain reservations being made in favour of the then existing Pill pilots.

Although a ship navigating the Bristol Channel, unless bound to or from Bristol, is not required by law to take a pilot, still, if a pilot is employed at all, he must be a licensed pilot; and a licensed pilot can always supersede an unlicensed man, and claim pilotage money from the ship.

The gross sum spent by the shipowners in pilotage of vessels to and from the Bristol Channel Ports, was, in 1860, 41,308 *l.* 8 *s.*, and in 1868, 47,219 *l.* 7 *s.* 10½ *d.*, showing an increase of payments on the part of the shipowners of 5,919 *l.* 19 *s.* 10½ *d.* under the new system. As regards the distribution of this money, the following is the result, as shown by the Parliamentary Returns:—

	1868.				1860.			
		£.	s.	d.		£.	s.	d.
Bristol	compulsory	10,349	17	8	compulsory	19,560	7	5
Cardiff	voluntary	15,074	1	9	ditto	6,084	8	3
Gloucester	ditto	4,707	13	–	ditto	2,891	10	5
Newport	ditto	4,966	11	–	ditto	2,062	19	7
Bridgwater	compulsory	719	9	8½	compulsory	802	10	3
Llanelly	ditto	3,322	14	5	ditto	3,876	19	11
Swansea	ditto	5,601	2	3	ditto	4,091	10	7
Neath	ditto	1,926	5	7	ditto	1,766	15	1

At Cardiff, Gloucester, and Newport, the number of pilots has been augmented as follows:

	Number of Pilots in 1860.		Number of Pilots in 1868.	
Cardiff	Channel	0	Channel	54
	Port	43	Port	32
Gloucester	Channel	0	Channel	19
	Port	18	Port	20
Newport	Port and Channel	20	Port and Channel	28

At Bristol, the pilots have suffered; their numbers have fallen from 78 pilots and 19 apprentices in 1860, to 66 pilots without an apprentice in 1868.

It must however be borne in mind that this increase at Cardiff, Newport, and Gloucester, and falling off at Bristol, is not due to the retention by Bristol of the compulsory system, but is to be accounted for by the pilotage work finding its proper level, and so leaving the pilots at one port, and falling to the share of pilots at other ports, as soon as the Bristol monopoly was broken down.

As regards the earnings of the pilots individually.

The

The average net sum paid to pilots per man in 1860 and 1868 is as follows: —Each pilot keeps his own earnings, subject to deductions on account of maintenance of Boat Fund, &c.

	1860.	1868.	Increase.	Decrease.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
Bristol	152 4 –	89 – –	- -	63 4 –
Cardiff	- -	*163 12 5	—	—
Gloucester	155 – –	223 12 –	68 12 –	—
Llanelly	75 7 6	66 1 6	- -	9 6 –
Newport	80 – –	130 – –	50 – –	—
Swansea	95 10 –	83 5 –	- -	12 5 –
Bridgwater	50 – –	—	—	—
Neath	52 – –	54 – –	2 – –	—

The highest sums earned by any one pilot in 1860 and 1868 are as follows, viz.:—

	1860.	1868.	Increase.	Decrease.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
Bristol	388 3 6	306 13 3	- -	81 10 3
Cardiff	- -	446 14 7	—	—
Gloucester	249 7 6	330 6 3	80 19 3	—
Llanelly	115 15 4	92 9 1	- -	23 6 3
Newport	130 – –	254 – –	124 – –	—
Swansea	150 – –	155 – –	5 – –	—
Bridgwater	87 9 6	—	—	—
Neath	74 – –	82 10 4	8 10 4	—

These sums are liable to great reductions in some cases, including insurance, wages, and victualling of boats' crews, and wear and tear of boat.

In addition to the above facts it is proved that the change made in 1861 has proved perfectly satisfactory to the shipowners and pilots of Cardiff, Newport, and Gloucester; that the shipowner is better served at lower rates than he was under the old system, whilst the pilot is better paid. If the compulsory system had continued, there would have been a still larger sum spent on pilotage than has been actually spent; but it would have been money wasted. It would have been loss to the shipowner, and probably no gain to the individual pilots. Under the voluntary system the service has been what was required, and no more.

The Bristol pilots have suffered, because their business has been in part transferred to the pilots of Newport, Cardiff, and Gloucester. But it has been shown by your Committee that the effect of this has been to make their course far out, even as far as Falmouth and Cork, in search of inward-bound ships, especially foreigners. And as there are no fixed rates to the westward of Lundy, your Committee have not been able to ascertain whether the money earned for this outside pilotage, is or is not included in the above returns. If it is, the Bristol pilots have suffered less than would appear from the above returns. And, at any rate, they have been induced by the change of 1861, to offer their services to vessels which want them, instead of forcing themselves on vessels which do not.

It has been further proved to your Committee that the feeling at Bristol is in

* It is right to point out that the average net earnings of a Cardiff pilot proper exceed this sum. The sum of 163 *l.* 12 *s.* 5 *d.*, is estimated on the whole number of Cardiff pilots, including the 14 Pill pilots, who held supplemental licenses for Cardiff. To give the real earnings of a Cardiff pilot, the 14 supplementary Pill pilots should be omitted, as well as their earnings; and as their aggregate gross earnings from Cardiff only amounted to 336 *l.* 4 *s.* 6 *d.* in the year, out of the 15,074 *l.* 1 *s.* 9 *d.* earned at Cardiff, a large sum is left to be divided amongst the Cardiff pilots.

in favour of making the pilotage on Bristol trade voluntary, at any rate as far up as the Holms, and probably as far as Kingroad. And at Swansea, the feeling is in favour of making it voluntary, except from the Mumbles into the docks. As regards the Avon, from Kingroad to Bristol, and the pilotage into Swansea Docks, the local opinion is in favour of retaining compulsory pilotage, not for the safety of the ship, or the maintenance of pilots, but as a matter of harbour regulation. Considering, however, that all coasters are now free from pilotage in the Avon, and cause no accidents, that the masters of steamers are also licensed, that in the somewhat similar case of the Severn, from Sharpness upwards, where pilotage is voluntary, no vessel goes without a pilot, and that in the upper waters of the Thames, as above stated, pilots or skilled watermen are invariably and voluntarily employed, your Committee can have no doubt that, in the Avon and at Swansea, masters who do not know the river will of their own accord always employ pilots.

Acting on the representations made to the Committee by witnesses from Glasgow and Bristol that the so-called pilotage of the Upper Clyde and Avon were rather in the nature of compulsory regulations for the convenience of the traffic on those narrow channels, your Committee have inserted a clause in the Bill, giving to the harbour authorities of Bristol and of the Clyde power to make bye-laws for the proper regulation and police of the River Avon as far as Kingroad, and of the Clyde between Glasgow and Newark Castle.

Dublin and Belfast.

Doyle, 8585 *et seq.* 8645. 8597. 8652. Your Committee have also received evidence from Dublin and Belfast. At Dublin pilotage is compulsory on all vessels entering Kingstown or Dublin, except coasters under 50 tons. There are 40 pilots, who cruise in 12 cutters, which are maintained by the Port Board out of their earnings. Three-fourths of the pilots' earnings come from these coasters, who complain loudly of having to employ them. The pilot above referred to also states that, in consequence of the shifting banks, the currents, and the fogs, the dangers of the Dublin pilotage are very great. This evidence, however, is contradicted entirely by Captain Reynolds, who has frequented the port without a pilot for years. From the evidence of Mr. Watson, a member of the Port Board, it appears that that Board, which is a representative body, determined not to petition against the Bill, but only in favour of more speedy compensation. The experience of Dublin, as given by this witness, is interesting. It appears that immediately after the passing of the Act of 1849, the Ballast Board, who were then the pilotage authority of the port, agreed to exempt coasting steamers, on condition of their paying 150 *l.* a year for 10 years to the pilot fund. They now examine and license masters and mates freely; and in 1869 there were 34 licensed. In 1849 the revenue from pilotage was 6,356 *l.* In 1851, in consequence of the exemption of coasting steamers, it had fallen to 4,730 *l.*, and the fall of the pilotage establishment was prophesied. But by 1869 it had risen to 7,032 *l.*

Farrer, 165. 8600 *et seq.* 11034 *et seq.* Watson, 10690. App. A, No. 21. Watson, 10724.

It is obvious to your Committee that the only question at Dublin is the question of compensation.

Macfaren, 9759 *et seq.* Cochrane, 9804. Your Committee have had evidence from two shipowners at Belfast to the effect that compulsory pilotage is unnecessary in the Lough, but is necessary in the river, which is a channel three miles long and 70 yards wide, in order to prevent collisions, and blocking up of the Channel. To the same effect is the evidence of Benson, a pilot.

Reynolds, 11042 *et seq.* On the other hand, Captain Reynolds, of the City of Dublin Company, who has traded in and out of it for seven years, has stated that the pilotage is perfectly easy, that compulsory pilotage is quite unnecessary, and a great hardship on coasters.

No evidence has been received from any of the authorities at Belfast.

Though your Committee have been ready to receive any evidence against the Bill from other ports they have received none. And they have thought it unnecessary to call for evidence from ports where pilotage is voluntary, since it is notorious that the shipowners of those ports are not only entirely satisfied with the voluntary system in their own ports, but are decidedly in favour of the abolition in other ports, in which, as their ships frequent those ports, they have, of course, a strong interest. Nor has there been any attempt to produce evidence from any

any quarter to the effect either that the pilotage service in voluntary districts is inefficient, or that life and property are less safe in those districts, or that vessels which need pilots in those districts neglect or refuse to do so.

As regards the feeling of the ports on the north-eastern coast, your Committee desire to refer to the Report of Mr. Lindsay's Committee on Merchant Shipping in 1860, xx. to xxii., and to the evidence given before that Committee, especially that of Mr. Hudson as to the Tyne and Mr. Potts from Sunderland, expressing the views of the shipowners at those ports.

Your Committee conclude, therefore, by stating what appears to them to be the general effect of the opinions and arguments laid before them.

1. The present system is anomalous to the last degree, both in the extent to which compulsory pilotage is carried, and in its exemptions. But, except from Liverpool, no evidence of the least importance has been laid before your Committee in favour of doing away with these anomalies by extending the compulsion or diminishing the exemptions.

2. The exemptions have been largely extended by recent legislation, and, except that they have increased the anomalies, have given complete satistisfaction. Nor has any attempt been made to show that this great increase of exemptions has been attended by any increase of loss or danger. To attempt to diminish the exemptions would cause an amount of opposition and dissatisfaction which it would be impossible to overcome.

3. The opinion in favour of freedom in pilotage has, in recent years, gained greatly in strength. In London, where 20 years ago all the large shipowners were in favour of compulsion, there is now an almost unanimous feeling against it. And in Liverpool, where there is still a large majority of sailing shipowners in favour of compulsion, there is a minority against it, whilst the great and growing steamship interest are, with few exceptions, against the obligation.

4. Even amongst the pilots themselves there are many who see that the real interest of the abler and more energetic is better served by a system which enables them to make the most of their own services, than by one which, whilst securing them employment, deprives them of special reward for superior service.

5. This change of opinion is, in a great measure, due to the increase in steam shipping. These ships arrive and depart with regularity and navigate pilotage waters with speed and certainty. Where the voyages are short the officers themselves become excellent pilots. And where they still employ pilots the pilotage is comparatively short.

6. It is also due to the changed views of the shipowners on the subject of immunity from liability, and to their sense of the evil of the present legal relation between a captain and a compulsory pilot.

7. The above change of opinion does not imply that pilots are less needed or will be less employed than before. On the contrary, every shipowner and ship captain who has given evidence, except in the case of steamers, and small coasters making very short voyages, has expressed his own wish to employ pilots, and his opinion that all other prudent owners and captains will employ them. If less time is occupied in pilotage, and fewer pilots are required, it is due to the rapidity with which the pilotage service is performed.

8. The strongest evidence has been given that steam tugs are no substitutes for pilots, and that a pilot is as much needed with a steam tug as without.

9. Many witnesses who have supported the present Bill are in favour of a much larger measure of freedom than the Bill provides. Some of them desire that all restrictions on the numbers of licensed pilots should be removed; that pilots should be at liberty to cruise in search of ships where they find it most profitable to do so; and some of the evidence points to the expediency of free bargains with the pilots as to rates, at any rate in inland waters and in outward pilotage. But these witnesses look upon the abolition of compulsory employment as the first and necessary step towards other improvements in the system.

Such being the general effect of the views presented to your Committee, they proceed to consider the arguments by which the advocates of compulsory pilotage support its continuance.

The reasons alleged are as follows :—

1. That it is necessary, in order to maintain a competent supply of pilots.

A practical answer to this reason, seems to be, that in those ports of this country where pilotage is voluntary, the supply of pilots is as good as where it is compulsory ; at Cork as at Falmouth, on the Tyne as on the Mersey, on the north as on the south side of the Thames. Indeed, in the case of the Thames, it appears that the supply of pilots would be wholly insufficient for the work, if it were not that the licensed and compulsory pilots were supplemented by a large and very efficient class of unlicensed volunteers. And in the Mersey, on the other hand, under a strictly compulsory system, the supply of licensed pilots is so much too large, that the authorities are obliged to reduce the number, in order to provide adequate employment and payment for those that remain. In fact, where pilots are really wanted, they are as much employed and paid under a voluntary as under a compulsory system ; it may be said that, if this is the case, there is no hardship on the shipowner in compelling him to employ a pilot. But there is this great difference : if the employment is voluntary, the pilot must be efficient in order to obtain it ; and if he is efficient, he is likely to be employed. If the employment is compulsory, there is no effectual security for his efficiency. And there is the further great difference, that in the former case the responsibility rests with the employer, in the latter with the Government, Legislature, or pilotage authority ; in other words, with nobody.

Evidence to Committee of 1860.

2. That it is necessary for the protection of the ship, its crew, its passengers, and cargo.

In answer to this reason, your Committee would observe, that it is no part of the business of Government to take a ship out of the hands of those most interested in her safety ; and that merchants, shipowners, and insurers are much better judges of what they need than Government can be. So far as life is concerned, upon which considerable stress has been laid, it has been shown to your Committee that coasting passengers steamers, which probably carry more human lives than any other class of vessels, have been practically exempted from compulsory pilotage, both at Liverpool and on the Thames ; and that either for the interest of the owner, under the present law of liability, or for other reasons, these steamers have always been navigated by very competent persons, and have been peculiarly free from the accidents incident to difficult pilotage.

3. That it is necessary to place every ship in the hands of a pilot on entering a port, in order to prevent confusion and risk to other ships in the port.

This, however, is a matter not of pilotage, but of port regulation, and is generally so regarded. In the Thames, where a very large proportion of the ships which navigate the river are free from compulsory pilotage, every ship employs a competent pilot, licensed or unlicensed, and no difficulty is experienced.

4. That without the obligation arising out of a strict service, out of stringent regulations, and out of a corresponding obligation on the part of the ship to employ a pilot, the pilots will not feel themselves morally bound to give willing and efficient service.

Your Committee would scarcely have thought it necessary to notice this reason, if it had not been advanced by able witnesses from Liverpool. If evidence were needed to show that the general principles of human conduct are applicable to pilotage, and that in pilotage as in other matters of business, self interest and competition are more efficient stimulants than rules and discipline, such evidence is supplied in abundance by the cases in which pilotage is voluntary.

5. That the step taken by the Bill is one-sided and incomplete ; that it retains a fixed price ; a licensed corps ; limited numbers ; stringent regulations as to cruising, and obligations on the pilots to accept an offered service. And that

that in these respects it is unfair on the pilot; whilst it fails to give either party the benefit of complete freedom.

It will be seen from previous remarks that your Committee have been led to the conclusion that the present Bill may in many districts lead to further steps in the direction of freedom.

But for this the pilotage authorities have ample powers; and in the meantime there is nothing unreasonable in imposing on a body of men who, by obtaining licenses, will still have a monopoly of a necessary employment, such restrictions and regulations as may be found necessary.

But whatever further steps may be hereafter found necessary, your Committee are satisfied that the first essential step is the abolition of the obligation to employ a pilot. When the shipowner is at liberty to employ a pilot or not according as he finds him useful, he will have the means by which he can in time compel all other improvements which may be needed.

The present Bill will place matters in districts in which pilotage is non-compulsory in the same position in which matters are when pilotage is voluntary, and will leave it in the hands of the pilotage authorities to make such further changes (if any) as may be found necessary.

6. That if further improvements are to be left to the pilotage authorities, the abolition or retention of compulsory pilotage may also be left to them, especially when these authorities are elected and representative boards.

Your Committee are of opinion that the case does not admit of the delay which this objection would involve. Local authorities are not always disposed to recognise the altered conditions of trade; and in the present instance it is very doubtful whether they represent fully the growing steam trade; nor do the pilotage authorities of a port necessarily represent the ships which trade to a port. And there is no doubt a tendency in all governing bodies and their officers to become strongly attached to systems which they have administered.

Moreover, in the present case the proposed change in the law is one of such general application, and involving such important consequences, not only to the port itself but to the strangers who come to it, as to render it especially undesirable to leave it to the caprices of local legislation. With the law of liability, for instance, no authority short of the Imperial Parliament can properly deal. And, finally, in the opinion of your Committee, no case has been made out for special and exceptional legislation. When the difficulties of pilotage are great the demand for pilots, and the consequent supply of pilots, is great in proportion.

On the other hand, the objections to the practice of compelling ships to employ pilots are as follows:—

1. It is unjust, for it obliges many ships that do not require pilots, to pay for keeping up a staff for those who do.

2. The system tends to create and maintain a body of protected monopolists, whose interests are not identical with those of the shipowner, who know that they must be employed, and whose independent services are probably not so readily or so effectively given as if their employment depended on their efficiency.

3. A further and very serious objection is to be found in the consequence as regards liability, which has been so fully stated above.

The liability of the owner and his servants is put an end to, and the security against mismanagement arising from this liability is seriously diminished, whilst persons sustaining damage by collision are deprived of their remedy.

4. The captain and his officers, from their acquaintance with their ship and crew, are better able to handle her, even in pilotage waters, than a pilot to whom the vessel is strange. To compel the former to give up charge to the latter leads to disaster.

The two last objections are fully admitted by most of the advocates of compulsory pilotage. And some of them, whilst advocating the retention of compulsory pilotage, still propose that the pilot shall not be allowed to interfere with, but shall only advise, the captain; and that the shipowner shall be liable for the acts of the pilot.

It is obvious, however, that any attempt to carry this proposal into effect

would be met by very serious opposition from the great body of shipowners. The legal principles on which the present law is founded, viz., that a man is liable for the acts of those whom he voluntary employs, but not for the acts of those whom he is compelled to employ, appears to your Committee to be in itself just and reasonable. And if, for the sake of remedying a practical inconvenience, this principle is departed from, it is probable that further anomalies and inconveniences will be the result. Nor is it likely that the captain and the pilot will ever assume their proper relative positions so long as the former is compelled to employ the latter.

Your Committee are therefore of opinion that the immunity from liability must stand or fall with the legal obligation to employ a pilot.

Looking to the above considerations it appears to your Committee, on the one hand, that the reasons alleged in support of compulsory pilotage admit of satisfactory answers; and that on the other hand, the evils to which it gives rise are of the most serious character, and are such that it is impracticable to cure them without abolishing compulsory pilotage altogether. They have, therefore, come to the conclusion that the principle upon which the Bill is founded, is a right one, and that the Bill should, with the amendments which your Committee have made in it, be passed into a law at as early a date as possible. Your Committee are satisfied that if this is done, not only will the trade of the country suffer no injury, but that the step thus taken will lead to further improvements in the pilotage service of the different ports, and will in the end render that service more remunerative to efficient pilots as well as more satisfactory to their employers.

PROCEEDINGS OF THE COMMITTEE.

Tuesday, 15*th March* 1870.

MEMBERS PRESENT:

Sir John Hay.	Mr. Brassey.
Mr. John Stewart Hardy.	Mr. P. Wykeham Martin.
Mr. Cave.	Mr. Pemberton.
Mr. Graves.	Sir Henry Selwin-Ibbetson.
Mr. Childers.	Colonel Bourne.
Mr. Malcolm.	Mr. Turner.
Mr. Price.	Sir Charles Wingfield.
Mr. Lefevre.	Mr. Stevenson.

Mr. Shaw Lefevre was called to the Chair.

The Committee deliberated.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 22*nd March* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir John Hay.	Sir Charles Wingfield.
Mr. John Stewart.	Mr. Price.
Mr. Turner.	Mr. Gourley.
Colonel Bourne.	Mr. Grieve.
Mr. Cave.	Mr. Norwood.
Mr. Graves.	Mr. Malcolm.
Mr. Wykeham Martin.	Sir Henry Selwin-Ibbetson.
Mr. Brassey.	Mr. Stevenson.
Mr. Pemberton.	

Mr. *Thomas Henry Farrer* was examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 25*th March* 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir John Hay.
Mr. John Stewart Hardy.
Mr. Turner.
Colonel Bourne.
Mr. Pemberton.
Mr. Gourley.
Mr. Grieve.
Mr. Cave.
Sir Charles Wingfield.
Mr. Graves.
Mr. Stevenson.
Mr. Brassey.
Mr. Norwood.
Mr. Malcolm.
Mr. Wykeham Martin.
Mr. Price.
Sir Henry Selwin-Ibbetson.

Mr. *Thomas Henry Farrer* was further examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 1*st April* 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir John Hay.
Mr. John Stewart Hardy.
Mr. Turner.
Colonel Bourne.
Mr. Gourley.
Mr. Grieve.
Mr. Cave.
Sir Charles Wingfield.
Mr. Stevenson.
Mr. Brassey.
Sir Henry Selwin-Ibbetson.
Mr. Price.
Mr. Norwood.
Mr. Wykeham Martin.
Mr. Graves.
Mr. Malcolm.
Mr. Pemberton.

Mr. *T. H. Farrer* was further examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 5*th April* 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir John Hay.
Colonel Bourne.
Mr. Grieve.
Mr. Gourley.
Mr. Cave.
Sir Charles Wingfield.
Mr. Graves.
Mr. Wykeham Martin.
Mr. Stevenson.
Mr. Norwood.
Sir Henry Selwin-Ibbetson.
Mr. John Stewart Hardy.
Mr. Turner.
Mr. Malcolm.
Mr. Pemberton.

Mr. *William Brown Clegram* and Sir *Frederick Arrow* were severally examined.

Motion

Motion made, and Question put, "That the Committee do now adjourn"—(Sir *John Hay*).—The Committee divided.

Ayes, 8.	Noes, 7.
Sir John Hay.	Mr. Gourley.
Mr. John Stewart Hardy.	Sir C. Wingfield.
Mr. Turner.	Mr. Stevenson.
Colonel Bourne.	Mr. Grieve.
Mr. Pemberton.	Mr. Cave.
Mr. Graves.	Mr. Wykeham Martin.
Mr. Malcolm.	Mr. Norwood.
Sir H. Selwin-Ibbetson.	

[Adjourned till Friday next, at Twelve o'clock.

Friday, 8th April 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir John Hay.	Mr. Wykeham Martin.
Mr. John Stewart Hardy.	Mr. Stevenson.
Colonel Bourne.	Mr. Brassey.
Mr. Grieve.	Mr. Price.
Mr. Gourley.	Mr. Malcolm.
Mr. Cave.	Mr. Norwood.
Sir Charles Wingfield.	Mr. Turner.
Mr. Graves.	Mr. Pemberton.
Sir Henry Selwin-Ibbetson.	

Sir *Frederick Arrow* was further examined.

[Adjourned till Tuesday, 26th April, at Twelve o'clock.

Tuesday, 26th April 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir John Hay.	Sir Charles Wingfield.
Colonel Bourne.	Mr. Charles Turner.
Mr. Graves.	Mr. Stevenson.
Mr. Brassey.	Mr. Price.
Sir H. Selwin-Ibbetson.	Mr. Pemberton.
Mr. Wykeham Martin.	Mr. Gourley.
Mr. John Stewart Hardy.	Mr. Norwood.
Mr. Grieve.	

Captain *Judkins* and Mr. *Andrew Tucker Squarey* were severally examined.

[Adjourned till To-morrow, at Twelve o'clock.

Wednesday, 27th April 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Mr. Brassey.	Mr. Grieve.
Mr. Graves.	Mr. Charles Turner.
Sir Charles Wingfield.	Mr. Stevenson.
Mr. Wykeham Martin.	Mr. Cave.
Mr. Gourley.	Mr. John Stewart Hardy.

Mr. *Andrew Tucker Squarey* was further examined.

Captain *Graham Hewitt Hills*, R.N., was examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 29th April 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Mr. John Stewart Hardy.	Mr. Stevenson.
Mr. Charles Turner.	Mr. Price.
Colonel Bourne.	Sir Henry Selwin-Ibbetson.
Mr. Grieve.	Mr. Malcolm.
Mr. Gourley.	Sir John Hay.
Sir Charles Wingfield.	Mr. Norwood.
Mr. Graves.	Mr. Cave.
Mr. Wykeham Martin.	

Captain *Ballantine*, Mr. *John Towne Danson*, and Mr. *Thomas Richard Shallcross* were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 3rd May 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Mr. Charles Turner.	Sir H. Selwin-Ibbetson.
Mr. Malcolm.	Mr. Gourley.
Mr. Stevenson.	Mr. Pemberton.
Mr. Graves.	Mr. Wykeham Martin.
Sir Charles Wingfield.	Sir John Hay.
Mr. Brassey.	Mr. Norwood.
Mr. Grieve.	Mr. John Stewart Hardy.
Colonel Bourne.	Mr. Cave.

Mr. *J. Lamport*, Mr. *M. Moss*, and Mr. *R. Galloway* were severally examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 6th May 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir John Hay.	Mr. Gourley.
Mr. C. Turner.	Colonel Bourne.
Mr. Graves.	Mr. Brassey.
Mr. Philip Wykeham Martin.	Mr. Pemberton.
Mr. Norwood.	Sir H. Selwin-Ibbetson.
Sir C. Wingfield.	Mr. Stevenson.
Mr. Malcolm.	Mr. J. Stewart Hardy.
Mr. Grieve.	Mr. Cave.

Mr. *Robert P. J. Simpson,* R.N., examined.

The Committee deliberated.

Admiral *George Evans* and Mr. *Henry Bremner* were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 10th May 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Mr. Graves.	Mr. Gourley.
Mr. Norwood.	Mr. Grieve.
Mr. Stevenson.	Mr. Philip Wykeham Martin.
Mr. Brassey.	Mr. Charles Turner.
Mr. Malcolm.	Mr. Cave.
Mr. Price.	Mr. J. Stewart Hardy.
Sir C. Wingfield.	Sir John Hay.

Mr. *Angus Turner,* Mr. *Thomas Henderson,* Mr. *James Allan,* Mr. *John M'Kelvey,* and Mr. *Alexander Alexander* were severally examined.

[Adjourned till To-morrow, at Twelve o'clock.

Wednesday, 11th May 1870.

MEMBERS PRESENT:

Mr. Cave in the Chair.

Afterwards Mr. Shaw Lefevre in the Chair.

Sir C. Wingfield.	Mr. Pemberton.
Mr. Philip Wykeham Martin.	Mr. Price.
Mr. Norwood.	Mr. Malcolm.
Mr. Grieve.	Mr. Graves.
Mr. Charles Turner.	Mr. J. Stewart Hardy.

Mr. *Anthony Bannister,* Mr. *Dale Brown,* Mr. *William Henry Brewis,* Mr. *John Lumsden,* and Mr. *John Harvey* were severally examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 13*th May* 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Mr. Cave.	Sir H. Selwin-Ibbetson.
Sir C. Wingfield.	Mr. Philip Wykeham Martin.
Mr. Gourley.	Mr. Price.
Mr. Grieve.	Mr. Graves.
Mr. J. S. Hardy.	Mr. C. Turner.
Mr. Norwood.	Mr. Brassey.
Mr. Malcolm.	Sir John Hay.

Mr. *Anthony Bannister* further examined.

Captain *John Drew*, Captain *John Rosser*, and Mr. *Thomas Ford* were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 17*th May* 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Mr. P. Wykeham Martin.	Sir H. Selwin-Ibbetson.
Mr. Graves.	Mr. Pemberton.
Sir C. Wingfield.	Colonel Bourne.
Mr. Cave.	Mr. Gourley.
Mr. C. Turner.	Mr. J. Stewart Hardy.
Mr. Grieve.	Mr. Norwood.
Mr. Brassey.	

Mr. *John B. Miller*, Mr. *John Capon Mallett*, Mr. *Frederick Augustus Castle*, Mr. *Henry Tillman*, and Mr. *Thomas Ralph* were severally examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 20*th May* 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Mr. Graves.	Mr. Stevenson.
Mr. Brassey.	Mr. Norwood.
Mr. Price.	Mr. P. Wykeham Martin.
Sir H. Selwin-Ibbetson.	Colonel Bourne.
Mr. Malcolm.	Sir C. Wingfield.
Mr. Grieve.	Mr. Cave.
Mr. Pemberton.	Sir John Hay.

Mr. *John Taylor*, Mr. *Alfred Tozer*, Mr. *William Barfield*, Mr. *William Daines*, Mr. *Richard Triphook*, Mr. *James Doyle*, and Mr. *William Webb* were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 24*th May* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir C. Wingfield.	Sir H. Selwin-Ibbetson.
Mr. Cave.	Mr. Stevenson.
Mr. Gourley.	Mr. Price.
Mr. Grieve.	Mr. Charles Turner.
Colonel Bourne.	Mr. J. Stewart Hardy.
Mr. Graves.	Sir John Hay.
Mr. Brassey.	

Mr. *Frederick Patteson*, Mr. *William Spelding*, Mr. *George Thomas Hinton*, Mr. *George Duncan*, Mr. *Robert Macfaren*, and Mr. *James Cochrane* were severally examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 27*th May* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir John Hay.	Mr. Stevenson.
Mr. Gourley.	Mr. Price.
Mr. Graves.	Mr. Hardy.
Sir Henry Selwin-Ibbetson.	Mr. Turner.
Mr. Grieve.	Mr. Norwood.
Mr. Cave.	

Mr. *Patrick Benson*, Mr. *Frederick Leyland*, Mr. *William Inman*, Mr. *John Marwood*, and Mr. *Henry Jones* were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 31*st May* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir John Hay.	Mr. Stevenson.
Colonel Bourne.	Mr. Gourley.
Mr. Grieve.	Mr. T. Brassey.
Sir Henry Selwin-Ibbetson.	Mr. Wykeham Martin.
Mr. Graves.	Mr. Pemberton.

Mr. *William Watson*, Mr. *John Thompson Bouch*, and Captain *Thomas Reynolds* were severally examined.

[Adjourned till Tuesday, 14th June, at Twelve o'clock.

Tuesday, 14*th June* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir John Hay.	Mr. Price.
Mr. John Stewart Hardy.	Sir Henry Selwin-Ibbetson.
Colonel Bourne.	Mr. Wykeham Martin.
Mr. Grieve.	Mr. Charles Turner.
Sir Charles Wingfield.	Mr. Cave.

Mr. Stevenson.	

Mr. *Alfred Holt*, Mr. *Henry Owens Johnson*, Mr. *Robert Chaddock*, Mr. *Francis James Beckett*, Sir *Frederick Arrow*, Mr. *Robert Lee*, Mr. *William Adams*, and Mr. *Matthew Lamert Irvin* were severally examined.

[Adjourned till To-morrow, at Twelve o'clock.

Wednesday, 15*th June* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Mr. John Stewart Hardy.	Mr. Wykeham Martin.
Mr. Gourley.	Mr. Cave.
Sir Charles Wingfield.	Mr. Charles Turner.
Mr. Stevenson.	Mr. Price.
Mr. Malcolm.	Sir John Hay.
Mr. Graves.	Mr. Brassey.

Mr. *Howard Fox*, Mr. *Henri Josse*, Mr. *Thomas Oates*, Captain *James Johnson*, Mr. *George Henry Evans*, Mr. *William Wood*, Mr. *Charles Joseph Luton*, Mr. *Anthony G. Robinson*, Mr. *Thomas Davies*, and Mr. *Richard Williams* were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 21*st June* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir John Hay.	Mr. Graves.
Mr. J. Stewart Hardy.	Mr. Wykeham Martin.
Mr. Pemberton.	Mr. Stevenson.
Mr. Turner.	Mr. Thomas Brassey.
Colonel Bourne.	Mr. Price.
Mr. Gourley.	Sir Henry Selwin-Ibbetson.
Mr. Grieve.	Mr. Malcolm.
Sir Charles Wingfield.	Mr. Norwood.
Mr. Childers.	

A Paper

A Paper handed in by Mr. *Graves*, was read, and ordered to be placed in the Appendix.

The Preamble of the Bill was *postponed*.

Clause 1.—Amendment proposed in line 10, after the word "pilot" to insert the words "except in those districts and ports in which the pilotage authority now existing, or hereafter to be constituted in accordance with the Act, shall deem it desirable to continue the present law"—(Sir *John Hay*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 8.	Noes, 8.
Sir John Hay.	Mr. Gourley.
Mr. J. Stewart Hardy.	Mr. Grieve.
Mr. Pemberton.	Sir C. Wingfield.
Mr. Turner.	Mr. Childers.
Colonel Bourne.	Mr. Wykeham Martin.
Mr. Graves.	Mr. Stevenson.
Sir H. Selwin-Ibbetson.	Mr. Brassey.
Mr. Malcolm.	Mr. Price.

Whereupon the Chairman declared himself with the Noes.

Another Amendment proposed in line 10, after the word "pilot" to insert the words "Provided that in every port in which a pilotage authority now exists, or may hereafter be created, which represents by election the trade and commerce of the port, it shall be left to such pilotage authority to decide whether any compulsory system which may be in force at such port shall be retained or abolished; but not no such power shall be vested in any pilotage authority, the constitution of which shall not have been approved by the Board of Trade. Provided also, that any such pilotage authority as above mentioned shall have full power from time to time to increase, alter, modify, and re-adjust the pilotage charges within their district as they may think proper. Provided also, that in every port in which such a pilotage authority as above mentioned does not now exist, or shall not be created within 12 months from the passing of this Act, the power determining whether a compulsory system of pilotage shall be continued or abolished, shall be exercised by the Trinity House of Deptford Strond. Provided also, that in every case in which a system of compulsory pilotage shall be abolished, pursuant to this clause, due regard shall be had to the interests of pilots, boat-owners, and other pilotage officers affected thereby"—(Mr. *Graves*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 8.	Noes, 8.
Sir John Hay.	Mr. Gourley.
Mr. J. Stewart Hardy.	Mr. Grieve.
Mr. Pemberton.	Sir C. Wingfield.
Mr. Turner.	Mr. Childers.
Colonel Bourne.	Mr. Wykeham Martin.
Mr. Graves.	Mr. Stevenson.
Sir H. Selwin-Ibbetson.	Mr. Brassey.
Mr. Malcolm.	Mr. Price.

Whereupon the Chairman declared himself with the Noes.

Question put, That the Clause stand part of the Bill.—The Committee divided:

Ayes, 10.	Noes, 7.
Mr. Gourley.	Sir John Hay.
Mr. Grieve.	Mr. Hardy.
Sir C. Wingfield.	Mr. Pemberton.
Mr. Childers.	Mr. Turner.
Mr. Wykeham Martin.	Colonel Bourne.
Mr. Norwood.	Mr. Graves.
Mr. Stevenson.	Mr. Malcolm.
Mr. Brassey.	
Mr. Price.	
Sir H. Selwin-Ibbetson.	

Clause 2.—Amendment proposed in line 1, to leave out the words, "If in consequence of the operation of this Act," in order to insert the words, "Whereas in consequence of the operation of this Act, the earnings of the present licensed pilots may be damaged by the passing of this Act, by the abolition of the exclusive rights and privileges which they have hitherto enjoyed as such pilots: Be it enacted that the Commissioners of Her Majesty's Treasury, by examination on oath or otherwise, which oath they are hereby authorised to administer, may inquire into, and may, by the production of such evidence or otherwise, as they shall think fit, require, ascertain, and absolutely determine the net annual amount of the earnings of each pilot on an average of five years immediately preceding the commencement of this Act, or of such proportion of five years as shall have elapsed since each pilot was licensed, and shall award to each such pilot a sum of money or annual payment during the

the term of his natural life of such amount as shall be equal to one-third of the net annual earnings of such pilot, upon the said average of five years, or of such proportion of the five years as aforesaid"—(Mr. *Pemberton*)—instead thereof.

Question put, That the words "If in consequence of the operation of this Act" stand part of the Clause.—The Committee divided:

Ayes, 10.	Noes, 5.
Mr. Hardy.	Mr. Pemberton.
Mr. Gourley.	Mr. Turner.
Mr. Grieve.	Colonel Bourne.
Sir C. Wingfield.	Mr. Graves.
Mr. Wykeham Martin.	Mr. Brassey.
Mr. Norwood.	
Mr. Stevenson.	
Mr. Price.	
Sir H. Selwin-Ibbetson.	
Mr. Malcolm.	

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 28th June 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir C. Wingfield.	Colonel Bourne.
Sir John Hay.	Mr. Price.
Mr. J. Stewart Hardy.	Mr. Gourley.
Mr. Charles Turner.	Mr. Brassey.
Mr. Grieve.	Mr. Stevenson.
Mr. Malcolm.	Mr. Norwood.
Mr. Graves.	Mr. Wykeham Martin.
Mr. Pemberton.	Mr. Cave.

Clause 2 further considered.—Amendment proposed in line 21, after the word "has," leave out the words "been caused by the operation of the Act," in order to insert the words "not been caused by the falling off of the trade of the port, or any matter within the control of the pilots"—(Sir *J. Hay*)—instead thereof.—Question put, That the words proposed to be left out stand part of the Clause.—The Committee divided:

Ayes, 11.	Noes, 5.
Mr. Hardy.	Sir J. Hay.
Mr. Grieve.	Mr. Pemberton.
Sir C. Wingfield.	Mr. Turner.
Mr. Price.	Colonel Bourne.
Mr. Gourley.	Mr. Graves.
Mr. Brassey.	
Mr. Stevenson.	
Mr. Wykeham Martin.	
Mr. Norwood.	
Mr. Malcolm.	
Mr. Cave.	

Amendment proposed in line 23, after the word "trade" to leave out the word "may," in order to insert the word "shall"—(Mr. *Graves*)—instead thereof.—Question put, That the word "may" stand part of the Clause.—The Committee divided:

Ayes, 8.	Noes, 7.
Mr. Grieve.	Sir J. Hay.
Sir. C. Wingfield.	Mr. Hardy.
Mr. Price.	Mr. Turner.
Mr. Gourley.	Colonel Bourne.
Mr. Brassey.	Mr. Graves.
Mr. Stevenson.	Mr. Malcolm.
Mr. Wykeham Martin.	Mr. Cave.
Mr. Norwood.	

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 30th June 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Mr. Turner.	Mr. Brassey.
Mr. Graves.	Mr. Price.
Mr. Grieve.	Mr. Pemberton.
Mr. Stevenson.	Mr. Wykeham Martin.
Mr. Malcolm.	Mr. Gourley.
Sir C. Wingfield.	Colonel Bourne.
Mr. Norwood.	

Clause 2, further considered.—Amendment proposed in line 26, to leave out from the word "Act" to the end of sub-section 3, in order to insert the words "report to the Commissioners of Her Majesty's Treasury concerning such application, or the Commissioners may, upon receiving such report, make a grant to the pilotage authority, either by way of annual payment or otherwise, out of monies to be provided by Parliament for that purpose, of a sum of money to be applied by such authority, either towards compensation of the pilots in respect of the loss of employment which they may suffer by the operation of this Act, or towards the superannuation of a certain number of such pilots"—(*The Chairman*)—instead thereof.—Question, That the words proposed to be left out stand part of the clause, put and *negatived.*

Question proposed, that the proposed words be there inserted.—Amendment proposed to the said proposed amendment, to insert after the words "compensation of the," the words "Commodore or Superintendent"—(Mr. *Norwood*).—Question put, That those words be inserted in the proposed Amendment.—The Committee divided:

Ayes, 6.	Noes, 6.
Mr. Pemberton.	Mr. Grieve.
Mr. Turner.	Sir C. Wingfield.
Mr. Graves.	Mr. Price.
Mr. Brassey.	Mr. Gourley.
Mr. Norwood.	Mr. Stevenson.
Mr. Malcolm.	Mr. Wykeham Martin.

Whereupon the Chairman declared himself with the Noes.

Another amendment proposed to the proposed amendment to leave out the word "employment," in order to insert the word "income"—(Mr. *Norwood*)—instead thereof.—Question, That the word "employment" stand part of the said proposed amendment, put, and *negatived.*—Word "income" inserted.—Question put, That the proposed amendment as amended be inserted in the clause.—The Committee divided:

Ayes, 9.	Noes, 4.
Mr. Grieve.	Mr. Pemberton.
Sir. C. Wingfield.	Mr. Turner.
Mr. Price.	Colonel Bourne.
Mr. Gourley.	Mr. Graves.
Mr. Brassey.	
Mr. Stevenson.	
Mr. Wykeham Martin.	
Mr. Norwood.	
Mr. Malcolm.	

Another amendment proposed, after the last amendment to insert the words—"Always provided the Board of Trade may, on fresh proof of diminished income, authorise the pilotage authority to reduce the number of pilots licensed by such authority, and such reduction shall be effected by withdrawing from the list of acting pilots, as in the opinion of the pilotage authority, with the consent of the Board of Trade, it may be needful to withdraw, so that every licensed pilot who continues to act as a pilot in the district may receive the annual amount of income previously received by such pilot, to be computed upon an average of three years immediately preceding the passing of this Act; and the pilotage authority shall annually pay to each of such pilots as it may have been found needful to withdraw as aforesaid, out of the moneys to be provided as hereinafter mentioned, for and during the term of his natural life, an amount of not more than two-thirds of the emoluments previously received by such pilot, to be computed upon the average of

three years as aforesaid, or of such shorter period as such pilots may have been licensed"—(Mr. *Graves*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 5.	Noes, 8.
Mr. Pemberton.	Mr. Grieve.
Mr. Turner.	Sir C. Wingfield.
Colonel Bourne.	Mr. Price.
Mr. Graves.	Mr. Gourley.
Mr. Malcolm.	Mr. Brassey.
	Mr. Stevenson.
	Mr. Wykeham Martin.
	Mr. Norwood.

Another amendment proposed, after the last amendment to insert the words "such superannuation not being less than one-third of their average earnings during the three preceding years"—(Mr. *Pemberton*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 5.	Noes, 7.
Mr. Pemberton.	Mr. Grieve.
Mr. Turner.	Sir C. Wingfield.
Colonel Bourne.	Mr. Price.
Mr. Graves.	Mr. Gourley.
Mr. Brassey.	Mr. Stevenson.
	Mr. Wykeham Martin.
	Mr. Malcolm.

Another amendment proposed, after the last amendment, to insert the words "officers employed under a pilotage authority, shall in every case in which they can give proof of a loss of income caused by the operation of this Act, be entitled to compensation"—(Mr. *Graves*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 5.	Noes, 6.
Mr. Pemberton.	Mr. Grieve.
Mr. Turner.	Sir C. Wingfield.
Colonel Bourne.	Mr. Price.
Mr. Graves.	Mr. Gourley.
Mr. Malcolm.	Mr Stevenson.
	Mr. Wykeham Martin.

Sub-sections 4 and 5, *disagreed to*.

Sub-section 6, Amendments made.

Amendment proposed, at the end of the clause to add the words "it shall be lawful for the Board of Trade to exercise the powers given to it by the 3rd sub-section of this clause, notwithstanding that any pilotage authority shall neglect or refuse to make such application as is set forth in the 1st sub-section of the clause"—(Mr. *Graves*).—Question put, That those words be there added.—The Committee divided:

Ayes, 10.	Noes, 3.
Mr. Pemberton.	Mr. Grieve.
Mr. Turner.	Mr. Price.
Colonel Bourne.	Mr. Wykeham Martin.
Sir C. Wingfield.	
Mr. Graves.	
Mr. Gourley.	
Mr. Brassey.	
Mr. Stevenson.	
Mr. Norwood.	
Mr. Malcolm.	

Another amendment proposed after the last amendment, to add the words "And whereas certain pilots and others in different pilotage districts, upon the faith that the compulsory system of pilotage would be maintained, have invested large capital in the purchase, building, and maintenance of the pilot boats or cutters used or employed in the pilotage service of such district; and it is just and reasonable that full compensation should be made to such pilots and others for the change which will be effected by the passing of this Act: Be it therefore enacted, that immediately after the passing of this Act it shall be lawful for the Board of Trade, and they are hereby required, to ascertain to their satisfaction in such manner as they may deem most expedient, the exact price or sum which each pilot or other person has paid for the share or shares which he may hold in any pilot boat or cutter in any district at the time of the passing of this Act: That the Board of Trade, upon being so satisfied, shall make a report to the Commissioners of Her Majesty's Treasury, who shall forthwith pay to each of such pilots or other person, out of moneys to be provided by Parliament for the purpose, such sum or sums as he may have paid for the share or shares held

held by him in such pilot boat or cutter, and upon payment of such sum or sums, such pilot and other person shall transfer to the Commissioners of Her Majesty's Treasury, or to such person or persons as they may appoint, his share or shares in the said pilot boats or cutters, to be disposed of, dealt with, used, or employed as the Board of Trade may thereafter direct" —(Mr. *Graves*).—Question proposed, That those words be there added—whereupon amendment proposed to the proposed amendment, to leave out from the word "that," in line 7, to the end of the proposed amendment, in order to add the words "in the event of its appearing desirable by the pilotage authority of a district, in consequence of the operation of this Act, to reduce the number of boats or cutters employed before the passing of this Act, the Commissioners of Her Majesty's Treasury, on the application of the Board of Trade, may pay to the owners of such boat or boats a sum of money towards compensation for such loss of employment"—(Mr. *Norwood*)—instead thereof.—Question put, That the words proposed to be left out stand part of the said proposed amendment.—The Committee divided:

Ayes, 5.	Noes, 8.
Mr. Pemberton.	Mr. Grieve.
Mr. Turner.	Sir C. Wingfield.
Colonel Bourne.	Mr. Price.
Mr. Graves.	Mr. Gourley.
Mr. Malcolm.	Mr. Brassey.
	Mr. Stevenson.
	Mr. Wykeham Martin.
	Mr. Norwood.

Question put, That the proposed words be added instead thereof.—The Committee divided:

Ayes, 7.	Noes, 6.
Mr. Pemberton.	Mr. Turner.
Sir C. Wingfield.	Colonel Bourne.
Mr. Brassey.	Mr. Grieve.
Mr. Stevenson.	Mr. Graves.
Mr. Wykeham Martin.	Mr. Price.
Mr. Norwood.	Mr. Gourley.
Mr. Malcolm.	

Question put, That the proposed amendment, as amended, be added to the Clause.—The Committee divided:

Ayes, 8.	Noes, 5.
Mr. Pemberton.	Mr. Turner.
Colonel Bourne.	Mr. Grieve.
Sir C. Wingfield.	Mr. Graves.
Mr. Brassey.	Mr. Price.
Mr. Stevenson.	Mr. Gourley.
Mr. Wykeham Martin.	
Mr. Norwood.	
Mr. Malcolm.	

Clause as amended, *agreed to.*

Clause 3, *disagreed to.*

Clause 4, amended, and *agreed to.*

Clause 5.—Amendment proposed, in line 2, to leave out the word "seventy"—(Mr. *Turner*).—Question put, That the word "seventy," stand part of the Clause.—The Committee divided:

Ayes, 8.	Noes, 5.
Mr. Grieve.	Mr. Pemberton.
Sir C. Wingfield.	Mr. Turner.
Mr. Price.	Colonel Bourne.
Mr. Gourley.	Mr. Graves.
Mr. Brassey.	Mr. Malcolm.
Mr. Stevenson.	
Mr. Wykeham Martin.	
Mr. Norwood.	

Clause *agreed to.*

Clause 6, amended, and *agreed to.*

Clause 7, *agreed to.*

New Clause (Pilotage Rates may be increased) added.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 4th July 1870.

MEMBERS PRESENT:

Mr. SHAW LEFEVRE in the Chair.

Sir John Hay.	Mr. Cave.
Mr. Hardy.	Mr. Brassey.
Sir C. Wingfield.	Mr. Turner.
Mr. Malcolm.	Colonel Bourne.
Mr. Stevenson.	Mr. Price.
Mr. Grieve.	Mr. Pemberton.
Mr. Graves.	Mr. Wykeham Martin.
Mr. Gourley.	Mr. Norwood.

New Clause (Any person after examination may be licensed to act as pilot between London and Gravesend)—(Sir *C. Wingfield*)—brought up, and read 1st time.—Question put, That the Clause be read a 2nd time.—The Committee divided:

Ayes, 9.	Noes, 6.
Sir J. Hay.	Mr. Cave.
Mr. Hardy.	Mr. Grieve.
Mr. Turner.	Mr. Srevenson.
Colonel Bourne.	Mr. Brassey.
Mr. Gourley.	Mr. Price.
Sir C. Wingfield.	Mr. Wykeham Martin.
Mr. Graves.	
Mr. Pemberton.	
Mr. Malcolm.	

Amendments made.

Question put, That the clause as amended stand part of the Bill.—The Committee divided:

Ayes, 9.	Noes, 6.
Sir J. Hay.	Mr. Cave.
Mr. Hardy.	Mr. Grieve.
Mr. Turner.	Mr. Stephenson.
Colonel Bourne.	Mr. Brassey.
Mr. Gourley.	Mr. Price.
Sir C. Wingfield.	Mr. Wykeham Martin.
Mr. Graves.	
Mr. Pemberton.	
Mr. Malcolm.	

New Clause (As to navigation of the Rivers Clyde and Avon)—(Mr. *Cave*)—brought up, and read 1st time.—Question put, "That the Clause be read a 2nd time."—The Committee divided:

Ayes, 11.	Noes, 3.
Sir J. Hay.	Mr. Grieve.
Mr. Hardy.	Mr. Gourley.
Mr. Turner.	Mr. Stevenson.
Colonel Bourne.	
Mr. Cave.	
Sir C. Wingfield.	
Mr. Brassey.	
Mr. Price.	
Mr. Wykeham Martin.	
Mr. Malcolm.	
Mr. Norwood.	

Amendment proposed to be made to the Clause, by leaving out the words "Trustees of the Clyde Navigation," and inserting the words "Clyde Pilot Board"—(Mr. *Grieve*)—instead thereof.

Question

Question put, That the words "Trustees of the Clyde Navigation," stand part of the Clause.—The Committee divided:

Ayes, 10.	Noes, 4.
Sir John Hay.	Mr. Cave.
Mr. Hardy.	Mr. Grieve.
Mr. Turner.	Mr. Stevenson.
Colonel Bourne.	Mr. Brassey.
Sir C. Wingfield.	
Mr. Graves.	
Mr. Pemberton.	
Mr. Wykeham Martin.	
Mr. Malcolm.	
Mr. Norwood.	

Clause added.

New Clause brought up, "Nothing in this Act shall extend to the Port of Liverpool" —(Mr. *Graves*),—and read 1st time.

Question put, That the Clause be read a 2nd time.—The Committee divided:

Ayes, 7.	Noes, 9.
Sir J. Hay.	Mr. Cave.
Mr. Hardy.	Mr. Grieve.
Mr. Turner.	Mr. Gourley.
Colonel Bourne.	Sir C. Wingfield.
Mr. Graves.	Mr. Stevenson.
Mr. Pemberton.	Mr. Brassey.
Mr. Norwood.	Mr. Price.
	Mr. Wykeham Martin.
	Mr. Norwood.

New Clause brought up, and read 1st time as follows:—"The master of any pilot boat whose income may be diminished by the passing of this Act shall be entitled to the same compensation, and to be calculated on the same principle, as pilots will be entitled to after the passing of this Act"—(Mr. *Pemberton*).—Question put, That the Clause be read a 2nd time.—The Committee divided:

Ayes, 10.	Noes, 6.
Sir J. Hay.	Mr. Grieve.
Mr. Hardy.	Mr. Gourley.
Mr. Turner.	Sir C. Wingfield.
Colonel Bourne.	Mr. Stevenson.
Mr. Cave.	Mr. Price.
Mr. Graves.	Mr. Wykeham Martin.
Mr. Brassey.	
Mr. Pemberton.	
Mr. Malcolm.	
Mr. Norwood.	

Amendment proposed to be made to the Clause by inserting, after pilot boat, the words "withdrawn by the pilotage authority with the consent of the Board of Trade"—(Mr. *Stevenson.*)—Question put, that those words be there inserted.—The Committee divided:

Ayes, 8.	Noes, 8.
Mr. Cave.	Sir J. Hay.
Mr. Grieve.	Mr. Hardy.
Mr. Gourley.	Mr. Turner.
Sir C. Wingfield.	Colonel Bourne.
Mr. Stevenson.	Mr. Graves.
Mr. Price.	Mr. Brassey.
Mr. Wykeham Martin.	Mr. Pemberton.
Mr. Norwood.	Mr. Malcolm.

Whereupon the Chairman declared himself with the Ayes.

Question put, That the Clause as amended be added to the Bill.—The Committee divided:

Ayes, 11.	Noes, 5.
Sir J. Hay.	Mr. Gourley.
Mr. Hardy.	Mr. Wingfield.
Mr. Turner.	Mr. Stevenson.
Colonel Bourne.	M. Price.
Mr. Cave.	Mr. Wykeham Martin.
Mr. Grieve.	
Mr. Graves.	
Mr. Brassey.	
Mr. Pemberton.	
Mr. Malcolm.	
Mr. Norwood.	

Preamble *agreed to.*

Motion made, and question proposed, "That the Chairman be directed to move the House for leave to make a Special Report"—(The *Chairman*).—Amendment, to leave out from the word "that" to the end of the question, in order to add the words, "Inasmuch as it appears that opinions are very much divided on many points of great importance, and as an amendment involving the principle of the universal abolition of compulsory pilotage was lost only by the casting vote of the Chairman (two members being absent), it is desirable, especially at this late period of the Session, and in view of the withdrawal of the Merchant Shipping Code, to present the Bill as altered for further discussion in the House, rather than to occupy further the time of this Committee in the consideration of Special Reports."—Question put, "That the words proposed to be left out stand part of the question."—The Committee divided:

Ayes, 7.	Noes, 7.
Mr. Grieve.	Sir J. Hay.
Mr. Gourley.	Mr. Hardy.
Sir C. Wingfield.	Mr. Turner.
Mr. Stevenson.	Colonel Bourne.
Mr. Price.	Mr. Graves.
Mr. Wykeham Martin.	Mr. Pemberton.
Mr. Norwood.	Mr. Malcolm.

Whereupon the Chairman declared himself with the Ayes.

Main question put.—The Committee divided:

Ayes, 7.	Noes, 7.
Mr. Grieve.	Sir J. Hay.
Mr. Gourley.	Mr. Hardy.
Sir C. Wingfield.	Mr. Turner.
Mr. Stevenson.	Colonel Bourne.
Mr. Price.	Mr. Graves.
Mr. Wykeham Martin.	Mr. Pemberton.
Mr. Norwood.	Mr. Malcolm.

Whereupon the Chairman declared himself with the Ayes.

Special Report proposed by the Chairman brought up, and read a first time, as follows:—

"Your Committee have taken evidence as to the present state of the law from the Permanent Secretary to the Board of Trade, and from the Deputy Master of the Trinity House. They have also taken evidence from the different ports at which compulsory pilotage exists, against the Bill; and, finally, they have taken evidence from the same ports, and from ports where pilotage is wholly voluntary, in favour of the Bill.

"By compulsory pilotage is meant a system which first of all fixes by authority the number of pilots which the trade of any given port is supposed to need; and then, partly in order to secure them employment and remuneration, partly in order to provide for the safety of ships, proceeds to require that all ships, or certain classes of ships, frequenting the port, shall employ them. It is difficult, without going into great detail, to give a complete and accurate account of the extent to which this system has prevailed, or still prevails, since not only does it exist in some ports and not in others, but where it does exist the exemptions vary in many different ways. In fact, the existence or non-existence of the obligation and the nature and extent of the exemptions from it differ in such an arbitrary and capricious manner as to show that they must have arisen from local and special legislation, without reference to general principles of any kind. Generally speaking, however, compulsory pilotage

pilotage exists in its most complete form at Liverpool, Dublin, on the Upper Clyde, at Bristol, and at some other smaller ports. In the London Trinity House districts, including the Thames, and most of the outports on the south coast, in Hull, and in some other ports, the system has been very largely modified by exemptions of different kinds; whilst in all the ports on the east coast (north of Hull), at Cork, Cardiff, Newport, and Gloucester, as well as at many other smaller ports, there is no compulsory pilotage whatever. A Return of the compulsory and non-compulsory districts has been laid before your Committee, by which it appears that the number of licensed pilots employed in districts where there is some kind of compulsion is 1,828; whilst in those where there is no compulsion whatever the number is 1,066. Appendix A., No. 20.

"When steamers first began to take a large part in the short trades, and from that time till after the repeal of the navigation laws, loud complaints were made against compulsory pilotage, especially on the part of coasting steamers. In 1848 an Act, 12 & 13 Vict. c. 88, was passed, enabling pilotage authorities at their own discretion to examine masters and mates, and, if they should be found competent, to give them certificates authorising them to pilot their own ships. This Act being permissive only, was acted on by the Trinity House and some other bodies, but to no great extent, and the complaints against compulsory pilotage still continued. In 1853 another Act, 16 & 17 Vict. c. 129, was passed, by which the Board of Trade was enabled, in case of refusal by any pilotage authority to examine masters or mates for pilotage certificates, to examine them itself, and to grant certificates exempting them from compulsory pilotage. These enactments were re-enacted in 1854, in clauses 340 to 344 of the Consolidated Merchant Shipping Act of that year, and still remain law. They are limited, however, in their operations by provisions that the certificates granted under them shall only apply to ships owned by the same owner, and that the names of the ships shall appear on the certificate; and every master or mate has to pay to the pilotage fund of the ports for which he is licensed the same fees upon the grant or renewal of his license which a regular pilot has to pay. Under these clauses a good many masters and mates have been examined. In a Return of this Session (No. 88, Parliamentary Paper, 1870), the number of masters and mates examined under this Act at the different ports and receiving certificates in the years 1868, 1869, are given. From these numbers it seems that the practice at the different ports differs largely. Thus the numbers of the largest ports for 1869 are as follows:— Farrer, 12 *et seq.*

Trinity House of London (including London and outports)	240
Liverpool	10
Glasgow	133
Hull	283
Bristol	30
Dublin	44

"In most cases the pilotage authorities, acting with the knowledge of the power possessed by the Board of Trade, have themselves conducted the examination.* In a few cases the Board of Trade have had to examine.

"At Liverpool the pilotage authority for long refused to examine at all; and only gave way upon the resolute expression of intention on the part of the Board of Trade to examine themselves. But very few examinations of masters have, as will be seen from the above figures, been held at Liverpool.

"There can be no doubt, however, that the effect of these clauses has been restricted by the conditions above referred to, and still more by the operation of the law of liability referred to below.

"A further alteration of the law, having an opposite tendency, though not adopted with any retrograde intention, was made in the same year, 1854. In 1851 a compulsory examination of masters and mates in the foreign-going trade was first introduced. In 1853–4 the question arose, whether to extend this examination to the home (or short foreign and coasting) trade. It was determined to do so with respect to passenger vessels only. The question then arose, to what the examination should extend. Seamanship was of course to be required, but as regards navigation, the thing needed was rather local than general knowledge. To meet this, it was determined to make all home trade passenger ships subject to compulsory pilotage in all ports where there are licensed pilots, unless the master or mate should obtain certificates enabling them to pilot their own vessels either under the clauses above referred to, or under a special provision inserted for the purpose of enabling the Board of Trade more easily to grant certificates when the local authorities should make difficulties. (*See* Clauses 354, 355 of the Merchant Shipping Act.) A new species of compulsory pilotage was thus introduced, with a new form of exemption. It seems not to have been the intention that pilots should be employed in these cases, but simply that officers should be compelled to qualify themselves.

"The Act of 1854 further provided, with respect to compulsory pilotage, that pilotage should continue compulsory where it was then compulsory (section 353); and that all existing

* Parliamentary Paper, 455, 1862, Nos. 102, 103, 104; Parliamentary Paper, 532, 1864, Nos. 50 to 59; in these Papers the question of compulsory pilotage is discussed at some length between the pilotage authority at Liverpool and the Board of Trade.

† At Arundel, Waterford, and Boston. *See* Parliamentary Paper, 455, 1862, Nos. 138 to 166.

existing exemptions should continue in force (section 353); and that every pilotage authority should have power, with the consent of Her Majesty in Council, to exempt any ships, or classes of ships, from compulsory pilotage (section 332). These clauses, coupled with those relating to the Trinity House pilotage, are full of apparent inconsistencies, and have led to much doubt and litigation. The tendency of the courts has been on the whole to favour the exemptions.* And some bye-laws have been passed removing some of the inconsistencies by extending the exemptions. †

Farrer, 30 *et seq.*

"Compulsory pilotage is enforced by virtue of section 353. If a ship which is not exempted fails to employ a pilot who offers, the master is liable to a penalty of double the pilotage, which is recoverable, not by civil process, but under the rules of law applicable to criminal proceedings. This has been the cause of great complaints and gross hardship. A pilot alleges that a ship has refused his services at Gravesend. The ship has gone (say) to Shields. He gets a warrant from the magistrates there, and sends it down to Shields with a policeman to arrest the captain. The captain, to avoid being carried up to Gravesend as a prisoner, is forced to pay whatever is asked.‡

"The only alteration in the law since made is by the Act 25 & 26 Vict. c. 63, s. 41 (1862), which was intended to exempt ships from compulsory pilotage when merely calling for orders or otherwise passing through a pilotage district without loading or discharging. It is however so worded that in the opinion of the law officers it does not exempt a ship calling for orders where the ultimate port of destination is not known at the time when she calls. It is construed as exempting a ship which puts into Falmouth in distress, or which passes through the Downs or Yarmouth Roads on her way to Hull or Newcastle, or through the Solent on her way to London. But it is supposed not to exempt a ship which puts into Falmouth in order to learn where she is to go.

Farrer, 39 *et seq.*
Squarey, 2376 *et seq.*

"In order to complete this outline of the law of compulsory pilotage, it is necessary to notice one of its most important consequences, viz., the exemption of the shipowner from liability for damage done by his ship when the ship is placed in charge of a pilot by compulsion of law.

"The first enactment on the subject was the 52 Geo. 3, c. 39, s. 30 (in 1812):—

"'No owner or master of any ship shall be answerable for any loss or damage for or by reason or means of any neglect, default, or incompetency of any pilot *taken* on board of any such ship, *under or in pursuance of any of the provisions of this Act.*'

"The Pilot Act of 1825, 6 Geo. 4, c. 125, which repealed the former Act, contained a section (sec. 55) in nearly the same terms. It exempted the owner from responsibility, not only when the fault was that of a pilot employed by compulsion of law, and also when the fault was that of a pilot acting in charge of the ship in pursuance of the Act, as explained in Lucey *v.* Ingram, 6 Meeson & Welsby, 302.

"This enactment was repealed by the Merchant Shipping Act Repeal Act of 1854 (17 & 18 Vict. c. 120), and was replaced by the 388th section of the Merchant Shipping Act of that year, which is in the following words:

"'No owner or master of any ship shall be answerable to any person whatever for any loss or damage occasioned by the fault or incapacity of any qualified pilot acting in charge of such ship within any district where the employment of such pilot is compulsory by law.'

"The immunity of the shipowner is confined by that section to cases in which the damage is occasioned by the fault of the pilot acting in charge, where the employment of such pilot is compulsory by law. All doubt was also removed as to the immunity being applicable throughout the United Kingdom.

"Before the first of these enactments, it appears that the Courts of Admiralty had always held the ship doing the damage responsible, notwithstanding that she was in charge of a compulsory pilot. And after the passing of the Act 52 Geo. 3, c. 39, Lord Stowell and Sir John Nichol, feeling the hardship caused by the exemption, refused to apply it on grounds which have been repudiated by later decisions.

"These decisions have proceeded on the principle that where the law takes the ship out of the charge of the owner and his servants, and places her in charge of another person, it is a just and logical consequence that the owner should be relieved from responsibility for the acts of that person; and it has been laid down by high authority, that this consequence would follow from a mere legal obligation to employ a pilot, even if there were no express statutory provision exempting the owner from liability; but at the same time the courts have felt the hardship of the exemption as against the ship suffering damage, and have confined its application, by a very strict application of the principle adopted by them. They have held, that the employment of the pilot must be compulsory at the time. They have also held, that wherever the casualty could be traced in any degree to the act of the master and crew, the owner was liable, and they have thrown on the owner the burden of proving that the casualty was caused by the pilot. These decisions have narrowed the injustice caused by the section, but have probably increased litigation, since the question whether a mistake was due to the pilot or the captain or crew is one extremely difficult to determine, and very likely to be productive of false evidence.

"At

"At any rate, the effect of this law, coupled with the frequency of collisions arising from the more crowded state of our channels and harbours, and the speed of steamers, is very remarkable. If a vessel, navigated by a pilot, but commanded by a master who has passed his pilotage examination, does damage, the owner is responsible. If a vessel navigated by a pilot whom, for any other reason, the owner is not obliged to employ, does damage, the owner is responsible. But if the vessel is navigated by a pilot whom the law requires him to employ, then, whether the owner would or would not, for his own sake, have employed the pilot, he is free from responsibility, and there is, practically, no remedy whatever for the injured party. The consequences, when followed out, are most absurd and most injurious. The following are some of the practical absurdities and inconveniences of this state of the law:—

"The whole class of smaller vessels which frequent our ports, and which never need a pilot, are deprived of all remedy when in collision with a ship which is compelled by law to employ a pilot. Appendix A., Nos. 1, 2, 3, and 4.

"The Admiralty Court is occupied with collision cases in which the question is, not which of two ships was in the wrong, and how much she ought to pay, but whether the one ship or the other, or both, was in charge of a compulsory pilot, and whether that pilot was or was not in actual charge at the time, and committed the fault which caused the collision.* This last question is one upon which it is most difficult to get at the truth, and which must inevitably lead to endless litigation, and equally endless false swearing.

"Two ships, A and B, both of the same size and description, come into London, A from the North Sea, B from the Channel. Both employ a pilot. They get into collision. If A is in fault, B has a remedy; if B is in fault, A has none.

"Two ships, A and B, say from Leith to London, both take a pilot at Orfordness. A has passengers; B has none. They get into collision. If A is in fault, B has no remedy against A; if B is in fault, A has a remedy against B.

"Two ships again, A and B, bound from Havre to London, take pilots at Dungeness. The master of A has taken pains to pass a pilotage examination, and he has a pilotage certificate. The master of B has, perhaps purposely, avoided doing so. They come into collision. A has no remedy against B, whilst B has a remedy against A.

"The object of the legislation of 1854 concerning passenger ships, viz., that of requiring, through the medium of compulsory pilotage, that masters shall learn to pilot their own ships, is thus defeated. Your Committee are informed that there has actually been a case in which the master of a Scotch passenger steamer asked the Board of Trade to contract the limits of a certificate which they had granted him, because his ability to pilot his own vessel exposed his owner to liability when in charge of a pilot.

"Again, a ship bound to London takes a London pilot at Scilly or the Lizard; a very common case. For damage by collision westward of Dungeness, the owner is liable. For damage done eastward of Dungeness he is not.

"Again, take the British Channel. As above stated, ships bound to or from Bristol are bound to take a pilot up and down Channel. Ships bound to or from Cardiff, Newport, and Gloucester are not. A Bristol ship gets into collision with a Newport, Cardiff, or Gloucester ship, both having pilots. The Bristol ship has a remedy; the Cardiff, Newport, or Gloucester ship has none.

"A further consequence of this exemption from responsibility, coupled with the doctrines laid down by the Courts concerning the relation between the master and the pilot, is to remove the responsibility from the master of the ship, and to prevent him from attempting to interfere with the management of the pilot, however bad that management may be. The following is an extract from the judgment of the Privy Council, in the case of Hammond *v.* Rogers, in the case of the 'Christiana,' Moore's Rep., p. 171. Baron Park says, 'The duties of the master and the pilot are in many cases clearly defined. Under ordinary circumstances we think that the pilot's commands are to be implicitely obeyed. To him belongs the whole conduct of the navigation of the ship, to the safety of which it is important that the chief direction should be vested in one only. It was never intentded that, under ordinary circumstances, the master was to exercise any discretion whether he could obey the pilot or not. There may be extraordinary occasions when the master would be justified in disobeying the commands of the pilot. If from sudden illness or intoxication he becomes incompetent to command, the supreme authority would revert to the master during the pilot's temporary incapacity. It may be the same in the case of manifest incapacity of a permanent character; but any opinion upon these questions is unnecessary for the decision of the present case, as none of these circumstances occurred. The pilot has unquestionably the sole direction of the vessel in those respects whereon his local knowledge is presumably required.' The same doctrine has been laid down by Dr. Lushington, and was relied on by the Court of Inquiry, in the recent notorious case of the 'Spindrift,' as a reason for exempting the master from blame. The obvious tendency of such a state of the law is to induce the captain to abstain from all interference with the pilot, however necessary. If, in order to prevent obvious danger, he interferes, he is, according to the above doctrines, exceeding his duty, and makes his owner liable for the consequences. If he goes below, or stands by and sees the pilot run his ship into danger, he knows that the law will free him and his owner from all blame or liability.

"Your

* *See*, for an instance of the utterly preposterous questions raised, Dr. Lushington's judgment in "Earl of Auckland," Parliamentary Paper, 455, 1862, No. 94.

Duncan, 9565 and 9711 *et seq.* Inman, 10363 *et seq.* Lamport, 3598–9 and 3668. Squarey, 2379 *et seq.* Bouch, 10906 *et seq.* Galloway, 4093. 4153.

"Your Committee have the strongest evidence of the mischievous tendency and bad effects of such a state of the law. All parties are agreed that, as a general rule, the master is the person who ought to be responsible for the navigation of his own ship, and that the pilot ought to be his adviser only, to point out to him the peculiarities of the local navigation. The captain knows the qualities of his own vessel and of his crew, which the pilot does not, and he acts under a stimulus which it is impossible to apply to a pilot. So much do many of the best and most careful shipowners feel this, that, in spite of the law and of the possible consequences to themselves, they direct their captains never to give up charge to the pilot, but to use him as a local adviser only; whilst others say that they think this the safe and proper course, but hesitate to adopt it for fear of making themselves liable for damage.

Holt, 11095.

"In confirmation of the above opinion concerning the state of the law, your Committee would refer to the Admiralty Regulations on this point. The following is the 7th section of the Navigation and Pilotage Regulations: 'The captain is to order everything that relates to the navigation of the ship to be performed as the pilot shall require; but, nevertheless, he and the master (that is, the navigating officer) are to attend particularly to his conduct, and if, from his or his mate's observations, he shall have reason to believe the pilot not qualified to conduct the ship, or that he is running her into danger, he is to remove him from his charge and to take such measures for the safety of the ship as the circumstances may require, noting the time of the pilot being so removed in the ship's log-book; and if the ship be damaged at any time through the ignorance or negligence of the pilot, but where a common degree of attention on the part of the captain and master would have prevented the disaster, those officers will be deemed to have neglected their duty.'

Farrer, 84 *et seq.* Squarey, 2386 *et seq.*

"Your Committee have also had evidence of the law of several foreign maritime nations on the question of exemption from liability where pilotage is compulsory. It appears that in New York, and probably in other pilotage waters of the United States, pilotage is compulsory; but it has been decided by the Supreme Court that the owner is not thereby exempted from liability. In France, Holland, and Belgium, the law is the same as in the United States.

"In the North German Confederation, the law is like our own, *i. e.*, compulsory pilotage carries with it exemption from liability.

"This point is the more important, since, as will be seen below, some of the strongest supporters of compulsory pilotage are yet strongly of opinion that the present exemption from responsibility should be done away with.

"The above are the most important features of the law of compulsory pilotage, generally. But it is difficult to understand its bearing without entering at some length upon the nature of the pilotage service at the different principal ports.

"Your Committee have had before them detailed evidence from the following districts in which compulsory pilotage prevails:—

1. The districts under the Trinity House of Deptford Strond, comprising the Thames and all outports, for which special provision has not been made by private Act or Charter. These districts are situated for the most part on the southern, south-eastern, and south-western coasts of England and Wales.

2. The Mersey.	5. The Bristol Channel.
3. The Clyde.	6. Dublin.
4. The Humber.	7. Belfast.

"The Trinity House of Deptford Strond has the most extensive pilotage jurisdiction in the United Kingdom. It licenses pilots for the London district, extending from Orfordness on the north to Dungeness on the south, and governs the pilots within these limits without the intervention of Sub-Commissioners. In 1853 the inward pilots from Dungeness to London, who had formerly been under the management of the Court of Loadmanage of the Cinque Ports, were transferred to the Trinity House, and now form, with the outward pilots from London, one joint service.

"The Trinity House have, from time to time, shown readiness to meet the views of the Government and the demands of trade, and the consequence is that their system, whilst still retaining the principle of compulsion, has been rendered more than usually anomalous by the number and extent of the exemptions.

Parliamentary Paper, 88, 1870

"They have always examined masters and mates of vessels fairly and liberally; and it appears that in 1869 there were 171 masters and 69 mates possessing certificates granted by them.

"The statutory exemptions to compulsory pilotage, as determined by the Merchant Shipping Act, 1854, s. 379, are as follows:—

"(1.) Ships employed in the coasting trade of the United Kingdom.
"(2.) Ships of not more than 60 tons burden.
"(3.) Ships trading to Boulogne, or to any place in Europe north of Boulogne.
"(4.) Ships from Guernsey, Jersey, Alderney, Sark, or Man, which are wholly laden with stone, being the produce of those islands.
"(5.) Ships navigating within the limits of the port to which they belong.
"(6.) Ships passing through the limits of any pilotage district on their voyages between

between two places both situate out of such limits, and not being bound to any place within such limits, nor anchoring therein.

"These exemptions (for some of which no good reasons can be given) are considerably wider than those which existed under former Acts.

"As has been stated, all coasters are exempt, and all vessels from or to ports in Europe north of Boulogne. This last exemption originally applied to the London district only, and was extended for the Merchant Shipping Act, 1854, to the Trinity House outport districts. Some years ago the Trinity House asked to have the exemption confined as before, but the Board of Trade refused to attempt to confine any existing exemption. (*See* Parliamentary Paper 455, 1862, Nos. 13 and 14.) There is really no sense or principle in the exemptions. Even as regards coasters the exemption is obsolete. In former times it may have been the case that coasters were a separate class, making shorter voyages, and consequently better acquainted with local navigation. This is not the case now. The shortest and most frequent voyages are in many cases those to the ports in neighbouring foreign countries, and vessels which one day are employed on a coasting voyage may the next day sail for a foreign port. The other exemptions are even less reasonable. A vessel from St. Petersburgh is as likely to need a pilot either in London or the outports as one from Havre; and a vessel from Antwerp or Havre is as little likely to require a pilot as one from Liverpool or Glasgow.

"The Trinity House have also, with the sanction of the Queen in Council, exempted from compulsory pilotage all vessels which, having come to this country from foreign ports, proceed in ballast to load at another port; and they have so reduced the compulsory rates on ships passing through Yarmouth Roads as to make it not worth the while of pilots to force their services on vessels which do not want them; two grievances which were much complained of have thus been put an end to.

"In the London District the appointment and service of pilots is extremely complicated, and this complication, coupled with the system of compulsory pilotage, and the numerous exceptions which have been made from it, has produced serious anomalies.

"The different classes of pilots are very numerous.

"1.—The Old Cinque Port Pilots.

"Of these there are now remaining. They are licensed to conduct vessels from Dungeness to London Bridge, and *vice versâ*, by the South Channel; and they have a system of contributions, and of pensions and allowances, distinct from those of the other Trinity House pilots.

"Though licensed to conduct vessels out as well as in, their employment is practically confined to the inward pilotage. They meet inward-bound ships at Dungeness or the Downs, and are there put on board in rotation from cutters which are the property of the Trinity House and under Trinity House management, and which have their regular cruising ground at the above-named places.

"2.—Inward Pilots by the South Channel, Licensed by the Trinity House since 1854.

"Of there there are now 59. They have the same functions and position as the Old Cinque Port pilots, except that they are only licensed as far as Gravesend, and are under the same rules, so far as regards contributions and pensions, as other Trinity House pilots.

"Trinity House, London, Outward Pilots, Licensed for the South Channel.

"These live in London, and take ships from London Bridge or Gravesend to the Downs or Dungeness. Though licensed for inward as well as outward pilotage, they are practically confined to the latter, because it is not worth their while to wait at Dungeness in the cutters until their turn in rotation arrives. They are 52 in number; 43 of them are licensed for the outward pilotage in the North Channel also. Some of those licensed before 1854 have licenses for the whole of the waters between London Bridge and the sea, whilst all licensed since that time are confined to the waters below Gravesend.

"4.—Pilots licensed from Orfordness Inwards by the North Channel.

"These are only licensed for inward pilotage, and they go as far as London. They are 62 in number. They cruise in cutters of their own, without control by the Trinity House. Those licensed before 1854 pilot vessels up to London. Those licensed since that time only go as far as Gravesend: 43 of them are, as above mentioned, also licensed for the South Channel.

"5.—Pilots Licensed Outwards by the North Channel.

"These go from London to Orfordness. Those licensed before 1854 take ships from London, whilst those licensed since that time go from Gravesend only.

"6.—River or Mud Pilots.

"These have been licensed since 1854, and pilot ships up and down between London and Gravesend. They are in number. The restriction of this pilotage to a distinct class was introduced in 1854, in consequence of application from the shipowners of London, who were then of opinion that a distinct body of men was needed for the service. Besides these, 50 of the North and South Channel pilots were licensed for this pilotage before 1854.

"7.—Pilots for Home Trade Passenger Ships.

"The licenses of these pilots are confined to this class of ships. They were introduced in or shortly after 1854, when the employment of pilots by home trade passenger ships was made obligatory, as above mentioned. Certain coasting steamers had previously been in the habit of employing unlicensed watermen to pilot them on the upper waters of the Thames, and, on their application, the Trinity House granted special licenses to these men. They are 22 in number.

"The above pilots are all licensed after examination; are subject to the control of the Trinity House; may be deprived of their licenses for misconduct; and are bound to charge certain fixed rates, neither more nor less. In the case of outward pilotage generally, and also in the case of inward pilotage at Orfordness and Gravesend, the shipowner is not bound to take the pilot in rotation, but may, if the circumstances permit, choose his pilot. At Dungeness the ship is obliged to take the first pilot who offers, and the pilots are compelled to offer themselves in rotation.

"But besides the above body of licensed pilots there are large bodies of men who live altogether, or in part, by the pilotage of vessels trading to and from London, who are wholly unlicensed, are subject to no special rules, and have no special privileges. These consist of—

Duncan, 9570.

"First.—The Deal Boatmen.—Of their capacity to handle large ships the licensed pilots speak disparagingly; but the shipowners state that they often receive valuable services from these men, and that they find them in places and under circumstances where the licensed pilots, sure of employment at their Dungeness station, are not to be found. The experience of the Board of Trade, in the recent cases of the 'North' and the 'Olivia,' shows that some of these men, now under no control whatever, are capable, not only of making extortionate demands for salvage, but of pillage of wrecked property, and fraudulent collusion with captains for the purpose of getting up false and fraudulent claims.

Parliamentary Papers, 389 and 539, 1867.

Spedding, 9041.

"Secondly.—Unlicensed men who take ships by the North Channel to or from the sea, or to or from the northern ports.—Of these men there appear to be a large number. One witness, a licensed pilot, puts those who get their living wholly or partially in this way at 1,000, and says there is as much unlicensed pilotage below as above Gravesend. The licensed pilots speak of them as broken-down captains, &c. But no complaints are made of these by shipowners; and the Chairman of the Shipowners' Society says that some of these men are first-rate pilots and very clever men; and he points out that whereas a licensed pilot would cost a ship of 1,500 tons 50 *l.*, one of these men performs the service admirably for 12 *l.*

Duncan, 9691 *et seq.*

"Thirdly.—Unlicensed watermen who pilot ships between London and Gravesend.—These men are freemen of the Watermen's Company, and like all other freemen of that Company, must have passed an apprenticeship of seven years on the river. But the number of free watermen employed in this pilotage is only a fraction of the whole number of free watermen employed on the river, and they are subjected to no special examination or test as to their capacity for this pilotage service. The number so employed is from 400 to 500, whilst the number of pilots licensed between London and Gravesend is only 70. Indeed it appears that on the Thames above Gravesend scarcely any captain ever takes his ship up or down without a pilot of some kind; and that as the number of licensed pilots is wholly inadequate for such a service, the unlicensed free watermen perform the greater part of it.

"No complaints are made of the conduct of these men; and though some of the licensed pilots state that more collisions happen to vessels in their charge than to those in charge of licensed pilots, they have brought no figures to sustain the assertion. On the other hand, a great shipowner states that there are more accidents with licensed pilots than with watermen; the principal complaints by bargeowners have been of damage caused to them by collisions with steamers in charge of licensed and compulsory pilots, for which the injured bargeowner can obtain no redress. And even if collisions were more frequent with vessels when in charge of watermen, the fact would not be suprising, considering that the number of vessels piloted by watermen is far greater than of those piloted by licensed pilots, and that watermen take vessels at all times of day and night, whilst the licensed pilots as a rule only go in the daytime. But the competency of the watermen for the navigation of the Thames is best shown by the facts of their employment. When the Trinity House licensed 23 watermen in 1854 for home-trade passenger ships, one of the reasons, as stated to your Committee by a licensed pilot, was that those steamers were in the habit of starting at all times of day and night, and as all times of tide; and that the licensed pilots would not undertake the responsibility of navigating ships unless free to choose their own time of starting.

Robinson, 12871.

Farrer, 59 *et seq.*, 409 *et seq.*

App. A., Nos. 1, 2, 3, 4.

Hinton, 9499.

Robinson, 12772.

Pattison, 8754 to 8761.

starting. Again, it appears that two of the unlicensed free watermen have been selected to pilot Government ships; that one of them earns 900 *l.* a year, and is employed largely in ships owned or managed by one of the Elder Brethren of the Trinity House; that another earns 500 *l.* a year, and is largely employed by two of the members of your Committee; that 25 of them earn 200 *l.* a year each, and that about 400 earn 50 *l.* each. And it is also proved that, whilst the licensed pilots' charges ranged, in the case of steamers or vessels towed by steam, from 18 *s.* for a ship drawing seven feet, to 3 *l.* 1 *s.* 6 *d.* for a vessel drawing 15 feet, and to 9 *l.* for a vessel drawing 23 feet, with intermediate charges in proportion, the charges of the watermen range only from 1 *l.* 5 *s.* to 2 *l.* In general, the watermen's charges are not more than half those of the licensed pilots. A screw collier making 70 voyages a year would pay 420 *l.* for a licensed pilot, whilst she only pays 170 *l.* for a waterman; and yet this waterman makes 500 *l.* a year. It is further shown that some owners, when obliged to take licensed pilots, take also one of these unlicensed watermen.

Hinton, 9303.

Hinton, 9244 to 9249.
Spedding, 9053.
Hinton, 9414 to 9416.
Hinton, 9250.
Duncan, 9701.

"These watermen are liable at any time to be superseded by licensed points. But the pilots are clearly insufficient in numbers for the work, and they find practical difficulties in enforcing the law against vessels not subject to compulsory pilotage. As a matter of fact, whilst they do supersede the watermen when engaged in piloting to the Baltic, they do not interfere with them when employed in coasting steamers, or of in sailing vessels, not subject to compulsory pilotage, which, in consequence of the time they require, are much less profitable than steamers. These watermen, however, though so largely employed, are unable to get licenses under the present rules of the Trinity House, because they have not served 12 months at sea.

Robinson, 12764.
Hinton, 9279 to 9297.

"Under these circumstances it is not surprising that there should be many complaints.

"The shipowners complain that at Dungeness they have no choice of pilots, and that if pilotage were less hampered by restrictions they would find the pilots at the places they want them, and be able to select the pilots they prefer, or at any rate to refuse to employ those to whom they object; and they point to the pilotage in the North Channel, and in the Thames about Gravesend, as showing that greater freedom produces equally good or better service at a lower price.

Duncan, 9568 to 9570.
Robinson, 12754. 12767. 12887.

"The shipowners also complain of being obliged to take pilots at all when they do not want them, and of the harsh modes by which the pilots have enforced the right to employment.

Farrer, 30 *et seq.*
Robinson, 12757.

"The owners of small craft complain of the injury done to them by vessels in charge of compulsory pilots, for which they have no redress.

"The Cinque Ports pilots, whilst alarmed at the prospect of the abolition of compulsory pilotage, and anxious to retain the power of forcing themselves on inward-bound ships, and to be protected against the Deal boatmen, desire that the cutters shall be placed under their own management, free from Trinity House control.

App. A., Nos. 1, 2, 3, 4.
Millen, 7406. 7659.

"The pilots who are licensed for the waters below Gravesend, whilst anxious to retain compulsory pilotage as against the shipowner, and their exclusive privileges as against unlicensed pilots, are anxious to have their own licenses extended to the waters between London and Gravesend; and they point out that the effect of the present change of pilots at Gravesend is to delay a ship often for some hours, and to impose on the shipowner a charge amounting in large vessels to 20 or 25 per cent. greater than is payable where the pilot's service is continuous from London to the sea, or *vice versâ*.

Spedding, 9004.
Spedding, 9123 to 9125.

"The London pilots complain that, by requiring them to place their names on the list, and to serve in rotation at Dungeness, they are practically precluded from sharing in the inward pilotage of the South Channel, since it is not worth their while to stop at Dungeness for the purpose.

Spedding, App. A., No. 10.

"The pilots by the North Channel urge that there is no reason why they should not be allowed to pilot ships both ways, *i.e.*, both inwards and outwards.

Spedding, 9009.

"The Gravesend pilots, whilst desiring to retain Gravesend as a station, and to prevent the pilots between London and the sea from encroaching on the waters between London and Gravesend, also complain of the pilots licensed for home-trade passenger ships, and are anxious for greater powers to prevent the employment of unlicensed watermen by other vessels.

Hinton, 9316-18. 9341.

"The unlicensed free watermen are perfectly satisfied with their voluntary employment, and with their present rates of payment; but they complain of the power of the licensed pilots to supersede them, a power which, if this Bill passes, will, they fear, be more largely exercised than it has hitherto been, since the licensed pilots may, if deprived of the power of making vessels pay for them which do not want them, seek to compensate themselves by superseding the watermen on vessels now left in the watermen's hands.

Wood, 12424 *et seq.*
Luton, 12545 *et seq.*

"Amongst all these complaints there have been none, except on the part of pilots themselves, against the existing exemptions; nor has any evidence been given to show that either in the North Channel, where all pilotage is voluntary, or in the upper waters of the Thames, where the greater proportion of vessels are free to employ a pilot or not, the principle of voluntary pilotage has worked unsatisfactorily either to shipowners or pilots. On the other hand, it appears that both in the North Channel and in the waters above Gravesend, the supply of voluntary pilots is ample and good, and that the voluntary pilots are well paid, and satisfied with their earnings. It is out of that part of the system which is compulsory, and not out of that part which is voluntary, that the complaints and difficulties above noticed have arisen.

"Some of those complaints are, in the opinion of your Committee, well founded, and some are ill founded; but in both cases the conclusion to be drawn from them seems to be

that the greater the freedom of contract and employment, the greater the prospect of satisfaction to employer and employed.

"To what extent this freedom should go, and by what steps it should be introduced, are matters well deserving of consideration.

"They are, however, with the exception of the obligation to employ a pilot, matters which it is in the power of the Trinity House to deal with, and in making the following suggestions, your Committee feel that much must be left to that body and to the Board of Trade.

"It appears to your Committee that, so far as regards the Thames above Gravesend, little or no interference or control is wanted beyond the grant of a license to any man who may prove himself, either by long and successful practice or by examination, competent to conduct ships in those waters, with a power to withdraw the license in case of misconduct. From the experience of the free watermen, it seems that it is even unnecessary to fix a price, and that where, as in the Thames, a shipowner or captain has ample time and opportunity to make his bargain, absolute freedom in this respect has produced lower charges, more satisfactory service, and more ample remuneration to the best men, than a fixed charge.

"But great consideration is due to the pilots who have undertaken their present licenses on the faith of the present system, and it will be necessary to proceed cautiously and by degrees. Possibly an arrangement might be made by which all competent men might receive pilotage licenses, under the condition that they shall for a certain period confine themselves to the class of vessels they have hitherto piloted, and shall not take charge of the class of vessels hitherto piloted by licensed pilots, except in the absence of such pilots.

"As regards the rates, it is clear that, if they are to be fixed at all, they ought ultimately to be fixed at a rate not higher than that which compensates the skilled watermen; and as a step towards this end, the restriction which prevents a licensed pilot from demanding less than a fixed amount should be at once done away with. It is obvious that a licensed pilot is at a great disadvantage in competition with the watermen when he is not only authorised, but compelled, to charge twice as much as the waterman.

"As regards the sea pilots, whether by the North Channel or the South Channel, your Committee see no reason why all of them, if competent to pilot vessels between Gravesend and London, should not be licensed for the whole distance between London Bridge and the sea. It is obvious that any unnecessary limitation in the employment of competent men, and any unnecessary change of pilots must add to the cost of pilotage, and in this case it is proved to do so.

"Applying this to the pilots of the North Channel, your Committee see no reason why the same licenses should not in all cases extend both to the outward and the inward pilotage, as has since 1853 been the case with licenses for the South Channel.

"As regards the pilots of the North Channel, it is clear that whilst there is no want of employment for the 62 licensed pilots, who make incomes averaging 274 *l.* a year against 340 *l.* made by those in the South Channel, and no complaint, either concerning their inefficiency or the insufficiency of the service, yet that the number would be insufficient for the wants of the trade if it were not supplemented by a large number of competent but unlicensed men. The fact that there is ample employment for the licensed pilots, and the still more important fact that the pilotage in this channel is not compulsory, are, no doubt, circumstances which facilitate the employment of these unlicensed persons, and prevent the monopoly of an insufficient number of licensed pilots being felt as a grievance. It would, in the opinion of your Committee, be an improvement if the Trinity House were, by degrees, to enlarge the number of licensed pilots by this channel, so as eventually to embrace all the competent men; taking care, at the same time, that the rates do not exceed those which will command efficient service. Miller, 7322.

"The most difficult questions arise with respect to the South Channel. It appears to your Committee that the following questions deserve the careful consideration of the Trinity House, viz.:—

"Whether some freer system should not be established with respect to the cruising ground of the pilots, so that if, as the shipowners have stated, pilots are often needed further down the channel, pilots may be encouraged to cruise and seek them there.

"Whether the strict system of rotation at Dungeness should be continued, and whether a shipmaster should not have the option of choosing any pilot he may prefer, and of rejecting any pilot whom he disapproves,—This point has been strongly urged upon your Committee by the Chairman of the General Shipowners' Society, and there can be no doubt of its advantages if it can be adopted without breaking up the system. One of these advantages would be that it would facilitate the taking the same pilot inwards as well as outwards, and would thus save unnecessary labour and expense.

"Whether, having in the meantime due regard to existing interests, steps should not be ultimately taken for granting licenses to all such Deal boatmen, or other boatmen, as may prove themselves to be competent and of good character,—This seems desirable not less for the purpose of completing the pilotage service, than for the purpose of preventing extortionate demands on the part of the boatmen.

"As regards pilotage rates for all the sea-going pilots, it appears to your Committee that a maximum but not a minimum rate should be fixed: The evidence of the free watermen shows that a low charge with constant employment, whilst most advantageous to the shipowner, also produces the largest income to the pilot, and the licensed pilots should be as free in this respect as the watermen.

"There

"There is one point in the Trinity House system which calls for special remark, since it is in itself questionable, and also stands in the way of the various improvements suggested above. There is a large pension fund to which all Trinity House pilots, both in the London District and in the Outport District, contribute, and from which all on retirement receive pensions; but it is managed neither purely as a charity, nor on the strict principles of a benefit fund or insurance society. Each pilot contributes annually poundage, *i. e.*, 2½ per cent. of his earnings, and each pilot on retirement receives a pension, not proportioned to what he has paid but to his length of service, and the highest rate of pension is 28 *l.* a year. In order to receive this pension, pilots in the London District must prove that they have not 75 *l.* a year of their own, and those in the Outport Districts that they have not 50 *l.* There is an accumulated capital of 88,000 *l.*

Trinity outport pilotage not yet referred to.

Sir F. Arrow, 1435.

"The principle of this fund is obviously unjust, since it makes the pilots who earn much contribute in proportion to their earnings, whilst it gives them only the same small pension as those who earn and contribute little, and deprives them even of this small pension if they have laid by a moderate sum for themselves.

"The operation of the fund is also mischievous in impeding such reforms as those suggested above, since the vested interests of the existing pilots in the fund has to be considered when there is any question of adding to the number of existing pilots, or of altering their status and remuneration. Your Committee are of opinion that this system should be altered by winding up the present fund. In what manner this should be done—whether it should be made the basis of a new fund, founded on sound principles of insurance, or whether the pilots should in the Trinity House Districts be left to provide for their own retirement, as is the case in many other districts, are questions of detail, into which, as they do not materially or directly affect the subject of compulsory pilotage, your Committee do not think necessary to enter; and they content themselves with stating that they deserve the serious consideration of the Trinity House and of the Board of Trade.

"As regards the principal question, viz., that of compulsory pilotage, your Committee reserve the general arguments affecting the Thames, as well as other ports, for a subsequent part of this Report. As regards the evidence specially affecting the Port of London, it has been proved to your Committee that whilst in 1854, and even as late as at the time of Mr. Lindsay's Committee in 1860, the principal owners of sailing ships in London were in favour of compulsory pilotage, not only have no London shipowners taken any active part against the present Bill, but that the pilots, though they have tried to induce them to give evidence against it, have wholly failed. At the same time, the Shipowners' Society, representing the principal shipowners of London, have petitioned in favour of the abolition of compulsory pilotage; and their chairman, Mr. Duncan, and deputy chairman, Mr. Robinson, have given strong evidence in support of that petition, and have urged upon your Committee that much more freedom is required than is given by this Bill.

Farrer, 204 *et seq.* 221 *et seq.*

Miller, 7360.

Duncan, 9550 *et seq.*

Robinson, 12740 *et seq.*

"The steamship owners, daily increasing in importance, are and always have been against compulsory pilotage.

"The Trinity House, who so lately as 1862 remonstrated with Mr. Milner Gibson against any relaxation of compulsory pilotage, have made no sign against this Bill, whilst they have, in the course of the last winter, officially suggested to the Board of Trade that the exemption from compulsory pilotage in those districts, hitherto confined to coasters, should be extended to vessels trading between the Elbe and Brest.

"Almost the only evidence against the abolition of compulsory pilotage in the Port of London proceeds from the pilots who now derive supposed benefit from it. Even these witnesses limit their arguments rather to the amount of compensation they ought to receive than to the greater question whether compulsory pilotage should be retained; and some of the most intelligent of them have stated to your Committee that they have no apprehension of any loss of employment to themselves or their brother pilots if this Bill should pass.

"Under these circumstances, and apart from the more general question, it is obvious that no case has been made for continuing compulsory pilotage in the Port of London; and it also appears to your Committee that the first step to be taken in order to remove the anomalies above referred to, and to place the system on a sound footing, is to free the shipowner from all obligation to take a pilot when he does not require one.

"When this is done, and not till then, will it be possible to work out experimentally the further steps above referred to.

"Your Committee have also received evidence from the Chamber of Commerce of Falmouth, one of the outport districts of Trinity House, who are unanimously in favour of the abolition of compulsory pilotage at that port.

Fox, 12024.

"Falmouth is an excellent natural harbour with no trade, but a great port of call. The harbour has no outlying difficulties, and masters who know the port can enter and leave it without difficulty. The mail packets which call there find the pilots so useless, that they pay for them without allowing them to come on board, and collisions frequently occur from the inexperience of pilots managing large vessels. On the other hand, there are many foreign vessels which would take pilots, even in fine weather, and in bad weather they are much wanted for inward-bound vessels. But as pilotage is compulsory, pilots make their earnings in fine weather, and stay in port in bad weather; and the complaints are loud and frequent that they are not to be found when and where they are wanted, whilst they force themselves on board when they are not.

Fox, 12043. 12047. 12040. 12025. 12033. 12075.

"Next to the Trinity House districts, the most important pilotage district in the United Kingdom is that of Liverpool. One witness estimates the value of the property in ships

Danson, 3130. 3314.

and cargoes passing in and out of the Mersey in a year, at 400,000,000*l.*, and the number of lives at 400,000. It is also the port at which the question of retaining or abolishing compulsory pilotage has raised the greatest difference of opinion, and from which, in consequence, your Committee have received the largest amount of evidence.

Squarey, 2349.

"The present Liverpool pilotage system dates from 1765, and a further Act was passed in 1797. The regulation of pilots was entrusted to a committee appointed by a body of commissioners representing, or supposed to represent, the Corporation and various interests at the port. Under these Acts pilots were licensed, pilotage rates were fixed, and pilotage was made compulsory. In 1824 the Acts were consolidated and the system of owning pilot boats described below was first introduced. Subject to the general alterations in the

Squarey, 2351, 2352.

pilotage laws of the United Kingdom mentioned above, these matters remained in this condition until 1857. In that year the Mersey Dock Board, which had been constituted by an Act of the previous Session brought in a consolidating Bill, and in pursuance

21 & 22 Vict. c. 90.

of directions in the Act which created them, included in that Bill provisions concerning pilotage, and by the Consolidation Bill as passed, the local pilotage of Liverpool is now regulated.

2353.

"The Mersey Dock Board themselves, elected by the dock and harbour ratepayers, are the ultimate authority; but the immediate management is in the hands of a committee called the Pilotage Committee. It is appointed annually by the Dock Board, and consists of 12 members; four of them are required by the Act of Parliament to be persons who are not members of the Board, but who are familiar with the duties and qualifications of pilots, and the other eight members, making up the 12, are selected from the members of the Dock Board.

"The pilotage district of the Mersey extends from Point Linas, in Anglesey, to Liverpool.

"By the Mersey Docks, 1868, s. 129 (Pilotage), all inward-bound vessels are bound to take a pilot on arriving at the pilot station, and all outward-bound vessels are bound to take a pilot until they reach the Bell Buoy. If they do not take a pilot, they are, by the

3.

Local Act, compelled to pay pilotage; and by the Merchant Shipping Act, s. 353, the

Squarey, 2404 *et seq.* 2496 *et seq.*

penalty of double pilotage attaches. An attempt has been made to show that the Liverpool Act does not compel a master to employ a pilot or to put the ship in his charge; but only compels them to pay pilotage rates. It is, however, clearly proved to your Committee,

Farrer, 42 *et seq.*

not only that the general penal enactment in the Merchant Shipping Act applies to Liverpool, but that it has been decided by the highest authority that the Liverpool Act itself makes the employment of the pilot compulsory; takes the ship out of the hands of the master and places her in those of the pilot; and relieves the owner from liability for damage done by his ship when under the charge of the pilot.

"The exemptions from compulsory pilotage in Liverpool under the Local Act extend to coasting vessels under 100 tons, and to coasting vessels in ballast. Coasters pay only half pilotage. But vessels are not considered coasters if they have made a voyage to a foreign port within six months. Under this clause there are considerable anomalies. If a

Simpson, 4483 to 4488.

vessel under 100 tons has been engaged in trading (say) to Aberdeen or Newcastle, she is exempt. If such a vessel has been trading to those ports, or to nearer ports, such as Dublin or Bristol, and within six months has been to Brest or Havre, she becomes liable. If a large coasting steamer has a barrel of beef on board she is liable. If she has no cargo, but has a full load of passengers she is not, so far as the Local Act is concerned.

"A further practical exemption has been made in the case of coasting passenger ships.

Farrer, 143. Watson, 10696 to 10699. Simpson, 4474. 4482.

These ships, as conveying cargo, were subject to compulsory pilotage under the Local Act. This was much complained of, and in 1853 an arrangement was made with the pilots to the effect that those ships should be exempted altogether from outward pilotage; and as regards inward pilotage, that they should not be compelled to employ pilots so long as they paid 1*s.* a foot to the pilots. They have since continued to do this; have never

Bremner, 4755.

taken pilots; and pay the pilots a sum, which in 1869 was about 1,500*l.*, for no service whatever. Their ships have been safely navigated by their own officers without casualties. This arrangement was confirmed by Order in Council, under the old Pilotage Committee, has continued under the present Mersey Board, and is still in force.

"The exemptions arising from examinations and licenses of masters and mates are very few at Liverpool. Only 10 possessed such licenses in 1869. Since

Parliamentary Paper, No. 70.

1859, only 36 have applied, and only 22 have passed. The reasons for this given by the different parties differ. The officers of the Mersey Board state that the examinations are

Simpson, 4254. Hills, 2734. 2738. Squarey, 2397. Leyland, 9971. 10056.

freely and fairly conducted, and that any competent man could pass; and the reason they allege for the paucity of applications is that the obtaining a certificate of exemption from compulsory pilotage would render the owner liable for damage. And in this they are supported by the evidence of some of the large owners of foreign-going shipping.

Farrer, 148 to 154.

"On the other hand, it is clear that the pilotage authorities in Liverpool for long refused to examine at all under the Act, alleging as a reason the grave responsibility for life and property under which they laboured; an allegation which is curiously inconsistent with

Watson, 10695. 10757. Reynolds, 11030.

the arrangements which, as above stated, they had made with the coasting steamers, an arrangement characterised of one of their own officers as an 'unholy compact;' and the owners and captains of coasting steamers still appear afraid of applying to the Mersey Board. In fact, as the 1*s.* per foot is a small charge, they do not care much about the local obligation; but as their ships, when carrying passengers, are under the 354th section of the

the Merchant Shipping Act required to take pilots, and as the Board of Trade have in some recent cases declined to grant certificates excepting from this obligation, and have referred the officers and employers to the Mersey Board, the question of examination by the latter is likely, if the law remains in its present state, to arise again. Farrer, 150.

"Under this system and its exemptions, it appears that there are about 48,000 vessels passing through the channels in and out of the Mersey, of which about 15,000 take pilots and 33,000 do not. The latter comprise the coasting steamers and a large number of small flats and coasters. Hills, 2790.

"The principal feature of Liverpool pilotage is founded on the importance of having the pilots stationed at given points in the approaches to Liverpool. There are 12 boats, of which six are cruising at one time. The one furthest out is near Point Linas, in Anglesey, and the inner boats near the North-West Light Ship. So soon as she has discharged all her pilots into inward-bound ships she returns to port; the next boat takes her place, and so on, and another boat from Liverpool replaces the inner boat. Great pains seem to be taken to keep the boats on their stations. The pilots are put on board inward-bound ships in rotation, and their masters have no choice whatever. Even if a pilot has already misconducted himself, and brought loss on the owner, he cannot refuse to employ him; nor can a vessel find a licensed pilot beyond the above stations. Simpson, 4202, and following. Bouch, 10884.

"As regards outward pilotage, the general rule is, that the pilot who brought the ship in takes her out; but this is not universal. If the pilot is ordered to go out, he must go; and if a shipowner particularly desires to have any particular pilot the choice is, under certain conditions, allowed him; but it does not appear that this choice is readily given, or much made use of. Simpson, 4246.

"Compulsory pilotage ceases at the Bell Buoy, outside the Bar, and there was formerly a penalty for taking pilots further. But it was found very inconvenient that pilotage should cease at this point, which is often the point of the greatest difficulty, and consequently the penalty has been relaxed, and vessels are allowed to take pilots outwards as far as Cape Linas, and two pilot boats now cruise between the Bell Buoy and the North-West Light Ship to supply pilots to ships which, having got rid of their outward pilot, still find themselves in need of one. This pilotage is quite voluntary, has arisen out of the demand, and is much made use of. Hills, 2865 to 2884. Simpson, 4442.

"A further important exception from the strict cruising system has been made in the case of the large and regular steamers trading to America, which call at Irish ports. In these cases the pilotage authorities have allowed the owners to select a pilot, who is attached exclusively to these steamers, and who goes out to Queenstown or Londonderry with one vessel, and returns in the next inward bound vessel belonging to the same owner. There are at present 14 of such pilots attached the vessels of seven different owners. The practice commenced in consequence of the dissatisfaction of Mr. Inman with the pilots he was obliged to employ, and was suggested by the superintendent of pilots himself; and it appears from the evidence of the superintendent of pilots, that the practice is extending, and that the pilotage authorities are willing to extend it. Simpson, 4247 to 4253. 4312 to 4315. Appendix (F). Inman, 10240. 10244.

"The pilots so employed, however, get no more than other pilots, and pay their earnings into the fund of the boat to which they are attached. Mr. Inman pays each of his three choice pilots 540 *l.* a year, of which only 180 *l.* goes to the pilot himself, the remainder going to the pilots who have not earned it, and to the boat-owners as after mentioned. If all the 14 choice pilots are in the same position, it would follow that they earn amongst them 7,560 *l.* a year, of which they receive 2,520 *l.*, whilst 5,040 *l.* goes to maintain the station and boat system. If this system of choice pilots should extend, as seems likely, the result will be, that the best pilots on the largest and most regular ships will contribute a very large proportion of the expense of keeping up a system which is of no possible use to them, or to the ships which employ them. Simpson, 4314. 4321. Inman, 10256.

"The number of pilots at Liverpool, including licensed apprentices, is 284, and there are besides 34 unlicensed apprentices. Their aggregate earnings in 1869 were 67,500 *l.* The average earnings of a first-class pilot are now 215 *l.* to 218 *l.*, being less by 30 *l.* than they were some years ago, and considerably less than the earnings at ports where the pilotage is voluntary. It will be reduced in 1872 by about 30 per cent., in consequence of the cessation of the compensation for differential rates on foreign ships, a compensation unjustifiable in principle, which was given up by the Trinity House in 182 , but which was only put an end to in Liverpool and other outports by an Act of 1862. The falling off now perceptible is due partly to the larger size and smaller number of vessels, whilst the greater employment of steam, either in the vessels themselves or as tug power, and the consequent regularity in arrivals, enables a smaller number of pilots to do the duty. The pilotage authorities are now reducing the number of apprentices, allowing only six to a boat, instead of 10 as formerly; and the chairman of the pilotage committee states that whereas the present number is 318, only half them are at sea at one time, and that from 250 to 280 would be sufficient for the port. Moss, 3825. Moss, 3821. Moss, 3832. 3841. Moss, 3834. 3831. 4015.

"Some of the pilots state that a much smaller number would be sufficient; that half of them are constantly idling and wasting their time in Liverpool; and that a well employed pilot is not employed for more than 40 out of the 365 days in the year. In the substantial truth of this statement the pilots are confirmed by some of the shipowners. Holt, 11147. 11153. 11221.

"The earnings of the pilots in each boat are appropriated to that boat. They are paid to the treasurer of the pilots, who pays over 2½ per cent. to the Dock Board, on account of the Squarey, 2362.

Holt, 11143. App. A., No. 15.

the Annuity Fund. The remainder is appropriated to the boat which has earned it, and is divided, according to the bye-laws, in the following proportions :—

		Shares.
Owners of the boat	For the boat	2½
	For each licensed apprentice	⅔
	For all unlicensed apprentices	1½
Masters		1
Pilots, 1st Class		1
„ 2nd Class		⅔
„ 3rd Class		

"As given in more detail by the superintendent of pilots, this will be :

Simpson, 4173–4.

To boat-owners	Boat's share	2½
	4 licensed apprentices	2⅔
	– unlicensed „	1½
	To boat-owners	6⅔
3 masters		3
To pilots :		
16 first-class pilots		16
1 second-class pilot		⅔
1 third-class pilot		⅓
	Whole earnings	27⅙

"Consequently, of the earnings, about one-fourth goes to the boat-owners, one-eighth to the masters, and the remainder to the pilots themselves, amongst whom it is divided in the above proportions. The aggregate earnings for 1869 were 67,500 *l.*, out of which 49,600 *l.* was paid to pilots and apprentices, and 16,000 *l.* to boat-owners. The average net earnings of each pilot for 1869 was 195 *l.*, the highest net earnings of any one pilot 210 *l.* This, as above mentioned, is considerably less than it has been in former years, and it will be diminished further next year.

Simpson, 4447. Parliamentary Paper, 88, 1870.

Squarey, 2376. Simpson, 4175 and following.

"The system of boat owning is very peculiar. They are owned in shares by pilots and superannuated pilots, in the following proportions :

34 Masters own	330	shares.
40 Actual pilots	200	„
20 Superannuated pilots	238	„
Total	768	

"Out of the earnings of each boat, about one-fourth part as above mentioned goes to the boat-owners, who, on the other hand, have to pay the expense of working the boat, of maintaining her in good condition, and of replacing her when worn out. When the owner of any share dies, his share is put up to auction among the pilots or superannuated pilots, at a price fixed by the Mersey Board. If not bought at that price, the Mersey Board can allow the representatives to hold it for a year, and so on. The price and value of the shares depends, not on the cost and expense of the boat, but on the proportion of pilotage earnings allotted to her, which is the interest on the money thus invested. The average price per share paid for the last five years has been 118 *l.* The aggregate price paid by the pilots is thus, 90,700*l.*, or according to the pilot's solicitor, 92,160 *l.* The aggregate value of the boats when originally built was about 30,000 *l.*; and as they have been built at different times from 1847 downwards, their present actual value must be much less. The working expenses of the boats are estimated at 5,000 *l.* Depreciation and insurance, that is, the cost of repairing and insuring, are estimated at 12½ per cent. on the actual value. Interest on 30,000 *l.*, at 5 per cent., would be 1,500 *l.*

Simpson, 4179. Appendix (J). Bremner, 4652. Simpson, 4194. 4449.

The actual sum paid to the boat-owners in 1869 was, as above stated, 16,000 *l.* Assuming the value of the boats to be 30,000 *l.*, the account would stand as follows :

	£.	£.
Sum paid to boat-owners		16,000
Actual expenses :		
Interest on capital	1,500	
Depreciation and insurance	3,750	
Working expenses	5,000	
		9,350
Leaving £.		6,650

as a sum which is deducted from the earnings of the working pilots in order to pay interest at the rate of 9 or 10 per cent. to those of the pilots who have invested in the boat shares. But as the actual value of the boats is much less than 30,000 *l.*, this latter sum is, in truth, considerably higher. This practice was first established in 1824, and has been continued ever since, though pointedly condemned by the Royal Commission of 1836, and loudly complained of by many of the pilots. It is obvious that under it money earned by the pilots is devoted from the legitimate objects, viz., payment for services rendered, and that it

Squarey, 2367. Farrer, 711.

it is either an improper deduction from well-earned wages, or an unnecessary burden on the shipowner. It has also the effect of creating the opposition of a vested interest to any change in the system of cruising and of employing pilots, an effect which, under the present circumstances of the Liverpool pilotage, may be a very serious evil.

"There is a pension or annuity fund arising from 2½ per cent. contributed by the pilots out of their earnings; the interest on 10,691 *l.* of invested capital, and certain balances from fees or licenses, and from penalties, making an income in 1869 of 2,306 *l.* The pensions are paid to superannuated pilots, their widows and orphans, making in the aggregate of payments in 1869, of 2,074 *l.* The pensions to pilots are about 27 *l.* per annum. Simpson, 4270 *et seq.* Bremner, 4637.

"Under these circumstances, very different opinions have been expressed by the Liverpool witnesses with respect to the present system.

"Many of them are well satisfied with it as a whole, but wish for certain amendments, noticed below; whilst all admit that amongst the pilots are excellent men, that the remuneration of these men is too low rather than too high, and that the rates are very moderate.

"On the other hand there are many complaints.

"Some shipowners, even of those who support the present system, and many of the pilots, wish that the pilots should cruise further outwards in search of ships.

"Most seem to be of opinion that the present boat-owning system is an evil, and many of the pilots complain bitterly of it.

"It appears also to be admitted on all hands that the number of pilots is too large.

"The steamship owners, and some others, are extremely dissatisfied with the results of the discipline administered by the pilotage committee. They say that complaints are not attended to, that pilots are inadequately punished, and that no system of regulation and discipline can have the same effect in procuring good service as free employment and free choice.

"As regards the present Bill, the following are the points in the Liverpool evidence which seem worthy of remark.

"The Mersy Dock Board, a body composed of persons elected by the dock ratepayers, have sent up their secretary to give evidence against the extension of the Bill to Liverpool, though they passed no resolution on the subject, and were much divided in opinion. Squarey, 2537 *et seq.*

"The Shipowners' Association of Liverpool, which represents the sailing-ship owners, have passed a unanimous resolution in favour of the present system. Squarey, 2571–73. Shallcross, 3428.

"The Steam-Ship Owners' Association of Liverpool have passed a unanimous resolution in favour of that part of the Bill which abolishes compulsory pilotage. Squarey, 2574. Leyland, 9962.

"As regards these two interests, it is to be observed that whilst the total entries and clearances of sailing tonnage in Liverpool have increased from 3,070,104 in 1850 to 3,867,697 in 1868, the tonnage of steamers has increased in the same period from 192,570 to 2,572,297, and is still increasing, and likely to increase in a still greater proportion.

"The owners of small coasting vessels complain of having to employ pilots when they do not want them, and they also complain of the mode in which the rates are fixed, as unfair to small vessels.

"The pilots are divided in opinion. Some of them are of opinion that the present system should stand, whilst others think that the change proposed by this Bill, whilst it may cause injury to the less efficient pilots, will, in the end, benefit those who are more efficient.

"As a general rule, those who are in favour of compulsory pilotage, as well as those who are opposed to it, think the immunity from liability for damage when the ship is in charge of a compulsory pilot, to be a greater evil, on the grounds that it is unjust; that it causes litigation; that it tends to induce masters to give up the command of their ships to pilots; and that it tends to induce the pilot to collude with the master of the vessel to take undeserved blame upon himself. All, also, are agreed that the pilot should be the adviser of the captain, and not his substitute. But there is a great difference of opinion as to whether it would be right to do away with the immunity without also doing away with the obligation to employ a pilot. On the one hand, Mr. Squarey, the able and experienced solicitor to the Dock Board, argues strongly from the practice of foreign countries in favour of retaining the compulsion and doing away with the immunity, and he is supported by Mr. Danson, Mr. Lamport, and Mr. Galloway. On the other hand, the whole of the witnesses who are opposed to compulsory pilotage, and the steam-ship owners generally, as well as some of the supporters of compulsory pilotage, argue with great force, that if a shipowner is compelled to employ a pilot he cannot justly be made liable for the acts of that pilot. Squarey, 2443. 2520. Danson, 3183. Lamport, 3581 *et seq.* Moss, 3868. Galloway, 4091. Leyland, 9962 *et seq.* 10184. Inman, 10243. Bouch, 10907 *et seq.* Squarey, 2376 *et seq.* Lamport, 3597, &c. Galloway, 4094, Leyland, 9968. Inman, 10253.

"A second point on which opponents of compulsory pilotage are agreed, but upon which its supporters are at variance, is as to the proper meaning and effect of compulsory pilotage. Mr. Squarey represents the view that compulsory payment is all that is required; that the obligation to pay is the important element; that this payment is like light or harbour dues, a tax is levied generally upon the trade of the port for the maintenance of a service which is at times necessary for, and is always available by all. And in this view he is supported by Mr. Lamport. On the other hand, Mr. Danson, Mr. Moss, and Mr. Galloway think that the more important element is the compulsory employment, for the sake not only of the vessel itself, but of other vessels and of the channels of the port. Bouch, 10910. Judkins, 2149. Ballantine, 3118. Shallcross, 3454. Squarey, 2400, &c. Lamport, 3566. Danson, 3138. Moss, 3865. Galloway, 4094.

"A further point on which there is great difference of opinion is that of the existing

exemptions. The witnesses in favour of the Bill are of course for doing away with exemptions, by making them universal. The witnesses in favour of the present system are not equally unanimous. They are all in principle, against the proposed exemptions, feel the anomalies they create, and would do away with them if they could. But the more cautious know that this is impracticable, and admit the necessity, if compulsory pilotage is continued, of continuing those anomalies.

Judkins, 2049. Squarey, 2456. Ballantine, 2980. Danson, 3139. 3232. Lamport, 3636. Moss, 3924. Simpson, 4241. 4361. Bremner, 4769. Leyland, 10017. Inman, 10263. Bouch, 10947 *et seq.*

"Another point on which the opponents of compulsory pilotage are agreed, but on which there is not the same apparent agreement among its supporters, is connected with the boats' stations and cruising ground of the pilots. The opponents are agreed that the pilots are often needed much farther out than they are now found, and say that if the system were a free one they would be found on the coast of Ireland, would be largely employed, and would earn much more than they do at present. And they are fortified in this by the case of the 14 choice pilots employed by the North American steamers. Many of the pilots themselves are of the same opinion. Mr. Lamport, a supporter of compulsory pilotage, is also of opinion that the pilots should cruise farther. But the chief strength of the case in favour of compulsory employment of pilots is vested on the absolute necessity for maintaining in its integrity the present system of cruising station, a thing which it is scarcely possible to do if a number of the pilots are to seek employment elsewhere. And it is to be observed that two of the strongest nautical witnesses in favour of this system, are Captains Judkins and Ballantine, of the North American Mail Steamers, who never make use of these stations, and who voluntarily take and pay extra for pilots from Cork and Londonderry.

Jones, 10561–3. Lamport, 3595.

"Putting aside these differences, the main arguments of those who support compulsory payment of pilots, as distinguished from compulsory employment, are,—

"1. That the approaches to Liverpool are exceptionally dangerous, and require exceptional treatment.

"2. That if the employment of pilots is voluntary, they will be taken in bad weather, but not in good weather.

"3. That under such circumstances, they will not keep the sea or look for vessels in bad weather.

Lamport, 3570 *et seq.*

"4. That discipline and regulations, coupled with the knowledge that they must obtain employment, are more effective stimulants to energy and good conduct, than competition, and the expectation of good pay for good service.

Danson, 3138. Moss, 3794.

"To these the advocates of compulsory employment, as well as compulsory payment, add that it is necessary pilots should be employed as well as paid.

"1. For the safety of the ship herself, of the lives of those on board, and of her cargo.
"2. For the safety of other ships which she may meet.
"3. To prevent her from being wrecked and blocking up the channels.

"Of these arguments, most are general, and are discussed below. As regards the special case of Liverpool, it seems desirable to make one or two observations. Comparatively little argument has been directed to the outward pilotage. The reason is probably twofold. First, the opponents of compulsory pilotage having to a certain extent a choice of pilots in Liverpool, and being for the most part owners who would under any circumstances employ a pilot, do not care so much about it as about the inward pilotage. Secondly, that part of the outward pilotages which is most dangerous, viz., that which is outside the Bell Buoy, is now entirely voluntary, is well maintained, and causes no complaints. This latter reason is one which in the opinion of your Committee has an important bearing on the whole system of compulsion.

Hills, 2865.

"As regards the statement that Liverpool is exceptionally dangerous; your Committee have the most positive evidence from a number of witnesses, not only that Liverpool is the most dangerous port in the kingdom, but that exceptional danger is a special reason for compulsion. But it is not a little remarkable that most, if not all, of these witnesses, when pressed, expressly state that they know little or nothing of the nautical dangers of other ports, and that they are absolutely ignorant of the working of the pilotage systems at the numerons ports when it is voluntary. And, on the other hand, your Committee have strong evidence, from Liverpool shipowners and others, that the dangers of Liverpool have been much exaggerated, and that captains used to the port can, and do, bring their vessels in and out in safety. And your Committee have also evidence of the most trustworthy kind, that the difficulties of the Thames are fully as great as, if not greater than, those of the Mersey. But even supposing the Mersey to be the more dangerous, the consequence, according to all experience, would seem to be, not that compulsion is requisite, but that pilots will, under a voluntary system, be the more needed there, and therefore the more employed.

"Your Committee have also received evidence for Glasgow. It appears that pilotage is compulsory on all vessels above 60 tons burthen from Newark Castle above Port Glasgow to Glasgow. For a large part of the way the course of the river is tortuous, narrow, and artificial, and it is encumbered by an enormous traffic, and is being constantly dredged. According to all the witnesses, the assistance of a person accustomed to the navigation is necessary,

necessary, not only for the vessel itself, but in order to prevent injury and obstruction to other vessels, to the navigation, and to the works of the Clyde Trustees. The masters and mates of steamers navigating the Clyde are freely licensed to pilot their own vessels. In 1869, 125 were so licensed. An exception has been made, by Order in Council, in favour of vessels of a somewhat larger size when towed by steam-tugs; but the exception has not been made use of. The evidence from Glasgow is strong and unanimous in favour of the present system, whilst it is equally unanimous in favour of voluntary pilotage below Greenock. The case is a very peculiar one, and is more in the nature of harbour police and regulations than of pilotage.

"The assistance of some person skilled in the navigation appears to be generally desirable, if not necessary. At the same time there seems to be little room to doubt that, without compulsion, vessels which require such assistance would, as a matter of course, take it. And the apprehension expressed by Glasgow witnesses that foreign vessels, ignorant of the dangers, would not do so, receives little countenance from the fact so distinctly proved to your Committee, that foreign vessels in non-compulsory pilotage waters do, as a matter of course, generally take a pilot; and that even on coming to Glasgow, these vessels are in the habit of taking a pilot in the outer waters where no British vessel would think of taking one.

"The pilotage district extends from Dimlington, on the north of the mouth of the Humber, to Donnanook, on the south, up the Humber as far as Hull, and farther upwards up to Goole and Gainsborough. The pilots are licensed by the Trinity House of Hull, and are controlled by Pilotage Commissioners, consisting of representatives from the Trinity House, the Hull Corporation, the merchants, and the shipowners. There are 68 pilots between the sea and Hull, and 21 apprentices; and the number of pilot boats is seven, of which three are always cruising at the mouth of the Humber. The Trinity House have always examined masters and mates freely. The number possessing licenses in 1869 was 283; in fact, almost all the vessels belonging to Hull shipowners are thus exempt from compulsory pilotage. The earnings of the pilots are thrown into a common fund, and, after payment for boats and other expenses, are divided amongst them. The average amount received by each pilot for the last five years has been 148 *l.* All coasters are exempt, and all foreign-going vessels drawing less than 6 feet of water; so that, practically, almost the only vessels subject to compulsory pilotage are foreign-going vessels, whose owners are not represented on the Hull Pilotage Commission.

Bannister, 5782.
5593.
Brewis, 6069.

"Your Committee have received evidence from the Pilotage Commissioners, the shipowners, and pilots of Hull, in favour of retaining compulsory pilotage, and urging that the pilotage is exceptionally difficult, and that compulsory pilotage is necessary for the safety of the foreign ships which frequent the port; but in this case, as in that of Liverpool, it is remarkable that these witnesses know nothing of pilotage at ports where it is voluntary, and are not even aware that, in the North Channel of the Thames, the same class of ships, which in the Humber are obliged to take pilots, do as a matter of fact employ a large and well paid body of pilots without any compulsion whatever; and in the case of the Humber there is the additional fact, that the witnesses who advocate compulsory pilotage are themselves exempt from it.

"On the other hand, your Committee have had loud complaints of the incidence of pilotage rates on small foreign-going vessels trading to Goole and Gainsborough, and also from all the representatives of shipping at the port of Grimsby; and your Committee have also had conclusive evidence that there is nothing exceptional in the pilotage of the Humber.

Appendix A., No. 19.

Oates, 12181 *et seq.*
Arrow, 11860.
Oates, 12229.
Josse, 12112. 12138.

"Your Committee have also had evidence that there is considerable dissatisfaction amongst the pilots. That the younger pilots wish to have an opportunity of earning more. That not more than one-half of what is paid goes to the pilots. That the seven cutters are far more than sufficient. That many of the pilots themselves would wish the pilotage thrown open, supposing that it would lead to larger employment of the better men.

12201 *et seq.*

"Finally, your Committee have had evidence that whilst the Humber pilots, whose service is compulsory, and who cruise in numerous and expensive vessels provided by the pilotage authority, are often not to be found when wanted, there are also a set of pilots licensed by the Trinity House of Hull, for the purpose of piloting vessels from the sea to Lynn, Boston, and Wisbeach, whose service is voluntary, and who cruise in all weathers in small and comparatively cheap but efficient vessels, and that these pilots are always to be found at sea when wanted, cruising from Flamborough Head to the Deeps, so that they not unfrequently bring even Humber vessels to the place when they can find a regular Humber pilot. In conclusion, your Committee are of opinion that there is no substantial difference between the case of Hull or that of the North Channel of the Thames. The vessels frequenting both are of the same class and character, and in the case of the latter are already exempted from compulsory pilotage without any evil result whatever. Practically, compulsory pilotage in the Humber is confined to foreign vessels, and for the most part these vessels, when navigating the North Channel of the Thames, take pilots without compulsion. There is, therefore, no good reason for retaining compulsion in the Humber.

"Your Committee have also taken evidence from Bristol and from the neighbouring ports in the Bristol Channel.

See Parliamentary Paper, 70, 1870. Clegram, 1031 *et seq.* Drew, 6396 *et seq.*

"Pilotage within the Bristol Channel to the eastward of Lundy Island may be divided into two classes, viz.:

"(*a.*) Pilotage on the waters of the Channel itself, or Channel pilotage.

Rosser, 6882 *et seq.*
Johnson, 12240 *et seq.*

"(*b.*) Pilotage within local limits of, and adjacent to, ports and rivers of the Channel; or local pilotage.

"As regards Channel pilotage, by the Act 47 Geo. 3, c. 33, s. 19, it was made compulsory on all ships bound to or from ports in the Channel to employ pilots licensed by the town council of Bristol.

"This enactment placed the whole of the Channel pilotage of the Bristol Channel in the hands of Bristol pilots, hereinafter referred to as "Pill" pilots, from the name of the village at which they reside.

"As regards local pilotage, Bristol had jurisdiction in certain ports under the Act 47 Geo. 3, whilst Acts were from time to time passed giving to certain authorities powers of compulsory pilotage within local limits, *e. g.*:

Gloucester	Obtained sub-commissioners under the Trinity House in London. (Compulsory.)
Newport	The same. (Ditto.)
Neath	The same. (Ditto.)
Bridgwater	The same. (Ditto.)
Port Talbot	Compulsory Act, 4 Will. 4.
Llanelly	A Compulsory Act, 21 & 22 Vict.
Swansea	A Compulsory Act, 17 & 18 Vict.
Porthcawl	A Compulsory Act, 6 Geo. 4.

"In 1861, the year to which, for present purposes, it is necessary specially to advert, the ports of Gloucester and Newport (Monmouthshire), which had down to that year possessed compulsory local pilotage systems of their own, combined together and with Cardiff, to throw off the Bristol yoke, the first and second as regarded the general Channel pilotage of ships proceeding to or from those ports, and the third as regarded local as well as Channel pilotage.

"The result was, that under the Bristol Channel Pilotage Act of 1861, ships navigating the Bristol Channel, and bound to or from a port other than Bristol, became free of Pill pilots, so far as Channel pilotage was concerned, and in the three ports last named, voluntary local pilotage was established. In other ports of the Channel, compulsory local pilotage was continued.

"At the present moment, the only ships required by law to take a Channel pilot when navigating the Bristol Channel, are ships bound to or from Bristol; and, as regards local pilotage, the compulsory system is retained at—

Bristol.	Swansea.
Bridgwater.	Neath.
Llanelly.	Port Talbot (formerly Aberavon).

whilst the voluntary system is established at—

Cardiff, including Penarth.	Newport, Mon.
Gloucester.	Porthcawl.

"Not only was pilotage to and from Newport, Cardiff, and Gloucester, made voluntary by the Act of 1861, but these ports were enabled to license their own pilots for the Channel, certain reservations being made in favour of the then existing Pill pilots.

"Although a ship navigating the Bristol Channel, unless bound to or from Bristol, is not required by law to take a pilot, still, if a pilot is employed at all, he must be a licensed pilot; and a licensed pilot can always supersede an unlicensed man, and claim pilotage money from the ship.

"The gross sum spent by the shipowners in pilotage of vessels to and from the Bristol Channel ports, was in 1860, 41,308 *l.* 8 *s.*, and in 1868, 47,219 *l.* 7 *s.* 10½ *d.*, showing an increase of payments on the part of the shipowners of 5,919 *l.* 19 *s.* 10½ *d.* under the new system. As regards the distribution of this money, the following is the result, as shown by the Parliamentary Returns:—

	1868.				1860.			
		£.	*s.*	*d.*		£.	*s.*	*d.*
Bristol	compulsory	10,349	17	8	compulsory	19,560	7	5
Cardiff	voluntary	15,074	1	9	ditto	6,084	8	3
Gloucester	ditto	4,707	13	–	ditto	2,891	10	5
Newport	ditto	4,966	11	–	ditto	2,062	19	7
Bridgwater	compulsory	719	9	8½	ditto	802	10	3
Llanelly	ditto	3,322	14	5	ditto	3,876	19	11
Swansea	ditto	5,601	2	3	ditto	4,091	10	7
Neath	ditto	1,926	5	7	ditto	1,766	15	1

At

"At Cardiff, Gloucester, and Newport, the number of pilots has been augmented as follows:

	Number of Pilots in 1860.	Number of Pilots in 1868.
Cardiff	Channel - - - 0 Port - - - - 43	Channel - - - 54 Port - - - - 32
Gloucester	Channel - - - 0 Port - - - - 18	Channel - - - 19 Port - - - - 20
Newport	Port and Channel - - 20	Port and Channel - - 28

"At Bristol, the pilots have suffered; their numbers have fallen from 78 pilots and 19 apprentices in 1860, to 66 pilots without an apprentice in 1868.

"It must, however, be borne in mind, that this increase at Cardiff, Newport, and Gloucester, and falling off at Bristol, is not due to the retention by Bristol of the compulsory system, but is to be accounted for by the pilotage work finding its proper level, and so leaving the pilots at one port, and falling to the share of pilots at other ports, as soon as the Bristol monopoly was broken down.

"As regards the earnings of the pilots individually.

"The average net sum paid to pilots per man in 1860 and 1868, is as follows:—Each pilot keeps his own earnings, subject to deductions on account of maintenance of boat fund, &c.

	1860.	1868.	Increase.	Decrease.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
Bristol	152 4 –	89 – –	- -	63 4 –
Cardiff	- -	*163 12 5	—	—
Gloucester	155 – –	223 12 –	68 12 –	—
Llanelly	75 7 6	66 1 6	- -	9 6 –
Newport	80 – –	130 – –	50 – –	—
Swansea	95 10 –	83 5 –	- -	12 5 –
Bridgwater	50 –	—	—	—
Neath	52 – –	54 – –	2 – –	—

"The highest sums earned by any one pilot in 1860 and 1868 are as follows, viz.:—

	1860.	1868.	Increase.	Decrease.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
Bristol	388 3 6	306 13	- -	81 10 3
Cardiff	- -	446 14 3	—	—
Gloucester	249 7 6	330 6 3	80 19 3	—
Llanelly	115 15 4	92 9 1	- -	23 6 3
Newport	130 – –	254 – –	124 – –	—
Swansea	150 – –	155 – –	5 – –	—
Bridgwater	87 9 6	—	—	—
Neath	74 – –	82 10 4	8 10 4	—

"These sums are liable to great reductions in some cases, including insurance, wages, and victualling of boats' crews, and wear and tear of boat.

"In addition to the above facts it is proved that the change made in 1861 has proved perfectly satisfactory to the shipowners and pilots of Cardiff, Newport, and Gloucester; that the

* It is right to point out that the average net earnings of a Cardiff pilot proper exceed this sum. The sum of 163 *l.* 12 *s.* 5 *d.*, is estimated on the whole number of Cardiff pilots, including the 14 Pill pilots, who held supplemental licenses for Cardiff. To give the real earnings of a Cardiff pilot, the 14 supplementary Pill pilots should be omitted, as well as their earnings; and as their aggregate gross earnings from Cardiff only amounted to 336 *l.* 4 *s.* 6 *d.* in the year, out of the 15,074 *l.* 1 *s.* 9 *d.* earned at Cardiff, a large sum is left to be divided amongst the Cardiff pilots.

the shipowner is better served at lower rates than he was under the old system, whilst the pilot is better paid. If the compulsory system had continued, there would have been a still larger sum spent on pilotage than has been actually spent; but it would have been money wasted. It would have been loss to the shipowner, and probably no gain to the individual pilots. Under the voluntary system, the service has been what was required, and no more.

"The Bristol pilots have suffered, because their business has been in part transferred to the pilots of Newport, Cardiff, and Gloucester. But it has been shown by your Committee that the effect of this has been to make their course far out, even as far as Falmouth and Cork, in search of inward-bound ships, especially foreigners. And as there are no fixed rates to the westward of Lundy, your Committee have not been able to ascertain whether the money earned for this outside pilotage is or is not included in the above returns. If it is, the Bristol pilots have suffered less than would appear from the above returns. And, at any rate, they have been induced by the change of 1861, to offer their services to vessels which want them, instead of forcing themselves on vessels which do not.

"It has been further proved to your Committee, that the feeling at Bristol is in favour of making the pilotage on Bristol trade voluntary, at any rate as far up as the Holms, and probably as far as Kingroad. And at Swansea, the feeling is in favour of making it voluntary, except from the Mumbles into the docks. As regards the Avon, from Kingroad to Bristol, and the pilotage into Swansea Docks, the local opinion is in favour of retaining compulsory pilotage, not for the safety of the ship, or the maintenance of pilots, but as a matter of harbour regulation. Considering, however, that all coasters are now free from pilotage in the Avon, and cause no accidents, that the masters of steamers are also licensed, that in the somewhat similar case of the Severn, from Sharpness upwards, where pilotage is voluntary, no vessel goes without a pilot, and that in the upper waters of the Thames, as above stated, pilots or skilled watermen are invariably and voluntarily employed, your Committee can have no doubt that, in the Avon and at Swansea, masters who do not know the river will of their own accord always employ pilots.

Doyle, 8585 *et seq.* 8645. 6597. 8652. Farrer, 165. 8600 *et seq.* 11034 *et seq.*

"Your Committee have also received evidence from Dublin. At Dublin pilotage is compulsory on all vessels entering Kingstown or Dublin, except coasters under 50 tons. There are 40 pilots, who cruise in 12 cutters, which are maintained by the Port Board out of their earnings Three-fourths of the pilots' earnings come from these coasters, who complain loudly of having to employ them. The pilot above referred to also states that, in consequence of the shifting banks, the currents and the fogs, the dangers of the Dublin pilotage are very great. This evidence, however, is contradicted entirely by Captain Reynolds, who has frequented the port without a pilot for years. From the evidence of Mr. Watson, a member of the Port Board, it appears that that Board, which is a representative body, determined not to petition against the Bill, but only in favour of more speedy compensation. The experience of Dublin, as given by this witness, is interesting. It appears that immediately after the passing of the Act of 1849, the Ballast Board, who were then the pilotage authority of the port, agreed to exempt coasting steamers, on condition of their paying 150 *l.* a year for 10 years to the pilot fund. They now examine and license masters and mates freely; and in 1869 there were 34 licensed. In 1849 the revenue from pilotage was 6,356 *l.* In 1851, in consequence of the exemption of coasting steamers, it had fallen to 4,730 *l.*, and the fall of the pilotage establishment was prophesied. But by 1869, it had risen to 7,032 *l.*

Watson, 10690. App. A., No. 21. Watson, 10724.

"It is obvious to your Committee that the only question at Dublin is the question of compensation.

Macfaren, 9759 *et seq.* Cochrane, 9804.

"Your Committee have had evidence from two shipowners at Belfast to the effect that compulsory pilotage is unnecessary in the Lough, but is necessary in the river, which is a channel three miles long and 70 yards wide, in order to prevent collisions, and blocking up of the Channel. To the same effect is the evidence of Benson, a pilot.

Reynolds, 11042 *et seq.*

"On the other hand, Captain Reynolds, of the City of Dublin Company, who has traded in and out of it for seven years, has stated that the pilotage is perfectly easy, that compulsory pilotage is quite unnecessary, and a great hardship on coasters.

"No evidence has been received from any of the authorities at Belfast.

"Though your Committee have been ready to receive any evidence against the Bill from other ports they have received none. And they have thought it unnecessary to call for evidence from ports where pilotage is voluntary, since it is notorious that the shipowners of those ports are not only entirely satisfied with the voluntary system in their own ports, but are decidedly in favour of the abolition in other ports, in which, as their ships frequent those ports, they have, of course, a strong interest. Nor has there been any attempt to produce evidence from any quarter to the effect either that the pilotage service in voluntary districts is inefficient, or that life and property are less safe in those districts, or that vessels which need pilots in those districts neglect or refuse to do so.

"As regards the feeling of the ports on the north-eastern coast, your Committee desire to refer to the Report of Mr. Lindsay's Committee on Merchant Shipping in 1860, xx to xxii, and to the evidence given before that Committee, especially that of Mr. Hudson from the Tyne and Mr. Potts from Sunderland, expressing the views of the shipowners at those ports.

"Your Committee conclude, therefore, by stating what appears to them to be the general effect of the opinions and arguments laid before them.

"1. The present system is anomalous to the last degree, both in the extent to which compulsory pilotage is carried, and in its exemptions. But, except from Liverpool, no evidence

evidence of the least importance has been laid before your Committee in favour of doing away with these anomalies by extending the compulsion or diminishing the exemptions.

"2. The exemptions have been largely extended by recent legislation, and, except that they have increased the anomalies, have given complete satisfaction. Nor has any attempt been made to show that this great increase of exemptions has been attended by any increase of loss or danger. To attempt to diminish the exemptions would cause an amount of opposition and dissatisfacton which it would be impossible to overcome.

"3. The opinion in favour of freedom in pilotage has, in recent years, gained greatly in strength. In London, where 20 years ago all the large shipowners were in favour compulsion, there is now an almost unanimous feeling against it. And in Liverpool, where there is still a large majority of sailing-ship owners in favour of compulsion, there is a minority against it, whilst the great and growing steamship interest are, almost to a man, against the obligation.

"4. Even amongst the pilots themselves there are many who see that the real interest of the abler and more energetic is better served by a system which enables them to make the most of their own services, than by one which, whilst securing them employment, deprives them of special reward for superior service.

"5. This change of opinion is, in a great measure, due to the increase in steam shipping. These ships arrive and depart with regularity and navigate pilotage waters with speed and certainty. Where the voyages are short, the officers themselves become excellent pilots; and where they still employ pilots the pilotage is comparatively short.

"6. It is also due to the changed views of the shipowners on the subject of immunity from liability, and to their sense of the evil of the present legal relation between a captain and a compulsory pilot.

"7. The above change of opinion does not imply that pilots are less needed or will be less employed than before. On the contrary, every shipowner and ship captain who has given evidence, except in the case of steamers and small coasters making very short voyages, has expressed his own wish to employ pilots, and his opinion that all other prudent owners and captains will employ them. If less time is occupied in pilotage, and fewer pilots are required, it is due to the rapidity with which the pilotage service is performed.

"8. The strongest evidence has been given that steam tugs are no substitutes for pilots, and that a pilot is as much needed with a steam tug as without.

"9. Many witnesses who have supported the present Bill are in favour of a much larger measure of freedom than the Bill provides. Some of them desire that all restrictions on the numbers of licensed pilots should be removed; that pilots should be at liberty to cruise in search of ships where they find it most profitable to do so; and some of the evidence points to the expediency of free bargains with the pilots as to rates, at any rate in inland waters and in outward pilotage. But these witnesses look upon the abolition of compulsory employment as the first and necessary step towards other improvements in the system."

Such being the general effect of the views presented to your Committee, they proceed to consider the arguments by which the advocates of compulsory pilotage support its continuance.

The reasons alleged are as follows:—

"1. That it is necessary, in order to maintain a competent supply of pilots.

"A practical answer to this reason seems to be, that in those ports of this country where pilotage is voluntary, the supply of pilots is as good as where it is compulsory; at Cork as at Falmouth, at Newcastle as at Liverpool, on the north as on the south side of the Thames. Indeed, in the case of the Thames, it appears that the supply of pilots would be wholly insufficient for the work, if it were not that the licensed and compulsory pilots were supplemented by a large and very efficient class of unlicensed volunteers. And in the Mersey, on the other hand, under a strictly compulsory system, the supply of licensed pilots is so much too large, that the authorities are obliged to reduce the number in order to provide adequate employment and payment for those that remain. In fact, where pilots are really wanted, they are as much employed and paid under a voluntary as under a compulsory system; it may be said that, if this is the case, there is no hardship on the shipowner in compelling him to employ a pilot. But there is this great difference: if the employment is voluntary, the pilot must be efficient in order to obtain it; and if he is efficient, he is likely to be employed. If the employment is compulsory, there is no effectual security for his efficiency. And there is the further great difference, that in the former case the responsibility rests with the employer, in the latter with the Government, Legislature, or pilotage authority; in other words, with nobody.

Evidence to Committee of 1860.

"2. That it is necessary for the protection of the ship, its crew, its passengers, and cargo.

"In answer to this reason, your Committee would observe, that it is no part of the business of Government to take a ship out of the hands of those most interested in her safety; and that merchants, shipowners, and insurers are much better judges of what they need than Government can be. So far as life is concerned, upon which considerable stress has been laid, it has been shown to your Committee that coasting passenger steamers, which probably carry more human lives than any other class of vessels, have been practically exempted from compulsory pilotage, both at Liverpool and on the Thames; and that either for the interest of the owner, under the present law of liability, or for other reasons, these steamers have always been navigated by very competent persons, and have been peculiarly free from the accidents incident to difficult pilotage.

"3. That it is necessary to place every ship in the hands of a pilot on entering a port, in order to prevent confusion, and risk to other ships in the port.

"This, however, is a matter not of pilotage, but of port regulation, and is generally so regarded. In the Thames, where a very large proportion of the ships which navigate the river are free from compulsory pilotage, every ship employs a competent pilot, licensed or unlicensed, and no difficulty is experienced.

"4. That without the obligation arising out of a strict service, out of stringent regulations, and out of a corresponding obligation on the part of the ship to employ a pilot, the pilots will not feel themselves morally bound to give willing and efficient service.

"Your Committee would scarcely have thought it necessary to notice this reason, if it had not been advanced by most respectable witnesses from Liverpool. If evidence were needed to show that the general principles of human conduct are applicable to pilotage, and that in pilotage as in other matters of business, self-interest and competion are more efficient stimulants than rules and discipline, such evidence is supplied in abundance by the cases in which pilotage service is voluntary.

"5. That the step taken by the Bill is one-sided and incomplete; that it retains a fixed price; a licensed corps; limited numbers; stringent regulations as to cruising, and obligations on the pilots to accept an offered service. And that in these respects it is unfair on the pilot; whilst it fails to give either party the benefit of complete freedom.

"It will be seen from previous remarks that your Committee have been led to the conclusion that the present Bill may in many districts lead to further steps in the direction of freedom.

"But for this the pilotage authorities have ample powers; and in the meantime there is nothing unreasonable in imposing on a body of men who, by obtaining licenses, will still have a monopoly of a necessary employment, such restrictions and regulations as may be found necessary.

"But whatever further steps may be hereafter found necessary, your Committee are satisfied that the first essential step is the abolition of the obligation to employ a pilot. When the shipowner is at liberty to employ a pilot or not, according as he finds him useful, he will have the means by which he can in time compel all other improvements which may be needed.

"The present Bill will place matters in districts in which pilotage is non-compulsory in the same position in which matters are when pilotage is voluntary, and will leave it in the hands of the pilotage authorities to make such further changes (if any) as may be found necessary.

"6. That if further improvements are to be left to the pilotage authorities, the abolition or retention of compulsory pilotage may also be left to them, especially when these authorities are elected and representative boards.

"Your Committee are of opinion that the case does not admit of the delay which this objection would involve. Local authorities do not always, or generally, represent the more advanced opinions and wants of the trade; and in the present instance it is very doubtful whether they represent fully the growing steam trade; nor do the pilotage authorities of a port necessarily represent the ships which trade to a port. And there is no doubt a tendency in all governing bodies and their officers to become strongly attached to systems which they have administered.

"Moreover, in the present case the proposed change in the law is one of such general application, and involving such important consequences, not only to the port itself, but to the strangers who come to it, as to render it especially undesirable to leave it to the caprices of local legislation. With the law of liability, for instance, no authority short of the Imperial Parliament can properly deal. And, finally, in the opinion of your Committee, no case has been made out for special and exceptional legislation. When the difficulties of pilotage are great, the demand for pilots, and the consequent supply of pilots, is great in proportion.

"On the other hand, the following objections to the practice of compelling ships to employ pilots, are as follows:

"1. It is unjust, for it obliges many ships that do not require pilots, to pay for keeping up a staff for those who do.

"2. The system tends to create and maintain a body of protected monopolists, whose interests are not identical with those of the shipowner, who know that they must be employed, and whose independent services are probably not so readily or so effectively given as if their employment depended on their efficiency.

"3. A further

"3. A further and very serious objection is to be found in the consequence as regards liability, which has been so fully stated above.

"The liability of the owner and his servants is put an end to, and the security against mismanagement arising from this liability is seriously diminished, whilst persons sustaining damage by collision are deprived of their remedy.

"4. The captain and his officers, from their general knowledge, and their acquaintance with their ship and crew, are better able to manage her, even in pilotage waters, than a pilot to whom the vessel is strange. To compel the former to give up charge to the latter leads to disaster.

"The two last objections are fully admitted by most of the advocates of compulsory pilotage. And some of them, whilst advocating the retention of compulsory pilotage, still propose that the pilot shall not be allowed to interfere with, but shall only advise, the captain; and that the shipowner shall be liable for the acts of the pilot.

"It is obvious, however, that any attempt to carry this proposal into effect would be met by very serious opposition from the great body of shipowners. The legal principles on which the present law is founded, viz., that a man is liable for the acts of those whom he voluntary employs, but not for the acts of those whom he is compelled to employ, appears to your Committee to be in itself just and reasonable. And if, for the sake of remedying a practical inconvenience, this principle is departed from, it is probable that further anomalies and inconveniences will be the result. Nor is it likely that the captain and the pilot will ever assume their proper relative positions so long as the former is compelled to employ the latter.

"Your Committee are therefore of opinion that the immunity from liability must stand or fall with the legal obligation to employ a pilot."

SPECIAL REPORT proposed by Mr. *Graves* brought up, and read first time, as follows:—

"YOUR Committee have taken evidence and considered the several petitions which were referred to them. It appears that of 35 petitions only three are in favour of the Bill; of the remaining petitions, which are from merchants, shipowners, and mercantile bodies, from pilotage authorities, from pilots and officers connected with pilotage establishments, and from freemen of the Waterman's Company in the Thames, 23 are against the passing of the Bill, with alternative claims in several cases for compensation.

"Many of the petitions against the Bill allege that the proposed change in the law of pilotage would seriously increase the risk to life and property.

"So far, therefore, as any inference can be drawn from the petitions, it appears that the feeling of pilotage authorities, of merchants and shipowners, and of pilots, is decidedly adverse to the proposed alteration of the law.

"The Committee were occupied during 20 days hearing evidence which was tendered to them.

"Witnesses were examined in relation to the pilotage systems in operation in the Thames, the Mersey, the Clyde, the Bristol Channel, the Severn, the Avon, the Humber, the Tyne; and at Dublin, Queenstown, Falmouth, Southampton, Belfast, and other places; also as to the practical working of those systems, and the effect likely to arise from making the employment of pilots voluntary instead of compulsory. Evidence was also given as to the expediency of the propssed change in the law, by steam and sailing shipowners of London, Liverpool, Hull, Bristol, and other ports, and by witnesses representing marine insurance companies in London and Liverpool.

"Without entering into a detailed analysis of this evidence, which is appended to the Report, the general result may be stated as follows:—

"The marine insurance companies and the Liverpool Underwriters Association, and the pilotage authorities who were represented before the Committee, are opposed to the proposed change, as affecting their respective ports. The committee of the association of sailing shipowners of London, so far as respresented at the meeting convened to consider the Bill, are in favour of it; whilst the sailing shipowners of Liverpool appear to be almost unanimously opposed to it. As regards the steam trade, that of London, the coasting steam trade throughout the kingdom, and a majority of the steam trade at Liverpool, comprising the Inman and Bibby Lines are in favour of the Bill; whilst an important section of the Liverpool steam trade, including the Cunard Company and other large steam shipowners, are very strongly opposed to the abolition of the present system of pilotage at Liverpool. In the Clyde, the Humber, the Avon, and at Swansea, the great preponderance of opinion is in favour of maintaining a compulsory system of pilotage.

"The Deputy Master of the Trinity House, Sir F. Arrow, stated that his private opinion was in favour of the Bill, but he said emphatically that he was not authorised to express the opinions of the Elder Brethren of the Trinity House; and he informed the Committee that the question had not been discussed by them since 1862, when they expressed their opinion that compulsory pilotage should be maintained. It is to be regretted, looking at the extensive control over pilotage exercised by the Trinity House, that the more recent opinions of the pilotage committee of that corporation were not placed in evidence before the Committee.

"Compulsory pilotage now prevails at Bristol, at Liverpool, in the Clyde, in the Humber, at Dublin, Belfast, in all the principal Irish, and in most of the Scotch ports.

"It also prevails at all places within the jurisdiction of the Trinity House of London, which extends, with few exceptions, over all the ports on the east coast south of the Humber, on the south coast in the English Channel, and on the west coast as far to the northward as Holyhead.

"In the Tyne, at Cardiff, Gloucester and Newport, at Leith and at Queenstown, pilotage is voluntary.

"From this summary it will be seen that the navigation of the great majority of British ports is now conducted under a compulsory system of pilotage, the compulsion consisting in an obligation to pay some amount of money, varying at different ports from the ordinary rate of pilotage, to very heavy penalties, as the alternative to employing a licensed pilot who tenders his services.

"The compulsory system of pilotage now in operation has been recognised and confirmed by various statutes in relation to merchant shipping. The 353rd section of the Act of 1854, which is still in force, expressly declares that the employment of pilots shall continue to be compulsory in all districts in which it was by law compul-ory before the passing of that Act.

"The same Act for the first time affirmed, in express terms, a rule which had previously depended on judicial decisions: viz., that owners and masters of vessels should not be liable for loss or damage occasioned by the fault or incapacity of any qualified pilot acting in charge of a vessel within any district where the employment of such pilot is compulsory by law.

"Compulsory pilotage is not peculiar to this country. It was proved before the Committee that it prevails in the United States, and in France, Holland, Belgium, and the North German Confederation.

"It is important to notice here, that in all compulsory pilotage districts certain classes of vessels have been exempted from the obligation to employ or pay for pilots.

"These exemptions (in which Mr. T. H. Farrer, in his Memorandum on Compulsory Pilotage, dated 23rd February 1870, remarks that "there is no sense or principle") vary in different districts, but, as a rule, they appear to have been introduced in favour of vessels which, from their small draft of water, or from their frequent arrival and departure at the port, were supposed not to stand in need of pilotage services.

"In 1848 provision was made, for the first time, by the 12 & 13 Vict. c. 88, for the granting by pilotage authorities to masters and mates of vessels, of licenses to enable them to pilot their own vessels. This provision was continued and enlarged by subsequent Acts; and by the Merchant Shipping Act, 1854, which is still in force, the Board of Trade are authorised to grant certificates to masters and mates in cases where they may consider that any local pilotage authority has unreasonably withheld a license; they are also empowered, irrespective of, and without any prior application to the local pilotage authority, to grant pilotage certificates to masters and mates of home trade passenger ships, which, unless they have a master or mate holding a pilotage certificate, were by the same Act compelled, under a penalty not exceeding 100 *l.*, to employ a licensed pilot.

"Thus it will be seen that under the law as it now stands, many vessels are absolutely exempt from pilotage; and that all vessels, without exception, British as well as foreign, may avoid compulsory pilotage if placed in the hands of officers qualified to obtain from the local authority or from the Board of Trade a pilotage certificate.

"The Committee are of opinion that the evidence proves conclusively that the system of compulsory pilotage now in force, though capable of improvements in details, fulfils in a very high degree that which is admittedly its principal object, viz., the preservation of life and property from the dangers attendant on the navigation of the entrances to the various ports throughout the kingdom.

"It has been proved that in the Mersey, the Humber, the Avon, the Clyde, at Swansea, and all the principal outports where the compulsory system prevails, there are to be found at all times, and under every condition of weather, a sufficient number of licensed pilots well qualified for their duties, provided with boats thoroughly fitted for the service, and working under systems adapted to the circumstances of the locality.

"It has also been proved that an efficient system of pilotage is maintained on the voluntary principle at Gloucester, and it has been stated that the system works satisfactorily in the Tyne, at Cardiff, Newport, and Queenstown; but at all the latter places the navigation is apparently free from difficulty or danger. It is, however, to be remarked, that no local evidence was tendered to the Committee as to the working of the voluntary system at any of these ports, Gloucester excepted; and, consequently, the Committee are not in a position to express any opinion as to the efficiency or otherwise of the voluntary system. From none of these ports, however, has any evidence been tendered to the Committee.

"In the Thames, although there are many efficient pilots, it appears that the Trinity House has not licensed a sufficient number of pilots to meet the requirements of the port. This circumstance, combined with the existence of several classes of pilots, licensed for different distances, and for various purposes, has produced confusion and irregularity, and has led to the general employment as pilots of licensed watermen who have passed no examination to test their competency, and who are not under the control of any pilotage authority.

"This unsatisfactory condition of the Thames pilotage system may, perhaps, to some extent

extent explain the different views as to the present Bill entertained by the shipowners of London and those of Liverpool, to which we have previously referred.

"However this may be, the evidence certainly points to the propriety of the pilotage of the Thames being reorganised by a properly constituted pilotage authority for London, in the appointment of which the merchants and shipowners of London should have direct representation, and which should, subject to the supervision of the Board of Trade, be entrusted with the entire control of the pilotage affairs of the London district.

"As regards the main principle of the Bill, viz., the entire abolition of all legal obligation wherever it now exists to employ pilots, the Committee do not feel justified, in a matter so deeply affecting life and property, in recommending the adoption of an immediate and complete reversal of the system now prevailing in nearly every large port of the United Kingdom in opposition to the judgment of the pilotage authorities; especially as that system has been found to work well in practice, and to be adapted to the varying physical circumstances of the navigation, and to the local requirements of trade.

"The dangers and difficulties of access to ports differ widely both in degree and kind.

"In same places, such as the Tyne, Cardiff, Leith, Queenstown, Falmouth, the outer waters of the Bristol Channel, and other places easy of approach, voluntary pilotage may be found to work well; but there are other places where the natural difficulties are so great as, in the opinion of the Committee to render it highly inexpedient to make a change which undoubtedly tends to diminish the employment of skilful pilots, and thereby to increase the perils of navigarion.

"From the evidence of the shipowners who supported the Bill, it may be inferred that they are actuated by two distinct motives. With some the object is the saving of expense by not employing pilots; with others there seems to be a desire to be able to select pilots of their own choice.

"If, as the Committee believe, the result of the Bill would be to lessen the employment of pilots, the risk of loss to life and property would, it is to be feared, be very seriously increased, for it was shown that out of 20 vessels totally lost at or near Liverpool in 1869, only one was in charge of a pilot, the others being small vessels, flats, and schooners, without pilots. The principle of selection of pilots, in the case of the great majority of inward-bound vessels, was shown to be impracticable; whilst as regards outward-bound vessels, it appears to be already acted upon to some extent, and it could probably, if desired by shipowners, be carried still further.

"Another objection to the introduction of voluntary pilotage in difficult navigation is that it would lead to the employment of unqualified persons who would undertake to pilot vessels at lower rates than those necessarily charged by licensed pilots. This is obviously a source of danger which it would be extremely difficult to guard against.

"Another and a very serious objection to the sweeping and immediate abolition of compulsory pilotage proposed by the Bill, is that it must necessarily involve very large claims for compensation from pilots, boatowners, and others, whose interests would be affected by the change, and whose claims could not in justice be disregarded.

"The compensation clauses in the present Bill, which were generally considered to be inadequate and unsatisfactory, relate only to the claims of pilots; the claims of pilot boatowners and others who would be affected, and which must assuredly be recognised and dealt with, should the Bill pass in its present form, are wholly ignored.

"The Committee feel that whilst no consideration of this nature should be allowed to stand in the way of any change really necessary in the interest of commerce and navigation it may well influence the policy of legislation when the change proposed which is directly opposed to the provisions of the Merchant Shipping Bills of the present and last Session certainly cannot be said to be necessary, and is at best of questionable expediency.

"On a consideration then of all the circumstances, it is the opinion of the Committee that the system of pilotage to be adopted at any given port, should not be fixed by an arbitrary and inflexible law such as is proposed by the Bill; but that it should be left to the decision of local pilotage authorities, constituted in a manner to be approved by the Board of Trade, and so as to represent the trade and commerce of the district.

"Local authorities thus constituted would have the highest interest in rendering the access to their ports safe, easy, and economical, and they might be relied upon to maintain in their districts efficient and well disciplined bodies of pilots.

"Changes from a compulsory to a voluntary system originated by local authorities would, no doubt, involve questions of compensation from the public funds to pilots, boatowners, and others, for which it would be necessary to make provision; but it is probable that changes so made would be introduced gradually and under circumstances which would give rise to small claims for compensation as compared with those which must at once be dealt with if the Bill be passed.

"In view of the possibility of such changes, it would be necessary to give to pilotage authorities ample powers to readjust, and, if necessary, to increase or modify their rates, as to particular classes of vessels; to alter the incidence and the principle on which they are levied; to take over boats and other property; to settle questions of compensation, subject to the approval of the Board of Trade, and to deal with all other matters which might arise on a change from a compulsory to a voluntary system.

"Where no such local authority now exists, it would be necessary to allow time for its formation. Should this not be done within 12 months after the passing of the Act, it might be left to the Trinity House to exercise the discretionary powers at such port.

"The Committee think it right to add, though not called upon to express any opinion on the subject, that a great amount of evidence was submitted to them in favour of abolishing the exemption of owners from liability for the negligence of pilots, and they would suggest that the law on that subject should be reconsidered. If it were thought expedient to do away with this exemption the Committee consider that the retention of compulsory pilotage would not necessarily interfere with such an alteration of the law. It was shown that, although compulsory pilotage prevails in America, and in almost all the maritime countries of Europe, there is no country, except the North German States, where the law relieves the owner from liability for the pilot's acts.

"If this view be adopted, provision should be made that the refusal to take a pilot shall not involve any fine or penalty beyond the payment of a fair contribution to the pilotage fund, not exceeding in any case the regular pilotage rate.

"The shipowner would thus have the opportunity of getting the benefit of an efficient pilotage establishment, and the pilot, instead of taking command of the vessel, as he too frequently does under the present law, would confine himself to his proper function of supplying to the officer in charge of the ship, all information as to channels, tides, lights, marks, depth of water, &c., requisite for the safe navigation of the vessel through pilotage waters.

"In conclusion, the Committee recommend that the Bill should be amended, so as to carry out the views in regard to pilotage stated in this Report."

Motion made, and Question proposed, That the Special Report proposed by the Chairman be now read a second time, and considered, paragraph by paragraph.—Amendment proposed to leave out the words "The Chairman" in order to insert the words "Mr. Graves"—(Mr. *Graves*)—instead thereof.—Question put, That the words "The Chairman" stand part of the Question.—The Committee divided:

Ayes, 7.	Noes, 7.
Mr. Grieve.	Sir J. Hay.
Mr. Gowley.	Mr. Hardy.
Sir C. Wingfield.	Mr. Turner.
Mr. Stevenson.	Colonel Bourne.
Mr. Price.	Mr. Graves.
Mr. Wykeham Martin.	Mr. Pemberton.
Mr. Norwood.	Mr. Malcolm.

Whereupon the Chairman declared himself with the Ayes.

Main Question put, and *agreed to*.

Bill, as amended, to be Reported.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 8th July 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Mr. Turner.	Mr. Hardy.
Sir C. Wingfield.	Mr. Stevenson.
Mr. Grieve.	Mr. Gowley.
Mr. Graves.	Mr. Brassey.
Mr. Norwood.	Mr. Cave.
Mr. Price.	Mr. Pemberton.

Proposed Special Report considered, paragraph by paragraph.—Amendments made.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 12*th July* 1870.

MEMBERS PRESENT:

Mr. Shaw Lefevre in the Chair.

Sir C. Wingfield.	Mr. Gourley.
Mr. Grieve.	Colonel Bourne.
Sir John Hay.	Mr. Stevenson.
Mr. Graves.	Mr. Cave.
Mr. Brassey.	Mr. Norwood.
Mr. Turner.	

Special Report further considered.—Amendments made.

Page 23, paragraph 7.—Motion made, and questioned proposed,—"That Paragraph 7 stand part of proposed Report."—The Committee divided.

Ayes, 6.	Noes, 4.
Mr. Grieve.	Mr. Turner.
Sir C. Wingfield.	Mr. Graves.
Mr. Stevenson.	Sir John Hay.
Mr. Gourley.	Colonel Bourne.
Mr. Brassey.	
Mr. Cave.	

Further Amendments made.

Question: "That this be the Special Report of the Committee to the House,"—put, and *agreed to.*

Ordered, To Report.

MINUTES OF EVIDENCE.

Tuesday, 22nd March 1870.

MEMBERS PRESENT:

Colonel Bourne.	Mr. Malcolm.
Mr. Thomas Brassey.	Mr. Philip Wykeham Martin.
Mr. Cave.	Mr. Norwood.
Mr. Gourley.	Mr. Pemberton.
Mr. Graves.	Mr. William Philip Price.
Mr. Grieve.	Sir Henry Selwin-Ibbetson.
Mr. John Stewart Hardy.	Mr. Stevenson.
Sir John Hay.	Mr. Charles Turner.
Mr. Shaw Lefevre.	Sir Charles Wingfield.

MR. SHAW LEFEVRE, IN THE CHAIR.

Mr. THOMAS HENRY FARRER, called in; and Examined.

1. *Chairman.*] You are the Permanent Secretary of the Board of Trade?—I am.

2. And for many years you were at the head of the Marine Department of that Board?—Yes, since the end of 1850.

3. In that capacity have you had the subject of Compulsory Pilotage before you in different shapes and different places?—Yes, more or less during the greater part of that time.

4. Will you produce to the Committee a map which has been made out by the Board of Trade, showing the districts where compulsory pilotage is in existence, and where voluntary pilotage is now in force?—I will put in this map, but at the same time I should like to caution the Committee against accepting it as being accurate or complete. In the first place, the compulsory pilotage system differs very much in different ports; and in the second place, it is exceedingly difficult to rely upon the returns that are given us; because the persons who make the returns do not understand the questions, and they do not answer them precisely in the same way. We have made this map out as we best can, and it will give some general idea, both of the different jurisdictions and the ports in which pilotage is compulsory. I may mention one case which will illustrate the difficulty of trusting returns. In the Humber, the returns which were made to us, as will be found in the printed Paper lately laid before Parliament, state that there is no compulsion. Now, in one sense, that is true, but in another sense it is exceedingly untrue. The pilotage authorities there examine the masters and mates very freely, who, when they have passed, can navigate their vessels without a pilot; but, on the other hand, for ships whose masters and mates are not examined, a licensed pilot is compulsory. I merely mention that to show the difficulty there is in making any general map or any general return.

Mr. *T. H. Farrer.*

22 March 1870.

5. But so far as possible that map shows the districts where pilotage is compulsory at law under particular private or local Acts, and where it is non-compulsory?—Yes, with this qualification; that in many cases where it is compulsory it is only compulsory upon particular classes of ships or in particular classes of voyages.

6. Mr. *John Stewart Hardy.*] Will you tell us the colours?—Red, orange, brown, and green are compulsory; they are divided into those colours according to the jurisdiction. The Trinity House of London is red; the Trinity House of Hull is orange; the pilotage jurisdiction of Liverpool is brown; and other independent pilotage ports where there is some compulsory pilotage are green. There is another colour, yellow, for Bristol, where it is compulsory; with these other colours it is entirely free.

7. *Chairman.*] At the same time a Return has been laid before Parliament showing the number of pilots in each district, with their average earnings and other details asked for by the Board of Trade?—Yes; and that Return must be taken subject to similar qualifications.

8. Will you state to the Committee the total number of pilots now exercising their craft in compulsory districts, and the number of pilots in non-compulsory districts?—The total number of pilots in ports where pilotage is more or less compulsory is 1,828; the number of pilots in ports where the pilotage is entirely free is 1,066.

9. When you say districts where it is entirely free, you mean that they are still subject to the Pilotage Commissioners, and in most cases, if not all, their numbers are limited?—Whenever I speak of compulsory pilotage, I mean simply those

Mr. *T. H. Farrer.* 22 March 1870.

cases where the law obliges the shipowners to take a pilot; in ports where there is no such obligation, pilotage is often in other respects subject to regulations as strict and severe as those in force at compulsory ports.

10. The only difference being that in one case the employing a pilot is compulsory by law, and in the other it is not compulsory?—Yes.

11. Since you have been at the Board of Trade I believe little alteration has been made, except in the case of the Bristol Channel, in any of these districts as regards compulsion?—The two principal alterations I can call to mind are the Bristol Channel and the old district under the Newcastle Trinity House. In the Bristol Channel, Newport, Cardiff, and Gloucester have been emancipated from Bristol control, and at the same time compulsory pilotage with respect to all ships trading to and from those ports was put an end to. In the case of the Newcastle Trinity House, distinct independent authorities have been set up for the Tyne, for Sunderland, and Hartlepool; in that district pilotage was compulsory on foreign ships, but not on British ships. This obligation on the foreigner was gradually by the effect of reciprocity treaties, and ultimately by Mr. Milner Gibson's Harbours and Passing Tolls, &c. Act, 1861, put an end to.

12. Though little change has taken place in the districts during the last few years, a considerable number of changes have been made by law, affecting classes of vessels over all, or at least over portions, of the districts?—Yes, certainly; we shall come to those when we come to individual ports. There has been a considerable alteration which is general, viz.: the examination of masters and mates, and the licensing of those examined to pilot their own vessels.

13. The general tendency of legislation of late years has been to increase exemptions, and there have been modifications tending toward the abolition of compulsion?—Yes.

14. That legislation commenced in the year 1849?—Yes; at the time of the repeal of the Navigation Laws.

15. Will you state to the Committee the change then made as regards pilotage?—That was before I was appointed to the Board of Trade.

16. Will you state to the Committee the change then made?—The Act of the 12th and 13th Victoria, chapter 88, recites that "Whereas under the existing laws for the regulation of pilots and pilotage in various ports of the United Kingdom, masters of vessels are liable to the compulsory employment of pilots notwithstanding that the said masters are either themselves, or have on board their respective vessels some one or more persons, competent to perform that duty; and whereas it is expedient that the authorities, in matters of pilotage, should be permitted in certain cases to relieve the masters of vessels from such compulsion under certain prescribed regulations;" and it then proceeds to enact, "That notwithstanding any law, or any usage, custom, or prescription whatever to the contrary hereof, any master or mate may, upon satisfactory testimonials as to sobriety and good conduct being lodged with the Corporation of the Trinity House of Deptford Strond, or the sub-commissioners of pilotage, or other legally constituted authority in matters of pilotage for any port or district, as the case may be, be examined by some of the Elder Brethren of the said corporation, or by the said sub-commissioners or other constituted authority, if they respectively shall see fit so to do, but not otherwise, with or without the assistance of other persons to be appointed by the said corporation, sub-commissioners, or other constituted authority respectively, as they shall see fit, as to his seamanship and his fitness to pilot any vessel of which he may be the master or the mate, within the limits for which he shall be so examined, and for which, if found fit to pilot the same, he shall receive a certificate under the common seal of the said corporation, or the seal (if any), or hands of the said sub-commissioners, or other constituted authority, setting forth the said limits, and the vessel for which he shall be so certified, which certificate shall be in force for one year and no longer, and may be renewed from year to year, at the discretion of the said corporation, sub-commissioners, or other constituted authority, as the case may be, such renewal to be endorsed on such certificate, and signed by the secretary of the said corporation for the time being, or by any two of the said sub-commissioners or other persons composing such other constituted authorities as aforesaid; and such certificate, so long as the same shall be in force as above provided, shall be a full and sufficient authority for the person to whom the same shall have been granted to pilot and conduct within the limits specified in the said certificate the vessel whereof he may be the master or the mate, without the aid or assistance of any duly licensed pilot, and without being subject to any of the penalties in that behalf imposed by any Act or Acts, or by or under any charter or charters relating to pilotage."

17. I believe that was very little acted upon by the local authorities?—It was acted upon to some extent by the Trinity House of London and by one or two others, but it was not generally acted upon.

18. The Merchant Shipping Act of 1854 re-enacted those clauses, and gave the Board of Trade power to examine, in the case of the local authorities refusing to avail themselves of that privilege?—It was not exactly that. In 1853 Mr. Cardwell introduced an Act, the 16th and 17th Victoria, chapter 129, by which various alterations were made in the law relating to pilotage; and by the 14th section of that Act, after reciting the previous Act, it was enacted as follows: "That if upon complaint to the Board of Trade it appears to such Board that any such authority as aforesaid have, without reasonable cause, refused or neglected to examine any master or mate who has applied to them for the purpose, or after he has passed, have, without reasonable cause, refused or neglected to grant him a certificate, or that the examination of any such master or mate has been unfairly or improperly conducted, or that any terms imposed, or sought to be imposed, by such authority, are unfair or improper, the Board of Trade may, if in their judgment the circumstances appear to require it, appoint persons to examine such master or mate, and if he be found fit to pilot his vessel within the limits for which he is examined, may grant him a certificate, setting forth the limits, and the vessel for which he is certified, upon such terms and conditions, and subject to such regulations as such Board may think fit; and such certificate shall be in force for one year, and be renewed from year to year;" and the 15th section provides that such fees are to be paid on the examinations as

as may be fixed upon by the pilotage authorities, with the consent of Her Majesty in Council; and where the Board of Trade examine, the Board of Trade are to fix the fees, so that the fees are not to be less than the fees paid by pilots upon their licenses; and the fees taken by the Board of Trade are to be applicable to paying the expenses of the examinations, and if there is any surplus it is to go to the pilots' superannuation funds, if any, or otherwise for the benefit of the pilots. I should mention the circumstances under which the Act was passed. There were great complaints from the steamship owners, especially trading into and out of the port of Liverpool, and it was very much upon their representations that Mr. Cardwell introduced his Bill. The Bill was much contested by the Liverpool authorities, and divided upon in the House, but it was carried by a large majority.

19. The Merchant Shipping Act of 1854 re-enacted the clauses that you have read to the Committee, and gave additional power to the Board of Trade to exempt particular districts from compulsory pilotage by Provisional Order, did it not?—As regards the examinations of the licenses, the "Merchant Shipping Act, 1854," 17 & 18 Vict., c. 104, ss. 340–344, re-enacted the Acts of 12 & 13 Vict., c. 88, and those sections of 16 & 17 Vict., c. 129, which I have read. Then, in addition to that, the Merchant Shipping Act of 1854, section 332, contained the following general power of exemption: "Every pilotage authority shall have power by law, made with the consent of Her Majesty in Council, to exempt the masters of any ships, or of any class of ships, from being compelled to employ qualified pilots, and to annex any terms or conditions to such exemptions now existing by virtue of this Act or any other Act of Parliament, law, or charter, or by usage, upon such terms and conditions and in such manner as may appear desirable to such authority."

20. In one respect that Act extended compulsory pilotage, namely, to the home passenger vessels, by Section 354 as well as Section 355?—This is a rather complicated subject, and the Committee will excuse me if I read the sections, and explain them a little at length. Section 353 is this: "Subject to any alteration to be made by any pilotage authority in pursuance of the power hereinbefore in that behalf given" (that is to say, subject to the power of exemption from compulsory pilotage, which I have read), "the employment of pilots shall continue to be compulsory in all districts in which the same was by law compulsory immediately before the time when this Act comes into operation, and all exemptions from compulsory pilotage then existing within such districts shall also continue in force." Under those words, the Courts have held that exemptions not specially provided for in that Act of 1854 still continue in force, notwithstanding the express provisions in the Act of 1854, that compulsory pilotage shall exist; the Courts have leaned in favour of the exemptions. Then the mode in which compulsory pilotage is to be enforced is important: (s. 353.) "Every master of any unexempted ship navigating within any such district who, after a qualified pilot has offered to take charge of such ship, or has made a signal for that purpose, either himself pilots such ship without possessing a pilotage certificate enabling him so to do, or employs, or continues to employ, an unqualified person to pilot her; and every master of any exempted ship navigating within any such district, who, after a qualified pilot has offered to take charge of such ship, or has made a signal for that purpose, employs, or continues to employ, an unqualified pilot to pilot her, shall for every such offence incur a penalty of double the amount of pilotage, demandable for the conduct of such ship." Thus the evasion of compulsory pilotage is punished, not by compulsory payment of pilotage, but by a penalty.

21. That is a general provision, affecting not only compulsory districts, but non-compulsory districts?—No, there is a difference. The provision I have just read applies to compulsory districts only. In non-compulsory districts, under Section 360, there is a penalty upon an unqualified pilot, who continues to pilot a ship after a qualified pilot has offered his services, but there is no penalty upon the master for employing an unlicensed pilot.

22. Will you now describe the operation of the Acts upon the home trade passenger ships?—The Act of 1854 imposed a new compulsory pilotage, which did not exist previously, in this way. Previously compulsory pilotage existed only under a number of Local Acts, with different exemptions. In many of them there were exemptions in favour of coasters, without any distinction being made between sailing and steam vessels, and without any difference being made between ships carrying passengers and ships which did not. In the meantime, by Mr. Labouchere's Mercantile Marine Act of 1850, 13 & 14 Vict. c. 93, the masters and mates of foreign going vessels were compelled to undergo an examination before they could procure certificates. In 1853 or 1854, there was a question as to whether that system of examination should be extended to coasting vessels. Mr. Cardwell thought that what was required for the masters of coasting vessels was local knowledge, much more than that sort of general knowledge of navigation which could be tested by a general examination. In fact, it was knowledge of pilotage rather than knowledge of navigation that was required, and he therefore thought that it was undesirable to interfere with the coasting vessels which did not carry passengers, but that it was desirable to do something for the safety of passengers, consequently he introduced a clause (Section 354) of the Merchant Shipping Act of 1854, which is as follows: "The master of every ship carrying passengers between any place situate in the United Kingdom or the Islands of Guernsey, Jersey, Sark, Alderney, and Man, and any other place so situate, when navigating upon any waters situate within the limits of any district for which pilots are licensed by any pilotage authority under the provisions of this or of any other Act, or upon any part thereof so situate, shall, unless he or his mate has a pilotage certificate enabling such master or mate to pilot the said ship within such district, granted under the provisions hereinbefore contained (that is, under the provisions I have already quoted), or such certificate as next hereinafter mentioned, being a certificate applicable to such district and to such ship, employ a qualified pilot to pilot his ship, and if he fails so to do he shall for every offence incur a penalty not exceeding 100 *l.*" But it was not his intention that he should really employ a pilot; his intention was that the master should be induced to submit himself for examination.

Mr. *T. H. Farrer.* 22 March 1870.

23. To qualify himself for local pilotage?—Yes. Then comes a further clause, Section 355, which has caused very great confusion. It was represented, especially by the steam shipowners plying in and out of Liverpool, that the pilotage authorities never would fairly grant certificates. They said, "When you are putting upon us a new obligation, take care that that obligation does not weigh too heavily against us. As regards the local obligation, we may go to the pilotage authorities and be examined if we like; but as regards the new obligation, do you the Board of Trade take it into your own hands to give us a certificate." This representation was thought to be reasonable, and to meet it Section 355 was introduced, and that section gave the Board of Trade power to exempt any home trade passenger ship from the obligation imposed by Section 354. It is as follows: "Any master or mate of a ship, which by the last preceding section is made subject to compulsory pilotage, may apply to the Board of Trade for a certificate, and the Board of Trade shall thereupon, on satisfactory proof of his having continuously piloted any ship within the limits of any pilotage district, or of any part or parts thereof, for two years prior to the commencement of this Act, or upon satisfactory proof, by examination, of his competency, or otherwise as it may deem expedient, cause to be granted to him, or to be indorsed on any certificate of competency or service obtained by him, under the third part of this Act, a certificate to the effect that he is authorised to pilot any ship or ships belonging to the same owner, and of a draught of water not greater than such draught as may be specified in the certificate within the limits aforesaid; and the said certificate shall remain in force for such time as the Board of Trade directs, and shall enable the master or mate therein named to conduct the ship or ships therein specified within the limits therein described, to the same extent as if the last preceding section had not been passed, but not further or otherwise; and every such master or mate shall, upon applying for such certificate or for any renewal thereof, pay to the Board of Trade, or as it directs, such fees, not exceeding the fees payable on an examination for a master's certificate of competency under the third part of this Act as the Board of Trade directs; and such fees shall be applied in the same manner in which the fees payable on such last-mentioned examination are made applicable." So that you have a double obligation: a local obligation and a general obligation. From the local obligation imposed by local Acts the pilotage authorities can exempt them by a certificate issued under Sections 340 to 343; and if they fail to do their duty, the Board of Trade can also exempt. From the general obligation imposed by Section 354 the certificates issued under Sections 340 to 343 will exempt; but, in addition, the Board of Trade can also exempt under Section 355.

24. Will you now point out to the Committee the clauses enabling a qualified pilot to supersede an unqualified pilot?—By Section 360 of the Act, a qualified pilot may supersede an unqualified pilot, but the master may pay the unqualified pilot a proportionate sum for the distance that he has piloted the vessel, and deduct the same from the money paid to the other pilot.

25. That is a general provision affecting a non-compulsory pilotage, as well as a compulsory district?—Yes; and then comes Section 361 imposing a penalty on an unqualified pilot assuming or continuing in the charge of any ship after a qualified pilot has offered to take charge of her.

26. Now, with regard to the mode of recovering rates when earned, will you explain to the Committee those clauses?—Section 363 first defines the persons liable to pay pilotage rates, and then it proceeds, that "In default of payment such pilotage dues may be recovered in the same manner as penalties of the like amount may be recovered by virtue of this Act; but such recovery shall not take place until a previous demand thereof has been made in writing, and the dues so demanded have remained unpaid for seven days after the time of such demand being made"; consequently, where the owner of a ship refuses to pay pilotage which has been duly earned, the pilot must give seven days' notice before he can proceed for their recovery; but under Section 353, which I read before, a pilot whose services have been refused by a master who is under the obligation of law to employ him, can at once proceed for the double pilotage, that is, for the penalty, and he can have the master arrested and brought up as a criminal without seven days' notice.

27. Will you now proceed to explain to the Committee Section 388, which deals with the liability of shipowners where pilotage is compulsory?—Section 388 is this: "No owner or master of any ship shall be answerable to any person whatever for any loss or damage occasioned by the fault or incapacity of any qualified pilot acting in charge of such ship within any district where the employment of such pilot is compulsory by law"; that section, I should mention, is a re-enactment, but in a modified form, of a section in a previous Pilotage Act.

28. That is the law under which owners are now exempted from liability where they carry a pilot under compulsion?—Quite so.

29. I think a considerable number of complaints have been made to the Board of Trade, from time to time, as to the existing method of enforcing compulsory pilotage?—Yes.

30. Will you give the Committee some cases illustrating the complaints that have been made?—I will take some cases in a Paper which has already been laid before Parliament; it is Parliamentary Paper, 455, of the Session of 1862; it is improperly entitled Newcastle-upon-Tyne Trinity House. This is a statement in a letter from Mr. Lindsay to the Board of Trade, dated the 12th of January 1860, and it is to be found at page 40 of this Return. "The barque, 'Chase,' Clark, master, having taken in ballast at Northfleet, passed Gravesend on the 30th of December last, on her way to the north. It was blowing at the time very strong from the westward. Off the town pier, Gravesend, a pilot in his boat hailed the ship. The master hove to; but as the 'Chase' was likely to fall foul of a vessel at anchor, he was obliged, before the pilot could reach his ship, to fill her fore yard, in order to give her steerage way to clear the vessel at anchor. Seeing this, the pilot pulled for the shore. The master alleges that he did everything in his power to get the pilot on board; but that the pilot made no exertions to reach the ship, knowing that his pilotage was secure, whether he performed his duty or not. The master further states that he was agreeable to have

have a pilot, and that if the most ordinary exertions had been used the pilot could easily have got on board. Such are the facts represented to me by Messrs. Lumsden and Byers, in whose statements I can place the utmost confidence. I now beg to call your attention to what followed. The first account rendered for pilotage was sent through a solicitor, whose note (No. 1) I enclose. It is dated the 4th instant, but it did not reach the master of the 'Chase' till 3 p.m. of Saturday the 7th inst. The master had to consult Mr. Boxford, the owner of the barque; as soon, however, as this latter gentleman had received the account, he sent, on Monday the 19th instant, a post-office order for the full amount claimed, with 6*s.* 8*d.* additional, being the lawyer's charge for writing the note. But the matter did not end here. On the same day, namely, Monday the 9th instant (I am particular with the dates), a policeman was dispatched from Gravesend, and on the morning of Tuesday the 10th he served upon the master of the 'Chase' the enclosed summons (No. 2), and demanded payment of the enclosed account (No. 3), amounting to 21*l.* 1*s.* This, you will note, contains a charge of double pilotage, 12*l.* 8*s.*; solicitor's fee, 1*l.* 1*s.*; and the policeman's expenses, 7*l.* 1*s.* 6*d.* I understand that these proceedings, however prompt, and, I must add, harsh and extraordinary, are in conformity with the law; and Mr. Boxford must have felt so, for though he had paid the pilotage, he at once also paid the 21*l.* 1*s.* also demanded of him." I should remark that the same facts are mentioned in the memorial from the Sunderland Shipowners' Society; and they state, at page 41 of the same Return, "That this case is only one among many in which the warrants of a Gravesend justice of the peace have been similarly employed to extort the payment of large sums of money, under the pretence of the law having been violated by refusing a pilot, the approved commercial practice being to submit to tyranny when resistance is profitless, and pay money not considered due rather than incur the personal vexation and pecuniary loss of a long journey under arrest, and of an unsatisfactory hearing of disputed facts before a tribunal in the impartiality of which the shipowner has not the slightest confidence."

31. Mr. *Pemberton.*] What is the tribunal?—Two justices of Gravesend. Then there is a letter from the solicitor explaining his proceedings in the matter at page 44, and it appeared that there had been some misunderstanding about the dates. In fact, the question of dates was never distinctly cleared up. He states that he was not aware when he obtained the warrant for arrest that the shipowner was willing to pay the pilotage without it. I do not think the facts, as stated by Mr. Lindsay, were disputed, except that the pilot states distinctly that the master declined to take him on board, whereas the master states that he could have got on board if he wished. In other respects the facts were not disputed, and in the end the Board of Trade were obliged to tell Mr. Lindsay only that it was a hard case, and that they could do nothing. Mr. Lindsay's letter is dated the 12th January 1860; he mentions the 30th of the previous December 1859, as the day on which the pilot offered his services.

32-3. *Chairman.*] I think there was a complaint from the Dutch Minister, with reference to another ship called the "Martha Alida"?—At page 71 of the same Paper the case of the "Martha Alida" is given; the letter is in French, but I will translate, as well as I can, the statement of the case. "I am charged by my Government to bring to your Lordship's notice the following facts concerning rates of pilotage, and other expenses for the administration of pilotage at Yarmouth, as imposed upon Captain Karst, master of the Dutch vessel the 'Martha Alida.' On his voyage between Queenstown and Hull the captain had continually to strive against a heavy sea and contrary winds, and when he arrived at Lowestoft he was obliged to anchor in consequence of the tempest. The weather having become calmer he continued his voyage towards Hull, passing between the Yarmouth banks and the shore, when he was boarded by a boat, from which they asked him whether he wanted a pilot, to which he said, 'No.' When he arrived at Hull they asked him 1*l.* 10*s.* for the pilot rates at Yarmouth. Captain Karst declared that he was ready to pay the sum as soon as they proved that he owed it, but the proof was never given; some days after an employé of the police of Yarmouth arrived at Hull to arrest the captain, and take him before the authorities of the last-mentioned town, unless he would immediately pay double the pilotage rates, as well as certain expenses, amounting altogether to the large sum of 14*l.*, detailed in the note that I have the honour to annex." Here is the bill of costs for apprehending the captain of the schooner the "Martha Alida;" pilotage and witnesses, 3*l.* 7*s.*, attorney, 1*l.* 1*s.*, magistrates clerk's fees, 5*s.* 6*d.*, telegrams, 9*s.*, railway fares to Hull and back, and incidental expenses of policemen, 4*l.* 17*s.* 6*d.*, and officers' charges, 4*l.*; amounting altogether to 14*l.*, which the captain had to pay because he did not take a pilot in the Yarmouth Roads, whom he did not want. The explanation given does not alter the case, it admits the facts; and the Board of Trade were obliged to end the matter by telling the Foreign Office that the case was one of great hardship, with which, however, they could not interfere.

34. Then the case of the "Billow," which is reported in the same Paper, I believe, bears upon the same case?—Yes, that was a case brought to the notice of the Board of Trade by Mr. Tatham, who, if I remember rightly, was an owner of small ships in the fruit trade; and this is a memorial to the Trinity House from William Henry Dugdale, at page 103 of this Return: "That I am master of the schooner 'Billow,' and was, on the 10th day of May instant, on my homeward voyage from Nassau to London, laden with turtle, and other goods. That, in passing through the Downs from Dungeness to Deal, I own that I failed to display the usual signal for a pilot. That I was in the act of doing so, when a small tug-boat spoke to me, and asked where I was from; I replied from Nassau, and that I wanted a pilot. A foreign brig was also coming through the Downs, and the pilot on board of her spoke me, and said he should report me for not having the 'Jack' flying. That on the 15th of May instant I was applied to by Mr. Edward Drew, a solicitor at Deal, on behalf of William Mackie, one of the pilots of your honourable house, and was required to pay double pilotage, under section 378 of the Merchant Shipping Act, for not displaying a 'Jack;' and I was afterwards informed by Mr. Drew that a warrant was prepared, and would be executed unless I would remit to him the sum of 9*l.* 12*s.* 6*d.* by way of compromise

Mr. *T. H. Farrer.*

22 March 1870.

Mr. *T. H. Farrer.*
22 March 1870.

of the matter. That I, thereupon, applied to your honourable house, and was informed that I had better pay the amount; whereupon I immediately caused the sum of 9 *l.* 6 *s.* to be remitted to Mr. Drew, whose acknowledgment I hold for the same, stating that he has paid it to Mr. Mackie." (I should state that the Trinity House entirely deny that they ever advised him to pay this sum.) "That immediately after the above payment was made I was arrested in London, from a process issued from Dover, and was thence conveyed to Dover, to answer a charge of not displaying a 'Jack.' That when before the magistrate at Dover I mentioned that I had already paid a penalty for that offence of 9 *l.* 6 *s.*, but the magistrate refused to take notice of the same, and convicted me in a penalty of 19 *l.* 13 *s.*, and 5 *l.* costs (making altogether 24 *l.* 13 *s.*), and I had no alternative but to pay the same or go to prison; and I accordingly, there and then, paid, or caused to be paid, the said sum of 24 *l.* 13 *s.* That, in consequence thereof, I have caused application to be made to Mr. Drew for a return of the said sum of 9 *l.* 6 *s.* so paid by me as aforesaid, but the same has not yet been returned to me." Now the allegations in reply to that are, that this man was in the habit of trying to evade the compulsory pilotage, and that he was at this time following another vessel which had a pilot on board, and that the authorities of Dover and Deal, or rather the pilots of Dover and Deal acted independently, each for themselves But admitting this, the consequence was that this man, who did not want a pilot, had not only to pay double pilotage, was carried as a criminal to Dover, and had to pay also the expenses of the arrest and warrant.

35. Mr. *Gourley.*] Have you had many similar cases since 1862?—No; we were obliged to answer at the time that we had no power to interfere, and there was no use in laying complaints before us.

36. *Chairman.*] Those papers were laid before Parliament, and it was seen that there was no remedy for these cases?—Yes.

37. Were these two penalties for the same offence?—Yes, only they were enforced from different places; not hoisting the Jack upon coming into the Downs was the one offence; first of all one pilot applied, and he was paid; on that occasion the master paid without legal process; on the second occasion the magistrates at Dover convicted for the same offence, and would not receive previous payment as a defence; the two fines were for the same affair.

38. Mr. *Hardy.*] He paid the first penalty without having appeared before any justices, and he had nothing to show that he had paid it?—He showed that he had paid it, but could not show that he had paid under legal process,

39. *Chairman.*] I now wish to ask you with reference to the complaints that have been made of the exemptions of the liability of shipowners, where pilotage is compulsory; you have already read to us a clause of the Merchant Shipping Act, exempting the shipowners from liability where he is bound to carry a pilot, and you have said that that clause was a re-enactment of previous legislation upon the same subject, but I think you cannot trace that legislation earlier than the year 1812; is not that the case?—I cannot trace it before 1812; it is quite clear that pilotage was compulsory in the Thames as early as 1716. There is an Act of that year, 3 Geo. I., c. 13, which clearly implies that it was compulsory then, and it probably had been compulsory before.

40. But as far as you can tell, there was an exemption of liability by statute, in respect of owners when pilotage was compulsory earlier than 1812?—Yes, the first clause upon the subject that we find is the 52nd of Geo. 3, c. 39, s. 30; that clause was re enacted by the Pilotage Act of the 6th of Geo. 4, c. 125, s. 55, and it is worth while looking at the words of that section, because they differ from the words of the Merchant Shipping Act. That was the Act that governed pilotage generally before the Merchant Shipping Act, 1854. Section 55, is to this effect, "That no owner or master of any ship or vessel shall be answerable for any loss or damage which shall happen to any person or persons whomsoever, from or by reason or means of any neglect, default, incompetency, or incapacity of any licensed pilot acting in the charge of any such ship or vessel, under or in pursuance of any of the provisions of this Act, where and so long as such pilot shall be duly qualified to have the charge of such ship or vessel, or where and so long as no duly qualified pilot shall have offered to take charge thereof." That differs from the present Act, because it does not say anything about the employment of a pilot being compulsory. It says, whenever he is employed under the provisions of the Act. The clause in the Merchant Shipping Act says, that he shall not be liable within any district wherein the employment of a pilot is compulsory by law.

41. I think the judges in the older cases rather leaned against the shipowners; in this case they extended his liability, even though the employment of a pilot was compulsory?—As far as I can make out, from the judgments given immediately after the passing of those Acts of Geo. 3, it would seem that the judges had always held a shipowner liable before that time, whether the employment of a pilot was compulsory or not. There is a case decided by Lord Stowell, in 1814, two years after the passing of the 52 Geo. III. It is called the "Neptune the Second," and is reported in the Dodson's Reports, page 467. In thatcase the pilotage must have been compulsory, and yet Lord Stowell held that the owner was liable. The Act is not mentioned in his judgment; it merely shows what Lord Stowell's impression of the general law was. Then the question was very much discussed before Sir John Nichol in the case of the "Girolamo," in 3 Haggard's Reports, page 169. He there raised a great many points upon the Act, and was obviously very desirous of contracting its operation as much as possible, and he finally decided that, whereas the Act reserved the jurisdiction of the Admiralty Court, the Admiralty Court had still power to order a remedy *in rem.*, thereby making the ship liable for the damage done by a compulsory pilot, although there might be no action at common law against the owner. I think we may say positively, that neither of those cases are now law in this country.

42. The tendency of the courts of recent years has been to establish the law in this manner, that, independently of the Merchant Shipping Act, or any statutory provision exempting the owner from liability, as a matter of general law, where the law compels the employment of an agent, the principal is not liable for his actions?—Yes;

—Yes; but before we come to that I think I should add, that if any members of the Committee wish to see a statement of the previous law, they will find it very well put in Sir John Harding's argument, in the case of the "Peerless," in 1st Lushington's Admiralty Reports; that argument contains a complete statement of the cases and of the law, independently of the Act.

43. Will you refer to Dr. Lushington's judgment in the case of the "Protector," which states the more recent law on the subject?—That is to be found in 1st William Robinson, page 45. This is the way in which Dr. Lushington states the law: "Where the appointment rests with the owner himself, as in the case of the master and crew, it is reasonable that he should be held responsible for their acts, who are agents selected by himself; and he is bound to provide persons of adequate skill, diligence, and sobriety. But where a person is compulsorily put on board the vessel, and the owner's authority is superseded by legislative enactment, it would be a violation of all justice to hold such owner responsible for the skill, sobriety, and caution of an individual with respect to whom he has no power of selection, whose qualifications he has no opportunity of deciding upon, but which are to be ascertained and determined by others, the owner himself being entirely debarred from any possibility of interference. On the words of the statute, therefore, and upon principles of equity and justice, I am bound to hold the owners relieved from all responsibility where the accident has been occasioned, according to the words of the statute, 'from or by reason or means of any neglect, default, incompetency, or incapacity of any licensed pilot acting in charge of the vessel.'" In another case, the "Maria," in the same volume, at page 106, he says, "Now I am of opinion that independently of the express provisions in those statutes, the compulsorily taking of a pilot does, upon general principles, relieve the owner from all responsibility for his acts. Observe the expression of Mr. Justice Le Blanc, 'independently of the general principle, the Pilot Act provides,' &c. Although, therefore, his judgment was founded upon the opinion that the 55th section did apply to the Liverpool Act in the particular case he was deciding, he clearly recognised the general principle, and this principle is one that is recognised by common sense and justice all over the world. Supposing, then, the General Pilot Act not to apply in this case, is not the general principle alone sufficient to exonerate the owners? I think it is, and for this reason: upon general principle a man is answerable for the acts of his servants, for injuries done by them to others within the scope of their employment; and why? Because he selects them, and the selection is voluntary. But if a man is compelled to employ another, the principle upon which liability depends wholly fails." Those judgments, which, I think, are confirmed by other cases in the Courts of Common Law, are certainly inconsistent with the doctrines held by Lord Stowell and Sir John Nichol, with the doctrine held in the American courts, and with the view of the law taken by the present Judge of the Admiralty Court.

44. The effect of those decisions is that the statutory provision, which you have already read, is unnecessary, and that he is practically exempt from liability where he is bound to carry a pilot, independently of any statutory provision to that effect?—Yes.

45. At the same time I think the judges have rather struggled against the provision of the Act, and have thrown the liability upon the shipowner wherever they found it possible to do so; wherever the shipowner has at all interfered with the pilot, or where he cannot show that the pilot was exclusively responsible for the damage effected?—They have done so; but before we go to that I should like to read two or three passages which show to what extent the courts carry the doctrine in this respect; that they hold not only that the master and the owner are freed from liability, but that for many purposes the master is not legally entitled to interfere with the pilot.

Mr. *T. H. Farrer.*

22 March 1870.

46. Will you point out a case showing that point?—This is from the case of Hammond *v.* Rogers, in the matter of the "Christiana," in the Privy Council, reported in 7th Moore's Reports, page 171. I will read from the judgment of Mr. Baron Parke:—"The duties of the master and the pilot are in many respects clearly defined. Although the pilot has charge of the ship, the owners are most clearly responsible to third persons for the sufficiency of the ship and her equipments, the competency of the master and crew, and their obedience to the orders of the pilots in everything that concerns his duty; and under ordinary circumstances we think that his commands are to be implicitly obeyed. To him belongs the whole conduct of the navigation of the ship, to the safety of which it is important that the chief direction should be vested in one only. The expressions attributed to the learned Judge in the report of his judgment in this case, we are perfectly satisfied, were never intended to suggest that under ordinary circumstances the master was to exercise any discretion whether he would obey the pilot or not. There may be extraordinary occasions when the master would be justified in disobeying the commands of the pilot. If from sudden illness or intoxication he becomes incompetent to command, the supreme authority would revert to the master during the pilot's temporary incapacity. It may be the same in the case of manifest incapacity of a permanent character; but any opinion upon these questions is unnecessary for the decision of the present case, as none of these circumstances occurred. The pilot has unquestionably the sole direction of the vessel in those respects where his local knowledge is presumably required." And in the case of the "Lochlibo," in 3 Robinson's Admiralty Reports, page 321, Dr. Lushington says, "It appears to me that it would be a most dangerous doctrine to hold forth, considering the duties imposed upon pilots, and the experience and local knowledge they are supposed to possess, if I were to sanction the interference of the master in any way in the performance of those duties which the pilot must be considered more peculiarly competent to discharge, and of which the master, in the majority of cases, must be a very inferior judge. I do not, of course, in these observations intend to go the extraordinary length of saying that under no possible state of circumstances is the master justified in interfering with the pilot. If the latter was utterly incompetent to the proper discharge of his duties, it would clearly be incumbent upon the master to interfere for the protection of the lives and of the property on board his vessel. Such, however, would be a case of extreme necessity."

Mr. *T.H.Farrer.*

22 March 1870.

47. On the other hand, I think the courts have recently carefully confined the exemption to cases where the employment of a pilot is compulsory, and where the fault is distinctly a fault of the pilot?—It is strictly confined to those cases; there are a vast series of cases, some not consistent with one another, but the whole tendency of which has been strictly to confine the exemption from liability to cases where a fault arises from the act of the pilot. First the courts decided upon the language of the statute, that not only must the district in which the damage happens be a compulsory district, but the employment of a pilot must be compulsory; in proof of that, I will refer you to the "Stettin," 1st Brown & Lushington, page 199; the "Lion," 2nd Law Reports, Privy Council Appeals, page 531, &c., &c.

48. And I think more recently the courts have held that the onus is upon the owner to show that the damage was due to the pilot, and not to anybody else?—They have held that not only must the act be the act of the pilot alone, but that it rests upon the owner to show that it was the act of the pilot alone.

49. I do not think I need take the Committee through the list, but do you state generally that that is the result of the cases more recently decided?—That is the result of all those cases; I will only mention two of them; the case of the "Carrier Dove," reported in Browning & Lushington, p. 113, was a case in which the owner was held responsible, because the vessel was moved in the Mersey at an improper time, although the pilot was upon deck and giving orders. The judgment in the case of the "Velasquez," 4th Moore, New Series, page 431, gives the result of all the recent cases. It says, "It has been established by a long course of decisions, both in the High Court of Admiralty, and at this Board, that to entitle the owners of a ship which is under the charge of a licensed pilot to the benefit of the provision in the Act which exempts them from liability where the collision has been occasioned by the fault of the pilot, it lies upon them to prove that it was caused solely by his fault. To show to what extent this general burden lies upon the owners, it is sufficient to cite the case of the 'Schwalbe'; there the cause of collision was an improper starboarding of the helm, an act of navigation presumably attributable to an order from the pilot, yet the owners were held liable, because they had failed to prove expressly that the order to starboard was given by the pilot. Lord Chelmsford in delivering the judgment of this Committee, said, "The owners therefore fail entirely in the evidence necessary to transfer the responsibility from themselves; and without considering whether there was any negligent act or omission on the part of the crew of the 'Schwalbe,' their Lordships think it sufficient to say, that the owners have not succeeded in establishing that the collision is to be attributed solely (if at all) to the fault of the pilot. Again, the cases have clearly established that if, for any act or omission which contributed to the accident, the master or crew is to blame; then, although the pilot is also to blame, the owners are not exempted from liability. One of the strongest cases of this kind is that of the 'Christiania,' for there every act of omission (and there were several of them) which contributed to the accident, was an act for which the pilot was to blame; yet, inasmuch as for one of them, viz., the omission to strike and haul down certain yards and masts, the master was held to be also in fault, the owners were not exonerated from liability. On the other hand, such cases as the 'George' and the 'Atlas,' seem to show that if it be proved on the part of the owners that the pilot was in fault, and there is no sufficient proof that the master or crew were also in fault in any particular which contributed, or may have contributed, to the accident, the owners will have relieved themselves of the burthen of proof which the law casts upon them."

50. Will you now explain to the Committee the effect of these recent decisions upon the management of vessels when within a compulsory district?—It certainly appears as if the effect of these decisions were to make it to the interest of the captain not to interfere with the pilot in any case, even if he sees the vessel going into danger. If he leaves the pilot perfectly alone and the pilot makes a mistake, the owner is not responsible if damage occurs; but, on the other hand, if he interferes he makes the owner responsible, and that notwithstanding that the master may be better acquainted with the qualities of his ship, and better acquainted even with the local navigation than the pilot himself. It is scarcely necessary for me to refer to the recent case of the "Spindrift," the Papers relating to which are in type, and will be in the hands of Members in a day or two.

51. Will you illustrate the effect of what you have spoken?—In that case the ship was in charge of a most experienced master as well as a most experienced pilot, but for two hours previous to the accident she was steering on a course which anyone who was the least acquainted with the channel navigation must have known to be the wrong course if the lead had only been cast; the captain went down below; he did not interfere in any way with the pilot; he came up just before the ship struck; he found the ship in a position in which she ought not to have been; he went down below again; the pilot changed the course of the ship, and the ship was on the shore. It is impossible to say what the motives were in that case, but if the master had been responsible for the conduct of the ship in that case, it is scarcely to be believed that he would have allowed his ship to be run on shore.

52. In consequence of this exemption of liability of the owner, the practice has grown up for the captain to leave the pilot in charge of the vessel?—Yes.

53. It is to the interest of the owner that he should do so?—It is to the interest of the owner that he should do so.

54–5. Simply on account of the exemption from liability?—Yes. In the case of the "Spindrift," the magistrate took a strictly legal view of the case; the Board of Trade did not question the magistrate's law; but they thought that he and his court, being a court of discipline, should have looked to nautical experience and practice in well-governed ships, as well as to decisions on questions of legal liability. Upon this point the Board of Trade consulted the Trinity House. I will read the view of the Elder Brethren as to what the practice and duty is. The Elder Brethren say, that "the question is rather one of custom or, perhaps, of opinion, than of law, and in giving expression to their views at the desire of the Board of Trade, they hope

hope it may lead to a better definition of what a master's duties are in such cases. The Elder Brethren do not consider that in well-conducted ships the masters regard the presence of a duly licensed pilot in compulsory pilotage waters as freeing them from every obligation to attend to the safety of the vessel, but are of opinion that while the master sees that his officers and crew duly attend to the pilot's orders, he himself is bound to keep a vigilant eye on the navigation of the vessel, and when exceptional circumstances exist, not only to urge upon the pilot to use every precaution, but to insist upon such being taken; and that this is the view now taken by large shipowners seems clear, from the fact that of late years the practice of allowing masters to join long voyage ships at ports down channel, as was formerly the custom, has been generally abandoned." That seems to show that the practice in good ships is at variance with law, as laid down in the cases I have referred to.

56. Is it the experience of the Board of Trade that many accidents have occurred from the captain leaving the pilots completely in charge of vessels?—I do not think that the Board of Trade's experience goes to such cases. They would not have the means of knowing about them.

57. Have complaints been made to the Board of Trade to that effect?—No; but the best shipowners have frequently represented to us that on no account would they take the vessels out of the charge of their masters and place them in the charge of the pilot. The owners of the best conducted ships look upon a pilot as a person who ought to assist the master with a knowledge of the local navigation; but that the master is the person who alone ought to be responsible for the navigation of the ship.

58. In consequence of the exemption of liability, the practice has grown up for the captain not to interfere with the navigation of the ship in pilotage waters, leaving the vessel in charge of the pilot exclusively?—Yes.

59. Now, will you point out to the Committee the cases of injustice which have occurred in consequence of this exemption of liability as between ship and ship, namely, in cases where vessels under compulsory charge of a pilot come into collision with a vessel not bound to carry a pilot?—We have had repeated memorials from the small shipowners in the River Thames as to the hardship of this law upon them. In the Paper which I have previously referred to (Paper 455 of Session 1862) there will be found at pages 82 and 83 a petition, or rather a representation, on behalf of a large number of barge-owners and owners of small craft in the Thames, stating that they are constantly run down by steamers in the Thames; that those steamers are in charge of compulsory pilots, and that they have no remedy. At page 83 there is a list of those to which damage had been caused by vessels under charge of duly licensed pilots, during the years 1860 and 1861, and of the amount not recovered from them.

60. Have these barge-owners any remedy against the pilot in such cases?—Their remedy against the pilot is absolutely worthless.

61. And in consequence of the exemption of liability of the owners, they have no remedy against the owners?—None. Then we have had two or three representations sent since that, which I will hand in to the Committee. A memorial was left at the Board of Trade by a large deputation on the 20th of May 1865, and signed by, I should think, some hundred barge-owners and owners of small craft in the river, owning barges and small craft to the extent of 135,000 tons, in which they represent this as a very great hardship. (*The same was delivered in*, vide *Appendix* (A), No. 1.) Here is another similar memorial received in February 1868, from an equally large number, or a greater number, of barge-owners, owning 407,000 tons, representing the same grievance. (*The same was delivered in*, vide *Appendix* (A), No. 2.) On the occasion of one of these deputations, the President asked for any cases which had occurred in which damage had been done, and in which the parties injured had not been able to recover. They consequently sent in an actual list of cases in which damage has been done, and in which nothing has been recovered. The damage in all these numerous cases amounted to about 6,000 *l.*, and only 652 *l.* was recovered. (*The same was delivered in*, vide *Appendix* (A), No. 3.)

62. You mean recovered from pilots?—Recovered from pilots. I will put in a letter from Mr. Lee, one of the owners of barges, in which he gives at full length a statement of two cases of this kind, and in which he was determined to prosecute the legal remedy to the uttermost. (*The same was delivered in*, vide *Appendix* (A), No. 4.)

63. Such cases are not merely confined to small vessels and barges, but they occur also between vessels of a much larger size when they are not bound to carry pilots?—Yes; I think it is only fair to say, with respect to these cases, that there is a per contra on behalf of the steamers. These barges go sideways, lumbering up and down the river, and are exceedingly in the way of steamers, so that the hardship is not entirely upon one side. In fact, the traffic increases daily, whilst the river remains the same.

64. When steamers not bound to carry pilots come into collision, then the owner has to pay?—Yes.

65. It is only those steamers that are not bound to carry pilots that are exempt?—It is not a question whether they carry pilots or not, but whether they are bound to carry a pilot or not.

66. With reference to the larger class of vessels other than those that you have mentioned, which are not bound to carry pilots, will you now mention to the Committee the kind of cases of hardship which occur?—I can put it in the shortest language by reading from a memorandum which has been laid before Parliament by the Board of Trade, which will give a few of these cases. You must remember that the exemptions from compulsory pilotage are of the most capricious kind, and the question in these cases is, whether both ships or whether one of them was compelled to carry a pilot. I can give you some of the results.

67. Will you first state to the Committee what the exemptions in respect to the River Thames are; I think that the exemptions in the case of the Thames are prescribed in the Merchant Shipping Act?—Yes; under Section 379 the Act recites: "The following ships, when not carrying passengers, shall be exempted from compulsory pilotage in the London district and in the Trinity House outport districts (that is to say): ships employed in the coasting trade

Mr. *T. H. Farrer.*

22 March 1870.

of the United Kingdom; ships of not more than 60 tons burden; ships trading to Boulogne or to any place in Europe north of Boulogne; ships from Guernsey, Jersey, Alderney, Sark, or Man, which are wholly laden with stone, being the produce of those islands; ships navigating within the limits of the ports to which they belong; ships passing through the limits of any pilotage district on their voyages between two places both situate out of such limits, and not being bound to any place within such limits, nor anchoring therein."

68. In addition to the above vessels coming to London from a foreign port, and then going to another part of the United Kingdom for cargo, they are exempt, are they not?—Yes, under an Order in Council passed at the instance of the Trinity House a few years ago.

69. I need not call your attention to the very numerous cases of vessels coming to London with a cargo, and going to other ports for a return cargo?—Yes. There were repeated complaints concerning vessels in ballast, and the discussion finally ended in the Trinity House procuring an Order in Council to exempt them.

70. Are those ships all exempt from the obligation to carry a pilot?—Yes.

71. In point of fact do they generally carry a pilot?—I believe that most of them do so, though he is often an unlicensed pilot.

72. Particularly so when they are foreign vessels?—Yes.

73. Will you point out the cases of hardship which occur as between vessels exempt, and vessels not exempt?—There is one other class of exemptions: all those who have masters and mates who are licensed to pilot their own vessels. I will read now, as the best answer I can give to the question, a passage from Parliamentary Paper, No. 70, of this Session: "Two ships, A. and B., both of the same size and description, come into London, A. from the North Sea, B. from the Channel. Both employ a pilot. They get into collision. If A. is in fault, B. has a remedy; if B. is in fault, A. has none. Two ships, A. and B., say from Leith to London, both take a pilot at Orfordness. A. has passengers, B. has none. They get into collision. If A. is in fault, B. has no remedy against A.; if B. is in fault, A. has a remedy against B. Two ships again, A. and B., bound from Havre to London, take pilots at Dungeness. The master of A. has taken pains to pass a pilotage examination, and he has a pilotage certificate. The master of B. has, perhaps purposely avoided doing so. They come into collision. A. has no remedy against B., whilst B. has a remedy against A. The object of Mr. Cardwell's legislation concerning passenger ships, viz., that of requiring, through the medium of compulsory pilotage, that masters shall learn to pilot their own ships, is thus defeated. There has been a case in which the master of a Scotch passenger steamer asked the Board of Trade to contract the limits of his certificate, because his ability to pilot his own vessel exposed his owner to liability when in charge of a pilot. Again, a ship bound to London takes a London pilot at Scilly, or the Lizard; a very common case. For damage by collision westward of Dungeness the owner is liable. For damage done eastward of Dungeness he is not. Again, take the Bristol Channel. As above stated, ships bound to or from Bristol are bound to take a pilot up and down Channel; ships bound to or from Cardiff, Newport, or Gloucester are not. A Bristol ship gets into collision with a Newport, Cardiff, or Gloucester ship, both having pilots. The Bristol ship has a remedy, the Cardiff, Newport or Gloucester ship has none."

74. Have you considered the state of the law with regard to two vessels coming into collision; after the case goes into the law courts, the question is not which is in fault, but which is bound to carry a pilot?—That is one of the questions.

75. That is often the main question fought in the law courts, is it not?—Yes; it is often not a fight as to which ship caused the damage, but which vessel was bound to carry a pilot; nor even is it a question of which had a pilot, but whether both having a pilot, one or other was or was not exempt from compulsory pilotage.

76. I think there are some cases bearing upon that point which you could lay before the Committee?—Yes; the litigation becomes almost absurd; the first question under the present state of the law which I have mentioned is (assuming that the pilot was one whom the shipowner was bound to take), was the damage caused by the act of the pilot alone. That is a question most difficult to try. The chief witnesses are the crew of the vessel in which the pilot is, and their interest is to show that the act was the act of the pilot alone. The consequence is a great deal of hard swearing, and litigation without end. I will put in a list of quite recent cases, furnished to me by Mr. Vernon Lushington, now Secretary to the Admiralty, from whom I have received much help on this subject. Here are 13 recent cases, many of which have gone up to the Privy Council, in which the question has been, was the act the act of the pilot alone, or had the master or owner anything to do with it. I do not see that there is any end to that litigation. (*The same was delivered in,* vide *Appendix* (A.), No. 5.)

77. The tendency of the court has been, where possible, to find that the captain or some of the crew is to blame, unless it is clearly shown that the pilot was in fault?—Yes, that is the first evil you have, and you must always have endless litigation on the question, was the pilot, and was the pilot alone, in fault? But then there is the further question, which is still more absurd, was the owner really obliged to employ a pilot or not? Under the Act as it stands, those questions are sometimes really too absurd. There was one case, the case of the "Earl of Auckland," an account of which is given in Parliamentary Paper, No. 455 of 1862, at page 79. Perhaps the Committee would like me to mention the circumstances of that case. The "Earl of Auckland" was in fault; she was in the Thames, and was in charge of a pilot, and the question was, was the owner bound to employ him. She was a home-trade passenger ship, and her owners, the defendants, alleged that Section 354 of the Merchant Shipping Act compelled them to employ a pilot, and that if that section did not do so, an Order in Council had been passed, the object of which was to relieve the vessel from compulsory pilotage; but that the real effect of the conditions in that Order imposed compulsory pilotage upon her. The plaintiffs replied that Section 353 of the Act maintained all the exemptions which were in force at the time the Act was passed, and urged that the maintenance of those exemptions relieved her from the obligation of employing a pilot; and upon this point the case was ultimately decided in favour of the plaintiffs. But another point taken

taken by the plaintiffs and much argued was, that if she was *primâ facie* compelled to employ a pilot, she was relieved from the liability by the certificate of the Board of Trade granted under an Order in Council passed for the purpose. Upon this the other parties replied that the Board of Trade certificate which they had themselves applied for was invalid, because their ship was misdescribed in the certificate. So that as regards this point, the question whether the owners were liable, turned upon the question whether these owners had misdescribed their ship in the certificate which they had themselves obtained from the Board of Trade. Upon that, Dr. Lushington took the very natural, but somewhat unusual, course of writing a letter to the Board of Trade, which I will read. This is the letter to the Board of Trade, written by Mr. Rothery, Registrar to the High Court of Admiralty, which will be found at p. 79 of the Paper referred to: "I am directed by the Right Honourable Stephen Lushington, the Judge of the High Court of Admiralty of England, to send you herewith, for the purpose of its being laid before the Lords of the Committee of Privy Council for Trade, copy of the papers in a case called the 'Earl of Auckland,' which has recently come before him, and of his judgment therein, as reported in the 'Law Times' of the 16th instant, and I am to request you to call their Lordships' attention to the very great confusion which, on a review of the Act of Parliament and the Orders in Council, appears to him to exist on the subject of pilotage."

78. Then there was the more recent case of the "Lion"?—Yes; the "Lion" is reported in the 2nd Law Reports, 1867 to 1869, Admiralty cases, page 102, and the 2nd Law Reports, 1867 to 1869, Privy Council Appeals, page 525. The "Lion" was a steamer which did damage when in the Thames. She had a pilot on board, and the pilot was the person who did the damage. The question, whether she was liable or not, depended upon the question whether she had passengers or not; whether she was subject to the section of the Act which imposed the obligation of carrying a pilot on a passenger ship. The facts appeared to be that the master when in London, on this voyage took his father-in-law and his wife on board, and when he got to Hull he paid the owners 7 *s.* a-piece for them, and under that state of circumstances he alleged that his vessel was a passenger vessel; the judge of the Admiralty Court refused to treat her as a passenger vessel on that ground. The case was actually taken to the Privy Council and argued before their Lordships upon this point.

79. If he could have brought his vessel under the head of a passenger vessel, then he would have been bound to carry a pilot and would have been exempt from liability?—Yes; he put his father-in-law and his wife on board, and when the voyage was ended he paid 7 *s.* a-piece for their passage, or the owner said he did, and alleged this as a reason for not compensating the owners of the ship which his vessel had injured.

80. With regard to the bearing of this exemption of liability upon the general maintenance of compulsory pilotage, I need hardly ask you whether that exemption from liability has been very much approved of by certain of the shipowners?—In the evidence before Mr. Lindsay's Merchant Shipping Committee of 1860, evidence was taken from a number of shipowners with regard to compulsory pilotage; and on the whole the large shipowners were decidedly, with the exception of the steamship owners, in favour of compulsory pilotage. With the permission of the Committee I will read one or two passages from their evidence. Here is the evidence of Mr. Dunbar, one of the greatest owners of sailing ships out of the Port of London. At page 37 of the Appendix to the Report of that Committee, Question 517, he is asked, "What is your opinion of that compulsory pilotage? *A.* I think it a very excellent thing, and I should be sorry to see it done away with. I may state that as we are compelled to take pilots, if I have a pilot on board of a ship, and an accident happens and she runs down another ship, I am completely free from liability; therefore I think that he ought to be well paid for that responsibility. Then again, there is not one English captain in a hundred in a long voyage ship who knows the Channel sufficiently to take his ship up and down. Independently of taking the responsibility off my hands, I do not think that an underwriter will write a ship without a pilot, and the expense of pilotage is not so very heavy. I have a ship of 835 tons; she has a very large draught of water, 22 feet, a very unusual thing; her pilotage upwards from the Downs to Gravesend was 20 *l.*, from which 5 *l.* was taken off because I employed steam. That left 15 *l.*, and all my responsibility was done with when the pilot went on board, unless my crew behaved badly. She went outwards drawing 21 feet, very deep indeed; her pilotage from Blackwall to the Downs was 22 *l.*, and she only took steam a short distance, for which 2 *l.* 16 *s.* came off; that made 19 *l.* 11 *s.* For taking the ship in and out I only paid 34 *l.*, and if I had run down half a dozen barges in the river I should have had to pay for them; whereas the pilot being on board exonerated me, and that is one of the reasons why I think that if the Board of Trade compel me to take a licensed captain of their own examination and approval I ought not to be accountable for his acts and deeds."

81. Will you read Question 516?—"With reference to pilotage it is at present compulsory on the British captain, as you are aware? *A.* Yes." Then there is the evidence of Mr. Beasley, a very extensive merchant and shipowner at Liverpool, in the India and China trades. He is asked at page 181, Question 2345, "You said that there ought to be no compulsory obligation. Do you object to compulsory pilotage? *A.* No, I do not object to that, because I think that it is almost necessary for the protection of property; and another thing is, that under the compulsory pilotage clause you are exempt from certain penalties which the law inflicts upon you. I myself once had a ship in collision with another. It was no fault of mine; the pilot mismanaged her, and having a compulsory pilot on board I was exempt from the consequences of the collision; I think that compulsory pilotage is necessary for the safety of navigation and of property at sea; I would not do away with it; in the case of coasters I would license the masters, as I believe is now being done." Then Mr. Anderson, the chairman of the Peninsular and Oriental Company, one of the greatest steamship owners, is asked at Question 3379, "What is your opinion with regard to pilotage; do you consider that it ought to continue compulsory as at present?—The pilotage is not altogether compulsory; there is permission now for mates and masters

Mr. *T. H. Farrer.*

22 March 1870.

Mr. *T. H. Farrer*

22 March 1870.

masters of ships to pass examinations for pilots, and being found qualified for any particular port, and getting a certificate for it, they may pilot the ship, but I believe that it is very little availed of; for this reason, that when you take a compulsory pilot you get rid of any liabilities for damage done while that pilot is in charge of your vessel; whereas, under the law as it now stands, if you employed your own captain or mate to pilot your ship and anything happened, you would have to pay the damage for it. I think that that is the consideration why the privilege of masters and mates piloting their own ships is very little availed of."

82. You have already told us that the masters of vessels can obtain certificates which, in fact, will exempt them from the necessity of carrying a pilot?—Yes. In the Parliamentary Return which has just been laid before the House will be found a list of all the certificates now granted to masters and mates of different vessels. There are a great many granted in some ports, but it is probable that if this law of liability were different from what it is there would be a much larger number.

83-84. Will you now refer the Committee to the law of the United States upon the subject?—We have ascertained the law in several foreign countries upon the subject. In Canada it appears that they have decided that the shipowner is not free from responsibility, though his ship is in the charge of a pilot; that will appear by Stuart's Vice Admiralty cases, Lower Canada, 1858, in the case of the "Lord John Russell." Then in the case of the United States we wrote to the Foreign Office to ascertain from the United States Government what their laws were. I will put in the answer that was received, which is a very doubtful one, and Mr. Seward said that the subject was of so much importance that he thought it would be necessary for them to bring it before Congress. (*The same was handed in*, vide *Appendix* (A), No. 6.) Since then there has been a case tried in the Supreme Court of the United States, in the case of the ship "China," belonging to the Cunard Company. It is a case which goes most fully into the whole subject. The ship had done damage in New York pilotage waters, she was in charge of a New York pilot, and under the New York statutes the ship was obliged either to take a pilot or pay for one. There were two questions argued in the court: First, whether she was subject to compulsory pilotage, and if so, whether she was liable for the damage done. The court went very fully into these points. They differed upon the question whether she was bound to take a pilot or not. The majority held that the law compelled her to take a pilot, but they were unanimous that, whether she was compelled to take a pilot or not, she was liable for the damage done. They discussed the English cases which I have referred to at very great length, and they came to the conclusion that reason and justice required that the ship should be liable, even though in charge of a compulsory pilot.

85. That was the decision of the Supreme Court of United States?—Yes; I will put it in. (*The same was delivered in*, vide *Appendix* (A), No. 7.) It is an instructive judgment giving the whole of the English law. Mr. Justice Swayne says, "This survey of the English adjudications warrants several observations. Lord Stowell, overlooking the statute, refused to recognise the principle of exemption. He held the true rule of law to be that fault created liability, notwithstanding that the pilot was taken upon compulsion. Sir John Nichol made a persistent effort to get rid of the statute by giving the jurisdiction clause a construction which annulled the operation of the exemption in the Admiralty Court. Dr. Lushington and the Privy Council have held that the exemption clause is to be strictly construed, and have given it a construction so narrow, as greatly to limit its operation and impair its efficacy; while Sir Robert Phillimore pronounced its working in the Admiralty Court 'fruitful of injustice,' and more than intimates that it is contrary to the fundamental principles of natural right. These results furnish little inducement to us to establish the principle in our jurisprudence. The question is not a new one in this country. It arose as early as the year 1800, in Bussey *v.* Donaldson, 4 Dallas, 206. In that case, the court said, 'The legislative regulations were not intended to alter or obliterate the principles of law by which the owner of a vessel was previously responsible for the conduct of the pilot, but to secure in favour every person, strangers as well as residents, trading to our port a class of experienced, skilful, and honest mariners to navigate their vessels safely up the bay and the river Delaware. The mere right of choice is indeed one, but not the only reason why the law in general makes the master responsible for the acts of his servant; and in many cases where the responsibility is allowed to exist, the servant may not, in fact, be the choice of the master.' Williamson *v.* Pierce, 4 Mart. N. S. 399; Yates *v.* Brown, 8 Pick. 23; and Denison *v.* Seymour, 9 Wend. 1, involved the same principle, and were decided in the same way. In the case of 'The Creole,' decided by Mr. Justice Grier on the circuit, in the year 1853, 2 Wall. Jr. 485, the subject underwent a learned and thorough examination, both by counsel and the court. The result was the same as in Bussey *v.* Donaldson. It appears by that case that Mr. Justice Swayne had ruled the point in the same way in his circuit; no American adjudication to the contrary has been brought to our attention. The question is now for the first time presented in this court. The New York statute creates a system of pilotage regulations; it does not attempt, in terms, to give immunity to a wrong-doing vessel. Such a provision in a State law would present an important question which in this case it is not necessary to consider. The argument for the appellants proceeds upon the general legal principle, that one shall not be liable for the tort of another imposed upon him by the law, and who is therefore not his servant or agent (15 East, 189; 4 M. and S. 77; 6 B. and C., 657; 12 Ad. and E., 737; 4 Exch., 244. The reasoning by which the application of this principle to the case before us is attempted to be maintained, is specious rather than solid. It is necessary that both outward and inward-bound vessels, of the classes designated in the statute, should have pilots possessing full knowledge of the pilot grounds over which they are to be conducted. The statute seeks to supply this want, and to prevent as far as possible the evils likely to follow, from ignorance or mistake, as to the qualifications of those to be employed, by providing a body of trained and skilful seamen, at all times ready for the service, holding out to them sufficient inducements to prepare themselves

selves for the discharge of their duties, and to pursue a business attended with so much of peril and hardship. The services of the pilot are as much for the benefit of the vessel and cargo as those of the captain and crew. His compensation comes from the same source as theirs. Like them he serves the owner and is paid by the owner; if there be any default on his part the owner has the same remedies against him as against other delinquents on board. The difference between his relations and those of the master is one rather of form than substance." Then he goes on to say, "The remedy of the damaged vessel, if confined to the culpable pilot, would frequently be a mere delusion. He would often be unable to respond by payment, especially if the amount recovered were large. Thus where the injury was the greatest, there would be the greatest danger of a failure of justice. According to the Admiralty law, the collision impresses upon the wrong-doing vessel a maritime lien. This the vessel carries with it, into whosesoever hands it may come; it is inchoate at the moment of the wrong, and must be perfected by subsequent proceedings. Unlike a common-law lien, possession is not necessary to its validity; it is rather in the nature of the hypothecation of the civil law; it is not indelible, but may be lost by laches or other circumstances. The 'Bold Buccleugh,' 7 Moore, P. C., 284; Edwards *v.* The steamer 'R. F. Stockton,' Crabbe, 580; the 'America,' 16 Law Rep., 264; the 'Lion,' Law Rep., November 1868; Ad. & Ecc., 107. The proposition of the appellants would blot out this important feature of the maritime code, and greatly impair the efficacy of the system. The appellees are seeking the fruit of their lien; all port regulations are compulsory. The provisions of the statute of New York are a part of the series within that category. A damaging vessel is no more excused because she was compelled to obey one than another. The only question in all such cases is, was she in fault? The appellants were bound to know the law; they cannot plead ignorance. The law of the place makes them liable. This ship was brought voluntarily within the sphere of its operation, and they cannot complain because it throws a loss upon them rather than upon the owners of the innocent vessel. We think the rule which works this result is a wise and salutary one, and we feel no disposition to disturb it."

86. I think there is a Bill now before the New York Legislature to abolish compulsory pilotage in that State?—That I am not aware of.

87. Will you now refer to the French and Belgian law?—From the judgment in the case of the "Halle," extracts from which I will put in (*the same was delivered in*, vide *Appendix* (A), No. 8), reported in Law Reports, Admiralty and Ecclesiastical, page 3, it will be seen that the Belgian law is the same as the United States law.

88. And the French law also?—Yes, we have ascertained that from the adviser of the French Embassy in Paris. I will put in his opinion. (*The same was delivered in*, vide *Appendix* (A), No. 9.)

89. The North German law is the same as ours, is it not?—Yes, according to a translation which I have here; the clause runs thus: "When the ship is in charge of a pilot (where pilotage is compulsory), and the crew have performed the duties required of them, the owner of the ship is then not responsible for the collision caused by the pilot." The practice of the English Royal Navy is very different. The rules issued and enforced by the Board of Admiralty will be found given in the 7th Section of the Navigation and Pilotage Regulations, and it is as follows: "The captain is to order everything that relates to the navigation of the ship to be performed as the pilot shall require; but, nevertheless, he and the master (that is the navigating officer) are to attend particularly to his conduct, and if, from his or his mate's observations he shall have reason to believe the pilot not qualified to conduct the ship, or that he is running her into danger, he is to remove him from his charge, and to take such measures for the safety of the ship as circumstances may require, noting the time of the pilot being so removed in the ship's log-book; and if the ship be damaged at any time through the ignorance or negligence of the pilot, but where a common degree of attention on the part of the captain and master would have prevented the disaster, those officers will be deemed to have neglected their duty." Not long since there was the case of the "Vigilant," which was reported in the papers at the time, and which it is worth while to refer to, to show the spirit in which the Admiralty have construed and applied that regulation. "The 'Vigilant' was run on the Gunfleet Sand on the 22nd of October 1862. In that case the Admiralty notified their decision in the following terms: 'My Lords observe that in a well-known Channel, within a mile of the Gunfleet Light, and in the immediate neighbourhood of two buoys, the 'Vigilant' was run upon a dangerous shoal, and narrowly escaped being totally lost. My Lords are aware that there was a pilot on board, but his presence did not absolve the commander and master from the duty of ascertaining, by bearings, and by reference to the sailing directions, that the ship was not hazarded. Admiral Johnstone is, therefore, to acquaint Lord Elphinstone and Mr. Phillips, the master, that my Lords consider their conduct in this matter to have been highly reprehensible, and deserving of their Lordships' severe censure.' And, in reply to a protest from Lord Elphinstone against this censure, on the ground that the vessel being in charge of a duly authorized pilot, and one of considerable experience, he deemed it his duty to order everything relating to the special act of navigating a ship to be performed as the pilot required, the Admiralty replied, that "the 'Vigilant' was run on shore while under the charge of the pilot, under circumstances which afforded to the commander and master full opportunity of ascertaining whether the course pursued was a safe one. They did not take the measures in their power for that end; they were, therefore, guilty of the neglect of duty pointed out in the 7th article of the 19th chapter of the instructions, and the Board of Admiralty could find nothing on Lord Elphinstone's statement to clear them of that neglect." In this case the error committed was wholly a pilotage error. Had it occurred with a merchant ship, I think that, according to the decisions I have read from our law reports, the master would have been bound not to interfere with the pilot.

90. The effect of the Admiralty regulations is this, that the captain of a man-of-war is not permitted to let the pilot take the absolute command of the vessel out of his hands?—Quite so.

91. And is in fact to condemn the practice which has grown up to some extent in the mer-

Mr. *T. H. Farrer.*

22 March 1870.

chant service, in consequence of this exemption of liability?—Quite so.

92. Will you now read to the Committee that portion of the Report of Mr. Lindsay's Committee of 1860 which bears upon this question?—The Report of Mr. Lindsay's Committee, page 20, is as follows: "The advantages and disadvantages of a compulsory and voluntary system of pilotage have been brought prominently under the consideration of your Committee; shipowners engaged in the long voyage trades generally express themselves satisfied with the existing system. They suggest, however, that some of the minor regulations might be modified with advantage. This class of shipowners, in the confidence that when a pilot is on board their ships they are practically exempt from liability in the event of collision, cheerfully submit to bear the charge of compulsory pilotage; they apprehend if the system was abolished that pilots would not be disposed in bad weather to make their appearance, and that consequently ships might be in danger when approaching the coast; but the proprietors of small ships engaged in the over-sea trade, complain of the heavy charges exacted for pilotage, especially in cases where their vessels are compelled, through stress of weather, to put into various ports in the Channel, or to anchor in roadsteads, where the services of a pilot are not required. The witnesses from Liverpool were in favour of maintaining the existing system of compulsory pilotage, and the establishment of pilots at that port is evidently conducted in a satisfactory manner; on the other hand, on the east coast of the kingdom, especially at Newcastle and Sunderland, a very great desire is expressed that it should be altogether optional with the master of a vessel to employ a pilot. Under a local Act this latter principle, so far as British ships are concerned, has been in operation during the present century in the Newcastle district, but pilotage dues are still exacted from foreign vessels even when the services of pilots are not required.

93. I believe that has since been repealed?—Yes, by the Harbours and Passing Tolls Act, 1861. Then the Report of the Committee of 1860 goes on to say, at page 21, "It appears that in the pilotage district of Newcastle, where the voluntary system prevails, and where the navigation is difficult and at times dangerous, no inconvenience results from the absence of any legal compulsion to employ a pilot; neither is the demand for, nor the supply of, duly licensed pilots in any way diminished by the practice which prevails; on the contrary, the supply is much greater than it is at most other places where pilotage is compulsory. Whether the vessels frequenting that pilotage district are in ballast, forming nine-tenths of the arrivals, or whether they are laden, the exception of entering or leaving the several ports without a pilot is not one in a thousand services. The success which has attended the working of the voluntary system in the north-eastern ports naturally leads the witnesses of that part of the coast to urge the adoption of the voluntary system throughout the whole of the United Kingdom. They dwell with great force and justice upon the anomalies arising from the 379th Clause of the Merchant Shipping Act, by which ships arriving from the westward of Boulogne are subject to pilotage coming into London, while ships from the other side of Boulogne, to the northward, embracing the whole northern and north-western shores of Europe, as far as Archangel and St. Petersburg, are left free to employ a pilot or not at their discretion. The services of a pilot are, however, almost invariably resorted to, and, therefore, the question seems narrowed to one bearing, mainly upon the expediency of adopting an uniformity of system." Then the Report refers to several local cases; and goes on, page 22: "As regards the main question of voluntary or compulsory pilotage, your Committee, after weighing most attentively all the arguments upon the subject, have arrived at the conclusion that a system of voluntary pilotage might be safely established in most parts of the empire, due consideration being had to the interests of those parties who have invested capital on the faith that the compulsory system would be maintained. Your Committee have had the most convincing evidence that where the system of voluntary pilotage prevails, the supply of pilots is more abundant, their efficiency is in no way inferior, and the rates generally lower than at any of the ports where compulsory pilotage is still in force. The arguments, therefore, which have been used in favour of the existing system, and the fears which have been expressed in regard to obtaining at all times, and under all circumstances, a sufficient supply of pilots, must give way to the facts which have been adduced in evidence; for instance, it appears that at Cork, where pilotage is voluntary, there are no less than 103 licensed pilots, whereas, at Falmouth, where quite as many vessels call for orders, and where pilotage is compulsory, there are only 36 pilots, who appear to be less vigilant, and who demand much higher rates for their services, although 'it is an open place, free from any danger.' Your Committee would further observe that where pilotage is compulsory, it is generally the practice to limit the number of pilots, to prevent them from accepting a less sum than the fixed rates, and to make it compulsory on each pilot to take his turn, and to accept whatever employment may offer. If the obligation on the ship to employ a pilot were done away with, the corresponding limitations and obligations of the pilots would also be done away with, and the probable consequence would be, that more men would offer, and that the supply would adapt itself to the demand. The general regulations which it would be necessary to frame, under the authority of Parliament, in order to carry into effect the requisite change, would be so simple as not to create any difficulty. Your Committee are of opinion that the pilots should be left under the local regulations of the existing pilotage authorities, who would fix the rates and the qualifications of the pilots to be licensed, by the difficulties of the navigation and the wants of the place, subject to the approval of the Board of Trade. Your Committee do not anticipate that any difficulty respecting the law and practice of insurance will accrue from the change; the law will thenceforth leave all parties at liberty to form a free contract, and the merchant, the underwriter, and the shipowner will be competent to adjust their policy of insurance upon what terms they please. All experience proves that masters will avail themselves of the services of a qualified pilot in any navigation which is in the slightest degree dangerous; and the existing exemptions in respect of coasting vessels, which give rise at present to no difficulties, justify the anticipation that if the pilotage of

of the foreign trade is thrown open, commerce and shipping will be relieved of restrictions which now, in many cases, fetter their efforts."

94. In the passage which you have read I observe that the Report is confined to the expression of an opinion that compulsory pilotage may be abolished in most parts of the country?—Yes.

95. Can you explain the introduction of those words, "in most parts"?—It tells its own story; the Report was drawn by Mr. Lindsay, and in the draft the passage referred to applied to the whole empire; the words "most parts" were subsequently introduced. But the original report with this exception was adopted by the Committee, and the whole argument tends to the entire abolition of compulsory pilotage.

96. Those words were introduced, after a division, by Mr. Horsfall?—Yes.

97. What was the majority in the division upon that point?—"Paragraph 98, read 2°.—Amendment proposed (Mr. Horsfall), line 4, to leave out the words, 'in every part,' in order to insert the words, 'in most parts.'—Question put, 'That the words proposed to be left out stand part of the paragraph.'—The Committee divided: Ayes, 3; Mr. Taylor, Mr. Lindsay, Mr. Dalglish. Noes, 7; Mr. Somes, Mr. Liddell, Mr. Horsfall, Lord Lovaine, Mr. Crawford, Mr. Willcox, Mr. Alderman Salomons."

98. I believe since that Report was presented to Parliament, there have been two changes in the law of some importance with reference to pilotage; first, the Act of 1861, which affected the Bristol Channel pilotage, and which repealed compulsory pilotage so far as Gloucester, Newport, and Cardiff were concerned; and secondly, the Act of 1862, which gave power to the Board of Trade to exempt particular places by Provisional Orders?—Yes, that is so.

99. Both tending in the direction of the abolition of compulsory pilotage?—That is so, as regards general legislation. There is the Act of 1862, the 25th and 26th Vict. c. 63, s. 39, paragraph 4, but that Act has not been acted on at all. Then there is another clause, Section 41, which provides that, "The masters and owners of ships passing through the limits of any pilotage district in the United Kingdom on their voyage between two places, both situate out of such districts, shall be exempted from any obligation to employ a pilot within such district, or to pay pilotage rates when not employing a pilot within such district, provided that the exemption contained in this section shall not apply to ships loading or discharging at any place situate within such district, or at any place situate above such district on the same river or its tributaries." This clause has not had the full effect intended. Mr. Milner Gibson's intention was, that where ships call, as at Falmouth, for orders, they should be exempt from compulsory pilotage, and that where ships put in from distress into ports of the United Kingdom, they should also be exempt from compulsory pilotage. I do not know that there have been any decisions upon these points, but the opinion of the law officers was, that the clause did not apply to the case of a ship calling for orders, because until she got her orders, she was not upon a voyage to any other port; and also if a ship came in in distress, and took out a single bale of her cargo, she was still subject to compulsory pilotage, and almost all vessels that put in in distress, are forced to land something in order to repair.

100. Then there was the Harbour and Passing Tolls Act of 1862?—That did away with everything in the nature of a differential charge or duty, and in doing so it swept away the last remaining obligation upon ships in the old district of the Newcastle Trinity House to carry pilots.

101. That is as to foreign vessels?—Foreign vessels.

102. That placed them in the same position as British vessels which had long been exempted?—Yes; but practically most foreign vessels have also been exempt for a long while under the Reciprocity Treaty Act.

103. Then there was the Bristol Channel Pilotage Act?—Yes.

104. We have now gone through all the general provisions with reference to pilotage; I have now to ask you a few questions with regard to the provisions affecting local pilotage districts. You have already put in a map, which points out the various districts, under the heads of compulsory and non-compulsory districts, and I need hardly ask you whether each compulsory district has its own set of rules, and its own exemptions, differing one from the other?—It is so, and the great variety of different regulations makes it exceedingly difficult for the Board of Trade to give any complete or full information about the special circumstances. There are certain returns made under the Merchant Shipping Act, but we have found that these, like other returns which are not regularly checked and tested, are often exceedingly unsatisfactory. In order to obtain more accurate information for the purpose of the present Bill, we have called for returns, which have been laid before Parliament, and which are in the hands of honourable Members; in Parliamentary Paper, No. 88, Session 1870, to which I have referred before, and we have also had this map made; but at the same time I confess that I am not myself entirely satisfied with their complete accuracy, and I have no doubt that the Committee will get far more information from the authorities than we can give.

105. Will you indicate to the Committee what are the compulsory districts, the number of pilots, and the different exemptions with regard to compulsory pilotage; in that return, the Deal and Dover pilots are grouped together under the head of London?—Yes.

106. The Trinity House district extends over a considerable extent of the coasts, does it not?—The Trinity House district extends, you may say, generally speaking, over the whole of the coast from where the Hull Trinity House district ends near the Wash, all the way round (with certain exceptions in the Bristol Channel) to Anglesea, and under the Act, they have power to appoint sub-commissioners even in other districts where no special provision is made for the appointment of pilots.

107. North of the Trinity House district on the eastern coast comes the Hull district, and north of that to a great extent the pilotage is free, is not that so?—A few years ago it was under the Newcastle Trinity House; but by a provisional order under the Act of 1862, Hartlepool, the Tyne and Wear, Sunderland, have each of them had separate districts created where they have their own pilots. It should be stated

Mr. *T. H. Farrer.* 22 March 1870.

that there is a distinction between the London district of the Trinity House, and the out-port district of the Trinity House. In the London district the Trinity House manage it themselves directly, and in an out-port district on the coast, they appoint sub-commissioners. They themselves appoint the pilots, but the sub-commissioners examine them, and do the local work.

108. Westward of the Trinity House district there comes the Bristol Channel district, which is partly subject to compulsory pilotage and partly not; is not that so?—Yes; the Bristol Channel district was long the subject of great contention. Most of the Bristol Channel was subject to the Bristol Town Council, who managed all pilotage there, and certain local pilotage in the newer ports were managed by the Trinity House through sub-commissioners. For many years one of the greatest difficulties which the Board of Trade had about pilotage was the endeavour to organise a system of pilotage for the Bristol Channel. The attempt was made at one time to make the Trinity House the supreme authority. At another time the Board of Trade tried to get the different ports to agree to have one common pilotage board for their common waters; but all those attempts failed, and eventually, in 1861, Newport, Cardiff, and Gloucester obtained a Bill, by which they became entirely free from Bristol, doing away with compulsory pilotage.

109. You have already stated the exemptions in the case of the Trinity House for compulsory pilotage which are contained in the Merchant Shipping Act of 1854. I believe, in the case of the other districts which are subject to compulsory pilotage, the exemptions are very different?—They are different in all cases; it is impossible to state them in any general form, but the exemptions from compulsory pilotage in the London and in the out-port districts of the Trinity House are contained, as I said before, in Section 379 of the Merchant Shipping Act of 1854.

110. They are exceedingly numerous, are they not?—They are very numerous. There are other exemptions besides those which are mentioned in the 379th section of the Act in the case of the Trinity House. First, I should mention that there was one considerable extension of the exemptions in this 379th section of the Merchant Shipping Act; under the old Act of 6 Geo. 4, c. 125, the exemption of ships trading to Boulogne, or any place in Europe north of Boulogne, was confined to the London district of the Trinity House; it did not extend to all their out-port districts. In the Act of 1854 it was extended to the out-port districts of the Trinity House. Then there is a very large exemption in the case of the Trinity House of London, as will be seen by this Return, in the case of masters and mates who pilot their own ships. The Trinity House of London have always acted freely and liberally under this enactment, and it will be seen from this Return that in 1869 there were 189 certificates of masters and mates renewed, and 51 granted. Then in addition to that the Trinity House have made various exemptions by Orders in Council. In that Paper which I have frequently referred to, No. 445 of 1862, pages 78 and 79, the Trinity House exempt all ships navigating in ballast, from any port or place in the United Kingdom to any other port or place in the United Kingdom, when not carrying passengers. That was done by an Order in Council passed in February 1861. There had previously been partial exemptions of ships in ballast, but eventually, by that Order in Council, all ships proceeding in ballast from one place in the United Kingdom to another within the districts of the Trinity House, were exempted. Then by another Order in Council, of the 16th of July 1857, which will be found in the same Parliamentary Paper, at page 16, the Trinity House extended their system of examination of masters and mates by examining them not only for a particular ship, but for any ship belonging to the same owners, and of no greater draught of water than that of the ship mentioned in the certificate.

111. But still that system did not apply generally?—Not generally.

112. So that a master who has obtained a certificate of this kind from the Trinity House is restricted to vessels belonging to a particular owner?—Vessels belonging to a particular owner, and of no greater draught of water than the one for which he is examined. The case of the "Earl of Auckland" turned upon the question whether one of these certificates, under these circumstances, was valid or not; the ship having been held by one owner in trust for another, the real owner had, so far as I remember, been put upon the certificate instead of the trustee.

113. I think there was one further exemption in the case of the Yarmouth Roads?—I mentioned the case of the "Martha Alida," where a Dutch captain had to pay very large expenses at Hull for not having taken a pilot in the Yarmouth Roads; and in consequence of that and many other cases the Elder Brethren made a rule reducing the pilotage in the Yarmouth Roads to such a nominal sum that it is not worth the while of the pilots to take advantage of their power to take the ship.

114. Will you now explain to the Committee the various systems of pilots working in and out of London?—It is a very difficult thing to understand it, and I am not quite certain that I understand it myself, but as far as I can make out there are seven different classes of pilots that pilot ships in and out of London. In the first place there are pilots who were licensed before 1854 to pilot vessels all the way between London and the sea. Then, in 1854, when the Merchant Shipping Act passed, the shipowners and the insurers of London desired that the two classes of pilots should be separated, and that there should be one class of pilots for the river above Gravesend, and another class of pilots for the river below Gravesend; and the Act of Parliament consequently requires the Trinity House, since the passing of that Act, to license pilots accordingly. Section 370 of the Merchant Shipping Act of 1854, which enables the Trinity House to license pilots for the London district, contains this restriction: "So nevertheless that no pilot shall be hereafter licensed to conduct ships above and below Gravesend;" consequently, since 1854, one set of pilots have been licensed for the river above Gravesend, and another set of pilots for the river below Gravesend, so that you have first the old pilots who were licensed to pilot vessels all the way.

115. Those are dying out, are they not?—Yes.

116. And I believe only 50 now remain?—I believe that is about the number. Then there are the pilots who have been licensed since that time

time between Gravesend and the sea; then there are the pilots who have been licensed since that time between London and Gravesend, who receive general licenses, and are general pilots of the Trinity House; then there are pilots for the North Channel who are not licensed outwards; and there are pilots for the North Channel who are not licensed inwards. In 1853 the difference between the inward and outward pilots for the South Channel (that is, the difference between the old Trinity House pilots and the old Cinque Port pilots) was done away with, but the difference between the inward pilots and the outward pilots for the North Channel was not done away with. Then, sixthly, there are a class of pilots called home trade passenger ship pilots, and the way in which those have cropped up is this. There were certain home trade vessels with passengers which were not in the habit of carrying licensed pilots before the Act of 1854, and those ships by the 354th Section of the Act of 1854 were afterwards obliged to carry licensed pilots; and it proved to be the case that the Trinity House had not sufficient of their own pilots to pilot those ships. A certain number of Thames watermen who, though not licensed pilots, had previously been in the habit of piloting ships were specially licensed for the purpose; they took the same rates of pilotage as the regular pilots, but they did not subscribe to the pilotage fund, and had no benefit from it. Then the seventh class are watermen who are not licensed at all, but who pilot a large proportion of the ships between London and Gravesend; I do not feel sure that they do not pilot half the ships between London and Gravesend; they are watermen belonging to the Watermen's Company and freemen of that company, but they hold no license as pilots.

117. Every vessel which comes up to London takes a pilot, whether he is licensed or unlicensed? —Yes, I believe so.

118. I believe every vessel from 20 up to 1,000 tons if it does not take a licensed pilot takes a waterman from Gravesend?—Yes, almost every vessel, if not every vessel. Then, besides those I have mentioned, there is another class of unlicensed seafaring men who pilot many ships below Gravesend, so that on the whole there are eight different classes of men in different positions as regards the law, but all of whom pilot ships on the Thames.

119. Although the Thames may generally be called a compulsory pilotage district, yet a considerable portion of these pilots are employed upon work which is not compulsory, is not that the fact?—By far the greater number of them are employed on work which is not compulsory.

120. Take the North Channel and the Thames in respect of which vessels going to the North of Europe generally make their voyage, and in respect of which voyage vessels are now exempt from carrying a pilot, there is a complete system of pilots established for the purpose of piloting those vessels, is there not?—Yes, there is a complete system of licensed pilots; no ship comes in from the north of Europe, by Orfordness to Gravesend without a licensed pilot.

121. Although they are exempt under the Act? —Yes.

122. And the same vessels coming up from Gravesend to London, also, they take a licensed pilot though they are still exempt under the Merchant Shipping Act?—Yes, all of them. I will put in the Order in Council under which the home trade passenger pilots are licensed.

123. You have already said that even vessels which are not bound to carry pilots, and which do not, in point of fact, take licensed pilots, almost all, as a rule, take watermen at Gravesend?—So far as we have learnt, they all take some one to help them up from Gravesend.

124. At law, however, a licensed pilot is entitled to supersede a waterman?—A licensed pilot is entitled to supersede a waterman. But it seems to have become a sort of custom amongst them that whilst a licensed pilot does supersede a waterman on board vessels subject to compulsory pilotage, he does not supersede him upon vessels which are not subject to compulsory pilotage.

125. I believe the number of licensed pilots from Gravesend up to London is 72?—Yes.

126. Seventy-two who are exclusively licensed for those districts?—Yes.

127. And I believe there are some 50 others licensed from London to the sea, irrespective of Gravesend?—Yes.

128. Below these licensed men there are something like 300 or 400 watermen acting as pilots to vessels which are not obliged to carry licensed pilots; under that system of licensed pilots there has grown up an extensive system of unlicensed pilots whose services are voluntary? — Yes; licensed and compulsory, licensed not compulsory, and not licensed at all.

129. But even with these watermen there is to some extent a monopoly, inasmuch as no person can become licensed to act as a waterman except through the Thames Conservancy; is not that the fact?—Through the Watermen's Company; not the Thames Conservancy.

130. And after undergoing a process of apprenticeship?—Yes. In the course of the last few weeks, we have had applications from all these classes, each against the other; each one who has the protection seeks to make the protection stronger against the other, and each who has not protection seeks to do away with the privileges of the other. The first class of old pilots, licensed before 1854, to pilot vessels all the way between London and the sea, wish very much stronger protection against unlicensed men; they wish to have the presence of a man who does not belong to the crew on board the vessel, made *primâ facie* evidence of a crime, so that they may prosecute the captain of the vessel for having him on board. Then the pilots who are licensed between Gravesend and the sea, but who are not licensed between London and Gravesend, seek to have their licenses extended from Gravesend to London; whereas the pilots who are licensed between London and Gravesend complain bitterly of the pilots who are licensed all the way from London to the sea. I will put in the Papers that these different persons have sent to us. (*The Witness delivered in the Papers*, vide *Appendix* (A.), Nos. 10, 11, 12, 13).

131. These various classes of licensed pilots are the result of regulations made by the Trinity House, are they not?—Yes, and of the Acts of Parliament. First of all there was an amalgamation of the old Trinity House pilots and the Cinque Port pilots, who were two classes. Some of the Cinque Port pilots still exist. Then since the Trinity House have taken the thing in hand, they only license one class of pilots for the waters from Gravesend to Dungeness by the South Channel, whether the ships go in or out. By

Mr. *T. H. Farrer.*

22 March 187.

the Act of 1854, the Trinity House are obliged to make a distinction between the pilots above Gravesend and the pilots below Gravesend, and one class of pilots come to us, begging that that distinction may be done away with, and another class come to us wishing that it may be extended.

132. With the exceptions you have mentioned, the distinction between the different classes of pilots depends upon how the Trinity House see fit to alter them from time to time?—The home trade passenger ship distinction is one that arises from the acts of the Trinity House.

133. But the distinction between the North Channel pilots and the Deal and Dover and South Channel pilots may be done away with by them?—Yes, but they are licensed for different waters. The pilots from Orfordness to London wish to have a license from London to Orfordness, as well as from Orfordness to London. Then the sixth class, the licensed pilots for home trade passenger ships, no sooner got their licenses from the Trinity House than they petitioned the Trinity House to license no more masters and mates, in order that the pilotage of the home trade passenger ships might be reserved to them; that will be found in Parliamentary Paper, No. 455, of 1862, at page 48. Then the seventh class, the unlicensed watermen, state to us that they are very anxious to have entire free trade in pilotage, and in this they certainly have a great deal to say for themselves. But then they do not wish to have the privileges of the Watermen's Company done away with. As regards their pilotage services, in Parliamentary Paper 445, of 1862, at pages 49 and 50, you will find they state that their ordinary charge with a screw collier, drawing from 14 to 18 feet of water, was from 1 *l.* to 1 *l.* 5 *s.*; and as far as I can make out from the Trinity House rates for the licensed pilots the charge for such a vessel would run from 3 *l.* 14 *s.* to 5 *l.* 15 *s.*, with a deduction of one-fourth as she has steam power; so that there is a difference between 1 *l.* 5 *s.* and 2 *l.* 16 *s.*, between the charge of the unlicensed watermen and the charge of the licensed Trinity House pilots. I will put in the Order in Council fixing the rates of the London pilots. (*The same was delivered in*, vide *Appendix* (A.), No. 14.) It is not very wonderful, under those circumstances, that the screw colliers and others should prefer to employ the watermen.

134. But at law a licensed pilot has still the right to supersede a waterman?—Yes.

135. In point of fact the custom has grown up for the licensed pilots and the watermen to keep to their own class of business?—Yes, and one reason of that is, that the licensed pilots find it very hard to supersede the watermen, where the pilotage is not compulsory.

136. I must now ask you a question with regard to Liverpool. I believe that at Liverpool the exemptions are comparatively few?—I think the exemption under the Liverpool Pilotage Act extends to coasters under 100 tons, or in ballast, and they must have been in the coasting trade for six months. The first exemption is under the Liverpool Act, the Mersey Docks Consolidation Act of the 21st and 22nd Victoria, chapter 92, sections 130 to 139, and the restriction that they must have been in the coasting trade for six months is under a bye-law, confirmed by an Order in Council of the 26th of January 1861; it is bye-law 148, which I put in. (*The same was delivered in*, vide *Appendix* (A.), No. 15.)

137. Mr. *Price.*] That is to prevent your assuming a vessel to be a coaster when she is not one?—Yes, so I suppose. Our knowledge of local pilotage is extremely fragmentary, so that we only hear of cases that happen to be brought before us, but here is a letter which was written from Runcorn to the Board of Trade, on the 19th February 1870, by a Mr. Steele. It is as follows:—

"Sir,—I have read with very great interest and pleasure the introduction of a Bill by the present Government, having for its object the *abolition of compulsory pilotage*. It will not be a matter of surprise that the honourable Member for Liverpool, belonging to the old school of protection, should request it for a certain number of his constituents, *i. e.*, the Liverpool pilots. I ask your indulgence to say a few words on this very important subject.

"During a period of nearly 20 years I have, in the Customs, been a tide and measuring surveyor of vessels; in that capacity I have been brought into almost daily intercourse with masters of vessels; in 1866 I retired on superannuation, and from that date I have been engaged in business here (as a ship and commission agent), which possesses a very considerable coasting trade. I am, therefore, I may say, almost daily engaged in business transactions with masters of vessels constantly trading to the port of Liverpool and to the Mersey. I am, therefore, enabled to give an opinion of the feeling of many ship masters, expressed to me personally, who from the nature of their calling are precluded from giving evidence on this important subject—compulsory pilotage, and on whose behalf I beg very earnestly to address you, *i. e.*, the masters of coasting vessels trading to and from the River Mersey, who have expressed to me the grievous hardships under which they suffer from the present pilotage regulations of the port of Liverpool. A large number of coasting vessels find owners in ship masters, if I may use the expression, 'of the old school,' who, energetic and frugal in their habits in their seagoing days, but for want of education, which they could not possibly attain in their early days, could not pass the improved qualification, and consequently retire from the sea with their little savings invested in a small share of one or more vessels; probably their vessels remain (for they would not pay to be broken up) monuments of antiquity.

"I will suppose a coaster of 100 tons register, with a draught of 13 feet, carrying a cargo of 160 to 170 tons; and this brings me to the existing regulation of the present pilotage charges at per foot. I shall be enabled to show you it is not a hardship only, but I think I shall prove it to you to be a monstrous injustice, pressing heavily on the coasting vessels of this country, who very largely (I do not mean steamers) contribute to the supply of seamen to the Royal Navy, and from whom our Naval Reserve is principally drawn, &c., is suffering at the present moment from the keenest possible competition, not only from our railways, who offer very low rates for long distances, but from our own screw steamers; and the time is fast approaching, if not already at hand, when the Government of this country should be willing to afford them all possible relief. I have already alluded to the pilotage charge by the foot being, I think it will be admitted,

admitted, a hardship. All benefits from shipping is derived from her freight, and all charges thereon should be regulated, as far as practicable, upon a just and equitable basis for all parties. An old vessel of 100 register tons to carry 170 tons, would draw 13 feet. I will suppose her to go foreign on a freight of 18 *s.* per ton; she pays for this Liverpool pilotage, say 10 *s.* per foot, 6 *l.* 10 *s.*, her freight 150 *l.*; this is a vessel of the old class. A modern built vessel, carrying 320 tons, the same rate of freight, 18 *s.* per ton, with one extra hand only, on a draught of 12 feet, pays 6 *l.* pilotage, and makes a freight of 290 *l.* It will thus be seen the vessel paying 10 *s.* less pilotage makes 120 *l.* additional freight; this would be obviated if the pilotage was charged upon the equitable principle of her register tonnage. Under the present arrangement, the large and wealthy shipowner of a vessel of 1,600 and 2,000 tons, drawing 16 to 18 feet, pays little more in pilotage than the ship-owning mariner.

"The honourable Member for Liverpool should be quite sensible that a Non-compulsory Pilotage Act would fall completely harmless on the pilots of the port of Liverpool; that no foreign-going captain, on account of his incapacity properly to navigate his vessel along the coast, would dream of making the attempt of dispensing with a licensed pilot, nor yet would his owners permit. Whereas, as regards coasting vessels, the legislative enactment dispensing with compulsory pilotage would be a very great boon indeed. I have listened with very great regret to the complaint of masters of coasting vessels, for I assure you, Sir, it is viewed in no more favourable light by them than a great injustice.

"It cannot, I think, be more favourably considered when masters and owners of coasting vessels, regular traders to this port, well acquainted with the channel, are compelled under cover of the Compulsory Pilotage Act, to take an officer on board to whom they have the greatest possible objection. The pilot's apprentice is placed, not unfrequently, on board, and the lead is continually in use, and in case of accident, admitting the pilot to be responsible for the safety of the vessel, he is only personally so, perhaps without means; the master is aware of the uncertainty of obtaining redress, and declines, in case of damage, to take steps to recover his loss. One other pilotage regulation exists at the port of Liverpool to which I may be permitted to call attention, I think most absurd. The present limit as to compulsory pilotage is on vessels of 100 tons register, and upwards, but provided a coaster, even under this tonnage, should have been a foreign voyage within a period of six months to her entering the Mersey, though she does not take or require a pilot, the pilotage charge is demanded. This proceeding is complained of most bitterly by coasting captains, and not unfrequently have I heard ship masters remark of having taken advantage of the night to avoid payment of the Liverpool pilotage. Such, Sir, is the state of things the honourable Member for Liverpool would seem to wish continued, or rather have it left to the interested ship-owning Pilot Board in Liverpool to redress. I feel sure, Sir, it will be observable to you that the constituted Pilot Board in Liverpool have a direct interest in making the pilotage charges as small as possible on the larger class of vessels entering Liverpool, and keeping up the so-called "efficiency" and sustenance of the pilotage staff there by a compulsory charge upon coasters.

Mr. *T.H. Farrer.*

22 March 1870.

"I entreat you, Sir, to move the Government that the non-compulsory clause, without Liverpool being excepted, shall stand part of their Bill; that coasters requesting the services of a licensed pilot, it shall be compulsorily rendered by a small charge on the vessel's register tonnage; in such case the charge for pilotage would be more equitably distributed. The pilot would not suffer loss of revenue, while the coasting trade, which is not remunerative, would be very much relieved.

"I fear I have already trespassed upon your valuable time; apologising for which,

"I have, &c.
(signed) "*William Steele.*"

"G. J. Shaw Lefevre, Esq., M.P.,
"Secretary, Board of Trade."

138. Mr. *Malcolm.*] As far as I understand from this letter, coasters under 100 tons are exempt?—His complaint is, that coasters under 100 tons have to pay. A ship under 100 tons, if she has been a foreign voyage, say to Havre, within six months, is not exempt. I am, however, bound to say that the general evidence in Liverpool is, generally speaking, that the shipowners are exceedingly well satisfied with their pilotage system.

139. You mean the shipowners generally?—Yes, the shipowners generally. Sometimes, however, one finds something to the contrary. A good many Liverpool papers come to me with reports of the proceedings of the Mersey Docks and Harbour Board, and I was rather struck, about the 15th of June 1868, by finding this extract from the proceedings of the Mersey Docks and Harbour Board.

140. Mr. *Graves.*] What paper is that extract from?—The "Daily Post" or "Courier," as far as I can remember; the 15th of June is the date in our registry, and the report is headed, "Negligence of Pilots." The report is as follows: "A communication was read from the secretaries of the Liverpool Shipowners' Association, stating that the committee of the association, at a meeting held on the 3rd instant, had directed them to bring under the notice of the dock board the frequent losses sustained by shipowners, owing to the accidents arising from the negligence of pilots while in charge of vessels. The committee were aware that the pilot in fault was legally liable to the shipowner for the damage sustained, but any remedy for damage against the pilot was practically of no avail, unless the pilot had sufficient means to pay such an amount as should be awarded against him. The association suggested that a bond with a sufficient surety for 100 *l.* should be required to be given by each licensed pilot to meet any loss or damage sustained by shipowners through the negligence or want of capacity on the part of such pilot. The chairman suggested that the letter should be referred to the pilotage committee, but he was under the impression that the board had no legal power to grant the application. Mr. Harrison thought, if the board had the power, it was very advisable that it should be done. Mr. Forwood said they had a precedent for it in the traffic department, where every stevedore, lumper, master porter, and even the lowest labourer was obliged to give a bond and surety to the extent

Mr. *T.H.Farrer.*

22 March 1870.

of 200 *l.*, those sureties having to meet any losses caused by the negligence of the parties, and which they could not make good themselves. If this was reasonable in the traffic department, it was much more reasonable as regarded pilots, and he agreed with Mr. Harrison, that if it could be done, it would be very desirable to comply with the application of the Shipowners' Association. Another point was, how far the master of a pilot boat ought to be made liable for the fault of a pilot whom he had put in charge of a vessel. Mr. Fletcher thought the request of the Shipowners' Association a very reasonable one. If it was reasonable that sureties should be required in the traffic department, it was much more so in the pilotage department, for a shipowner might select any stevedore, master porter, or lumper he pleased, while he was compelled to take whatever pilot was thrust upon him, whether he wanted the pilot or not. The letter was referred to the pilotage committee."

141. *Chairman.*] When you state that the shipowners of Liverpool generally are satisfied with the pilotage of that port, you must make an exception with regard to the steamship owners, must you not?—They have never been satisfied; there has been a battle between them and the pilotage authorities ever since 1854.

142. I believe, in a recent letter to the Board of Trade, on the subject of the Merchant Shipping Bill now before the House, they express a strong opinion that compulsory pilotage should be abolished?—Yes, they do, and I will read what they say; it is a letter on the subject of Merchant Shipping Acts generally, and the following are the passages with respect to pilotage: "The clauses in the Merchant Shipping Bill, brought in last year with reference to pilotage, had for their object the abolition of compulsion in the employment of a pilot, and of immunity from the consequences of his acts, but they also provided for the continuation of the compulsory payment of pilotage dues. This proposition to continue the burdens, but not the corresponding immunity of pilotage, having met with much opposition, the present Bill was brought in. The new Bill provides for the total abolition of the compulsory employment of a pilot, and of the compulsory payment of pilotage dues; and the immunity of the shipowner for the pilot's acts, although not expressly referred to in the Bill, will necessarily cease to exist in consequence of these provisions. The Bill also provides for the superannuation of pilots, and (Clause 3) for the preference of a licensed pilot over an unlicensed one; it also imposes a penalty of not exceeding 50 *l.* on an unlicensed pilot continuing in charge, and on the master who continues to employ him after a licensed pilot has offered himself for engagement. It is suggested that Clause 3 should be withdrawn, as it appears probable that it will create great difficulty in certain cases. 1st. If a ship is in charge of an unlicensed pilot, and a licensed pilot applies for employment and is taken, inasmuch as his employment in that case is enforced with a penalty, it will be said that it is compulsory, and that the owner will have an immunity from the consequences of his act. 2nd. If a channel pilot is engaged, say, to take a vessel from Liverpool to London, he will, under this clause, be liable to be superseded in every pilotage district which he enters. The difficulties attending the subject of compulsory pilotage have been so great; it has been so difficult to ascertain in any particular case of collision whether the circumstances are such that the employment of the pilot would protect the owner of the ship of which he was in charge; and, except where both the colliding ships are in charge of pilots, the law has been so one-sided in its effect, that the main provision of the Bill abolishing both the burden and the immunity together appears to be the most satisfactory way of dealing with the matter, and the Association approve of it accordingly. The Association have already expressed their opinion in favour of the entire abolition of compulsory pilotage. If it is abolished, there will not be much in this part of the Bill affecting the interests of shipowners. It is apparently intended as an alternative for the Bill for the Abolition of Compulsory Pilotage, and is framed so as to continue the compulsory payment of dues, but not the compulsory employment, and consequently not the immunity for the pilot's acts. If the compulsory payment of dues is not to be entirely abolished, the Association are very strongly of opinion that the present immunity of the shipowner for the acts of the pilot should be continued. Section 450 alters the present law as to the liability of Trinity House pilots (which is now limited to 100 *l.* upon their executing a bond with sureties to the Trinity House for that sum) by withdrawing all limitation. This alteration is an improvement, although perhaps not of very much practical importance."

143. I think various attempts have been made by the Liverpool Pilot Board to remedy the grievances of the steamship owners?—It is rather a complicated story, as I have said before. A steam ship, if she carries passengers, which almost all the steamships do, is under a double obligation to employ a pilot, first under the Liverpool Local Act, and next under the Merchant Shipping Act, section 354. Shortly after the passing of the Act of 1854, on the 30th of June 1854, a settlement was effected between the steamship owners and the then Pilotage Commissioners, by which the steamship owners were relieved from the obligation of taking a pilot at all, on the condition that they paid reduced pilotage rate, viz., one-fourth of the inward pilotage for no service whatever. I will put in that Order in Council. The effect of that Order in Council was, that the Pilotage Commissioners entirely abandoned all notion of being responsible for the safety of these vessels (a notion which they insisted upon very much in subsequent correspondence with the Board of Trade), on condition that these vessels, which were perfectly well navigated by their own captain and officers, should pay a certain tax towards the Liverpool Pilotage. Now, Captain Simpson, who seems to be a very efficient officer of the Mersey Docks and Harbour Board, terms that in a subsequent correspondence an unholy compact; it did not seem to me an unholy compact, but it entirely throws overboard what the Liverpool Pilotage Commissioners afterwards insisted upon, namely, that they were responsible for the safety of those vessels. By this Order in Council they threw that responsibility overboard altogether, provided they could get a certain tax levied upon these vessels for the benefit of the Liverpool pilots. The Order in Council is to the effect that the following regulations should be made with respect to coasting steamers plying from and to the Port of Liverpool, that is to say, 'The coasting steamers outward bound proceeding to sea without a pilot, be

be altogether exempted from the payment of pilotage, and that the rates of pilotage for coasting steamers inward bound be reduced from 4 *s.* to 1 *s.* per foot when the services of a branch pilot are not required on board the steamer.'" That regulation is still in force. (*The same was delivered in*, vide *Appendix* (A), No. 16.)

144. Mr. *Wykeham Martin.*] Who is liable for the damage now?—Under that regulation the steamer herself would be liable for the damage, because she takes no pilot. These conflicting parties were the Irish passenger steamers on the one hand, and the body who governed the pilotage of Liverpool on the other.

145. Who is liable now under their unholy compact, as it is called?—Under this unholy compact the pilots do not force themselves on board these passenger steamers, and the steamers are navigated by their own officers.

146. The steamer is liable at present?—Yes, the steamer is liable in case of damage. Then there was another obligation, under Section 354 of the Merchant Shipping Act, with regard to the home trade passenger ships. Section 355 of the Merchant Shipping Act was inserted in that Act very much at the instance of the owners of Irish steamers out of the port of Liverpool. It provided that the Board of Trade might grant certificates exempting these steamers from the new obligation to which they were subjected under the 354th section. These certificates were to be founded upon the fact that the masters and mates of those vessels had piloted vessels for a certain time safely, or had otherwise proved their competency, as the Board of Trade might think fit. The Board of Trade felt it was very undesirable that there should be two sets of examinations going on in the same port. They consequently referred the masters of these steamers, in the first instance, to the pilotage authority, because the certificate of the pilotage authority would have had the effect both of exempting them from the local obligation, and from the obligation of the 354th section of the Merchant Shipping Act. However, the pilotage authority for a good while refused to examine at all, and under those circumstances the Board of Trade granted certificates freely. Then came the great change in the pilotage authority of the port of Liverpool; the management was transferred from the old pilotage committee to the committee of the Mersey Docks and Harbour Board, which was not to consist entirely of the members of the Board, but which was to contain several other members, who were at first, if I am not mistaken, of the old pilotage committee; and pending that transfer, the Board of Trade held their hands and declined to grant pilotage certificates upon examination; they refused to grant new ones in any case.

147. Did "freely" mean without examination, or liberally with examination?—Freely, upon being satisfied by the experience of the officers, that they were qualified. The Board of Trade received the criterion mentioned in the Act, namely, service; but they have never actually examined at Liverpool, and they think a double examination in the same port is an evil.

148. *Chairman.*] Then "freely" did not mean after examination?—As regards the Board of Trade it did not mean after examination. Then after this, in the year 1859, the City of Dublin Company urged the Board of Trade to interfere. The whole history of that you will find in Parliamentary Paper, No. 445 of 1862, pages 90 to 96; the City of Dublin Company on the 1st of July 1859, wrote to the Board of Trade with regard to the application of Messrs. Johns and Hughes, officers of the City of Dublin Steam Packet Company, to the Mersey Board, in consequence of a resolution of the pilotage committees to the effect that it was not expedient to examine. In reply to that, the pilotage committee of the Mersey board wrote to the Board of Trade on the 15th of July 1859, in the following terms: "That in declining to undertake the examination of masters and mates of coasting steamers, the pilotage committee are exercising a discretion obviously vested in them by the 121st section in the Consolidation Acts Bill of 1858, and also by the 340th section of the Merchant Shipping Act of 1854. That a heavy responsibility would be incurred by granting a pilot license to a stranger, whose character the committee could only know by report, and who would be immediately removed from their supervision. He might have ability and pass the examination with credit, and yet by misconduct be utterly unfitted for the duty long before the expiration of the period for which a license has been granted. That the applicants are chiefly masters and mates of coasting passenger steamers, and although the committee admit the desirability of there being a competent pilot on board such vessels, they feel that a heavier responsibility is attached to the granting of those licenses than to those granted to apprentices on their first undertaking the duties of pilots. That the continual changing and intricacy of the channels at the entrance of the Mersey render increasing observation and vigilance indispensable. That vigilance cannot be exercised by a person in charge of a vessel only occasionally entering and leaving the port, and the necessary knowledge of such changes (and growing changes) can only be acquired by the pilots of the port by daily experience and frequent surveys for that purpose." To that the Board of Trade replied as follows: "That the examination and licensing of a pilot for general employment under the Local Act for the port of Liverpool is a totally different thing from granting pilotage to master and mates employed by any particular owner under the General Act. In the former case the pilots are the servants of the pilotage committee, selected for general employment by persons who are quite ignorant of them, and the pilotage committee are undoubtedly responsible for the selection they make. In the latter case the masters or mates are the servants of an owner who chooses, employs, and trusts them, and the sole object of the examination is to exempt a man who is proved to possess certain technical knowledge, from the necessity of employing a licensed pilot. Although the 340th section of the Merchant Shipping Act, 1854, provides that a pilotage authority may examine masters and mates, or may decline to do so 'if it think fit,' the 342nd section makes the Board of Trade responsible for correcting an improper use of the discretion thus given, and implies that that discretion shall be fairly and liberally exercised. The Mersey Board, in granting the licenses in question, will be assuming no responsibility whatever except that of ascertaining at the examination that the applicant possesses a certain degree of local knowledge of the navigation of the port. That masters and mates of steamers, making short voyages in the home and coasting trades, cannot be so long absent from the port as to be ignorant of the

Mr. *T. H. Farrer.*

22 March 1870.

Mr. *T. H. Farrer.*

22 March 1870.

changes that may from time to time place in the Channel, more especially as the certificates, if granted, must be renewed annually; and if such changes become serious it is the duty of the Mersey Board to move buoys or lights, and to give due notice of any alteration that they may have deemed necessary. No person in command of a coasting steamer ought therefore to be ignorant of any important changes in the channel. I am further to observe that the Trinity House and other pilotage authorities have long been carrying the obvious intentions of the Act into effect without difficulty and without evil consequences. In conclusion, I am to state, that should the Mersey Board fail to comply with the intentions of the Merchant Shipping Act, 1854, and to examine the persons who have applied them, my Lords will consider that circumstances have arisen which in their judgment require that they should exercise the powers given them by the 342nd section of that Act for the appointment of persons to examine masters and mates, and for the granting of pilotage licenses." Then, in reply to that, the Mersey Board, on the 6th of October 1869, passed a resolution, "That upon the application of the owners of any coasting steamer, this Board will admit to examination, and, if he be found competent, will license the master or mate of any such steamer to pilot the vessel to which he may for the time being belong, and while such vessel shall continue the property of the same owners; but subject to all the existing rules and regulations relating to Liverpool pilotage, except in so far as they are necessarily varied by the present resolution." So that controversy ended at the time; but Mr. Watson, of the City of Dublin Steam Navigation Company, was not at all content, and his company believed that they never should get fair examinations from the Mersey Board; and they insisted upon still getting from the Board of Trade certificates under the 355th section of the Merchant Shipping Act; and Mr. Milner Gibson, being satisfied that he had reason for it, at last assented, and consequently the Board of Trade for some time continued to grant them those certificates.

149. Later in 1868, the question was again raised apparently?—This same question was again raised in 1868.

150. And on that occasion the Board of Trade, thinking that the Mersey Board was not inclined to examine masters for certificates, declined to interfere?—On that occasion there was a good deal more correspondence with the Mersey Docks and Harbour Board, and it was thought undesirable that the Board of Trade should be granting pilotage certificates for Liverpool, whilst the Mersey Board were also granting pilotage certificates for the same place. The Mersey Docks and Harbour Board led the Board of Trade to believe that they were acting fairly in the matter, and the Board of Trade declined to grant any more certificates. I will put in this correspondence. (*The same was delivered in*, vide *Appendix* (A.), No. 17.) After that the City of Dublin Company resisted strongly; but, upon seeing the whole of the correspondence, they entered into a negotiation with the Mersey Board, and a proposal was made by the Steam-packet Company, not that all masters and mates should be examined, but that they should take on board on every voyage a licensed Liverpool pilot, paying him a reduced rate. To that the pilotage committee refused to assent, and there the matter still remains, and I believe the City of Dublin Company are exceedingly dissatisfied.

151. What was the total number of masters and mates examined under the provisions of the Merchant Shipping Act in Liverpool?—The whole number granted in 1868 was two; there were none granted in 1869; the total number renewed in 1868 was nine; the whole number renewed in 1869 was 10.

152. Can you say whether any applications have been made for certificates?—Of that we know nothing. In the Parliamentary Paper, No. 532, of 1864, page 40, you will find a further correspondence with the Mersey Board. A captain complained to the Board of Trade that his certificate granted by the Mersey Board was limited in this way:—"So long as the said steamer 'Helena' shall remain in the same trade," and he said that his certificate ought to be extended to the piloting of his steamer whether she was in the coasting trade or in the foreign trade. Upon that the Board of Trade referred to the Mersey Board, and they replied in a letter, which will be found at page 42 of the same Paper, dated 8th of September 1862. They refer to what had passed before, and then on page 43 they go on to say that, "in the opinion of the Committee there is no analogy between the two cases now referred to" (that is masters in the coasting trade and masters in the foreign trade). "The masters and mates of coasting vessels spend their lives in acquiring the experience and knowledge of pilots; they belong to a class who are all known; their duties and services are purely local, and render them, to some extent, amenable to supervision by the Board. But the reverse of all this applies to the masters and mates in the general trade, especially on long voyages; for over them the local pilotage authority would, practically, have no jurisdiction whatever; and whatever might be the knowledge which such a master or mate might at one time possess, it is obvious that it would be rapidly impaired by disuse. The most important changes in this navigation frequently occur within the time spent on a foreign voyage, while even in the absence of such extraordinary occurrence, it is certain that nothing less than continuous experience, and the most careful and unceasing watchfulness are necessary to keep up the efficiency of a Liverpool pilot. Even a man's moral character (scrupulously cared for here) might so deteriorate on a long voyage as wholly to disqualify him for the office of a trustworthy pilot on his return to Liverpool. Again, ships on foreign voyages are quite uncertain as to their ports of destination in this country, so that very long absences from Liverpool might interfere, and in no case could any local pilotage board exercise the slightest authority over persons on board such vessels, nor acquire any available knowledge of their conduct. If, indeed, so wide a system of licensing could be contemplated, it is manifest that it could only be attempted by some central body, with the authority and responsibility of Government. And there is yet this further and paramount consideration: any such general system of licensing pilots in the foreign trade would be totally inconsistent with the further maintenance of any local pilotage board. The two systems could not exist together." To that the Board of Trade replied (*same Paper*, page 43), as follows: "The enactment referred to in providing that the master

master or mate of any ship has a right to be examined, and, if found competent, to obtain a license enabling him to act as pilot of the ship or ships specified in the license, contains no distinction depending on the class of the vessel, or the nature of the voyage on which she may be engaged. If he is found competent to pilot a vessel he ought, as my Lords read the statute, to be empowered to pilot her into and out of the port for which he is examined, whatever be the place to or from which the vessel may be bound. The Mersey Board appears to consider that as regards pilotage into or out of the Mersey a master may be competent to pilot his vessel on a coasting voyage, and not competent to do so on a foreign voyage, and for this they allege as their reason the fact, that during prolonged absence the channels of the Mersey may undergo alteration. Upon this my Lords desire me to observe, first, that the objections arising from possible changes in the navigation apply less to short foreign voyages, *e. g.* voyages to France, than to some coasting voyages, and that the distinction adopted by the Mersey Board would, therefore, without any reason whatever, deprive of the advantages contemplated by the statute, a large, important, and increasing class of traders. Secondly, that in consequence of the great care with which the Mersey Board provide for the seamarks of the Mersey, changes are from time to time made in the leading lights, beacons, and buoys of the Mersey, which sufficiently indicate any changes that may occur in the channels. Thirdly, that the Act provides that a pilotage certificate granted to a master or mate shall not be in force for more than one year. Consequently no master or mate who is absent for more than 12 months can pilot his own ship without having his license renewed. In order to do this he must appear before the pilotage authority, who may then, if they have proper and sufficient reasons, refuse to renew the license. Under all these circumstances, my Lords cannot see that there is any ground for presuming that a master or mate who is found competent to pilot a vessel in the coasting trade is not also competent to pilot her in the foreign trade. In conclusion, I am to point out, as the Board of Trade have pointed out before, that the grant of a pilotage certificate does not constitute the master or mate a pilot, much less does it render the Pilotage Board responsible for his character or conduct. The object and effect of the Act is simply to relieve the employer from the exceptional obligation of employing and paying for the services of a pilot who is not his own servant, in cases where his own servant is capable of performing the duty, and when he, who is the best judge of his own interests, thinks such a course desirable."

153. What was the result of that correspondence?—The result was that a deputation came up from the Pilotage Committee to the Board of Trade, to Mr. Milner Gibson, and an account of the interview, given by the deputation, will be found in the same Paper, at pages 44, 45, and 46, in which the Board of Trade are very handsomely abused; but eventually the local authorities gave way. The Mersey Board, in fact, overruled their Pilotage Committee and passed a resolution that they would examine foreign masters; but I am not aware that they have examined many.

154. Notwithstanding that, I believe only nine certificates were renewed last year?—Only nine. It is a singular fact that there should be several hundreds examined in London and Hull, and only 10 certificates in existence in Liverpool in 1869.

155. And how many in Glasgow?—I will give the number at London, Hull, and Glasgow. In London, there were 51 granted, and 189 renewed; at Hull, there were 222 granted, and 61 renewed; on the Clyde, there were 133, I think, granted, but they do not distinguish between granted and renewed, or they have not made the return accurately.

156. Let me put into your hand the memorial of the steamship owners of Liverpool to which you have referred, expressing their ideas upon compulsory pilotage?—This is a report of the Liverpool Steamship Owners Association upon the Merchant Shipping Code and Pilotage Bills, 1870. "The difficulties attending the subject of compulsory pilotage have been so great, it has been so difficult to ascertain in any particular case of collision whether the circumstances are such that the employment of the pilot would protect the owner of the ship of which he was in charge; and except where both the colliding ships are in charge of pilots, the law has been so one-sided in its effect, that the main provision of the Bill abolishing both the burden and the immunity together, appears to be the most satisfactory way of dealing with the matter, and the association approve of it accordingly."

157. Referring now to the case of Glasgow and the Clyde, I think it is only compulsory from Glasgow as far as Greenock?—It is only compulsory up the narrow part of the Clyde from Greenock to Glasgow.

158. And with regard to exemptions, they are to apply to coasting vessels under 100 tons?—Yes, under 100 tons, moved or towed by steam.

159. It is not confined to coasters, I believe?—No, I think not.

160. The total number of masters and mates licensed for pilotage under the Merchant Shipping Act is 133, I believe?—Yes, 133.

161. Then, in point of fact, the pilotage of Glasgow is much like the pilotage of the Thames above Gravesend; it is merely river pilotage?—It is little more than a canal.

162. I believe, with regard to Dublin, the pilotage is compulsory?—The pilotage is compulsory; they have not sent us any information upon this return; therefore I am unable to give the exemptions accurately.

163. Last Session a Bill was introduced into Parliament for the purpose of extending the limits of their compulsory pilotage?—Yes.

164. And the Board of Trade objected to it, and it was altered, and left as it is now?—Yes.

165. I believe petitions had been received by the Board of Trade from Maryport and Workington against compulsory pilotage in that district?—Yes; in the Parliamentary Paper, No. 455, of 1862, reference will be found to this subject. We have petitions from the shipowners of Maryport and Workington, strongly objecting to compulsory pilotage within the Dublin district.

166. There is also a letter from the Ballast Board on the same subject?—The owners of the small steamers plying between Kingstown and Dublin, who were generally in the habit for a long while of plying with perfect safety, applied to us because the Dublin Ballast Board held their steamers subject to compulsory pilotage. I will put in the letter, and I will only read this passage from

Mr. *T. H. Farrer.*

22 March 1870.

from the answer of the Dublin Ballast Board, because it seems to me to show the same false view of their position as that which was shown by the letters I have read from the Mersey Board. It says, "I am, in reply, directed to state that the Board (*i.e.* the Ballast Board of Dublin) were actuated in this case solely by a sense of what is due to passenger safety, having regard to the great responsibility which rests with them, being the pilotage authorities of the port of Dublin, should any accident to life occur; and that they did not adopt this course without obtaining legal advice, which has been communicated in the following words." Then they quote a legal opinion to the effect that they had power to compel those vessels to take a pilot, about which there is no doubt whatever; to which the Board of Trade replied that they were perfectly mistaken in supposing that the responsibility for the lives of passengers on board these vessels rested with them; that it rested really with the owners of the vessels, and if they compelled the owners of those vessels to take a pilot under the notion that they would take the responsibility upon themselves, and that the owners were thereby to be relieved, they would be doing mischief instead of good. (*The letters were delivered in*, vide *Appendix* (A.), No. 18.) I understand that the Dublin Port Board have now petitioned in favour of this Bill.

167. Now I will ask you a question with regard to the Humber; in the Humber the practice has been for the pilotage authorities to grant certificates very freely?—Yes, they have exercised that power very liberally from the beginning; one of the first questions we had with them was, whether the granting of certificates was to extend to foreigners as well as to Englishmen; we gave way, and they have examined masters of foreign vessels as freely as the masters of English vessels.

168. What is the number of certificates granted at Hull?—In 1869, 222 certificates were granted and 61 renewed.

169. The number is so considerable that in their answer to a circular sent by the Board of Trade, the Hull authorities represent that the pilotage is not compulsory?—Their answer is, that practically the compulsory employment of a pilot is unknown in the Hull district.

170. On the other hand, the Board of Trade have received representations from the people of Goole, complaining very much of the compulsory system of Hull and the Humber?—Yes; whether that applies to the Port of Hull, or not, I do not know.

171. They have to pass through the Hull district to get to Goole?—Yes; they have to pass through the Hull district to get to Goole.

172. And they are subject to the same pilotage authorities as the Hull people?—Yes, in passing through that district. This is the petition, and it is so numerously signed that it is worth while reading it. "That your petitioners have long regarded the law of compulsory pilotage as a most grievous and obnoxious tax, quite contrary to the principles of free trade, inasmuch as the shipmaster is compelled to give up charge to the pilot forced on board by law, although it remains an unsettled point as to whether or not under some circumstances the master should remove the pilot from charge, thus placing the shipmaster in a very unenviable position; for to remove the pilot from charge, he must be supposed to know better what to do under the circumstances than the pilot he removes; and admitting that, how anomalous the law to force a pilot on board a ship, if that law supposes the shipmaster to know better how to navigate that ship than the pilot himself does. Your petitioners beg to remind your honourable Board of what took place with respect to the loss of the 'Spindrift,' wrecked near Dungeness. How the Court at Greenwich acquitted the master from any blame, owing to a compulsory pilot being in charge of the ship, and how your honourable Board, together with the Elder Bretheren of the Trininy House, dissented from that Court's decision; thus showing how difficult for a shipmaster to determine when the time arrives for him to supersede the pilot in charge. Your petitioners are confident that the most just and effectual way to remedy that evil would be to establish a voluntary system of pilotage, and beg your honourable Board to insert a clause in your proposed Merchant Shpping Amendment Bill, to abolish unconditionally the law of compulsory pilotage throughout the United Kingdom, and let there be free trade in pilots, the same as in shipmasters; your petitioners cannot see any reason why one class should be protected at the expense of another class; any person qualifying himself for a shipmaster can be one without any regard as to number, and your petitioners recommend the same law towards pilots. Your petitioners look upon the present modes of levying the rates for pilots' fees on the draught of water very unjust in principle, inasmuch as a ship of 2,000 tons would carry nearly ten times the number of tons per foot draught of water as another ship of 100 tons; thus showing that levying the rates on the draught of water falls very unequally on different sized ships. Your petitioners beg to recommend as a remedy for that evil, that all pilotage fees be levied on the gross tonnage of the ship, precisely similar to light dues, dock dues, &c." They wish it to be on tonnage instead of draught. I will put in this petition. (*The same was handed in*, vide *Appendix* (A.), No. 19.)

173. There is a difference of opinion among the pilots of Hull with reference to the maintenance of compulsory pilotage?—This memorial is from a pilot himself. It is signed by 40 pilots; and the writer adds, at the foot of this memorial, "Of the 68 pilots, including captains, the above comprise 40 of them." It is dated Hull, 17th March 1870: "We beg most respectfully to make a few suggestions to you on the subject of the Pilotage Bill, seeing that our livelihood is to some extent at stake. We Humber pilots are licensed by the Elder Brethren of the Trinity House, and after being licensed, are under the control of 72 commissioners, composed of shipowners, Trinity Board, town councillors, and others. There are many pilots who would welcome the abolition of the compulsory system if such abolition would also include the abolition of pilotage authorities, and we think that if the present Pilotage Bill is to pass, there should pass with it a corresponding remodeling of the whole constitution, as we think one authority would be quite sufficient, say our Trinity Board alone, or (which would be sooner preferred) your own authority, namely, the Board of Trade." (I do not think the Board of Trade will agree to that.) He goes on: "For besides making it better under the free system, it would make it more to our individual interest to carry on the work to the best advantage. Our machinery

nery also is much more expensive than is actually necessary. We have seven cutters employed in the service; three of them only been under weigh at one time, the remaining four being laid up eight months out of 13 (reckoning four weeks to the month); attached to which four cutters are one captain and three boys each. Our past experience proves to us that our commissioners would be slow to make any reduction in the shape of cutters, &c., though we think each reduction might safely be made. From the interest every pilot has in the service (more or less according to his length of servitude), we feel satisfied that under the new system our earnings would considerably diminish, and, such being the case, would also proportionately lessen the superannuation fund. We have at the present time seven men on this fund, varying from 14 *s.* to 1 *l.* per week; 20 widows and 13 orphan children are chiefly depending upon us and our exertions."

174. What is the whole number of pilots at Hull?—According to this statement 68; but according to the return from the pilotage authorities it is 69, with 18 apprentices.

175. Referring again to the case of the Bristol Channel pilotage, you have already told us that in 1861 an Act was passed which repealed compulsory pilotage, as far as Gloucester, Cardiff, and Newport were concerned, but left it subsisting for Bristol?—It was left subsisting for Bristol. The history of that is completely given in a Report made by Mr. Gray, the Assistant Secretary to the Marine Department of the Board of Trade, which has been just laid before Parliament. It is No. 70 of the present Session.

176. I believe the Bill of 1861 was referred to a Committee of the House of Commons, was it not?—Yes; a very painstaking Committee, indeed, investigated it and passed the Act, in which they transferred the pilotage of all vessels going to Newport, Cardiff, or Gloucester to the three pilotage boards constituted at each of those ports, and at the same time exempted them altogether from compulsory pilotage, so that the pilotage has since been altogether voluntary for all such vessels.

177. Previous to those vessels going to those towns they were compelled to take Bristol pilots in passing through the Bristol district, were they not?—Yes, they were obliged to take Bristol pilots at Lundy.

178. The effect of that was, that it relieved them from that complication of there being a joint system of pilotage for those towns?—Yes, the Act established a joint system of voluntary pilotage for those towns.

179. The effect of Mr. Gray's inquiries into the result of that Act is, that those towns are completely and properly served with pilots, and that the pilots are as much if not better off than they were before?—Yes; as regards the Newport, Cardiff and Gloucester pilots. That the Bristol pilots have suffered is perfectly true, but the reason of that is that the pilotage has been transferred from Bristol to the other ports.

180. And the pilots failed to transfer themselves to the other towns?—They failed to transfer themselves to the other towns, and the consequence is the Bristol pilots have suffered.

181. By the pilots surrounding?—Yes; at Gloucester, Cardiff, and Newport, the pilots are in receipt of wages as large as, or larger than, they were before the Act.

182. As they were before the Act was passed?—Yes, quite as large, or larger.

183. And with much greater satisfaction to the shipowners and the pilots?—Yes.

184. And no complaint has reached the Board of Trade with regard to the effect upon the shipping of the towns, has there?—As far as the shipping is concerned they are perfectly satisfied. There were some complaints of the pilots of some of the rates and regulations in the first instance, and they will be found in Parliamentary Paper, No. 532, of 1864; they have been settled and we have had no complaint from anybody since. The result of Mr. Gray's inquiries was that both pilots and shipowners were perfectly satisfied. Probably the Cardiff, and Gloucester, and Newport ships may often not take a pilot as low down as Lundy, where before the Act of 1861 they were compelled to take a Bristol Channel pilot; the reason of that is, they do not need a pilot between Lundy and the Holms.

185. Pilots are now found where they are practically wanted?—Yes.

186. And not at other places?—Yes; and I think that is saying a good deal, because it is obvious that pilots would be much more likely to be found when they were, as formerly, pilots for the whole of those waters, and for all ships navigating them, than when, as is the case now, the ships bound to each port have their separate set of pilots.

187. In the case of Bristol, is there any reason why pilotage should remain compulsory, while in the case of Gloucester it is free?—If a vessel can go without a pilot from Lundy to the Holms when going to Cardiff, she can go without a pilot when going to Bristol; and if they take pilots regularly from the Pill to Gloucester, they are likely to take a pilot regularly from the Pill to Bristol.

188. You have now explained to the Committee with reference to the ports where pilotage is compulsory; there are other ports which we need not refer to?—At Ipswich, Arundel, Boston, Waterford, and Londonderry, the Board of Trade have, as will be seen by the Parliamentary Return 455, 1862, pp. 106, 114, 118, 122, 125, 128, interfered to procure the examination of masters and mates, and in some cases they have examined them themselves; at the present moment they are not examining anywhere. I will put in a letter from Galway, complaining very much of compulsory pilotage; it is from some persons whose names I cannot quite read, Hamond I think is the name, but in the letter there is this statement: "To give you an instance of the rate of charges for pilotage, we will take the case of the 'Rock Light,' 1,643 tons register, belonging to Mr. Graves of Liverpool; the pilotage from the Arran to the roadstead (30 miles), was 16 *l.* 15 *s.*; had she entered the dock, the charge would have been 4 *l.* 2 *s.* 3 *d.* more; add this to the outer pilotage, would make a total of 41 *l.* 14 *s.* 6 *d.*, or 6 *d.* per register ton. The master of the ship (Captain Capper), appealed to the Harbour Commissioners for a reduction of this exorbitant charge, but his respectful appeal was left unheeded." There is great complaint in this letter of the very heavy compulsory pilotage charges at Galway. (*The same was delivered in,* vide *Appendix* (A.), No. 20.)

189. I think Falmouth is among other places where pilotage is compulsory?—Yes.

190. That was the subject of a good deal of discussion

Mr. *T. H. Farrer.*

22 March 1870.

discussion before the Committee of 1860; one is the case of Cork?—Yes. Admiral Sulivan's evidence is very full upon this point.

191. Cork is free of pilotage, is it not?—Yes.

192. The evidence taken before the Committee of 1860, showed that Cork was, on the whole, as well served with pilots, and that pilots, on the whole, were as actively employed there as they were at Falmouth?—Yes, at a lower charge.

193. The other principal ports where pilotage is free, are the Tyne, Sunderland, Cardiff, Newport, Gloucester, Cork, and, to some extent, London?—Yes.

194. You have already told the Committee that the number of pilots under the free system is about 1,080, whereas the number of pilots in the compulsory pilotage districts is 1,828?—Yes, where pilotage is more or less compulsory.

195. When you speak of pilotage being entirely voluntary, you mean that there is no compulsion upon the employer to take a pilot; that is to say, that no ship is obliged to take a pilot?—Yes.

196. Still till pilotage authorities had been constituted at those places under the Merchant Shipping Act of 1854, or under the Local Acts, the pilots have been licensed, and are so regulated; whereas in all other respects they are exactly similar to the rest of the compulsory pilotage districts, with the single exception that the compulsion to employ a pilot does not exist?—Yes.

197. There is a regulated price, and there is a licensed class, and, to a great extent, the authorities limit the number in much the same way as they limit the number in the compulsory districts?—Yes, that is done according to their own discretion.

198. As a matter of fact, from information you have, is it not the fact that in almost all cases the local pilotage authorities do limit the number of pilots?—Yes.

199. It is not a matter of calculation; they are entitled to license any number, are they not?—There is nothing to prevent them licensing any number they please at a regulated price. The maximum price is fixed by their Local Act, and in the case of the Trinity House it is fixed by the General Act, and they can increase or diminish the price within that limit; and they can increase or diminish the number of pilots.

200. With regard to price, however, they have limited the number and fixed the price?—Yes; they subject the pilot to all manner of regulations.

201. In the compulsory districts it is still open to the pilotage authorities to license any number they think fit, is it not?—Yes.

202. But, in practice, they have generally limited the number?—Yes, in practice they have, as in other cases, limited the number.

203. I should like you shortly to state to the Committee the conclusions which have led you to think that compulsory pilotage should be abolished?—In the first place, the *primâ facie* case is against compulsion of this kind at all; I think everyone will admit that. It rests upon those who require a shipowner to employ a particular person to prove that there is a particular reason for compelling him to do so. Then, starting with the fact that the compulsion is an anomaly (for which, of course, reasons, more or less good, may be stated), we find that many actual and practical anomalies have arisen from it. First of all, we have complaints from small vessels and from steamers that they are obliged to employ and to pay for pilots whom they do not want. Then, secondly, we have the exemptions which have arisen from time to time, which no one would wish to do away with, because they are exemptions from an anomalous obligation, but which yet in themselves are altogether absurd and anomalous. Thirdly, the probable result (and, so far as we can learn from the opinions of those with whom we have come in contact), the actual result is, that the pilots, when they know that they must be employed, will not show as much care and anxiety as if they are only employed when the shipowner wants them. Fourthly, as a consequence of compelling an owner to employ a pilot, and put the ship in his charge, as a natural and logical consequence, you have taken the power and responsibility from the master and the owner of the ship. You have taken the responsibility from those who are capable of best exercising it, and you have placed it in the hands of a person who, however competent, has not the same motive for exercising it properly. Fifthly, you have deprived the owner of the property injured by the misconduct of the ship in charge of the compulsory pilot, of his remedy. And sixthly, you have created a state of the law in which there arises as serious and as absurd and oppressive litigation as it is possible to find in the law books. On the other hand, the strongest argument in favour of compulsory pilotage, is that those who are most interested, namely, the shipowners, are, many of them, in favour of it; that is a very strong argument; but there are some considerations which weaken that argument, as I will show presently.

204. A considerable change of opinion has taken place amongst shipowners since 1860?—A very considerable change. I was very much struck indeed, the other day, by Mr. Duncan, the chairman of the London Shipowners' Society, coming and telling me that he and some of the largest shipowners in London were entirely against compulsory pilotage, for they did not find themselves served by it; that he thought they would be far better served if pilotage was altogether free, and the pilots went to meet the ships when and where they were wanted.

205. In 1860 some of the principal shipowners in London were against abolishing the compulsory pilotage?—I have read Mr. Dunbar's evidence, and I can read the evidence of others upon the subject.

206. In 1860 it was the fact, was it not, that the greater number of the largest shipowners in London were against abolishing compulsory pilotage?—Yes; and in 1854 they were still more strongly against its abolition.

207. Colonel *Bourne.*] I believe that Mr. Green gave evidence in favour of it in 1860?—Yes, I think so.

208. And Mr. Marshall also, I think?—Yes, nearly all the large sailing-ship owners.

209. Mr. *Norwood.*] They were entirely sailing-ship owners, were they not?—Yes, except Mr. Anderson, who gave as his reason that ships in charge of a compulsory pilot were exempt from liability.

210. Mr. *Graves.*] I believe that Messrs. Burns of Glasgow were in favour of compulsory pilotage?—I believe so; but they are now against it.

211. *Chairman.*]

211. *Chairman.*] Have the Board of Trade received any representations upon the subject from the London shipowners against the Bill?—None; so far as we know the shipowners in London support the Bill. But there are, no doubt, strong interests who are in favour of retaining compulsory pilotage; but, as I have said, there are important considerations which much weaken the argument to be derived from this fact. In the first place there are pilots who are entirely in favour of it, and the pilotage authorities are entirely in favour of it; but both of these are interested in the retention, or think themselves to be so. Then there are a large number of shipowners, I quite admit, who are in favour of it; but the argument to be derived from their opinion is weakened in my mind by two considerations. In the first place, it obviously seems that some of them, as is shown by the evidence which I have read, are influenced by the desire to be exempted from liability, which does not seem to be a very good reason; and, secondly, by the fact stated rather fully in the letter which I read from Mr. Steele of Liverpool, that the large shipowners, who always must employ pilots, get the small shipowners and those who do not want pilots to pay for the cost of pilot service. Those arguments weaken, in my mind, the strong arguments which would otherwise arise from the fact that the large sailing-ship owners are in favour of compulsory pilotage. The strongest argument in favour of compulsory pilotage is that without it you would not keep up a sufficient staff of pilots; but to that, I think, that the cases where pilotage is altogether voluntary is a complete answer. One instance of a thoroughly successful voluntary pilotage in a port where pilots are really wanted is an answer to that argument, unless you can show that the circumstances are so entirely different, and I do not think that can be done. When you look at the different ports where pilotage is free, and where it is compulsory, you will find that, comparing one port with another, you can put in every case a free port against a compulsory port. For instance, take London against Liverpool; one-half or three-quarters of the pilotage into London is voluntary, and the sailors tell me that the pilotage into London is just as difficult, and even more difficult, than the pilotage into Liverpool; in fact, the London pilots laugh at the pilotage into Liverpool; they say that it is easy compared with their own pilotage. Then take a river with a narrow channel; you have on the one hand the Avon, which is compulsory, and the Clyde, which from Greenock upwards is compulsory; on the other hand, the Severn is free, and the Tyne is free, and nobody will say that either the Severn or the Tyne have easy pilotage.

212. *Chairman.*] I presume that all these arguments against compulsory pilotage were advanced at the time of the Bristol Channel Pilotage Act?—I have no doubt they were; the Bill was very severely fought in Committee in both Houses, and the arguments were very carefully weighed by the Committees. Lord Elgin was the Chairman of Committee in the House of Lords.

213. Experience has shown the fallacy of the arguments used against them, has it not?—I think so. It is a very strong fact, that in every case where there is a compulsion there are a number of persons who wish the pilotage to be free; I do not know a single port where pilotage is free, where anybody wishes that there should be compulsion.

214. No complaints have reached the Board of Trade from those places?—None whatever; least of all is there any disposition on the part of any shipowner, small or great, or even of any pilots, to make it compulsory.

215. Have there been any complaints of the want of pilots when ships are in distress?—No.

216. Mr. *J. S. Hardy.*] Is there the same safety for life and property in the non-compulsory ports that there is in the compulsory?—I have never heard of the superiority of the compulsory over the non-compulsory ports in that respect.

217. *Chairman.*] One argument used against the abolition of compulsory pilotage is, that it may tend to the want of pilots at a time when ships are in danger, and would tend, therefore, to the insecurity of ships; will you lay before the Committee a letter of the underwriters of Lloyds with reference to the "Spindrift" case bearing upon this point?—Yes; they wrote a letter about the "Spindrift" case, and they, the underwriters of Lloyds, conclude their letter by saying that compulsory pilotage ought to be abolished.

218. Showing that in their opinion the safety of vessels would not be in the least degree endangered by the abolition of compulsory pilotage?—No.

219. It has also been stated by the secretary of Lloyds, that in his opinion premiums would not be increased by the abolition of compulsion; is not that so?—I had forgotten that fact, but I will read the letter to the Committee.

Friday, 25th March 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. Pemberton.
Mr. William Philip Price.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.
Sir H. Selwin-Ibbetson.

MR. SHAW LEFEVRE, IN THE CHAIR.

MR. THOMAS HENRY FARRER, called in; and further Examined.

Mr. *T. H. Farrer.*

25 March 1870.

The *Witness.*] WILL you allow me to put in two supplementary things? I put in the Dublin Return of Pilots, Pilotage Rates, &c., which was not in the printed paper. The fact was, that it was sent up to the Board of Trade without any notice called to it, in the covering letter, amongst a mass of other returns, and escaped notice. I put it in now. (*The same was delivered in,* vide *Appendix* (A), No. 21.)

220. Mr. *Norwood.*] Is that one of the pilotage returns?—Yes. You will find under the head of "Dublin" a blank with the words "no information." They had sent the information, but, being enveloped in a mass of other returns, it was overlooked. There is another letter, part of the correspondence, which was omitted last time that I put in. (*The same was delivered in,* vide *Appendix.*)

221. *Chairman.*] I asked you on Tuesday last with reference to the change of opinion which had taken place on the subject of compulsory pilotage, and you gave the Committee various illustrations of it; I think you have some further illustrations to give with reference to the opinion of the Trinity House upon the subject?—The Trinity House have always, up to a late period, been strongly in favour of compulsory pilotage. In the Paper I referred to before, 455 of 1862, Nos. 13 and 14 of that Paper, it will be found that in July 1857 the Trinity House remonstrated very strongly against the effect, or probable effect, of the extension of the exemptions contained in the Merchant Shipping Act of 1854, upon the out-port pilots. I told the Committee that in 1854 the exemption from compulsory pilotage of vessels trading to ports in Europe north of Boulogne had been extended from London, to which it was originally confined, to all the Trinity House out-port districts. In 1857 the Trinity House remonstrated strongly against the probable effect of that exemption. In the winter of the present year they have voluntarily sent, without any pressure or communication from the Board of Trade on the subject, a suggestion that that exemption, extending to the outports as well as to London, should be farther extended, and that it should apply to all ships that trade to any foreign ports as far as Brest; so far from wishing to confine the exemption, as they did in 1857, they wish now to extend it.

222. I think they have sent no remonstrance against the Bill for abolishing compulsory pilotage?—They have sent no such remonstrance. The change has been a very late one; for in April 1862 they remonstrated against the very slight additional exemptions that were proposed by Mr. Milner Gibson's Bill of that year. I will read what they state; it is very strong: "That the manifest object of the powers possessed by this section to be given to the Board of Trade, some of which have hitherto been vested in this corporation, is to enable that Board to establish a general system of exemption from compulsory pilotage. That this Board cannot but view such a departure from the principle which has hitherto governed the Legislature in its dealings with the important question of pilotage, as highly dangerous to the system of pilotage generally, and to the best interest of the shipowner." That was their opinion in 1862, and instead of remonstrating now, they have asked for an extension of the exemptions.

223. Now, with reference to the London shipowners, I think you stated on Tuesday that there had been a considerable change of opinion among them?—On all former occasions, the large London shipowners, that is to say, the owners of the large sailing ships out of London have always been strongly in favour of compulsory pilotage. We have received within the last day or two, a letter from the General Shipowners' Society of London, which represents, not the steam-ship owners who have for a long while been against compulsory pilotage, but the large sailing-ship owners of London. This is the letter: "General Shipowners' Society, 12 St. Michael's Alley, Cornhill, London, 23rd March 1870.—Sir, I am instructed to inform you that the decision of the committee of the General Shipowners' Society with respect to the Bill 'to abolish Compulsory Pilotage' is, that they agree to the principle of the Bill, but the details of the measure appear to them to require in several parts revision and amendment. The views of the committee are, that pilotage should be thrown entirely open, and licenses be granted to all parties who may apply and prove themselves duly qualified, such licensed pilots

pilots having the privilege of superseding any unlicensed man who may have been engaged previous to their offering their services."

224. I think you have also something to read from the underwriters of Lloyds on the same subject?—I mentioned that the underwriters at Lloyds had expressed their opinion. In a Paper circulated this morning containing the case of the "Spindrift," No. 82 of this Session, at page 30, will be found a letter from the secretary of Lloyds to the Board of Trade, dated 27th January 1870, in which the committee of Lloyds, after criticising the conduct of the Trinity House in the matter of the "Spindrift," end as follows:—"In conclusion, my committee desire me to say that the whole of the facts brought out in this case confirm them in the opinion which they have entertained for some time, that the period has arrived for the abolition of compulsory pilotage, and that the Acts of Parliament by which a captain is compelled, in certain waters, to hand over the charge of his ship to a pilot, and permitted to throw off all responsibility for her safety, should be repealed."

225. The Board of Trade, I think, has also received communications from two or three Chambers of Commerce, which you have not yet read to us?—The Leith Chamber of Commerce have sent us in a memorial, expressing their opinion in favour of entirely free trade in pilotage. I will put it in. (*The same was delivered in,* vide *Appendix* (A), No. 22.) I should mention that at Leith there was compulsory pilotage a few years ago, and that the Leith Harbour Board obtained an Order in Council putting an end to it altogether. I am informed that there is no compulsory pilotage whatever now, either in the Forth or in the Tay. The Dundee Harbour Board are in London now. They informed me that there is no compulsory pilotage whatever in the Tay, which is a difficult pilotage; that it is purely voluntary; that a few years ago a suggestion was made, when they had a Bill before Parliament, that it should be made compulsory; and that every shipowner to a man was against it; that their service is excellent, and that it is subject to very strict regulation, although nobody is obliged to employ a pilot. I may also mention that the United Associated Chamber of Commerce has sent in a petition in favour of the abolition of compulsory pilotage.

226. Mr. *Turner.*] That does not comprise all?—No.

227. There are a great many not there?—I do not think they comprise Liverpool.

228. *Chairman.*] I think from Falmouth the Board of Trade have also received a communication?—I believe they have, but I have not got it here.

229. Will you now explain to the Committee the operation of the Bill for abolishing compulsory pilotage that is before the House?—There are two or even more questions which are often mixed up when the subject of abolishing restrictions on pilotage is spoken of, but there are two very important ones: the first obligation is that upon the shipowner to employ the pilot, and that obligation is the subject of the present Bill. Beyond that there is the restriction of the number of pilots; that is, the endeavour, on the part of the authority, to proportion the number of pilots to the wants of the place; and besides this, there are the regulations governing the pilots. Those two things are perfectly distinct from one another, and this Bill deals only with the first of those two restrictions. It proposes to put an end altogether to the obligation of the ship to employ a pilot. It leaves the position of the different pilotage authorities, with regard to the pilots whom they license, untouched.

230. You have already explained to the Committee that there are a considerable number of pilotage authorities and pilotage districts where pilotage is not compulsory, but where there is, as I have said, a pilotage authority and a regulated price. The effect of this Bill, as I understand from you, is to place the compulsory districts exactly in the same position as the non-compulsory districts are now?—Precisely; leaving them to the general law of pilotage as contained in the Merchant Shipping Act with respect to licenses, and leaving, also, their own Local Acts, except in this matter of obliging the ship to employ the pilot, precisely as they stand at present, and leaving the districts which are now compulsory in the same condition as those which are non-compulsory.

231. In these non-compulsory districts the pilotage authorities have now the right, if they think fit, to limit the number of pilots?—They have.

232. And they exercise that right?—In most cases I believe they exercise it.

233. In those districts under the operation of the Merchant Shipping Act of 1854, the licensed pilot has the right to supersede the unlicensed pilot?—Yes.

234. The effect of this Bill will be to place the compulsory districts in the same position?—It will.

235. It does not attempt to deal with the non-compulsory districts?—It does not touch the non-compulsory districts at all in any way.

236. Then in the compulsory districts the right of the licensed pilot to supersede the unlicensed pilot will remain?—It will remain.

237. No alteration of the law is effected?—None at all.

238. And the right of the pilotage authority, if they think fit, either to license an unlimited number or a limited number?—Yes; and their power to withdraw the license, to regulate the pilots, to require them to cruise at particular places, will all remain as it is at present. The case of Dundee is rather a striking case. The people there are entirely in favour of voluntary pilotage, and yet they have a very absolute system of regulations. They restrict the numbers; they require them to cruise at particular places, although the pilots find their own boats; they require the whole of the money to be paid into one fund, and they divide it equally among the pilots. There is a system of very absolute and complete regulation, and yet no obligation on the shipowner to employ the pilot.

239. Will you now explain to the Committee the operation of Clause 2, which deals with the compensation of pilots, and the possibility of employing them not being so much, after this Bill has come into operation, as it now is?—The effect of this clause would be, that if, within a given period, and not after a given period, it is shown that the employment of pilots has diminished by reason of the operation of this Act, then that the supply should be proportioned to the demand; that is to say, if the demand for pilots has fallen off, then it should be competent

Mr. *T.H.Farrer.*

25 March 1870.

to the pilotage authority to proportion the supply to the demand by withdrawing a certain number of pilots, and that those pilots should be superannuated, and receive pensions out of the public Exchequer, with the consent of the Board of Trade and of the Treasury, the Board of Trade being satisfied that the falling off in the demand for pilotage, or in the remuneration to the pilots, had been caused by this Bill.

240. During that interval, the local authority would not have the right of increasing the number, without at the same time taking away from the pilots their right to superannuation under this Bill?—That is so.

241. But after the expiration of that period, it will be competent for the pilotage authority either to license an unlimited number, or to continue in their present practice of licensing only a limited number?—Quite so.

242. In that respect, therefore, the law will remain unchanged?—In that respect the law will remain unchanged.

243. Mr. *Graves.*] I have been struck by the fact, that in your evidence you have omitted any reference to the question of life; have you considered this question of pilotage in its bearing upon the protection of life?—The whole principle upon which this Bill proceeds, is, that ships will be just as much piloted, and as safely piloted, under a voluntary as under a compulsory system; and the safety of the ship involves the safety of the lives on board the ship.

244. Can you draw any distinction as to the greater safety of life under a compulsory system, or under a voluntary system?—Do you mean by that, to ask, whether we have any statistics showing the difference?

245. I desired to know what your own feeling was with reference to the comparative safety of life in a vessel entering a port where the system of pilotage was compulsory or voluntary?—If I were going myself in a vessel into a dangerous port, I should prefer that the system of pilotage should be voluntary, and think myself probably safer in that case.

246. Was not the primary object of the compulsory system of pilotage originally to ensure greater safety to life and property?—I suppose so; but the origin of it is lost in the darkness of the Middle Ages. I suspect that this is one of those careful restrictions upon free action which were exceedingly common in the days of guilds, but which have been gradually done away with. I only guess that, for I do not know it. I guess it, because I find in the earliest Acts of Parliament that we have relating to the pilotage of the Thames, symptoms that the compulsory pilotage then existed there, and that the examples of those systems has been followed in the cases of the later ports, ports which have grown up more recently, such as Liverpool.

247. Are you at all aware, in speaking of Liverpool, that up to the year 1776 there was a voluntary system of pilotage in Liverpool?—No, I do not profess to know the early history of pilotage in Liverpool; but the great trade of Liverpool, of course, has grown up since that time.

248. Probably you would not either be aware that it was altered at the instigation of the merchants and shipowners of Liverpool, and then, for the first time, placed under a compulsory system, and under a board?—I do not know much of the early history of the Liverpool pilotage system.

249. Would that alter your view, if proved to be the case, with regard to the fact that compulsory pilotage had been derived from obsolete guilds, so far as Liverpool is concerned?—So far as Liverpool is concerned, I know that everything in Liverpool is modern. I was speaking of the origin of the system, which is easily transplanted from a place where it exists, and has come down from the Middle Ages, into a newer port.

250. Are you of opinion that the preservation of life should still be the primary object of legislation?—The safety of ships undoubtedly is the primary object of all systems of this kind. Life is involved in the ship. If the ship is safe life is safe.

251. In a memorandum, which you have handed in to the Committee, on Compulsory Pilotage, No. 70, you say, "It is no part of the business of Government to take a ship out of the hands of those most interested in her safety; and that merchants, shipowners, and insurers are much better judges of what they need than Government can be." Is it not your opinion, the duty of the Government to protect by legislation the lives of the crews of vessels, just as much as it is the vessels themselves?—In my opinion, a good shipowner, or any shipowner, is much more capable of protecting the lives and the property on board his ship than the Government is able to do it for him, and much more likely to do it well.

252. I believe the Act of 1854 expressly recognised compulsory pilotage?—Certainly.

253. And required that all home trade passenger ships should take pilots?—I have told the Committee that that obligation was imposed as a general obligation on home trade passenger ships for the first time by that Act, and I explained what the origin and object of that section were. The object of that section was not so much to compel the home trade passenger ship to take a pilot, as to induce the owner of the ship to require his masters and mates to make themselves competent in the matter of local pilotage, and pass an examination in it. I speak of Mr. Cardwell's object.

254. That Act did for the first time give a statutory right to salvage for life?—It did. I think it had been contemplated in a previous Wreck and Salvage Act; but I think that Act was imperfectly drawn, and the effect was not what was intended; but the Merchant Shipping Act is the first that did it effectually.

255. Your impression is that the section requiring home trade passenger ships to take pilots had no reference whatever to the protection of life?—I do not say that at all. What I say is this: as I told the Committee a system of examination in navigation for the masters and mates of foreign going ships had been established in 1851. It was to a certain extent successful, and the question arose whether it should be extended to coasting ships. Mr. Cardwell thought that it was not desirable to interfere with the smaller class of coasters, and that it was desirable to impose some conditions upon those who navigated coasting, or rather home trade passenger ships. The question then arose, in what were they to be examined; because the same quantity of navigation was not necessary for them, and local knowledge was. There was a difficulty in the

Board

Board of Trade laying down any general rules as to examination in local pilotage; and the mode that Mr. Cardwell adopted to meet the difficulty, was to say that they should be compelled to take a pilot unless they proved themselves competent by examination to navigate their ships in the local waters. That was the history of that clause.

256. I believe, as a fact, the Board of Trade has invariably reminded any pilotage authority of the omission where they have found that the home trade passenger ships not having licensed masters sailed without pilots?—I am not aware that the Board of Trade have ever interfered in any way to enforce or induce the local authority to enforce the obligation to take a pilot. I should rather say that it was the contrary. The case that I put in the other day fram the Dublin Ballast Board, shows the line which the Board of Trade has taken upon that point. The Dublin Ballast Board thought themselves responsible for the lives in a steam ship that went from Dublin to Kingstown, which had been safely navigated for a great number of years by its own master. The Steam Ship Company had complained to the Board of Trade. The Board of Trade referred to the Ballast Board. The Ballast Board said that they held themselves responsible, and the Board of Trade pointed out to the Ballast Board that the shipowner was a much more responsible, and a much more effectually responsible, party than the Ballast Board could be.

257. Has not the whole current of legislation of late years been in the direction of giving a compulsory protection to life by the licensing of masters and mates, the surveying of ships, and the victualling of them, and the liability, generally, of shipowners and railway companies in case of loss of life? — Those different things that you mention go in such very different directions as far as the principle is concerned, that it is a little difficult to say that there has been any general tendency. The imposing liability upon the shipowner, or upon the railway carrier, by Lord Campbell's Act, is not only a different thing from imposing restrictions upon them in the shape of Government superintendence, but the two things are inconsistent with one another. If you impose by law, as you have done in the case of pilotage, obligation upon the shipowner to take the pilot, you naturally relieve him from responsibility. I think there has been legislation in both directions, and I do not think that legislation is exceedingly consistent.

258. You are not, on the whole, prepared to say that the tendency has been in the direction of greater compulsory obligation for the protection of life?—It is too large a question to answer without a great deal more dissection.

259. There is now a Bill before the House called "The Merchant Shipping Bill"? — Yes.

260. Do you consider that that is more stringent in those clauses and principles for the protection of life and property than the present law?—No; I do not think it is more stringent than the present law.

261. I believe that Bill was drawn very much under your knowledge and cognisance?—I have had a great deal to do with it.

262. That portion of the Merchant Shipping Act which requires home trade passenger ships to take pilots is apparently omitted from that Bill?—It is omitted from that Bill.

Mr. *T.H.Farrer.*

25 March 1870.

263. Will you give the Committee the reasons for that omission?—The reasons for that omission are the same reasons which have induced the Government to introduce this Bill for the abolition of compulsory pilotage. There were special reasons with regard to that, which I think I mentioned to the Committee on the former occasion. It was Mr. Cardwell's intention that masters and mates should be examined in local pilotage. To a certain extent that has operated, but, as was said by one of the shipowners, Mr. Anderson, I think, before Mr. Lindsay's Committee in 1860, the inducement has not operated to the extent that it was intended to operate, because when the master is examined the ship is exempted from the obligation to carry a pilot, and then, whether she has a pilot or not on board, the owner is liable for any damage that she does. Consequently, if the master and mate are examined, the owner no longer gets the benefit of exemption from liability. One provision of the law defeats the other.

264. If I remember rightly, you read some extracts from some portions of the evidence given by Mr. Dunbar and Mr. Besley before the Committee of 1860, to show that their desire to retain compulsory pilotage arose, to a large extent, from the non-liability of the owner which was involved?—Yes.

265. Have you got the evidence before you? —Yes.

266. Will you kindly turn to the evidence of Mr. Thomas Eustace Smith (4720, page 419), of the firm of Thomas and William Smith & Co., largely interested in shipping, I believe?— He is a well-known shipowner.

267. Will you read his opinion upon this question in 4720 to the Committee; he is asked, "Will you proceed with any other statement which you have to make"?—His answer is, "The question of compulsory pilotage, I believe, has been brought before the Committee. I should wish to express my opinion that there are a great number of ships which are engaged in foreign trade, such as the Mediterranean and the Indian trade, which are then taken down the east coast in ballast, and that if the pilotage be compulsory for the protection of the lives of the crew, which I believe to be the object of it, I think that the doing away with it would be attended with great loss of both shipping and lives. I think that the compulsory pilotage of ships going down the coast is absolutely necessary for the protection of the lives of the crew and of the ships themselves. I think it is highly undesirable that a man who has been in the Indian trade for perhaps ten or a dozen years, and who once a year goes down the coast, should be allowed to take that ship down without a pilot."

268. He clearly is of opinion that the question of life is one which he regards as apart from the question of liability or non-liability of the shipowner?—I take it that Mr. Eustace Smith is one of those shipowners who would always under any circumstances employ a pilot, and he is anxious not only that he should employ a pilot himself, but that the law should compel all his brother shipowners to employ a pilot.

269. It is no selfish interest that makes him give the evidence that he has done?—He would employ a pilot under any circumstances.

270. Now with reference to the question of liability

Mr. *T. H. Farrer.*

25 March 1870.

liability of the owner, supposing that that question was settled and clearly defined, and that the pilot's duties on board a ship were as clearly defined, would you still advise that the system of pilotage throughout this kingdom should be entirely voluntary?—Yes, I would.

271. Apart from the question of responsibility or liability of an owner, and altogether apart from the question of the duties of a pilot being defined, you still advocate the voluntary system?—I do.

272. In the Bill before the House, if I remember correctly, the principle involved with regard to pilotage is entirely different from the Bill before this Committee?—It is.

273. That Bill was introduced last year?—It was.

274. And in that Bill you recognise the principle that pilotage being for the benefit of all, should be contributed to by all?—Certainly; that was the principle of the Bill of last year.

275. Now you have abandoned that principle?—Yes.

276. And you leave it optional with any shipmaster to take a pilot or not?—Yes. Perhaps it would be right that I should explain the reason for that change. It was thought when that Bill was drawn, that it was desirable to make a change in the direction of freedom not too rapidly. The main argument, in fact, I might almost say the only argument, in favour of a system of compulsory pilotage is that without it you will not be able to keep up an efficient pilotage system. In drawing that Bill, it was thought desirable so far to yield to that argument as to make the ship contribute, although not obliged to take the pilot. In doing that you would have got rid of all the difficulty about the liability of the owners. You would have put the pilot and the captain in the true position; but still you would have retained the burden on the ship. It was found that that Bill was entirely disapproved. I believe shipowners everywhere said, "No; do away with the obligation to take a pilot; if you compel us to take a pilot, let us have the benefit of the exemption from liability." We found it was impossible to stop at that point; therefore, in the Bill of this year, it was found that, like other half measures, we did not succeed; and it was found that you must go to the full logical extent, and do away with the obligation; and in addition to that, I think that Bill was drawn rather to meet the apprehension which existed out of doors then, not apprehension which existed at the Board of Trade; for I think we have all been satisfied for a long while, that there would be just as efficient pilotage with a voluntary as with a compulsory system.

277. Will you divest your mind for a moment of all questions of liability, and state to the Committee, whether you think it is perfectly wise, that where a pilot service is conducted in an efficient manner for the benefit of a whole community, the whole community should not be compelled, where they have the option of seeking the advantages of it, to contribute towards it?—I think the best answer to that is to be found in the representations that are made by the steam-ship owners, and by the small sailing-ship owners; such, for instance, as those that I put in from the port of Runcorn. They say, "The large shipowner always wants a pilot. We do not want one. Why should the large shipowner tax us in order to pay for the pilot that he wants." That is what the steam-ship owners have said. "Our masters are perfectly able to conduct our vessels. Why should we be taxed in order to support pilots for the benefit of the large Liverpool sailing-ship owner."

278. Then I apprehend you would consider that though the service is maintained for the benefit of all, there is no occasion to require that all should contribute to it?—If it were proved by experience that you could not maintain such a necessary thing as a pilotage service without making all contribute, I might possibly be induced to think that you ought to make all contribute; but where all experience that we have of the other system is, that pilotage service will be just as well maintained under that as under the compulsory system, I think at any rate you ought to try freedom first, and not tax persons for what they do not want, in order to keep the thing up till you know that it is absolutely necessary.

279. You propose that only those who use shall pay?—That is what I would propose.

280. Will you let me bring you for a moment to the question of the lighting of the coasts of this kingdom; there are lighthouses all round the coasts, do all contribute to these, or merely those who use them?—The endeavour is to make the tax fall upon those who use; of course it is done only in a rough way, and there are persons who pass lights in the daylight who do not want lights, but it is impossible to tell at what period of the 24 hours their voyage will commence; on the whole, the endeavour is to make those who use, pay.

281. As a fact, I believe vessels invariably pay whether they use them or not?—A vessel pays when she passes them; the captain may shut his eyes to them if he pleases, but there is the lighthouse for his use, if he wants it.

282. What would your range of vision be; would you say 50 miles or 100 miles?—If by that you mean that there are certain anomalies in the present system of charging the light dues, I am ready to admit it; and it is the intention of Mr. Lefevre to try and do away with some of those anomalies.

283. Still I am correct in my supposition, that the principle you laid down in regard to lights is different from the principle you wish to lay down with regard to pilotage?—No, I do not admit it at all; our principle with regard to lights is, that those who use them pay for them, fitting it as well as we can to the facts.

284. Would you call a vessel coming within 100 miles of a light using that light?—I may at once explain to the Committee that the present scale of light dues was fixed at a time when steam was not in existence to the same extent as now, and when sailing vessels did not make the direct course which steam vessels make now, and consequently vessels were supposed to pass or to be likely to pass a great many more lights than they do now in their voyages to or from the coast, and in that way many anomalies have grown up; but we are trying by degrees to get rid of those anomalies and to make only those vessels which really pass the lights pay for them.

285. Let me ask you to bring your mind for a moment to the latest legislation in connection with lights, I mean the Act of last year, for the erection of a lighthouse at the Great Bass's Straits; that Bill, I believe, was brought in to the House by the Board of Trade?—Yes.

286. There, I believe, you have adopted the principle that all must contribute to it who pass within

within a certain latitude and longitude? — It is so.

287. And, as a matter of fact, vessels going to India in certain monsoons, do not pass within 500 miles of that light, and yet have to contribute to its maintenance? — Not having been prepared for this, I am unable to say exactly what the rule is about their payment; but I know that it was settled by the nautical advisers of the Board of Trade in such a way that those vessels which, according to the monsoon, should pass near or might pass near the light, should pay, while those which the monsoon drove to a distance from the lights should not pay. Going one way they pay, I know, and going another way they do not pay, but I cannot exactly state the rule.

288. These lights were principally built, I think, for the benefit of the Peninsular and Oriental Company's steamers going from Suez to India?—That light was built for the benefit of all vessels that round Ceylon and go to Calcutta, or go up into the Bay of Bengal.

289. But primarily for them; I think they use it more than any others?—I have no doubt it is of more value to them than any others, and they pay more for it than any others, because they pass it more frequently.

290. I suppose I am correct in my impression that all vessels going to Calcutta, no matter whether they sight the light or go near it, or some 500 miles from it, pay for the support of that light?—The intention of the Act and Order in Council, which were framed with the advice of the best nautical authorities, was that all those vessels that make such voyages as that it was likely the light would be a benefit to them, should pay.

291. That is the last legislation on this question; so that it would rather be to show that the tendency is not quite in the direction you have pointed out?—The intention may not have been properly carried out; upon that I give no opinion; but the intention with regard to that was precisely what I say is the true principle with regard to pilots, namely, that the ships which use should pay.

292. You have defined compulsory pilotage in your paper:—"By compulsory pilotage is meant a system which first of all fixes by authority the number of pilots which the trade of any given port is supposed to need; and then, in order to secure them employment and remuneration, proceeds to require that all ships frequenting the port shall employ them"?—I have said there are two different obligations. What is meant by compulsory pilotage in this Bill is a state of things where it is obligatory on the shipowner to employ the pilot.

293. Do you regard the present system, known as compulsory pilotage, as really compulsory in its operation?—I have said that it is necessary to keep the two things perfectly distinct; the obligation on the shipowner to employ the pilot, whether he wants him or not, is a perfectly different thing from regulating the pilot service.

294. I think you stated in evidence, that at the port of Hull there are 103 pilots?—103; that is the number of pilots who are licensed by the Hull Trinity House, including the out-districts as well as the Humber.

295. There appears to be 283 masters and mates licensed in Hull?—Yes.

296. In the Clyde there appear by that Return to be 32 pilots licensed, and there are 133 masters and mates licensed?—Yes.

297. Can you call it, strictly speaking, a compulsory system that admits of such expansion as that?—I think one ought to add to that, that at Liverpool there are 241 pilots and only 10 masters and mates licensed.

298. There is, practically, no limit to the numbers under the provisions of the Merchant Shipping Act?—There is no limit. The intention of the Merchant Shipping Act was that every master or mate who was competent should be able to get a license, and so, of course, there is no limit, and was intended to be no limit, to the number who might thus prove themselves competent, but they are not pilots.

299. They pilot their own vessels?—They are only at liberty to pilot their own vessels.

300. You have referred to Liverpool, and said that there are only 10 pilots licensed there last year?—Ten masters or mates licensed.

301. Granted certificates?—Yes.

302. Could you give the Committee any information as to the number of applications at that port for pilot licenses within the last 10 years?—No, I cannot. All that I know is that the owners of steam vessels seem to have an insuperable aversion to attempting to get their officers licensed by the Pilotage Committee at Liverpool. Of the merits I am unable to speak.

303. Are you aware there were only 36 applicants for pilot licenses since 1859 received at Liverpool?—I was not aware of the number. I should quite believe that they were very few.

304. Probably you would not either be aware that 27 of those 36 have passed and received licenses?—No, I did not know that fact. I am unable to speak to it.

305. Would the fact that there were only 36 applicants, and 27 were licensed, alter your views at all with regard to the liberality or otherwise of the pilotage authorities in granting licenses?—I told the Committee before, that in the course of the last two or three years, the Board of Trade had declined to examine at Liverpool at all: believing from the correspondence, that the Mersey board intended to act fairly in the matter of the examinations, and in the Papers that I put in will appear all the correspondence, showing you what took place, and why the Board of Trade thought so, but beyond that I know nothing. All that I know is that the owners of steamships seem to have the most rooted aversion to sending their masters and mates to the Pilotage Committee to be examined. I think it will be for them to explain why; I am unable to do so.

306. I think you are aware that the Mersey Docks and Harbour Board was only created in 1857?—I am quite aware of that.

307. And that they became the pilotage authority in 1859 on the 1st of January?—Yes; by the Act of 1858.

308. Did the Mersey Docks and Harbour Board seek to have the control of the pilots, or was it forced upon them by Parliament?—If I remember rightly, it was the doing of the committee which created the Mersey Docks and Harbour Board, which compelled them to bring the whole pilotage subject before the Committee of the following year; that is my recollection. Sir James Graham's Committee of 1857 I think inserted a clause into the Bill of that year, which created the Mersey Docks and Harbour Board, requiring them, in their Consolidation Bill

Mr. *T. H. Farrer.*

25 March 1870.

of the next year, to bring the subject of pilotage before Parliament.

309. So that the Mersey Docks and Harbour Board were not willing, in the first instance, and did not seek to assume the responsibility of controlling and managing the pilots of the port of Liverpool?—They were hardly in existence. I do not think it was their seeking; I think it was rather the doing of Parliament, if I remember rightly.

310. May I ask you if the Mersey Docks and Harbour Board is not, to a certain extent, composed of representative members of the Government?—It cannot be said that it is composed of representative members of the Government. The Admiralty put upon the board two or three members. That was part of the original constitution of the board; but those persons were put on rather for the purpose of redressing what was supposed to be a local inequality, than for any other purpose. They do not represent the Government, they represent certain local interests.

311. As a matter of fact, probably you would be able to state that there are four members of that board out of 28 nominated directly by the Government?—There are four members nominated by the Admiralty, all, I think, local persons.

312. In your evidence on Tuesday you referred to the Order in Council reducing the rate on home trade steamers to 1 *s.*, as contrary to the 354th section of the Merchant Shipping Act of 1854?—Not as contrary to it at all; I said that the officer of the Mersey Dock and Harbour Board in the correspondence which passed two years ago, stated that that Order in Council was the result of what he called "an unholy alliance" between the coasting steamers and the pilots. He thought the intention of the Act was, that the ships should be navigated by a pilot or by an examined master; and he thought that the steamers had tried to get out of that obligation by giving something to the pilots, and that the pilots had accepted that money without any additional security for the lives of passengers. I did not say that I agreed with him at all; I said I did not think it was an unholy alliance; I thought the steamers got as much as they could, and the pilots got as much as they could.

313. Are you not aware that the Order was made under Mr. Cardwell's Act of 1853; before the Act of 1854 was passed, and that it was passed with the assent of the Board of Trade?—It was no doubt passed with the assent of the Board of Trade, and if a similar Order were sent to the Board of Trade now they would agree to it, probably.

314. And it was before the Act of 1854?—That I cannot speak to.

315. This is the Order in Council which I should like you to look at (*handing same to the Witness*)?—I do not think the difference of date really affects the question at all, because the fact then would be this: prior to 1853, under the Liverpool Local Act, all coasting steamers were obliged to take a pilot. Under the Act of 1853, which, as I said, Liverpool opposed, power was given to the Board of Trade to examine the masters and mates in case the Liverpool Pilotage Committee should refuse to examine them. No doubt, pressed by that, and feeling that the Board of Trade would examine if the Liverpool Pilotage Committee agreed to this Order in Council, by which no safeguard whatever was taken for life, but by which a smaller sum was taken from the steamers, and they were exempted from the necessity of taking a pilot.

316. The Mersey Docks and Harbour Board are in no way responsible?—No, not the least in the world, for the passing of the Order in Council. But that Order has been in force for the 13 years during which they have been the pilotage authority, and it is still in force. I rather think that members of the old Pilotage Committee were at first and still are members of the Pilotage Committee of the Mersey Docks and Harbour Board; but I do not speak with certainty.

317. You seem to have some impression on your mind that there has been some unwillingness to give licenses to masters and mates who pass a certain examination. I should like to ask you, if you have had any appeal within the last few years from any of those men who failed to pass an examination before the pilotage authorities of Liverpool?—I do not think we have had any appeal lately. I have referred to a good deal of correspondence about it in early times, and I have put in some correspondence, showing the extreme unwillingness of the City of Dublin Steam Navigation Company to send their masters and mates to be examined. I am unable to call to mind that we have had any actual appeal from the decision of the Mersey Docks and Harbour Board.

318. Do you draw any distinction in your own mind as to whether a voluntary system is as applicable to one port as to another all round the kingdom?—It seems to me that one falls back upon the simple principle that where the pilot is most wanted there he will be found, and that, however different the circumstances are, the greater the demand the greater will be the supply; the greater the need the greater will be the demand, and where the demand is there will be the supply; therefore I do not think there is any difference between one port and another in that respect.

319. If I understand you correctly, you propose that the pilotage authority should have power to limit the number of pilots?—I propose that the pilotage authority should be left with the same power that it has at present.

320. You still would leave the question of supply and demand entirely to local authorities?—To the local authorities, as at present; at any rate for the present, whatever may be the ultimate result.

321. In the memorandum which you have handed in to the Committee I have noticed you use the expression that the pilotage authorities are nobody?—It is a very inadvertent expression, if I used it.

322. It is in the first paragraph, page 5, "In the ports last mentioned, both shipowners and pilots are better satisfied than they were before 1861; and there is the further great difference, that in the former case the responsibility rests with the employer, in the latter with the Government, Legislature, or pilotage authority; in other words, with nobody"?—That passage certainly does not mean that the Legislature and Government pilotage authorities are nobody. What it means is this: that there is no real responsibility when you place it upon a Government or upon a pilotage authority. Where the shipowner is responsible for his ship, there is responsibility; and where you ask the Board of Trade or a pilotage authority

authority to be responsible for a ship, there is no responsibility.

323. Still you propose to leave the fixing of the number to these pilotage authorities, to which you have alluded in this memorandum?—We say nothing about what the ultimate result may be in that respect. It is quite clear that in some places the numbers require to be increased, but this in no way interferes with the discretion of the pilotage authorities. I have said there are a great number of places where pilotage is free, and where yet the pilotage authorities find it desirable to restrict the number. This Bill does not interfere with that the least in the world.

324. Do you think that the system which would answer for the Hooghly or the Mersey, or say from Gravesend to the sea, requires no more skill than the pilotage, say, out of the port of Cardiff to Cardiff Roads?—I do not say anything of the kind; but I say that if it requires more skill, there will be a greater demand for pilots and a greater supply.

325. I think you based your argument very much upon the argument, that because the voluntary system of pilotage answers at certain ports—say, on the east coast, and at Gloucester, Cardiff, and Cork—that, therefore, it is applicable to every port in the kingdom, or every river, as for instance, the Hooghly in India, the St. Lawrence, the Mersey, or from the Thames to the sea?—What I said was that, *primâ facie*, the greater the need for the pilot, the greater the skill wanted; the greater the difficulty of pilotage, the greater would be the demand for pilots, and consequently the more complete the supply. That is what I said as a general principle, and then I said, that in order to prove that that did not apply to the case of pilotage, as it does to every other department of human life, you ought to show that the free system had failed, and I said that was far from being the case. There were ports in almost every possible condition round the coast in which the system was free, in which the supply was ample, and quite as good, and even more satisfactory, than where it is compulsory. I believe, if you take the different ports, you will find that there are ports of equal difficulty where the pilotage is free.

326. I will read to you a part of that paragraph to which I have alluded, "that it is necessary in order to maintain a competent supply of pilots;" then you give your reasons for that, "a practical answer to this reason seems to be that in those parts of this country where pilotage is voluntary, the supply of pilots is as good as where it is compulsory; at Cork as at Falmouth, at Newcastle as at Liverpool, on the north as on the south side of the Thames. In fact, where pilots are really wanted, they are as much, or nearly as much, employed under a voluntary as under a compulsory system. In the Bristol Channel where pilotage to Newport, Cardiff, and Gloucester was made voluntary in 1861, the pilots as a whole do more work and earn more than they did before the change"?—Quite so; you mentioned the Hooghly. The case of the Severn is, I believe, a case of very difficult pilotage; nobody goes up the Severn without a pilot, although it is voluntary, but everybody is better pleased, because the people get what they want.

327. Have you much experience of any of these ports to which you have alluded?—I am no sailor; I speak at second-hand.

328. Are you aware that at Cork the pilot boats are all owned by ship agents and not by pilots?—No; I do not know anything about that.

329. And that they are, therefore, not as much under the control of the pilotage authorities as they would be if owned by pilots?—I am informed that the pilotage system, however it is managed, at Cork is perfectly satisfactory.

330. Are you aware that pilots in Queenstown serve no apprenticeship?—No; I am not.

331. Are you aware that the masters of Her Majesty's ships going into Queenstown have, owing to the safety of the harbour, orders not to employ a pilot?—No, I am not aware of that.

332. The pilotage at Cardiff is voluntary?—Yes.

333. Are you aware at all of the number of vessels that are merely piloted from the dock into the roads at Cardiff, as compared with those that go to sea?—No.

334. The pilotage in merely over a short canal?—I am not acquainted with the local pilotage of Cardiff at all. I should like to mention a fact as to Newport. I happen to have heard this yesterday; the harbour authorities were at the Board of Trade, and they gave me an account of the effect of making pilotage voluntary at Newport, and they said it was most satisfactory; pilots are better employed; more are to be found at their stations, and they are better paid, and the shipowner better served. That has been the effect of the change from compulsion to freedom.

335. I am now merely speaking of the geographical position of these ports; are you aware that the pilotage in the Tyne ports, from sea into anchorage, say Shields, is a distance of less than two miles?—It is a short pilotage into the anchorage at Shields; but it is an entrance about which there is often a great deal of difficulty, and the pilotage of the river above, where the pilots are very much employed, is as difficult as that of any other river.

336. Are you aware that there are very great tidal peculiarities in the Severn, going up to Gloucester?—I know that it is said to be a very difficult pilotage.

337. And that no man would think of bringing his vessel up or down without a pilot?—Precisely; and therefore he always employs one.

338. So that under a voluntary and a compulsory system it would be the same?—It would be the same in so far as that the pilot would always be employed; but the relation between the pilot and his employer would not be at all the same. In the one case the servant is forced on the owner, whether he is satisfactory to the owner or not; in the other case, the owner only takes him if he is satisfactory. Whatever the extent of the pilotage difficulties about any port, to that extent the shipowner will be glad to employ a pilot at that port.

339. Do you practically find that the Board of Trade has as much control over the pilotage authorities where the system is voluntary as where it is compulsory?—The only difference between the two cases is, that where it is voluntary the Board of Trade have no occasion to examine masters or mates, because they do not want to be licensed in order to exempt their vessels from compulsory pilotage; that is the only difficulty. In every other respect, whatever powers of control the Board of Trade have, which are very small, exist as much in the voluntary as in the compulsory districts.

Mr. *T.H.Farrer.* 25 March 1870.

340. Have you got the Parliamentary Paper 178 of last year, the pilotage returns of each port?—No.

341. I will hand it to you (*handing same to the Witness*). Sunderland is, I believe, under the voluntary system?—Yes.

342. Will you read the foot-note at the bottom of that return from Sunderland handed in by the Board of Trade?—"The source from which this information is derived is the return which, under bye-law No. 8, the pilots are required to send in, at the expiration of each month, of the number of vessels piloted by them during the month, and the sums received for pilotage, but from the irregular manner in which these returns are made, notwithstanding frequent remonstrances on the part of the Board, this return is necessarily deficient and imperfect; neither do the returns sent in by the pilots show whether the vessels piloted by them were towed by steam, but nearly all the vessels entering and leaving the port (except small coasters) employ a steam-tug." I suppose the pilotage authority of Sunderland does not think it worth while to enforce the returns accurately, but I said before with regard to those returns altogether, when we came to use them this year we found them imperfect and of very little use.

343. You have read to the Committee a statement as to Runcorn, showing that the pilotage of the port of Liverpool was kept up very much for large shipowners, greatly to the injury of the coasting trade visiting the port of Runcorn; have you any idea of the number of coasters visiting the port of Runcorn last year?—No.

344. As between the 7th April 1869, and the 18th March 1870, not quite twelve months, are you aware that the number was 3,562?—No.

345. That out of that number there were 3,370 exempted from pilotage?—No.

346. Leaving under 200 vessels inwards (I speak of inwards because I could not get outwards), subject to compulsory pilotage?—Mr. Steele wrote to me yesterday to say he should be exceedingly willing to come up and give evidence on the point, and to procure witnesses. I know nothing beyond his letter.

347. Do you know anything of the estuary of the Mersey?—I do not know it, as a sailor, the least in the world.

348. Do you know anything of the dangers of the navigation; have you any impression about it as to whether it is at all different from the ports of Cardiff and Gloucester?—No, I know nothing about it, except what I hear from others, and what I hear from the Trinity pilots when they come to us, and from those who manage the pilotage in the Thames, who tell us that the pilotage of the Thames is to the full as difficult, and more difficult, than the pilotage of the Mersey, but beyond that I do not know anything about it.

349. You know Admiral Evans, the Conservator of the Mersey, I presume?—Yes.

350. He is a distinguished naval officer, is he not?—Yes.

351. Have you read his last report on the Mersey for 1869?—No.

352. I will hand it to you (*handing same to the Witness*); may I ask you to read that portion of his report beginning at No. 525?—"The water bailiff's returns show a list of 68 casualties and wrecks in 1869; of this number 20 were total wrecks. The barque 'Empress' of 350 tons being the only vessel of any size amongst them; the remainder were small vessels, flats, and schooners without pilots, and mostly of a class not able to contend with bad weather. The introduction of steam flats is gradually superseding this inferior class, and will tend to diminish such casualties. The remaining 48 cases consisted of vessels grounding on the banks for short periods, which were generally got off without sustaining any material injury. Of the wrecks that caused any obstruction to the navigation, eight were removed by the water bailiff, the remainder by the owners, or have totally disappeared. The number of wrecks and casualties here mentioned is considerably less than that of the previous year, and compared with the prodigious traffic of the port may be considered a small percentage. From the small number of casualties noted as occurring to ships in charge of pilots, it will be understood that the pilot service of the port is maintained in creditable efficiency. Cases have sometimes been recorded in which outward-bound ships on parting with their pilots at the Bell Buoy, have, on meeting the flood-tide, found themselves almost immediately involved in difficulties. By a recent change in the regulations, masters of ships have the option of retaining the services of pilots beyond the limits of compulsory pilotage district, an arrangement which in such cases cannot fail hereafter to be beneficial." So far, that is a step in the direction of freedom. But there is a letter which I have received this morning, which bears a little upon this point, if the Committee would like to hear it; it is from Mr. Forwood, of the West India and Pacific Steam Ship Company; it goes so very much to many of these points, that I think it will be interesting. It is headed, "Compulsory Pilotage," and he says:—"Dear Sir, I have read with much interest the particulars of your evidence before the Select Committee upon the Abolition of Compulsory Pilotage, and even at the risk of appearing somewhat presumptuous, venture to offer a few remarks upon this question, more especially as far as it affects our port. There can scarcely be two opinions amongst those who have any extended knowledge of shipping matters, as to the most unsatisfactory effects of the legal decisions based upon the present compulsory pilotage system; under it the management of vessels is transferred entirely from the trained masters and officers to the hands of a pilot, generally a man of second-rate abilities and efficiency, as regards his seamanship and navigation, removed only from his status of an A. B. by his particular and special knowledge of the landmarks and soundings of the channels or seas in which he navigates. Place the pilot in his proper position as the master's chart of the district, leave all the responsibility upon the masters, and you will have fewer accidents to shipping entering or leaving our ports. In my experience of 10 to 15 years in the management of sailing vessels and steamers, I have had three collisions of consequence, two of which occurred in the river Mersey; in both the pilot was in fault, and the master in both instances acknowledged they saw the danger the pilot was incurring, but they feared that by interfering with his orders, and the collision not being averted, the loss would be the owners, which, of course, was avoided by letting the pilot alone. The clause in the new Merchant Shipping Act meets this, and, I suppose, can remain, even if the Bill for abolishing compulsory employment or payment

ment of pilots does not pass, but I even hope you may succeed in this, and that Liverpool may not be made an exception to the Bill. I believe I am in the minority here upon this point, but I fear that the years of connection between the old pilot service of Liverpool and the shipowning community has caused a feeling to grow that all are one family, and have become, like family ties, difficult to sever, and that this sentiment has prevented there being any great consideration to the merits of the compulsory system in this town. To my mind the present pilotage system is narrow and cramped, and so ties down the pilot to one groove, that the individuality of the best men is lost in the crowd. It destroys that motive of self-interest which stirs men up to excel in their calling more than anything else. If the right to pilot a vessel is thrown open to every man who came before a board of examiners to prove his fitness to act as pilot, you will obtain a better educated body of men, and as the best men will win the shipowners' confidence, we shall have a far greater motive for a man to strive to please than the present incentive to well-doing, which is simply to avoid being brought before the committee and getting a black mark. Not one tithe of the complaints that shipowners have against the pilots come before the committee of management for the following, among other reasons: it involves trouble; it may prejudice the owner amongst the pilots, and it is too indirect a way of conveying to the pilot in fault the censure of the shipowner. The best and most direct censure upon a pilot would be for him to lose any future employment from the shipowner. Of course I may be met by the statement that if I am owner and dissatisfied with a pilot, I can take another from the same boat. This is true; but the men belonging to one boat are too much like the boat, a body corporate, insensible to such rebuff. A few words upon the financial question. Our working pilots are not over-paid; but too much of the earnings go to the ineffective or inactive service, and too little to the men. A close system must lead to this end, and nothing could be closer than the pilot boat-ownery, which absorbs so much of our pilotage payments. The great arguments of the upholders of the present system are, the difficult character of the navigation of the approaches of the Mersey, the necessity of our pilots keeping their look-out for vessels afloat, and not from the shore, and that the prevailing winds make our neighbouring coast line a lee-shore. To this I would urge primarily, when there is money to be made there will be found men ready and anxious to earn it, and that the trade of the port is so large, and the amount of pilotage to be obtained so considerable, that there is ample inducement for men and vessels to be employed in a free pilotage service, in which healthy competition would lead to a vast improvement over our present system, and instead of all our pilots remaining within 30 miles off the port, our masters would find them on entering the Channel, and many a vessel be saved which is now lost from the master's ignorance of channel navigation, particularly off the south-east coasts of Ireland. In conclusion, allow me to say that the pilots of Liverpool are a first-class body of men, as efficient as the system under which they labour will permit; seldom shirking their duty, be the weather ever so bad; but I believe the journeymen pilots' position, under a free system, would be improved, and the shipowner be better served; and, therefore, I advocate the change."

353. Mr. Forwood's suggestions do not, as it appears to me, agree with the views of the Bill now before this Committee; it is an entirely different suggestion?—To the extent to which this Bill goes those suggestions agree with it; but they go, as the representation from the Shipowners' Society of London goes, beyond this Bill. They would take away from the pilotage authorities the discretion of limiting the number.

354. Mr. Forwood, apparently, desires to give scope to the individuality of enterprise and energy; I do not see in what way the system as proposed in this Bill is to alter that in the slightest degree from the present system?—Because the shipowner would not take the pilot unless he found him useful.

355. You propose that the pilot should remain with all the compulsory obligations which exist at the present moment under the pilot authorities; and you make no distinction whatever, under such a system, between the energetic and enterprising pilot and the indolent, lazy man, who wishes to remain as near his own door as he can?—It is thought that the pilotage authority will be the best judge to what extent they can introduce a further system of freedom. This Bill does not propose to interfere with their discretion in that respect; but it rests with them.

356. The principle of this Bill cannot be called a free-trade principle?—It is a free-trade principle as far as it goes. It does not compel the pilotage authorities to adopt free trade, pure and simple, in the sense of throwing open the number of pilots, and doing away with all regulations.

357. Except as far as regards removing the obligation upon the shipmaster to take a pilot, there is no difference in the proposed mode of conducting the service and the existing mode?—It is not necessary to alter the law for that purpose, because the pilotage authorities have the power of doing it themselves.

358. I only wanted to know whether, with that single exception, the principle remains the same?—The Act leaves the pilotage authorities to do as they like in that respect. The present law compels shipowners to take pilots. It is necessary to remove that obligation by the action of Parliament. There is no Parliamentary obligation on the pilotage authorities to restrict the number of pilots, or to impose any particular regulations.

359. You do not propose by this Bill to enable pilots to pursue their calling with freedom, as you would allow other individuals to do so, that is, to allow them to be wherever they think they are most wanted; you do not give them that power at all?—We propose to leave that to the discretion of the pilotage authorities.

360. Am I correct in supposing your proposition to be this, that you allow the pilotage authorities to make regulations for the conduct of the service. In Liverpool we have four stations throughout the year on which the pilot-boats are compelled to be in all weathers; would you consider it consistent with the principle of freedom of trade to compel those men thus to risk their lives, and leave it entirely optional in the shipowner to take a pilot or not?—I think

Mr. *T. H. Farrer.*

25 March 1870.

that will be for the pilotage authorities to decide. In the passage I have just read from Admiral Evans' report, he states that the pilotage authorities of Liverpool have recently enabled masters to take the pilots beyond the usual limits; that is a step in the direction of freedom.

361. Looking at it from the point of justice, may I ask whether you would consider that such a one-sided compulsion can be considered as a just law, or could long be sustained?—I do not see that it is a one-sided obligation; you give a man his license on condition that he shall do certain things; I am not arguing in favour of those particular regulations; very likely ports differ, and it is found necessary to make different regulations in different ports. But where the pilotage authorities think it desirable to make such regulations, I do not see anything inconsistent with free trade, in saying to a man, "You shall only have a license on condition of observing such and such regulations." It may be, and I daresay in some places it will be the case, that you will get rid of the restriction on the number altogether; that may be found to be the case; there can be no doubt that in the Thames many more pilots are wanted than are licensed, but that after all is a matter which it is impossible to settle by general legislation.

362. Would you consider that it would be possible to maintain a one-sided obligation of the kind to which I have alluded, compelling men to risk their lives to be at their stations under all circumstances, and in all weathers, and that you shall leave it entirely optional in an owner to take a pilot from that pilot-boat or not?—Yes, because it is done; as I mentioned just now, it is done at Dundee.

363. Probably there may be some difference between Dundee and the port of Liverpool?—It is done at other ports. The real probability is, that no compulsion will be necessary; that where the man is wanted there he will be found.

364. You made some allusion to the loss of the "Spindrift" in your evidence on the former occasion, and you stated that a master of a vessel with a pilot on board in compulsory waters, feels less responsibility, and is less vigilant than if he is in non-compulsory waters, and that I think is correct. Are you aware that nearly all the large steamboats out of Liverpool take pilots from Liverpool to Queenstown, and *vice versâ*?—I should think it very probable, but I do not know the fact.

365. Do you think that the fact of having a pilot on board in compulsory or non-compulsory waters makes the slightest difference in the vigilance and responsibility of the commanders of those ships?—I rather think that in spite of the law the owners of those great steamers refuse to allow the master to be displaced by the pilot even in compulsory waters. I have heard so, and I believe it to be the case. They feel that the safety of their ships, whatever the law may be, is the most important thing, and that they must make their master responsible, at any rate, to them.

366. The Mersey Docks and Harbour Board is, as you are aware, composed of mercantile men of the port generally, elected by the ratepayers, and that they have no beneficial interest whatever in the control or management of the trust?—None whatever.

367. They have nothing but the welfare of the port at heart?—It is a public board entirely.

368. Has not that board, since its constitution, always upheld the compulsory system, and whenever the question of the abolition of that system has been brought before Parliament, has not the board petitioned and memoralised against it?—I have no doubt that is the case, but I do not know it.

369. You have stated that the compulsory system at Liverpool is generally believed to be very efficient, and is favourably regarded generally by the shipping interest of the port?—With the exceptions I have mentioned as to the steamship interest.

370. I say generally?—Yes; I believe generally. Amongst the sailing-ship owners that is so.

371. Will you state if there is any really good reason for abolishing a system that has worked so well, and given so much satisfaction?—I do not think, considering all the complaints that we have had before us, that the compulsory system has worked well throughout the kingdom.

372. I was speaking of Liverpool?—I do not see that, in a matter of this importance, involving such serious principles, it is possible to have one law for one port and another law for another port, or that it is desirable to do so.

373. You see no reasons in your own mind at all for necessity of keeping up by compulsion the efficiency of a particular service like Liverpool; you see no distinction in your own mind, and no reason why exceptions should be made?—No reason. I may say that, if the Board of Trade or the Government had thought that the abolition of compulsory pilotage would tend to any insecurity of life or property, they would never have thought of introducing this Bill for a moment.

374. You are of opinion, I think, that where the pilotage is voluntary, there would be more pilots?—It is impossible to say. I think the supply and the demand would adapt themselves to one another.

375. Do you mean licensed or unlicensed pilots, when you speak of the supply?—If the pilotage authorities did not attempt to restrict the numbers, the supply and the demand would settle themselves. If they restrict the numbers, they must do it by reference to what they believe to be the demand; and, of course, it would be according to their good or bad judgment in the matter whether the thing is well or ill done.

376. Does not the Bill contemplate decreasing the number of pilots?—It contemplates the possibility of a decrease, and therefore it proposes to compensate them if that should be the case; but there was no belief on the part of the Government that there would be any large decrease.

377. It provides for the forced superannuation, if the remuneration is insufficient?—Yes; if that should be the case, which was not expected to be the case.

378. Are you aware what the pay of a first-class pilot is at Liverpool?—No; I only believe generally that they are not overpaid.

379. The amount, I think, appears to be 195*l.*?—That is the average earnings.

380. That you consider is not over payment for a first-class pilot?—Not at all, I should think, into such a port as Liverpool.

381. That, I think, is the nett?—Yes; the highest nett is 210*l.*; the average nett is 195*l.*; the

the gross average is 212 *l.*; it is very small, compared to what some of the London pilots earn.

382. *Chairman.*] Many of the London pilots have much higher incomes, I believe?—The highest nett income of the London pilots is 700 *l.*, and the nett average is 250 *l.* I am informed that some of the unlicensed pilots in the port of London earn still more.

383. Mr. *Graves.*] You are of opinion that that income would be kept up to them under a free system?—We think so, from the experience of the ports where compulsory pilotage has been abolished, and from the knowledge that pilots would be much wanted at Liverpool.

384. Have you at all looked into the question as to whether in ports where the pilotage is voluntary there is not a much less per-centage of vessels taking pilots than where it is compulsory?—I have not made that comparison.

385. For instance, are you aware that at Cardiff only 38 per cent. entering and leaving the port take pilots, while at Liverpool 63 per cent. take pilots?—There is a vast proportion of the coasting trade at Cardiff which has never been in the habit of taking pilots. I should think that is very likely to be the case.

386. Steam coasters, as a rule, you think, do not take pilots?—As a rule, I should think not.

387. As the use of steam increases, the tendency would be rather to decrease the number?—I should think it would, as men make repeated voyages and learn to know the ports.

388. Would not there be a tendency on the part of poor or reckless shipowners in summer weather going out with a tug-boat to avoid the expense of pilotage?—That is a very difficult question to answer; but steamship owners in London have told us that they think the pilot would be employed as much, at any rate in large ships, where there was a tug, as if she had no tug. Of course, both in that case and in the case of the ship towed by steam, and of the steam coaster making short voyages, if she does not want a pilot, why should she be compelled to take one?

389. From your experience with regard to this question is it not notorious that the steam trade, as a rule, require pilots less than sailing ships will do?—The short steam trade.

390. So that to that extent the tendency would be rather to diminish the income than to increase it?—Yes, so far as the short steam trade is concerned; but then it must be remembered that that very much replaces the old coasting sailing vessels, which did not take a pilot. The long-voyage steamers now coming in and driving out the sailing vessels, I believe, generally take a pilot, and always would do so.

391. You probably remember the differential dues that foreign vessels were exempted from ten years ago?—Very well.

392. And that Parliament compensated the pilots of Liverpool for the loss of those dues?—What happened was, that under the old Reciprocity Treaty Acts foreign vessels were exempted from the differential dues which they had previously paid; and as those treaties came into existence, Parliament compensated the pilots of the port by paying them those sums. Then in 1861 or 1862 an Act was passed, by which all differential dues were put an end to, and that compulsion was put an end to also; and the pilots and other harbour authorities receiving those differential dues were to receive an annuity for ten years, calculated upon the average of what they had been receiving; and the Liverpool pilots received large sums in that way from the Government.

393. Do you remember the amount?—About 10,000 *l.* a year, I think.

394. For how many years has that been paid to them?—That was to be paid to them for ten years from the time of the passing of that Act.

395. That would expire next year?—Quite so; that is an additional reason for being liberal under this Bill.

396. So that the pilots of Liverpool will absolutely lose next year 10,000 *l.* a year of their income?—Which they ought never to have got.

397. That probably, as you very fairly stated, would be a reason why they should be dealt liberally with?—Certainly,

398. I think the Committee rather gathered from your views that, in your opinion, no loss would take place in their incomes from the abolition of compulsory pilotage?—We think not.

399. Are you at all aware how far the exemptions go that you are extending in the Merchant Shipping Code now before the House?—There would be very large exemptions in Liverpool, because the system is so strict at present.

400. You have generally condemned those exemptions; I think you call them gross anomalies?—I call them anomalies upon anomalies: anomalies made for the purpose of getting rid of greater anomalies.

401. Could not they have been got rid of by doing away with the exemptions in place of extending them and making the anomaly greater, as you propose to do?—If I were a Member of Parliament, knowing the feeling of the shipping interest, I should be very indisposed to bring in a Bill for the purpose of curtailing those exemptions.

402. Practically they could be got rid of in one way equally well as in the other way?—Yes.

403. You are aware that there is a large superannuation fund at Liverpool?—I am aware that there is a superannuation fund and a very peculiar system of investing in the boats, which, I believe, is the real way in which the pilots obtain their superannuation or secure themselves in old age. It is a very peculiar system indeed, condemned by the Commission on Pilotage in 1836, but which still continues, and which Mr. Forwood refers to in that letter when he talks about the part that goes to the dead weight. The pilots invest their money in the boats; a large part of their earnings is set apart for the boats, that is deducted from the active service, and the pilots participate in that according to their interest in the boats. That, I believe, is the state of things.

404. How would you propose to guarantee the superannuation fund to those people who have been contributing to it on the faith of a compulsory system for years?—According to this Bill the superannuation fund would not be injured, because the earnings would continue the same.

405. That is based on the supposition that the earnings continued the same?—If the earnings continue the same, of course there would be no loss.

Mr. *T.H.Farrer.* 25 March 1870.

406. You have provided for the possibility of a reduction taking place?—Yes; and then we diminish the claims upon the fund by compensating, at the Government expense, such a number of the pilots as it is necessary to withdraw, in order to leave the earnings sufficient to maintain the thing on its previous footing.

407. Why are the words, "If they think fit" introduced into the Bill, if you mean that the Government shall do so?—It was merely to reserve discretion to the Treasury, in order to see that undue claims were not made on the Government.

408. Do you think that, if you were an annuitant, you would like to be dependent upon the "thinking fit" of the Treasury?—Perhaps not; but one must remember that there is an elastic element here, viz., the question whether the pilots have done their best to earn their money, or whether their loss has arisen from other circumstances; because they ought not to be compensated if they lose by any other means than the operation of this Bill; if the trade of the place falls off, or if the pilots do not do their duty so well, they ought not to be compensated; it is only where they suffer by the operation of the Bill.

409. Are you aware that the present surplus of the annuity fund is only 200 *l.* a year?—Yes. This return does not give the amount paid to the boats, which is a very important element, which I have no doubt will be brought out before the Committee.

410. You have not looked into the matter as regards the question of annuities or superannuations?—It has been impossible to look into all the different funds of the different ports.

411. Do not you think it would be right to make it compulsory on the Treasury; that it should not be made optional in the way you propose?—If you could so define the claim as to make it certain that there should be no undue or unjust claim on the Treasury, I think it would be just that it should be fixed, and more satisfactory to everybody.

412. What do you propose to do with those boats to which you have alluded, and the owners of these shares?—Supposing the service to go on as we suppose, just as fully employed as before, the boats might remain as before; but the system of those boats is obviously a great clog on the pilotage service of Liverpool.

413. Do you know that the pilots of Liverpool own 75 per cent. of those boats?—I am quite aware of it, but such a system ties the hands of the pilotage authorities at every step.

414. Are you aware that the present owners have paid over 90,000 *l.* for their shares of these boats?—I am quite aware of the state of the case, and that they have invested a large sum of money in them.

415. How would they be recompensed, according to your proposition, for the 90,000 *l.*?—The boats would continue to earn what they do at present.

416. Though these shares were bought by the pilots under an obligatory Act and a compulsory system, you think they would be entitled to no compensation for the abolition of that compulsion?—If, as we believe, pilots were employed as much as ever, there would be no loss sustained at all.

417. If a loss were shown, you would think them entitled to compensation?—Then you would withdraw a certain number of pilots, and the remainder would get better paid.

418. Is it not the interest of commerce generally to have a superabundance of pilots; the interests of commerce can scarcely be to reduce the number for the purpose of paying annuitants?—If it is to the interest of commerce to maintain a number of pilots, as we believe it would be, there would be no loss, and no occasion to reduce the number.

419. I am speaking of the boats. I ask the question, how would you propose to compensate the owners of those shares for any loss they might sustain from a change of system?—I say, in respect of that, I believe that there would be no loss. If there were a loss, a certain number of the pilots would be withdrawn, and the earnings of the others would be greater than they are.

420. The savings of these pilots have, nearly all, been invested in these boats?—Yes, I am perfectly ready to admit, and I think that would be the best way of treating it, that the question of the pilot boats at Liverpool requires special consideration.

421. The House has confirmed that view of it, because in 1862, when it passed the Merchant Shipping Act, it expressly recognised the right of the pilots to be remunerated if compulsory pilotage were abolished. I believe that is correct?—I do not remember it.

422. Section 39 says, in doing so means should be afforded of paying due regard to existing interests, and the circumstances of particular cases?—I do not think that any one would deny that now.

423. You have laid a great deal of stress on the hardship of making an owner liable for the acts of a pilot forced upon him? — Perhaps I may have put that a little too strongly; I think all those passages which I quoted from Dr. Lushington's judgment show that it is a logical consequence of forcing a servant upon an owner, that you should free the owner from responsibility for that servant's acts; I agree with the logic. But I am not quite so sure I should admit it is a hardship.

424. You have said that in a compulsory system a shipmaster has no choice of a pilot?—That is not necessarily so; in some places where the system is compulsory he has his choice among a certain number; in other cases he must take the man in turn. That differs in different ports.

425. I think one of your great objections to the compulsory system was that there was no power of selection? — That is as it may happen. There is a power of selection among a limited number in London, for instance, but only among a limited number.

426. I gathered this impression from your evidence: that one reason why you desire this change is, that a voluntary system would give a man the power of selecting his own pilot?—That is rather a different question. It would give him the power of employing a pilot or not; whether he employed a pilot in turn would be a further question. I think, as a matter of fact, that in most cases where a shipowner is not obliged to employ a pilot, he is also at liberty to select whatever pilot he pleases, from among the licensed pilots.

427. Take an inward-bound ship; let me ask you what greater selection a shipmaster will have

have under the voluntary system than under the compulsory system?—He will, in the first instance, be able to do without the pilot at all if he wishes to do so; that will be the first, and the greatest and the most important step of all.

428. That is the only alternative?—So far as this Bill goes, that is the only thing. If what Mr. Forwood there suggests takes place; if what the Leith Chamber of Commerce suggests takes place; if what the London Shipowners' Society suggests takes place, namely, that the number of the pilots shall not be limited, and the pilots shall be at liberty to cruise wherever they please, there will be a further liberty.

429. You do not propose that by this Bill?—No, that would not be done by this Bill; it would be in in the power of the pilotage authorities to do it if they pleased.

430. Let me take the port of Liverpool; every vessel going into that port meeting the first pilot-boat receives a pilot; what choice or selection has the master in the man whom he takes under the voluntary system more than he has under the compulsory system?—I do not say, that, assuming the rule of the port to be that the pilot shall be employed in his turn, that the shipowner is able to select a particular man more than he could under the other system, but he is at liberty to employ him or not; he is at liberty not to employ him.

431. I am speaking now of selection?—Selection, again, is a different matter.

432. While in the outward voyage of the vessel selection is possible, in the inward voyage of the vessel selection is impossible?—Unless the owner chooses to send his pilot to meet him, which I believe is occasionally done. Suppose a shipowner, for instance, chose to send his pilot to meet his vessel at Cork and to bring her in.

433. That is done every day with large steamships?—Yes, then there would be complete selection.

434. These are very exceptional cases, not relating to one out of 500 vessels?—Still there would be absolute selection.

435. I want to bring out this point clearly, as to what difference in the selection of your pilot will take place under the Bill now before the Committee?—The difference made by this Bill will be, that the shipowner will be at liberty to employ the pilot or not.

436. As regards the selection of the man, there is no greater selection under the voluntary system than under the compulsory system?—There may or there may not be; I should think there was likely to be more selection, because the pilotage service will be more anxious to accommodate itself to the wants of shipowners.

437. The system in Liverpool is, that the boats take certain stations, and that the men, in their turn, are sent aboard each vessel that comes up; under those circumstances, I apprehend there will be no difference in the selection under a voluntary system and a compulsory system?—No, except this, that if that plan did not suit the wishes of the shipowners, and the shipowners wanted a special pilot or pilots, in different places, they would then be at liberty to make those arrangements, and no doubt the supply would follow their demands. At present it may not do so.

438. If my premises are correct, probably you would then be willing to admit that the captain had no power of selection. Suppose the rule to be that there are four pilot-boats, each at its own station; an inward-bound ship receives the pilot sent by the master of the pilot-boat; under those circumstances there would be no power of selection on the part of the master?—If you retain a system under which pilot-boats are obliged to be in a particular place, and there is a positive rule that each man shall be taken in his turn, there will be no selection except this, that the shipowner need not take the pilot unless he wants him.

439. Mr. *P. W. Martin.*] You said, in page 16, that the barges came lumbering down the river sideways, is that what has been told you?—That is what the pilots have told us.

440. You do not know it yourself?—I am not a bargeman nor a pilot.

441. You say you remember some very large deputations to the Board of Trade; have you got Paper, No. 455?—Yes.

442. Is that the "Sentinel" case?—No; the "Sentinel" case is, I think, in a subsequent paper not yet printed, but which I have put in.

443. Do you happen to recollect that in all these deputations, the barge owners stated that the presence of a pilot on board rendered either the pilot or the master perfectly reckless whether he ran down a barge or not?—I think that was the substance of their statements.

444. For instance, the "Snodland" was the case, was it not, of a barge that was close in shore; the steamer was out of her course, and cut her down; or was it the brick barge mentioned in the same paper?—I cannot recollect the exact circumstance.

445. Have you had any complaints within the last few weeks, as to the case of the barge that was run down, and the crew drowned while they were asleep?—I remember there was such a case, but I do not think we have had any official report or inquiry into it.

446. You say there is only 650 *l.* recovered out of 6,000 *l.* damage done by the steamer, and I see you say that the remedy against the pilot is worthless; I suppose that is because the pilot has no means?—He has none at all.

447. Practically, a barge coming out of the Medway, which they do twice a week, gets run down without any fault of her own, and the owner is utterly without redress?—Quite so. Mr. Lee, in one of these papers, gives a very full and instructive account of all that he did to endeavour to recover compensation. First of all, he proved that the ship was in fault; then he found that he could not recover damages because she was in charge of a compulsory pilot. Then he proceeded against the pilot. The pilot had no assets; then he made the pilot bankrupt, and he got nothing.

448. He practically lost his barge, and 380 *l.* to boot, in costs?—Yes.

449. Mr. *Stevenson.*] You have said that you think the abolition of compulsory pilotage will throw the responsibility, as to the safe conduct of the ship, and any accident that may arise from negligence, on the proper quarter, namely, the master and the owner; do you think it is possible, short of the abolition of compulsory pilotage, so to define the duties of the pilot, as always to prevent a confusion arising in regard to such responsibility?—I do not think it is impossible to do it, because I believe it is done, to a certain extent,

Mr. *T. H. Farrer.*

25 March 1870.

in France and in the United States; that is to say, the shipowner is responsible to the ship to which he has done damage, and he has his remedy over against the pilot. That appears to be the law in France, and probably the United States; but as to carrying any such law in this country, that is a different matter. The Bill of last year did propose something of the same kind. We found it met with general opposition from the shipowners; those who were opposed to compulsory pilotage would not hear of doing away with the exemption from liability, and retaining the compulsion.

450. Would the master and the owner still have recourse against the pilot for negligence under the voluntary system?—I should think so, certainly; just as much as under the compulsory system.

451. If this measure sanctioned an exception to the general rule of voluntary pilotage in any particular district, would not it follow that the law as to responsibility of a ship would differ in that district from the law in other ports?—Certainly, that would be the effect.

452. Do you think it would be possible to get an uniformity of the law of responsibility short of the total abolition of compulsory pilotage?—I do not think it would.

453. You have laid down the object of a pilotage law, or a pilotage system, to be that of securing a proper supply of pilots, and securing also that those pilots should be competent men; I may ask you whether, in the districts where pilotage is voluntary, and always has been voluntary, the pilotage service is administered under precisely the same general law as it is in the compulsory districts?—It is so under the general law; that is to say, the Merchant Shipping Act. It is precisely the same with regard to the two districts, except in the single matter of compulsion.

454. In those districts boards exist for the administration of the system?—Certainly.

455. Is it not the case that in general those boards are representative boards?—Yes, in general, I think so; but it is very difficult to give a general answer with regard to ports which differ so much in their circumstances. In the case of the establishment of recent boards they are representative.

456. Have any representative boards been recently established, except to administer a system of voluntary pilotage?—None that I know of. I am not aware of any new establishment of compulsory pilotage since I have been at the Board of Trade.

457. Are you prepared to give a general answer to this question: whether when a pilotage board most fully represents the views of the shipping interests, the pilotage is voluntary rather than compulsory?—The Mersey Docks and Harbour Board are the great exception to that; but I think, generally speaking, that is so. The Dublin Port Board is, to some extent, a representative body. That is another case where compulsion exists. But I think, generally speaking, where the board is a representative body the pilotage is free. The Clyde is another case of exception; the upper part, from Greenock to Glasgow.

458. Was not the upper navigation of the Clyde always compulsory?—It has, I think, been compulsory for a great number of years. It was not always compulsory; but then a few years ago the Clyde was a mere ditch.

459. Mr. *Malcolm.*] I think it has been compulsory only since 1858?—I think before that. I am now speaking from what was told me the other day; but I think it was made compulsory in 1848. It was before I came to the Board of Trade.

460. Mr. *Stevenson.*] I think you told us there was a growing feeling in the shipping interests in favour of voluntary pilotage?—I think so, certainly; because we have never an application to extend the compulsory system; but we have many applications to extend the voluntary system, or rather to do away with compulsion.

461. Do you think that if the Trinity House of London had been a representative body, more readily reflecting the feelings of a mercantile community, voluntary pilotage would not have been further extended than it has been?—It is possible; but at the same time, it is to be remembered that a great change has come over the London shipowners of late years, and that the London Trinity House very much reflected the views of the large sailing-ship owners.

462. You mentioned that the pilotage at Dundee is a voluntary pilotage?—It is.

463. Are you aware that there they supply vessels approaching the port at sea, by sending out pilot cutters with men on board?—The pilot cutters cruise there regularly. The pilot cutters are always cruising at the mouth of the Tay.

464. These cutters belong to the pilotage establishment?—No; I believe they belong to the pilots themselves. I believe the pilotage authority does not interfere with the cutters at all. It leaves the pilots to find them themselves. I was informed so yesterday.

465. The question has been raised as to limitation of the number of pilots by the pilotage authorities: is it not the case that there is a natural limitation, if I may so say, to the number of pilots by the rules of the different boards, which require the pilots to serve an apprenticeship?—Where it is necessary that an apprenticeship should be served before a man can become a pilot, of course they can only make those who are apprentices pilots; but that only puts the thing a little further back, because they can make more or fewer apprentices according to the demand of the port.

466. Would not the supply of apprentices (the number of young men coming forward to the profession) be regulated by the prospect of employment?—Undoubtedly; and I presume that the action of the pilotage authority in regulating the numbers is only an endeavour to fix the real supply and demand.

467. Do you not think that that discretion of limiting the number of apprentices may be very safely entrusted to pilotage authorities, where those pilotage authorities are representative of those who are to employ the pilots?—I think so. I think, if they find it better for the service to throw it entirely open and to examine everybody, they will do so. If they find it better to limit it, and to have a settled number of pilots, they will do that.

468. If the pilotage authority were a representative body, the interests involved would readily entrust them with such a discretion?—I think that is very possible.

469. I think you said there was nothing in this

this Bill which would affect the question as to whether a master wanting a pilot (supposing it were optional to him to take a pilot or not) would be required to take the first pilot. The Bill does not touch that question?—It does not touch that question at all. I take it, it would not be possible to require the master to take the first pilot that offered; but it would be competent to the pilotage authority to say, "If a pilot is taken at all such-and-such a pilot shall be taken." Their power is over the pilots, and not over the ship. It would be through the medium of the pilots that they would require them to be taken in turn.

470. Taking a pilot in turn so far limits the choice of the master to have any particular pilot?—It does so, certainly.

471. That would, I presume, only apply to pilotage inwards?—Yes. But there is nothing in this Bill to prevent the pilotage authorities making a rule that pilots shall be taken in their turn outwards.

472. Supposing such a case as this, that a vessel coming into the port of Liverpool thought proper to pass the pilot cutter that was furthest out at sea, and took no pilot, and afterwards the captain changed his mind, and, when nearer the port, took a pilot, do you think that would not be some hardship on the pilots who were in the first cutter, whose services had been refused, and would not some discouragement be inflicted upon pilots keeping well out to sea in order to offer their services?—I do not think this Bill affects that question. I admit it is a question of considerable difficulty.

473. Do you think there would be no difficulty in giving, under the general law, a sufficient discretion to the pilotage authorities to meet such a case?—Quite so. This Bill does not prevent their having such a discretion.

474. You think that case might be met by some regulation for the distribution of the earnings of the port?—I should think so; I do not see why it should not be met in that way.

475. In that distribution of the gross earnings of the pilots, consideration would be given to the case of those pilots who had kept themselves well out at sea, although they had not got any employment thereby?—Certainly. Such a case as that of Dundee, where the money is all paid into a common stock in order that it may be distributed in the way the pilotage authority thinks most consistent with justice and fairness, shows that it can be done. It will always be a question, I suppose, dependent upon the particular circumstances of the case, whether the matter will not settle itself by the man getting larger rates for going out further if he is wanted to go out further. The shipowners of London say they want a pilot at the Isle of Wight sometimes. If he is wanted they must pay more for him, and the probability is he will go there. In certain cases that will settle itself in that way.

476. If the shipowner paid more for taking the pilot at the outside station would there not be a temptation to prefer one from an inner station?—If the shipowner wants a man outside he probably would be willing to pay more for him.

477. You mentioned some cases on the previous day in which some Trinity House pilots had extorted money from shipowners in the Channel district for not hoisting a flag, and very large sums of money had to be paid, and the Board of Trade could give no redress?—Yes.

478. Are you aware whether the Trinity House took any steps as to those pilots on account of such conduct?—I am not aware of any steps except those mentioned in the printed papers to which I have referred.

479. Mr. *Brassey.*] In regard to the compensation proposed in the Bill, I suppose we may assume that if the shipping interests benefit largely by this Bill, the pilots must suffer in a corresponding measure?—Not necessarily. It is possible that both may be on a better footing, that the employment may be as great as it was before, the pay as great as it was before, and both parties better satisfied, as has proved to be the case in some ports.

480. It is possible that it may be otherwise; it is possible the result may not be so favourable to the pilots as you anticipate?—The compensation clauses show that we thought that that possibly might be the case.

481. I think, under the Bill, no claim for compensation will be entertained until after the lapse of a period of two years?—That is so.

482. Do you not think that the Board of Trade should, under certain circumstances, have a discretionary power to give some temporary compensation in the case of pilots who are proved to be suffering largely from the operation of this Act?—That period, and the details of that clause are, of course, open to consideration and alteration; it would be necessary to have sufficient time to see what the operation of the Bill had been; and it would be necessary to have a limited period, in order that claims might not be made at some future time, which had nothing whatever to do with the operation of this Bill.

483. A pilot brought before me a hard case, in practical illustration of what might happen under this Bill. He instanced the case of a man educating his family at a considerable annual expense, and suggested that it might be possible that he would have to withdraw his family from school, and that they would suffer from the loss of education for a period. That would certainly be a very hard case, because, although two years might not be very much to an adult, in the case of young persons, it would be a fatal blow to the course of their education?—That is a possible case.

484. I think, under the compulsory pilotage system, the Trinity pilots appointed to conduct the pilotage in the Thames, require to possess considerable qualifications: they must have been, I think, in command, either as master or chief mate for a certain number of years, of a sea-going vessel, and also have served a considerable apprenticeship in the river?—Yes.

485. I think you will agree that it is very important to keep faith with them, and that their just anticipations of the nature of the service at the time when they entered it, should not be disappointed?—Most certainly.

486. You spoke about the Bristol Channel, and you said that no loss had been suffered by the pilots in that Channel from the abolition of compulsory pilotage in those waters?—I stated that, on the whole, the pilotage service had not suffered, and that in the voluntary ports the pilots were better off than before. The Bristol pilots have suffered, because there has been a

Mr. *T.H. Farrer.*

25 March 1870.

transfer of the service from them to the Cardiff, Newport, and Gloucester Ports.

487. Has there been any increase in the trade of the Bristol Channel since the abolition of compulsory pilotage?—I have no doubt there has, as there has been, and I hope will be, all over the kingdom.

488. Unless there had been such increase of trade, I presume the pilots in the Bristol Channel would have suffered considerably by the abolition of compulsory pilotage in those waters?—The Bristol pilots would have suffered; I very much doubt whether the others would under any circumstances.

489. With regard to vessels carrying passengers, is it not your opinion that no such vessels should be allowed to navigate in pilotage waters without a pilot on board, unless the master has been proved to be qualified to navigate on those waters by examination before a competent pilotage authority?—The question to what extent you will carry the system of examination of masters and mates is, of course, rather a difficult question; but, according to my own opinion, I should be inclined to leave that responsibility with the shipowner himself, and I think he would provide for it better than Government would.

490. In regard to railways; in recent years the Government have recognised a certain responsibility for the care of the passengers travelling by railways, and also by the infliction of very severe penalties upon companies neglecting to carry out the working of railways under proper regulations?—The chief penalty upon the railway companies is the liability for damages in case of accident. We hear a great deal about that from the railway companies. That liability exists also in the case of ships, and I am inclined to think that that liability is a much greater security to the public than any system of Government supervision.

491. *Chairman.*] That liability will be extended under this Bill?—It will be extended rather than diminished.

492. Mr. *Brassey.*] Could not the objection of the steam-ship owners to compulsory pilotage be met by giving them immunity from the obligation to employ pilots in the case of all vessels commanded, by masters, who had proved their fitness to pilot their vessels in pilotage waters?—That is the present law, but that does not satisfy them.

493. We hear too often of ships going to sea ill-equipped and unseaworthy, do you not think that the same disposition to a somewhat reckless economy might extend itself to the case of pilotage, and that if you abandoned the obligation to employ pilots compulsorily, you would find the disposition to economy would often lead to a loss of life which otherwise might have been avoided?—I have no doubt that there will always be reckless people, and there will always be stingy people, but the question is, in what way you can best induce or compel them to take proper care, and I think, certainly, you can do it more effectually by putting upon them the responsibility for anything that goes wrong, than by endeavouring to substitute for their care and supervision, the care and supervision of any Government board, or any Government pilot.

494. You said a good deal in your former examination as to the anomalies which arose under the present system, in respect to the liability of shipowners, whose vessels have caused damage by collision; do you not think that those anomalies could be remedied without abolishing compulsory pilotage?—No, I think, practically, not. Of course it could be done as we proposed last year, but we found there was so much opposition to that, that practically it could not be done.

495. In the course of frequent voyages in vessels, I have observed the practice on board ships belonging to the Peninsular and Oriental Company, those ships in pilotage waters are compellable to take pilots; but I am aware that the practice of the captains of those vessels is, certainly, not to act as if they considered themselves absolved from responsibility by having a pilot on board; do you not think that the practice of the Peninsular and Oriental Company might be carried into the law and applied to all ships?—I think that would decidedly be a great improvement in the law. I think it is very hard that the law should say one thing, and that the most careful owners of ships should find it their interest to say and do something else; but that does not meet the whole case.

496. I think you have urged that no apprehension need be entertained that by abolishing compulsory pilotage, the pilotage services at the different ports which require pilotage service will be impaired in point of efficiency, and you have cited cases of various ports under the voluntary system in which there is a complete pilotage service; in such cases, the ships having pilots have no option as regards the selection of a particular pilot; the pilotage authority is responsible for the appointment of pilots, is it not?—Rules differ in different ports, therefore I can give no general answer; but I believe that in most cases where it is not compulsory on the shipowner to take a pilot, he is allowed, if he pleases, to choose his pilot from amongst the number of licensed pilots; but the rules differ, and I am unable to give any general answer.

407. I think you mentioned that you had received a communication from the London Shipowners' Society, conveying a resolution of that body in favour of the abolition of compulsory pilotage?—Yes.

498. Are you aware whether there was a difference of opinion in the committee as to the policy of that resolution?—No, I am not aware of it; but I should be very much astonished if there were not, knowing what the feeling of London sailing-ship owners has been in old times.

499. If the majority by which the resolution was carried was not a large one, it ought not to influence our judgment very much, ought it?—On the contrary, I think the fact that a majority of those large sailing-ship owners who always had taken a pilot in London, and who always have been in favour of compulsory pilotage, are now against it, is a very strong argument indeed.

500. Mr. *Norwood.*] You are aware, of course, of the pilotage system in the Humber?—I know it to a certain extent.

501. The licensing body there is the Hull Trinity House, I believe?—Yes.

502. But they are not the administrative body, I believe; there is a large elective body that manage the pilotage of the Humber, called the Pilotage Commissioners?—Yes.

503. That

503. That body consists of merchants and shipowners, who are elected at certain periods, members of the town council, and members of the Hull Trinity House; it is a large body, and partakes of the character of popular election to a considerable extent?—Yes.

504. Have you had any complaints recently as to the administration of the pilotage commissioners of Hull?—Nothing so much in the nature of a complaint as the letter I read from a pilot, and signed by 40 out of the 68 pilots the other day.

505. The shipping trade of Hull and the shipowners who frequent Hull have not complained?—No.

506. This return which is before the Committee, I think shows that the licenses to masters and mates by the Trinity House at Hull, are exceptionally liberal; I think it has the largest number of any port in the list, notwithstanding that Hull is not the largest port in the list by far; it, of course, ranks after London, Liverpool, and the Clyde?—Yes, it has a very large number indeed.

507. I dare say you are aware, that the Hull Trinity House practically refuse a license to no one who proves himself competent to receive that license?—No. I remember on one occasion, early in the history of the system of examination, a question arising with some foreign government, whether a foreign ship was entitled to this privilege, and upon our strongly representing to the Trinity House of Hull that it was entitled to it they gave way and examined, and I believe have ever since examined foreign masters and mates.

508. Both foreigners and Englishmen?—Yes; of course the foreigner is not so frequently able to pass the examination as the captain of a ship that belongs to Hull.

509. You have never heard recently that the Hull Trinity House have shown the slightest disinclination to license?—Not the least.

510. The Hull shipowners evidently take advantage of the system?—Obviously; their steam trade is very large, and no doubt, in all their large short trade they require the masters and mates to be licensed.

511. Of course, by taking a licensed master or mate they run the risk, with their eyes open, of not being covered by the non-liability of the compulsion?—Yes.

512. In point of fact, in the Humber, compulsion merely exists against strange vessels?—Practically; that is to say, vessels from other ports, and, as I gather from the memorial which I put in, from Goole, and the people in the Upper Humber, the shipowners of the ports above Hull.

513. Are you aware that the Trinity House has jurisdiction, as far as licensing all the way up the Humber is concerned, and that a Goole master and mate can obtain a license in the same way?—I should have thought that was the case.

514. I think with reference to the Hull jurisdiction the statement shows that there are about 69 or 70 pilots and 21 apprentices; are you aware that there are seven cutters employed?—I do not know the number of cutters except from that petition of the pilots.

515. You are not aware that there are always three cruizing?—No, I do not know the details of the service.

516. The river Humber is an intricate navigation, is it not; the entrance is some distance from the port of Hull?—Yes; I should think it requires a pilot.

517. It is about 20 miles, is it not?—Yes.

518. And tolerably full of sand banks?—Yes; there seemed to be a good many. It is very well lighted and buoyed.

519. Generally, with reference to the pilotage and the lighting and buoying of the river Humber, you have no complaints?—On the contrary.

520. I think you stated, in reply to the honourable Member for Liverpool, that the question as to the boats employed by the pilots in the Mersey and of compensation to boats that might be thrown out of employment would be considered.

521. In point of fact, that it was a fair question to be raised?—Quite fair.

522. Are you aware that the Hull system is very similar?—No; I do not know what the state of the Hull boats is.

523. You would not be surprised to hear that it was similar?—Not at all.

524. If it were similar to Liverpool, the Hull boat owners would be in the same condition to claim compensation?—Yes.

525. The difference of being on the east coast instead of on the west would not operate?—No.

526. With regard to the clause in the Bill as to compensation; the claim for compensation must be proved in not less than two, nor more than three, years; do you understand that that clause will give retrospective compensation; it will be two or three years before it can be ascertained that the pilots have suffered; would they get compensation from the period they commenced to suffer?—I do not think they would under the Bill as it stands, because the compensation is to be given in the shape of superannuation, of pensions, for withdrawing a certain number of pilots, the assumption being that they are not wanted.

527. Suppose, as a matter of hypothesis, that the passing of that Bill, or of a similar Bill, abolishing compulsory pilotage, would have an immediate and large effect on the Hull pilots, and they would feel the loss in the first year, you would not take that into consideration?—I think I said before that I felt quite sure the Government would consider those two or three years as a matter of detail, to be carefully considered.

528. Clause 3 of this Bill runs thus: "Notwithstanding anything in this Act, a licensed pilot may supersede an unlicensed pilot; and an unlicensed pilot assuming or continuing in the charge of any ship after a qualified pilot had offered to take charge of her, shall for each such offence incur a penalty not exceeding 50*l.*; and the master of any ship who, after a licensed pilot has offered his services, either gives his ship into the charge of, or continues to employ, an unlicensed pilot, shall for each offence incur a penalty not exceeding 50*l.*"; what meaning do you attach to the words "offered to take charge of her"; what would you consider to be the act which would be sufficient to cover those words?—Those words, I think, are taken from the present Merchant Shipping Act, and therefore, I suppose, whatever has been construed to be the case under that Act would be the case under this. I imagine it would be this: suppose a vessel comes up, and a pilot cutter, with a

Mr. *T. H. Farrer.* 25 March 1870.

licensed pilot, comes alongside and offers his services, that would be an offer to take charge.

529. Would it be compulsory on the ship to haul to?—That is one of the questions that have arisen with regard to compulsory pilotage; under what circumstances can a ship take a pilot on board? I presume a reasonable Court would hold that a shipowner should not be obliged to haul to if it were dangerous for him to do so.

530. I presume that different pilotage authorities have different rules on the subject?—I think that is the general law, and I think it would rest with the courts to give interpretation to that.

531. With respect to Hull, have you any communications from Hull to the Board of Trade with reference to this Bill, except the two you mentioned; one from the Trinity House pilots, and the other from Goole?—No, none that I am aware of.

532. There has been no expression of approval?—There has been no expression either of approval or disapproval, as far as I know.

533. Of course, with regard to petitions to the House, that is another matter?—Yes.

534. Have pilotage authorities power to alter the mode of payment and remuneration to the pilots; have they power to grant a larger sum in the winter than in the summer: suppose this Bill was to come into operation, would the law permit a pilotage board to say, "It is necessary in order to keep up our staff, that we should charge 50 or 25 per cent. more for winter service than for summer service?—It depends upon their separate Acts; in most cases I think there is a maximum set of rates fixed by the local Act; for the Trinity House by the General Act, and for other ports by their local Acts, and they have power to make any reduction within those limits; consequently, if they are not up to those limits at present, they might raise the pilotage rates in the winter up to these rates, retaining the present rates for the summer. I am told that that is what is actually done in Holland.

535. You know no case in England?—No.

536. Assuming that this Committee and the House were to decide upon some principle that they thought ought to guide the pilotage of our coasts, would not you think it very desirable that there should be, if possible, a uniform system?—It is difficult to say at what point the general law shall end and the local law begin, but I think there is so much that is local in pilotage, that it would be very difficult to bring it all under one general system.

537. You would not assimilate the system?—So far as the question of the obligation to employ a pilot goes; so far as the relation of the pilot to the master goes, so far as regards the mode in which the pilot shall recover his money, and other matters of that sort which are contained in the Merchant Shipping Act, it is desirable to have the law as uniform as possible, so that everybody may understand it.

538. If I understand the position of affairs aright, this Bill would really, if passed into law, form a chapter in the mercantile code?—It would have to be incorporated with that part of the mercantile code which relates to pilotage.

539. It would do away with the necessity for exemptions?—It would render it necessary to make considerable alterations in that part of the code.

540. Exemptions would not be required?—No, they would be knocked out at once, and the clauses about the compulsory payment of pilotage rates, where no pilotage service had been rendered, would have to be struck out.

541. The bearing of my question was to suggest to you whether if a principle were decided upon, it would not be very much to the advantage of the mercantile community that that principle should be worked out as fully and completely as possible, so as to make it suitable for all pilotage waters in the kingdom?—Most undoubtedly, but it was not attempted to do that in the present mercantile shipping code, because it was felt that the abolition of compulsory pilotage was so considerable an alteration that it was desirable to ascertain the opinion of Parliament upon it by itself.

542. I think I understood you to say that this Bill, in your opinion, is a step in the right direction, but is not the ultimate position that matters might assume in the course of time?—My own private feeling is, that the thing will have to go further.

543. According to your view this is a substantial instalment?—Certainly. I wish to say, with regard to that, that this removes the only legal impediment to freedom. When this Bill is passed the pilotage authorities, being representative bodies, will be able to do whatever is best for the interest of their respective ports.

544. On the previous day, in your evidence in chief, you alluded to the case of the "Spindrift," I have not got the papers before me, but I think some stress was laid upon Admiralty usage; I think some allusion was made to the custom of the Board of Admiralty with reference to instructions to men-of-war on the subject of pilots?—I read the Admiralty regulation.

545. I presume Her Majesty's ships are not bound to take pilots?—No, I do not think they are.

546. Then that case was not a parallel one with a private shipowner who is compelled to do so?—No; but it was quoted in the Board of Trade correspondence not to show what the law is, but merely to show what is the opinion of the Admiralty as to what the relation of the captain to the pilot ought to be.

547. I am not to understand from you that, because the Admiralty Board order the officers in charge of their ships to remain in charge, that a merchant ship captain must do the same thing if he is in compulsory waters; their positions are different?—Their positions are unfortunately different in consequence of the present state of the Statute law, and the decisions of the Admiralty Court.

548. There is so much tendency to increase the liability of merchant shipping owners that one likes to get these matters tolerably clear; am I not pretty correct in this definition of the law as to shipowners' liability in compulsory waters, that so long as his crew is ready and able to, and do execute the orders of the pilot in charge, promptly and efficiently, he is free from all responsibility in case of collision or damage?—The shipowner is bound to show that the accident happened from the fault of the pilot, and from the fault of the pilot only.

549. If the pilot was in charge of the vessel, and through his orders that vessel ran down another, and if the shipowner could prove that his

his crew were properly placed, and in a position efficiently to carry out the orders of the pilot, and did carry out the orders of the pilot, then the responsibility would rest with the pilot?—I think so.

550. In case that pilot was placed upon him compulsorily, that is not a very unreasonable state of things, is it?—I have said the exemption from liability follows logically from compelling the captain to take the pilot.

551. Mr. *Price.*] I think I understood you to say just now, in answer to a question of the honourable Member for Liverpool, that, in your opinion, a good shipowner was more competent to take care of his ship and crew than any Government by any interference which it could exercise?—I think so.

552. I think you also said, in answer to a question of the same honourable Member, that you did not think the regulations which were made for railway companies, and the restrictions imposed upon them were at all analogous in their character to compulsory pilotage?—I am not aware of any such analogy. I know of no case in which the Government appoint a railway guard or engine driver for a railway.

553. Has it not, in fact, been rather the policy of the Board of Trade or the Government, but more especially of the Board of Trade, in dealing with the railway companies, to hold the railway companies responsible for damage, injury, or loss of life, but to do nothing whatever which lessened or weakened the moral responsibility of those who had the management of the concern?—I think, since I have been at the Board of Trade, that has been distinctly the policy of almost every president.

554. I think I recollect once a railway company applying to the Board of Trade, in reference to a Bill then before Parliament, asking if they would determine what should be the particular mode of communication between the passengers and the guard?—Yes.

555. If I remember right, the ground on which the Board of Trade refused to do that was, that it was taking away the responsibility from those who should be directly responsible for the conduct of the traffic on the line?—That is so. That is only one instance of what the Board of Trade are saying every day.

556. I think there was a case, also, of lock-signals; the company said they would be very willing to establish the principle of lock-signals, if the Board of Trade would take the responsibility of what particular form of lock-signal it should be?—I think that was so.

557. Generally, you think that to take a ship out of the hands of the captain, who, of course, is the servant of the owner, and place it in the hands of a person not the servant of the owner, and over the selection of whom he can have no control, would be to weaken the moral responsibility of the owner of the ship in case of accident or damage, even although the legal responsibility might still be left with him?—Certainly; I do think so.

558. That, you do not think, is a very logical mode of proceeding?—I do not.

559. You were also asked by the honourable Member for Liverpool, whether it was not a fact that the payment for light dues was still, in most cases, compulsory?—It is compulsory.

560. Is there not this great distinction between light dues and pilotage dues, that any ship which passes within the range of the light must of necessity derive a benefit from that light, whether she pays or does not pay?—Certainly; with the qualification that if she passes in the daylight she does not want it.

Mr. *T. H. Farrer.*
25 March 1870.

561. Whatever benefit is conferred by that light a ship must derive, whether she contributes or whether she does not?—Just as much as a carriage going along a turnpike road.

562. Or as a passenger going along a street derives benefit from the gas-lights, whether he contributes or not?—Precisely, or as a ship going into harbour.

563. Would it not be practically impossible to maintain a light at all, except at the public expense altogether, except you made every ship pay?—Certainly.

564. If no ship were compelled to pay which did not want the light, no ship would want the light?—No; how could you tell who wanted it?

565. I suppose no ship would confess that she did want it; that is not the case with respect to pilotage?—They are all very ready to pay for the lights, and that is the best possible test of their wanting them.

566. There is that distinction between the two, that whether a ship paid or did not pay, she would still get the benefit of the light, if light were there; whereas, if she did not pay for a pilot, she would not get the services of a pilot?—Quite so; that is an essential distinction.

567. You were also asked whether it was not the fact that, since the pilotage of the Bristol Channel has been non-compulsory or optional, nearly every ship going up to Gloucester has taken a pilot, in consequence of the extreme difficulty of the navigation of that part of the river?—Yes.

568. Is it not a fact that that is true only of the part of the Channel extending from King-road to Sharpness Point, but that it is not true of that part between Lundy Island and King-road, where formerly they were compelled to take a pilot, but where now, not being compelled to do so, they only occasionally do so?—Some do, and some do not, as far as I am able to learn.

569. Therefore, the fact that every ship takes a pilot in the upper part of the Severn, or in that part of the Severn is due only to the distance between King-road and Sharpness Point; that is the dangerous part?—They take the pilot where they want him.

570. They do not take him over the whole jurisdiction, where formerly they were compelled to do so; but where, now, it is optional?—They do not necessarily do so; some do, and some do not. I was a little surprised at hearing from the Newport people yesterday, that they found the supply of pilots for those ships that want them at Lundy, quite as great under the voluntary system as it used to be under the compulsory system.

571. You have never received any complaint whatever from any shipowner, that he had a difficulty in finding a pilot, either westward of Lundy, or in any other part of the Bristol Channel?—On the contrary, the universal expression of those parts is, that they are much better supplied than they were before.

572. You were also asked whether you were aware of the fact, that a very small per-centage

Mr. *T. H Farrer.*

25 March 1870.

of the ships going to Cardiff employed a pilot, as compared with the shipping trade of the Mersey: are you also aware of the fact, that the amount of money paid for pilotage by the port of Cardiff has increased from 6,084 *l.* per annum, when the pilotage was compulsory to 15,074 *l.*, now that it is optional?—Yes, those are the figures in the return.

573. And that at Gloucester it has increased from 2,891 *l.*, when it was compulsory, to 4,707 *l.*, now that it is optional?—Yes.

474. And from 2,062 *l.* at Newport, when it was compulsory, to 4,969 *l.*, now that it is optional?—Yes.

475. Are you also aware that in Bristol, where it was compulsory in 1860, and was still compulsory in 1868, the amount paid for pilotage has fallen from 19,560 *l.* to 10,349 *l.*?—Yes, I am aware of that; but it must be taken with a qualification.

576. At all events, although that fact must be taken with a qualification, the whole tendency of those returns is, if they show anything, to show that the rendering of the pilotage optional in the Bristol Channel has in no way whatever interfered with the interest of the pilots, or tended in any way whatever to increase the difficulties or dangers of the navigation?—Not in any way that I am aware of; it has injured the Bristol pilots, because it has taken the business away from them, and transferred it to the others.

577. Mr. *Malcolm.*] In your evidence in chief you were asked one or two casual questions about the Clyde; the pilotage at present is only compulsory above Greenock, I believe?—That is all.

578. You said, in answer to Question 158, "And with regard to exemptions, they are to apply to coasting vessels under 100 tons?—Yes, under 100 tons moved or towed by steam"?—I think that is the case, because I think that was done by Order in Council on the application of the pilotage authority.

579. Do you know at all when the pilotage on the Clyde became compulsory?—I am speaking now from memory of what Mr. Turner told me the other day.

580. Perhaps that might assist you (*handing a paper to the Witness*)?—This is the Clyde Navigation Act of 1858. By the 136th section, the pilotage is made compulsory in that narrow part of the Clyde; but I was informed that the compulsion existed before this Act, in an Act passed, I think, in 1848. I speak from memory, and not from my knowledge of the Act itself.

581. As far as you know, you have had no special cause of inconvenience from this compulsory pilotage in that narrow part of the Clyde?—I am not aware that we have had any representations upon the subject.

582. You have had no returns of damage during the operation of that compulsory pilotage?—No.

583. You are not able to say from any return that the damage has been far less under the system of compulsory pilotage, that it was under the system of free pilotage which existed before?—No, I cannot say that. I should think it would be very difficult to make any comparison, if I am right in saying that 1848 was the time, because the Clyde has been so enormously improved of recent years that the trade is altogether a different thing.

584. In answer to my honourable friend, the Member for Liverpool, you said you thought if this Bill became law it would be very probable that many masters of ships, especially of foreign ships, would seek to take their own vessels up to port, without being troubled with a pilot at all?—I should doubt whether many masters of foreign ships would take their vessel from Greenock to Glasgow without a pilot, under any circumstances.

585. You quoted that in your report the other day as a very simple thing, it is mere river pilotage, little more than a canal; that is your opinion upon the point?—A canal with a tide in it is a very difficult thing for a big ship.

586. *Chairman.*] I think that question had reference to comparing the Clyde with the Thames. It had been stated that every vessel going up the Thames took a pilot, no matter whether compelled to do so or not?—Yes.

587. Mr. *Malcolm.*] We will suppose that a man was foolish enough to do it, or that under your free trade system he got an incapable man as a pilot, have you any idea what the effect of a comparatively speaking small vessel, meeting with the slightest accident in the Clyde, would be?—I do not know why he is to get an incapable pilot more under our free system than under the present system. Our impression is that he will get a more capable man.

588. How are you to compel him to take any pilot?—He may go without one.

589. We will suppose he does go without one, and being a vessel of nearly 500 tons, turning one of those corners of the Clyde, he gets jammed hard and fast across the river?—I do not think he would be at all more likely to go without a pilot under that system. He will not run his ship aground voluntarily.

590. Not having had any of these returns, perhaps you can hardly answer the question. However, evidence will be called to prove that the damage has been remarkably small; in fact, that the average damage to vessels on the Clyde for the last few years has amounted to about 40 *l.*, so that under a compulsory system you could practically, if necessary, make the pilot liable; if you proceeded against the pilot he could pay such an amount as that?—If you had a voluntary system, the shipowner would be much better able to pay than the pilot ever would.

591. I suppose it has never been suggested to you that under a compulsory system pilots might form a sort of fund; an indemnity fund, in point of fact?—That was mentioned the other day by Mr. Turner as a possibility, that they might agree to subscribe together to form a fund to indemnify persons who were injured.

592. You do not think anything of it?—I think it is rather a roundabout way of doing that which can be done much more simply by the voluntary system.

593. I think you said this Bill proposes to leave the boards exactly as at present?—Yes, I think so.

594. How do you reconcile that with clause 2, because you say that during the next two years these pilotage boards must not increase the number of their pilots, for fear of finding at the end of these two years they had made a mistake; and then if they had increased during those two years they would forfeit all claim to compensation, or anything of the sort?—In the first

first place with regard to that, that is one of those details which would very properly have to be reconsidered; but in the second place, the pilotage authority would only be likely to increase the number of the pilots if there were an increased demand for their services, and in that case no demand for compensation would arise, and consequently the Bill would not touch them.

595. No temporary increase?—It is not likely that there would be such fluctuation in the trade of a place in the course of two years as to make them largely increase the number of pilots.

596. There was one thing that struck me in one of your answers; you are very much in favour of pilots being allowed to cruise where they please; that is to say, so that Liverpool pilots should go right away down Channel, or up North wherever they liked, to try and pick up ships. Do not you think that practically would lead to an enormous amount of confusion, not to say perpetual rows between pilots of various ports?—I did not express a positive opinion as to what might be best in that respect. I said, on the contrary, it was for the pilotage authorities of each port to determine that. What I said was, that many shipowners represent to us that they want to find pilots in places where they do not find them now, and that want would probably be better met under a free system.

597. Vessels coming up to London would like to find pilots a long way down?—Yes; one of the largest London shipowners told me he wants to find a pilot down at the Isle of Wight.

598. Mr. *J. S. Hardy.*] In your evidence in chief you gave instances of three grievances which happened to various ships. Taking these three grievances, I wish to know whether you do not think that two of them, or the whole of the grievances, in fact, depend very much indeed on whether there is not conflicting evidence between the pilot and the master of the ship?—No, I do not think so. In the first place I think it is a hardship upon these men to be obliged to employ a pilot at all when they do not want him.

599. Under the present law, he having wilfully broken the law, there would be no grievance in his being punished for doing so?—I think there is an essential hardship to begin with. You begin with an anomaly and a hardship, and then you have an exceedingly severe and stringent law to punish the breach of that anomalous law. Of course the hardship of the original law very much increases the hardship of the remedy. I think, secondly, that even supposing it to be right that he should be compelled to take a pilot, it is a monstrous thing that when he has got to another port you should send a policeman after him and make him pay the whole sum that is demanded, upon pain of being carried another 200 miles, and stopping his ship altogether.

600. Do you not think the grievance in that case is in the law, and that it is not a grievance which falls upon that man in any special way if he has wilfully chosen to break the law?—If a man wilfully breaks an anomalous law, and the remedy is exceptionally harsh, I think he has a right to complain, even although he has been a law breaker.

601. You have told several honourable Members that you think the owners of ships, passenger-ships even, are more likely to be able to take care of their ships than the Government can do it for them. I want to know whether it is not perfectly possible, and, indeed, likely, that in many cases ships may be insured to such an extent that it may be a positive advantage to the owner that they should be cast away, and that he may care for nothing, except as regards the lives of the people on board?—Of course there is always that question. The question of insurance is one of the greatest difficulties of the whole matter. At the same time, I do not think you mend that by putting a Government pilot on board, or by taking the ship out of the shipowner's own hands. The thing has been exaggerated. No doubt, if a shipowner is over-insured, he may have an interest in losing his ship; but, on the whole, the interest of the shipowner is to make a good voyage and keep the ship safe.

Mr. *T. H. Farrer.*
25 March 1870.

602. By having compulsory pilotage, you ensure that there is somebody on board who will value the lives of the passengers as well as the safety of the ship?—I think you had better let the insurer look out for that, which he will do.

603. You said you thought in such a case there should be a claim for damages; has such an action ever been brought?—I should think in innumerable instances.

604. I mean for loss of life?—Yes; in one case the Board of Trade, under a special procedure provided for by the Merchant Shipping Act, recovered 6,000*l.* from the owners of the emigrant ship "John," to be divided among the families of the poor emigrants. But the best answer I can make is this, that ever since I have been at the Board of Trade, the Board have been pressed, year after year, by the shipowners to get rid of that liability under Lord Campbell's Act. I do not think they would press for that unless they felt it to be a real liability.

605. You say the larger shipowners would be certain either to employ a pilot, or else they would have their masters qualified to act as pilots?—I think so.

606. The assumption would be, that a ship which would be lost from want of employing a pilot would be one belonging to a small shipowner, to whom a little money would probably be an object?—Yes; but he does not want to lose his ship any more than a large shipowner.

607. At the same time, if he does lose it, it places him in such a position of insolvency that no action for damages would be of any value against him?—No; but he would be the less likely to wish to lose his ship.

608. No doubt; but the relatives of the people who are lost have no compensation whatever?—No. My position is this, that the shipowner is more likely to take care of his ship than the Government pilot is, and the ship is more safe in his hands than in the hands of the Government pilot.

609. Is there any way in which we can get the proportion of ships which are lost in pilotage waters with pilots, as against those which are lost without pilots?—No, I do not think there is; and I do not think it would be of much value to you if you got it.

610. You think the proportion would be much the same?—I cannot say what the proportion would be, but the nature and character of the ships would be so different, that you could not make any fair comparison.

611. Would the ships lost without pilots be all

Mr. *T.H. Farrer.*

25 March 1870.

small ships?—I should think the large ships take pilots generally.

612. I have just had put in my hands a paper giving an account of some trials at South Shields; I suppose there the system is voluntary?—Quite.

613. I see in this case that a man going off to pilot a steamer, which he says he has piloted ever since it was built, is interrupted by 10 pilots, who say that they and their children are starving, and that they must make a living as well as he; does not that tend to show that in places where pilotage is perfectly open, there is a competition which injures the position of the pilot, and makes it not what it ought to be?—I really do not know what the case there is. It is possible there may be more pilots than are wanted at the time; and I know there are differences between different classes of pilots. I do not think the Tyne is the only place where some of the pilots are badly off; and I do not believe that any want on the part of any of the pilots is due to the voluntary system; it certainly need not be so.

614. Does not this Bill rather put us on the horns of this dilemma: that if pilots will continue to be employed as before, it will be of no practical benefit, except as giving a theoretical exemption from the law; and if otherwise, there will not be the same number employed, and it must reduce the business of the pilot below that which it is at present?—I think not at all, believing, as I do, that the pilot will be just as well employed as before, and under a much more healthy system. It is not a theoretical objection at all. If the shipowner voluntarily employ a pilot, then, as in the Bristol Channel, the relation between employer and employed is healthy; if you compel him to employ a pilot, it is not. The shipowner feels that the pilot is not his servant, that he has not voluntarily taken him. The pilot feels that he must be taken, whether wanted or not, and the relation is an unhealthy one; just as if I employ a butler or a gardener voluntarily, the relation is a healthy one; whereas, if I am obliged to employ him, the relation is an unhealthy one.

615. Do you think it quite impossible to put the position of masters of ships towards pilots throughout the whole of the passenger service in the same position as the captain of a man-of-war is in, who is distinctly ordered by regulation, if he sees that the ship is going into any danger, to take the responsibility out of the pilot's hands?—I have said I think that would be an improvement.

616. You do not think it impossible, you think it difficult?—I think it is an illogical solution of the difficulty, and one that will give great dissatisfaction to the shipowners. I think they are right in their objection to it.

617. You do not think the public have any right to insist that there shall be some person on board who clearly has no interest in the property of the ship, but who has an interest in the lives of the people beyond the property of the ship?—I do not see what particular interest the pilot has in the lives of those in the ship. It is not a question whether the Government or the law have the right to do this or that. They have a perfect right to do anything necessary for the safety of the ship. Our position is this: that it is more likely to be safe if you leave the responsibility on the shoulders of the owners, than if you put the responsibility upon the shoulders of a man who is not responsible.

618. Even although heavily insured?—Even although heavily insured.

619. Mr. *Pemberton.*] I think you finished your evidence the other day by stating generally your objections to the present system; and I think you said that in the first place there was a *primâ facie* case against compulsion at all?—Yes.

620. Do you think that it is a *primâ facie* case against compulsion when the question involved is the lives of persons?—Yes, I do; because I think lives are safer under a voluntary system than under a compulsory system.

621. That is a matter of dispute; but setting apart the question under which system life is safer, compulsory or voluntary, do you think, the question being one of life, there is a *primâ facie* case against compulsion?—I think the question is in which way do you procure the greatest amount of good service, and the greatest chance of safety.

622. The question of the lives of the public being involved, it is not an ordinary question of compulsion, as it would be in the case of protection of property?—Life is more important than property, but they differ in no other way; it is as much the shipowner's interest to carry lives safely, as it is to carry property safely.

623. You say, "As a consequence of compelling an owner to employ a pilot, to put the ship in his charge, as a natural and logical consequence, you have taken the power and responsibility from the master and the owner of the ship." I think you also said this morning, that so far as you were concerned, you would rather be in a ship under a voluntary system, than under a compulsory system?—Yes.

624. Do you not think it would be an advantage to have the benefit both of the one and of the other?—How can you?

625. If you could have both, do not you think it would be an advantage?—Yes, if you could have the benefit of black and white at the same time.

626. Under the voluntary system, you have at present the advantage of the selection, which the owner would make under the compulsory system; you have the advantage of a person who is qualified, whom the Government insists on your employing; if there was any law under which those systems could be amalgamated, do not you think that would be an advantage?—I should like to hear what that system is.

627. If there was such a system, you would approve of it?—That I do not say until I hear what it is.

628. It is a simple question; if there were such a system, it stands to reason the advantage of a voluntary system, plus the advantage of a compulsory system, would be so much to the good?—If you get two advantages instead of one, no doubt two advantages are better than one.

629. As was suggested by my honourable friend the Member for Rye, do not you think it possible that the law might be so altered as that the compulsory service of a port might be maintained, and yet the owners of a ship might not be exonerated from all liability?—That, as I said before, is what was practically proposed in the Bill of last year; but it was said of that, and I think very properly, logically, and naturally, by the shipowners, "If you are to deprive us of exemption from responsibility, let us also be free to

to employ a pilot as we wish." I do not see how you can escape from that.

630. The system employed in Her Majesty's ships has been mentioned; do not you think some law might be devised by which the responsibility might not be entirely shifted from the owner, although he had a pilot on board?—The honourable Member for Hull has said, very truly, that the Queen's ships are not obliged to employ a pilot.

631. Assuming that an owner was obliged to take a pilot on board, do not you think the responsibility might be so shifted as to give you the advantage, both of the responsibility of the captain and also the advantage of an experienced pilot?—As I said before, I think the master and the owner should take the pilot wherever he is really necessary, and, therefore, that any such obligation is not wanted; then, as I said before, you only remove part of the grievance if you do that. You certainly remove one evil arising from the anomalous state of the law, but you still leave the small shipowner and the steamship owner compelled to pay for and take a man they do not want.

632. On the last occasion you gave us many instances of the hardship of the application of the present law; do not you think those cases are mere matters of detail—that is to say, the way in which the law is applied—and do not involve the principle of compulsory pilotage?—You might undoubtedly remove the present exceptional stringency of the remedy; in fact, we did propose to do it in our Bill of last year, without altering the nominal effect of law of compulsory pilotage. What the real effect of altering the remedy would be, I cannot say.

633. You mentioned several cases; can you tell me, without reference to the Papers, over how many years those particular instances were spread?—Those particular instances are, I think, all in this Paper. The dates of this Paper extend over about three years, I think. They do not seem to be the only cases, from the statement of the Sunderland shipowners; and naturally, if we reply, and make public our reply, that we are unable to interfere, people do not come to us any more.

634. I do not think there were a great many over the three years?—I only gave particulars of three, and I believe I referred to one other, which is mentioned specifically in this Paper.

635. I think you mentioned the case of a particular ship in which the Cinque Port pilots were concerned, in which there was a claim by a Mr. Drew?—Yes.

636. I think you said you did not know, as a matter of fact, whether that money had been returned?—No, I do not.

637. I believe it is the fact that it had been; but that, after all, is only as to the way in which the law was applied, and is no objection to the general principle of compulsory pilotage?—Of course you might make the remedy much less stringent, and then you would not have those cases of hardship of sending for a man, and putting him in charge of a policeman, and carrying him off 70 or 300 miles. You would still have the hardship of compelling a man to pay for what he did not want, and fining him if he evaded the obligation.

638. All those matters which you have mentioned are merely matters of detail in the administration of the law?—I have mentioned them to show, not the evil of the law of compulsory pilotage, but the evil of the remedy under the present Act.

639. The remedy, according to the existing system?—Yes: I showed how harshly this law, in itself originally harsh and anomalous, had worked.

640. You do not think, as a necessary consequence of a system of compulsory pilotage, that these evils must necessarily arise?—Not necessarily; but, at the same time, you would have very great difficulty in enforcing strictly a system of compulsory pilotage without some stringent remedy. If a ship is to go through the Downs, or down the Thames, and then go to Sunderland and Shields, it would be very difficult to recover the pilotage without some very stringent remedy.

641. You also referred to the case of the "Spindrift," did you mention that at all with a view of showing the bad operation of the laws relating to compulsory pilotage?—I think I only mentioned it to read certain passages. I read the opinion of the Elder Brethren and the opinion of the Admiralty in the case of the "Vigilance."

642. Do you remember where the "Spindrift" was wrecked?—Yes.

643. It was at Dungeness, was it not?—By the 370th section of the Merchant Shipping Act, the London district of the Trinity House is defined to include the water of the Thames, and seas and channels leading thereto, as far as Dungeness, and by section 376, the employment of pilots is made compulsory within that district. The "Spindrift" was wrecked within Dungeness.

644. That is not out of the compulsory pilotage waters?—No.

645. In that case do you know that the owner of the ship chose his own pilot?—I should think it was probably the case that he chose the pilot out of the licensed body of pilots. I did not, however, quote it as against the owner. All the evidence goes to show that the owner had taken the utmost care and precaution. I referred to the case as illustrating the bad effect of the present law of compulsory pilotage, and its consequences on the relation between the pilot and master.

646. Is it the fact that the Board of Trade exonerated the pilot?—No; emphatically, No! And the Trinity House, with whom the power rested, did not exonerate the pilot; they suspended him for three or six months.

647. Did not the Board of Trade exonerate him?—No, most undoubtedly not. They had no jurisdiction to say anything about him.

648. He was a Trinity House pilot?—Yes.

649. Have you any means of showing the actual number in any particular year, or over any particular period of years, of ships that have been lost when in charge of the Cinque Port pilots, for instance?—No.

650. I think yesterday you put in a document relating to the loss of ships in the Newcastle-upon-Tyne district?—I quoted a great deal from a Paper, 455—62, improperly headed "Newcastle-upon-Tyne Pilotage."

651. I think at page 83 there is a list of damage caused by vessels under the charge of duly licensed pilots and the amount not recovered as against them, during the years 1860 and 1861?—That is a return given to us by Mr. Moss, the solicitor for the bargeowners on the Thames, of cases of damage, mostly of small amount, done

Mr. *T. H. Farrer.* 25 March 1870.

to barges by vessels in charge of a compulsory pilot. In one of the Papers I put in afterwards there is another long list.

652. Of course that includes all the cases in which any claim was made against a pilot?—That is more than I can tell; when they came with the deputation to Mr. Milner Gibson, we said, "Can you give us any instances?" And, in consequence of that, Mr. Moss sent in this Return.

653. Looking at that Return, it appears that, altogether, there were only 27 cases, and of those there are only 14 in which the owners were enabled to recover from the pilot; the other cases are cases where the pilot denied his liability, or put in some plea?—Yes.

654. I should like to call your attention to the letter of Mr. Moss which enclosed that Return: "By the desire of Mr. Milner Gibson, on Saturday last, when before the deputation, I beg to enclose you the statistics, and also the proposed amendment of the Act in the way determined on by the gentlemen who waited upon Mr. Gibson; you will observe that it does not wish to abolish compulsory pilotage, but only to make the shipowner liable for the damage done by his vessel, although under the control of a pilot, in the same way that all masters are responsible for the default of their servants;" do not you think a system could be devised by which the shipowner could be made liable, and that, then, one of the principal objections to compulsory pilotage would be removed?—That would remove the objection to the present law made by these bargeowners, but I think you would find that there would remain a very large number of objections to be made by the shipowner.

655. My honourable friend, the Member for Rye, hinted at the question; did not you think one of the principal objections to the present system would be removed if any fund could be provided by which the pilot would really have to find the money, in cases where the accident happened by his default?—You would remove this particular objection, but you would not remove all the others.

656. I believe, in many cases, all the earnings of the pilots go to one particular fund; all their earnings are amalgamated?—In some cases, as in that of Dundee, they are thrown into hotch-potch, and divided amongst them.

657. Supposing the law were that the owners of a ship damaged by the fault of a pilot should have a claim against the fund?—I think that would undoubtedly give a better remedy to the bargeowner, but it would diminish the responsibility of the individual pilot. It would be like insurance.

658. Would it diminish the liability of the particular pilot if the primary remedy was against the particular pilot and the secondary remedy against the fund?—No, it would not.

659. I think you said you supposed that the origin of this principle of compulsory pilotage had reference to the obsolete guilds?—I should think so, but I do not know.

660. Is not it the fact that in America the same principle has been adopted?—They have taken it from us, no doubt.

661. That law is still in existence in America?—I believe it differs in different ports; but in some ports, no doubt, the shipowner is obliged either to employ or to pay for a pilot.

662. I think you said you thought that the voluntary system had proved to be a benefit to the pilots, and you instanced the case of the Welsh ports?—Yes.

663. Do not you think that the increase which has happened in those ports has been with reference to the general increase of the trade of the locality?—I daresay that has had something to do with it. That has happened in all parts of the country and one would hope would continue to happen.

664. Of course the rise in trade in every locality would have nothing to do with the question of compulsory pilotage?—No.

665. It is, of course, entirely independent; do not you think if the compulsory pilotage existed in these places, the trade of which has so increased, the pilots would have earned so much the more?—I do not think the thing would have been by any means so satisfactory from all I hear from the shipowners and pilots.

666. Of course, they would have shared in the general increase?—They might have got more, but things would not have been so satisfactory.

667. I suppose it is not the intention of the Legislature in any way to provide for the master of the ship, without any examination at all, being at liberty to pilot his ship in compulsory waters?—The master of a home-trade passenger-ship is at present obliged to undergo an examination. To what extent that examination shall be carried, so far as local pilotage is concerned, is quite a different question, and I do not think that is touched in this Bill.

668. I suppose it is not the intention that owners should be at liberty to employ a person without any certificate or examination at all?—He is obliged to pass an examination now, and that part of the law is not altered.

669. I think you referred to an objection which the owners had to send their masters and mates to be examined?—In some cases they have had great objections.

670. That objection would still exist?—I have never heard of any objection to the ordinary examination under the Board of Trade; but as regards the pilotage examination, they have to pay a fee for it in the first instance, which is one reason why they object; and to pay a fee for the renewal every year, which is another reason. At Liverpool, as I said before, for some reason which I am unable to explain, they certainly are exceedingly averse to applying; and yet the masters of these very steamers, who are thus unwilling to apply, have been in the habit for years and years of conducting their ships in and out every day with safety.

671. You say you think the new system would promote healthy competition; do not you think it would be at the risk of the public, at all events for some time, till the merits of the system had been tried?—No, I think not.

672. Under the new system would there be that constant attendance of the pilots which there is now?—If we are right, we think there would be quite as great, if not a greater, attendance.

673. You do not propose to compel the pilots to attend?—That would rest with the pilotage authority, as it does at Shields, or Cardiff, or Dundee.

674. So that, although by the new Act nobody would be compelled to take a pilot, yet the pilotage authorities might compel the pilots to be in attendance?—They might; but they would probably

probably never need do so, if their services were required there.

675. Still, that would be a possible result?—A possible, but a very improbable result.

676. You say you think that, even if the new system were carried into effect, as many pilots would be employed as are employed now?—In most places; where they are wanted they would.

677. Would they be the same pilots?—I do not see why there should be any difference.

678. It is rather a question of compensation?—If they were not employed.

679. As to the question of compensation, I think you say that is a mere matter of detail, to be considered afterwards?—As to certain points in it, and the application of the principles of the Bill to particular cases.

680. I think my honourable friend, the member for Hastings, alluded to the immediate diminution of a person's income and the great disadvantages which might happen; for instance, if he has to pay for life insurance, or any contribution to superannuation funds?—That period is a matter of detail to be considered.

681. I think you said you did not think there would be a greater area of selection of pilots, that there would be a larger class from which pilots would be selected?—That would, I think, depend upon the circumstances of each port and upon the pilotage authority. It is quite obvious that in the Thames there are a great number of persons constantly acting as pilots, and earning large incomes; acting just as regular pilots, but who are not licensed.

682. I do not quite understand whether you think the result of this change would be, that in most cases they would take pilots, and if so, whether they would take them from the same class, or whether the result would be that they would do without them?—Where they are really wanted now, they would still continue to take them, and they would take them from the same class, because the licensed pilot under this Bill has the power of superseding the unlicensed pilot; the pilot would retain the advantage of his license.

683. So that unless the result was that they did not take the pilots at all, there would not be very much change in the system?—Not so far as the pilot is concerned, except that the relation would be voluntary instead of compulsory, which is a very considerable change.

Friday, 1st April 1870.

MEMBERS PRESENT:

Colonel Bourne.	Mr. Malcolm.
Mr. Thomas Brassey.	Mr. Phillip Wykeham Martin.
Mr. Cave.	Mr. Norwood.
Mr. Gourley.	Mr. Pemberton.
Mr. Graves.	Mr. William Philip Price.
Mr. Grieve.	Sir Henry Selwin-Ibbetson.
Mr. John Stewart Hardy.	Mr. Stevenson.
Sir John Hay.	Mr. Charles Turner.
Mr. Shaw Lefevre.	Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., IN THE CHAIR.

Mr. THOMAS HENRY FARRER, re-called; and further Examined.

Mr. *T. H. Farrer.*

1 April 1870.

684. Mr. *Charles Turner.*] WITH regard to the protection of life and property, I think you stated to the honourable Member for Rye, that it might be left to owners and insurers who knew what their interests were to provide for that?—Yes, I think I said so.

685. Do you not think it is better for the Government to make provision as to that, than to leave it to any party to do so?—I think that the real question is in what way do you provide best for the safety of life; do you provide best for it by interposing a Government officer or by leaving the responsibility upon the shipowner? I am very much struck by what has happened at the Board of Trade; I think that almost every year since I have been there, that the shipowner has objected in the strongest way to his liability under Lord Campbell's Act. But he does not object to Government supervision, or at any rate not to the same extent, from which I gather that the liability under Lord Campbell's Act operates much more strongly upon his mind or much more strongly upon his actions than the Government supervision.

686. How then do you account for the course of maritime legislation since 1854, which includes the compulsory examination of masters and mates, and salvage for life, and so on?—I never said that I thought that the course of legislation had been entirely consistent, and I believe I did say that I thought that placing the liability upon the ship, or upon the owners of a railway, was at variance with the principle of Government supervision. No principle is ever carried out perfectly logically; but I do not see anything in the case of compulsory examination of masters and mates which is analogous to compulsory pilotage. The examination of masters and mates is precisely the same thing that is done in the case of barristers and doctors; you merely see that a person possesses a certain amount of qualification. You compel nobody to employ him, and you allow anybody to obtain the certificate and pass the examination who is able to do so.

687. Then you approve of the examination of masters and mates, but you disapprove of the examination of pilots?—I do not disapprove of the examination of pilots at all; I entirely approve of the examination of pilots.

688. But you would compel shipowners to take masters and mates who had been examined, and you would not compel them to take a pilot who had been examined?—You do not compel them to take a master or mate at all. You say that a man shall not exercise a certain calling unless he has proved his competency; but you do not force the owner to take any particular master or mate; you only say, if you take a master or mate you shall take a man who has been examined. In the same way, under this Bill, you say to the owner, if you take a pilot, you shall take a licensed pilot.

689. I think you stated that you did not see how the law could be made uniform, except by the abolition of compulsory pilotage?—I said that I did not see any way of clearing away all those anomalies which have grown up, except by going to the root of the matter and to the cause of the anomalies, and removing it.

690. Will there be no anomalies under the new Bill; I think you propose exemptions there in the respect of the immunity of owners in France and Belgium in that respect?—I am not aware that there will be any anomaly as regards either the voluntary employment of pilots, or as regards the law of liability. There will be different rules of pilotage, varying with the circumstances of the different ports.

691. How do you account for the difference of rule between the ports north of Boulogne, and those south of Boulogne?—I am really unable to account for it; it is historical; there it was, and there it is.

692. Why do you continue it?—Because I think that if you tried to take away that exemption you would find that the shipowners of our ports would resist you in such a degree that it would be impossible for you to pass any Bill of the kind. I say that it would be impossible for you to remove anomalies by making compulsion universal, even if it were desirable to do so.

693. But, even taking away compulsion, you have anomalies, do you not?—We leave the different regulations which the circumstances of different ports require, if you call them anomalies, in the hands of the pilotage authorities.

694. Then the burden of your argument generally is in favour of the abolition of the non-liability of shipowners?—My argument is strongly in favour of the liability of shipowners. I wish to take the exclusive liability off the pilot and put it

it on the shipowner. My argument is in favour of the abolition of the non-liability of owners, and in favour of doing away with those anomalous cases in which the owner is not liable for the conduct of his ship.

695. Would not the owner be rendered liable by the omission of section 388 of the Act of 1854?—I am afraid not, because the courts have settled that the immunity from liability arises at common law from the fact that the law compels an owner to employ a pilot. I have read some passages to that effect.

696. I think that now the pilotage authorities have the power to abolish compulsory pilotage in different ports, have they not?—They have.

697. And that principle is reported in the Bill of last year?—It was so repeated. That clause remained, and it is in the Bill of this year also.

698. And that goes upon the principle of the local authority being the best judge of what is desirable in its own district?—Quite so.

699. Why would you depart from that principle as regards compulsory pilotage?—Because compulsory pilotage, and those immunities from liability, are different from those local laws and regulations which are necessary for different ports, and which must differ in different ports. They are general principles, and the law becomes a mere chaos if you have the law upon those subjects differing in different ports.

700. Then, as I rightly understand, that although you think that it is compulsory upon a shipowner to employ a licensed pilot, you do not think that it is wrong that he should be obliged to employ a licensed master and mate?—I do not think it an oppression upon the shipowner to be obliged to employ a licensed pilot if he employs a pilot at all; but I think it is an oppression upon the shipowner to be obliged to employ a pilot, when a pilot very often is not necessary.

701. But whatever the compulsion to employ a licensed master or mate, it is compulsory with a limitation?—In the slightest possible degree; you cannot employ a barrister in a court of law who has not passed the examinations of the Inns of Court; but that is really no limitation upon the employment of a lawyer; you cannot employ an attorney who has not passed the examination at the Law Institution; but that is no limitation upon your employing an attorney; you cannot employ a doctor or a surgeon who has not passed an examination.

702. But at one time it was not necessary for them to pass an examination, was it?—It was not.

703. And the examination was enforced for the protection of life and property?—It was enforced possibly ultimately for the protection of life and property; but I should say rather for the purpose of raising the status and the education of the class.

704. Improving the class of masters and mates?—Improving the class of masters and mates.

705. I think you gave an illustration of a warrant being issued against a master in North Shields for penalties incurred at Gravesend, and you put that as rather a hard case; but is not that a course of proceeding which is applicable to the recovery of all penalties, and not to compulsory pilotage only?—I suppose that a penal clause of any kind might operate harshly in such a case; but it operates with double harshness when the offence which you have created is such a non-natural and artificial offence as not employing a person whom the shipowner does not want to employ.

706. But it is the law, and it is not for a man to judge as to the harshness of the law; it is a question whether, in all cases of penalty, you must not have such a course of procedure, and whether, if you do not pursue such a course, you have a penalty at all; is not that so?—No doubt, so long as the law is so, the man must submit to it; but we are now considering whether the law should be altered or not.

707. But so long as it is the law must not a man obey it?—Yes; but there are laws, and there are laws, and some laws are much harsher than other laws; in general penalties of this sort do not operate harshly, because the person who commits the offence is resident in the place; penalties against a shipmaster do operate harshly because he is always moving from one port to another, and to bring him from a port at a distance to another port at which he may have committed the slightest offence certainly operates harshly upon him; therefore it is exceedingly desirable that the laws against him in that respect should not be non-natural or artificial laws, but that they should be just laws.

708. But are you not rather assuming the question in that answer?—I say here is a man who is perfectly able to conduct his own ship, and who is conducting it. A man comes and says, "Take me on board as a pilot;" the master says, "I do not want you," and he goes away; upon these bare facts I say it is exceedingly hard that he should be told that he must pay a very large sum of money, or else that he must come back and stop his voyage, and put his owner to all sorts of expenses, and be brought back from Sunderland to Gravesend. But there is another point in these hard cases which I do not think I mentioned as clearly as I ought to have done the other day. In the particular case brought before the Board of Trade by Mr. Lindsay, there was a question whether under the circumstances the pilot could have been taken on board or not, whether the pilot offered himself in such a way as that the ship could take him, and whether it was not rather the pilot's fault than the shipmaster's fault that he was not taken on board; if the shipmaster could show that the pilot did not do his duty in offering himself, of course he would not have been subject to penalty; but it was not worth his while to dispute the question; coming up to Gravesend would have cost him a great deal more than the penalty, and therefore the real question at issue was never tried; in fact, the man has not a chance.

709. But the case would have been the same, I apprehend, if the pilot had offered himself, as we presume he did, nothing being shown to the contrary, in a proper way, and there being a necessity for a pilot?—But the master had not the least chance of proving his side of the case; he had no chance of offering a defence, because it was better worth his while to pay than to incur the expense of coming up to Gravesend to defend himself.

710. I think you stated, in answer to the honourable Member for Liverpool, that the case of the Liverpool pilot-boats required special consideration?—Very special consideration.

711. Is there anything in the Bill which provides for that?—There is nothing in the Bill

Mr. *T. H. Farrer.*

1 April 1870.

which provides for it, for when the Bill was drawn, we felt it hardly possible to provide for such a special case as that, without more complete knowledge of it; but I think that to some extent the Bill provides for it, because to the extent to which the pilot who is superannuated may be a boatowner himself, the Bill would probably enable the Government, in superannuating him, to take into consideration what he received by way of the earnings of the boat, as well as what he received as pure pilotage earnings; as regards those boatowners who are not pilots the Bill does not provide for it.

712. But it would be left entirely to the discretion of the Government?—No doubt the Treasury and the Board of Trade have a discretion, because it would be scarcely possible to leave a claim of that sort undefined; if it can be defined in the Bill so much the better for everybody; if it cannot be defined in the Bill, it will never do to leave an indefinite claim in the pilotage authority upon the public exchequer.

713. Have you proposed to put any clause in the Bill to make it imperative upon the Government to consider the claim?—I suppose that that will be a matter now for this Committee and for the Government to consider; but we have been looking into the subject of those boats for such information as we could get; the subject of these boats at Liverpool no doubt does require serious consideration from the Committee.

714. *Chairman.*] Not only with reference to compensation, but with reference to the general practice?—With reference to the general practice. I was much struck with an expression in a letter which I read from Mr. Forwood, to the effect that this boat system was a dead weight upon the pilotage system of Liverpool; and in a paper by Lieutenant Graham Hills, the Marine Superintendent, there is a passage with which I was struck. He says, "The system unquestionably works with some disadvantages which are open to amendment; the method of boat-owning, instead of every pilot having an interest in his boat and contributing fairly to her maintenance, only about half the pilots have shares: to be a boat owner has been an object of emulation, but this emulation has run up the price of shares to an enormous premium, and the capital invested in faith in the existing system, instead of being equivalent to the cost of the boats which would be about 30,000 *l.* amounts to nearly 90,000 *l.*" I think it would be worth while to explain to the Committee exactly what that system is. First I had better mention what the Act of Parliament is. The Act of Parliament of the 21 & 22 Vict. c. 92, s. 157, the Act of 1858, which re-enacts former Acts, states exactly how those boats are to be owned. The boats are owned by pilots; but when a pilot dies his share, unless it is voluntarily sold to another pilot, is put up to auction at a price fixed by the Mersey Board. That price is fixed under the Act of Parliament, not only with reference to the actual value of the boat, but with reference to the proportion of the earnings of the boat which are appropriated to that boat under the Liverpool Pilotage Bye-Laws. If the boat is not bought at that price at the auction, then the Mersey Board may allow either the representatives of the deceased pilot, or the superannuated pilot, as the case may be, to continue to hold his share in the boat for a year; and, at the expiration of that year, they may continue the license. It appears that under that system about one-third of the shares in the boats are owned by persons who are no longer acting pilots. Then by a bye-law, No. 144, passed in 1861, which is also, I believe, a repetition of a former bye-law, the earnings of each boat are divided into eight shares. Of these eight shares two-and-a-half go to the boat. Now I should like to read to the Committee what the Commission of 1836 said about this system. This is the report of the Commission on Pilotage in 1836:—"At the port of Liverpool 11 boats have been licensed for cruising with pilots which are owned by the masters of the boat and such other pilots belonging to the port as can raise sufficient capital to purchase a share. Some hold shares in more than one boat, and the extent and number of the shares depend upon each individual's opportunity and ability to purchase. The crew of each boat consists of two masters, one of whom always conducts the sailing of the boat while the other remains at home, of a certain number of apprentices, and from 10 to 15 pilots. The earnings are ascertained once a quarter, and after deducting for provisions, contributions to the fund, &c., the residue is divided into shares, as follows: Two masters one share each (say), 10 journeymen or licensed pilots one share each; owners for three apprentices, or two-thirds of three shares; ditto, unlicensed apprentices; ditto, wear and tear of boat; exhibiting a total of 18 shares when there are only 10 pilots on board." I think the proportions are somewhat varied in the more recent bye-law; the same system, at any rate, was in existence then as is in existence now, even if the proportions are not exactly the same. The Report of the Commission goes on: "It appears in evidence that the owners of one boat, No. 11, have divided a profit at the rate of 800 *l.* in one year; and the consequence has been to enhance the value of the pilots' vessels from 1,200 *l.* or 1,400 *l.*, their original cost, to between 4,000 *l.* and 5,000 *l.*, and even more. This, moreover, does not include the allowance to the masters, who do not act as pilots, and whose duty might, as in the Cinque Ports, be equally well performed by the senior pilot on board. We are of opinion that this system, in an establishment which appears otherwise well conducted, should be discontinued; but as the present owners of these boats have paid such exorbitant sums upon the faith of an existing Act of Parliament, they are fairly entitled to remuneration, which may be arranged in the following manner." Then they propose a plan for the abolition of this system; they say that the rates of pilotage were too high at Liverpool; that a portion of them should be devoted to the purchasing of the interest of those boats as a sort of sinking fund; and when that interest was purchased the pilotage rates should be reduced, and after that only so much of the earnings should be given to the boat as would actually pay for its cost and wear and tear. These recommendations were never acted on, and the same system goes on now; and as far as I can understand now, the facts are that there are now 12 boats; that according to the marine superintendent their value is about 30,000 *l.*; that the sum actually invested in them by the pilots is about 90,000 *l.* or 92,000 *l.* According to statements at a meeting that was held amongst the pilots lately, it appears that nearly 30,000 *l.* belongs to superannuated boatowners, and not to actual pilots.

pilots. It further appears that the whole pilotage earnings in 1868 and 1869 were about 67,000 *l.*, and that the total paid to the boat-owners, after paying expenses, was 6,853 *l.*, which, of course, is what Mr. Forwoord and Lieutenant Hills mean by the "dead weight upon the pilotage of the port."

715. Have you at all considered the question as to the adjustment of the compensation due to the pilots for their boats?—I am not in a position to propose any plan; but it would seem very desirable in any plan that was proposed that this system should be got rid of; that whatever is done should embrace some plan for freeing the pilotage of the port from this, which is obviously not only so much substracted from the actual earnings of pilots, but a sort of vested interest which prevents any alteration in the pilotage system in Liverpool, such as the employment of steam pilotage boats, as has been suggested in one of those papers.

716. I think that you proposed in this Bill that if the demand for pilots shall have fallen off, the pilotage authority may withdraw such a number of pilots as would leave the remainder at about the same emolument?—Yes, so that the remainder shall not suffer; but if the anticipations of either Lieutenant Hills or Mr. Simpson prove to be correct there will be really no case for compensation. I see that Mr. Simpson, the Superintendent of Pilotage, states: "Even without a compulsory system the employment of pilots in such ports as Liverpool would probably be universal;" and he goes on to say in another place in his paper, "Another reason is that with every facility for examination afforded to masters and mates, the number of pilotage certificates applied for has been exceedingly small; and the natural inference is that masters and mates consider the pilotage of the port so difficult that it is not to their advantage to take out a certificate. One shipowner has admitted that although he offered 25 *l.* a year additional salary he has altogether failed in inducing the masters of his ships to present themselves for examination. Only 29 certificates have been issued, and out of this number 20 have been resigned, or cancelled by death; of the nine remaining, one is held by a master of a steamer in the foreign trade, who nevertheless invariably employs a pilot, and eight by the masters of certain Glasgow schooners;" so that he thinks that the pilots will not suffer.

717. But supposing that they do suffer, and that there is a falling off in the receipts of the pilotage, out of what fund is it proposed to give superannuation to them?—Out of the public exchequer.

718. Sir *Henry Selwin-Ibbetson.*] Does that letter refer to any particular port?—I should mention that the papers from which I have quoted of Lieutenant Hills and Mr. Simpson, are some printed papers which have been circulated by them or by the Mersey Board. They are in substance criticisms upon the memorandum of the Board of Trade which was published. They relate entirely to Liverpool. They argue the general question of compulsory pilotage, of course, but with particular reference to Liverpool.

719. Mr. *Charles Turner.*] Is it not provided by the Bill that the number of pilots to be superannuated is to be decided by the Board of Trade?—The Board of Trade and the Treasury have both a check upon the thing; but of course it is to be presumed that they will act fairly in the matter.

Mr. *T. H. Farrer.*

1 April 1870.

720. But do you not think it better that the pilotage authority of the port, being better acquainted with all those matters than the Board of Trade can possibly be, should be the authority to decide as to the number of pilots required, and the number to be superannuated?—They are to decide it in the first instance, but the Government would have a check upon it. I do not think that it would quite do to allow the pilotage authority of Liverpool to have an unlimited power of drawing upon the public exchequer.

721. But are you aware that the pilotage authority of Liverpool do not consist of pilots?—Of that I am aware; but still Liverpool is Liverpool, and the public exchequer is the public exchequer.

722. But are you aware that the pilotage authority keep a very tight hand over the pilots?—I believe that the system of pilotage government is an extremely good one.

723. Are you aware that a certain number are elected by the Mersey Dock Board, and a certain number are chosen out of the ratepayers?—Yes.

724. I think it is one of your arguments that the abolition of compulsory pilotage would increase the number of pilots?—I do not say that it will increase them; I do not know whether it will or not; I believe that where all the pilots are really wanted there will be just as many as there are now, and if they are not wanted there will be fewer.

725. I think that in your paper you say that the pilotage of Bristol, which is compulsory, has decreased of late years, while that of Cardiff, which is now voluntary, has increased?—If I have said that it was due to the fact that the pilotage at Bristol is compulsory, I have said more than I intended, because the Bristol pilots have suffered in consequence of the pilotage being transferred from the Bristol pilots to the Cardiff, Newport, and Gloucester pilots; they did not take out licenses for those ports as they were enabled to do under the Bill, and the Cardiff pilots have done work which was formerly done by the Bristol pilots.

726. But do you not think that it is a fact that the decrease of pilotage at Bristol has arisen in a great measure from the decrease of the trade of Bristol; and that the great increase at Cardiff has arisen from the Marquis of Bute's docks and the new trade which has sprung up there?—There is no doubt that with the increase of trade there is an increased demand for pilots; and I hope that increase of trade will go on at Liverpool as much as it has done at Cardiff.

727. Therefore, the fact of the decrease of pilotage at Bristol may be attributed to the decrease of the trade; and the increase of the pilotage at Cardiff to the increase of trade at Cardiff?—I think that it is very obvious that the decrease of the trade of the Bristol pilots is due to the fact that the Pill pilots no longer have the monopoly of the trade of the Channel; all the ships used to be obliged to employ them, and now they are not.

728. But if the trade of Bristol has decreased, that would be a very important fact to consider; and if the trade of Cardiff has increased, it would naturally lead to an increase of pilots?—No doubt.

Mr. *T. H. Farrer.*

1 April 1870.

729. You need not look much further than that for the cause of the decrease at Bristol, and of the increase at Cardiff?—No; the way in which the fact is valuable for our purpose, is to show that where you do away with compulsory pilotage there are plenty of pilots still employed.

730. I think you stated that because the old Pilotage Commissioners of Liverpool refused to adopt the Act of 1853, and license masters and mates, the Board of Trade did so for some years, at least that the board began to do so, and then it ceased?—Yes; the Board of Trade granted licenses which exempted the ships from that new obligation under the 304th section of the Merchant Shipping Act. They granted those in the first instance to masters who had then been in the habit of piloting their ships; and for that purpose, proof of service and experience was the only thing necessary. When a certain time had elapsed, the Board of Trade were no longer able to rely solely upon the proof of service and experience, and they would have been obliged to examine. They disliked very much examining where there was a pilotage authority who could examine; and thinking that the Mersey Board really intended to examine fairly, they refused to examine themselves, intending to leave it to the Mersey Board.

731. How many persons did the Board of Trade license?—I have not got that with me, but I can easily get it, and will do so.

732. You have just stated, as I think you have stated before, that the Board of Trade licensed, not after examination, but upon mere proof of service?—They did so under the 355th section of the Act, which especially points to their so doing.

733. But do you consider that course at all equal to the examination which the Liverpool pilots have to undergo?—I am inclined to think that if a master had been in the habit of piloting his own vessel with perfect safety day and night, in and out of the port of Liverpool almost every day for two years, that would be as good a proof of his capacity as could be afforded by any examination.

734. Then, in point of fact, you would substitute for examination the proof that he might be able to pilot vessels going in and out of a port?—I should certainly feel quite as safe under the charge of such a captain, as if I knew he had passed an examination.

735. But would you think that a proper course for a public body to pursue, to do away with an examination upon such a proof?—The Board of Trade acted distinctly under the terms of the Act of Parliament.

736. But you would not approve of such a course generally, as merely passing a man through an examination to know whether he had piloted a vessel in and out of a port, and not whether he knew anything of his business?—With regard to all examinations of which we now hear so much, I would a great deal rather have the practical proof that a man had done his work properly, than I would have the sort of theoretical proof which you would get by an examination.

737. But would you put that into a Bill?—We did put it into that Bill.

738. Do you agree with the 25th paragraph of Mr. Simpson's letter to you, that it should be compulsory upon the pilot to perform the same services as he does now, and at the like rates and risks, but that it shall be voluntary on the part of the ship master whether he employs him or not?—I see no hardship in that, and I do not believe that it would be necessary to use any great (if any) degree of compulsion; I believe that the pilot would willingly go where he was wanted, if you gave him a proper rate for his services.

739. You are aware that the pilot service of Liverpool is a very hard service in the winter season; that there are gales of wind, and that there are great doubts entertained by the authorities of Liverpool, both shipowners and pilots, whether, in case a man was obliged to be upon the station at the great risk of his life in the winter season, you could maintain a service equal to the present service, supposing that in all cases of fine weather ships could sail past without taking a pilot?—The question of price is of course a question of great importance, and the price, no doubt, could be determined. We have no doubt that the question of price could be determined more easily under a voluntary system than under a compulsory system, because you could find out the price that the shipowner was willing to give for the services which he required. But supposing the price to be settled, that is to say, such a price as would induce the pilot to offer his services, and such a price as would make it worth the while of the shipowner to employ him, I see no reasons why the ordinary rules which govern trade and employment should not govern pilotage as well as other trades and employments; I believe that the pilot would go where he was wanted.

740. But the cases are not quite parallel. In the winter season a pilot exercises his vocation with very great risk of his life; he takes the sea in all weathers, when it is almost impossible for any boat, except a boat found and built as the Liverpool boats are, to keep the sea; and in fine weather, of course, there is the risk of no vessel requiring him. Do you not think it quite possible that there would be a crowd of pilots who would go out in fine weather and very few pilots who would go out, under the circumstances I mentioned, in bad weather where their lives were in very great peril?—I should think, probably not, because in the very fine weather they would not be wanted, and so there would not be so much motive on the part of the shipowners to employ them; but in the bad weather they would know that every shipowner wanted a pilot, and if you only fix a price remunerative to the pilot and not too high for the shipowner, they would be induced by the certainty of employment to go out in bad weather. Nothing keeps the Deal boatmen from going out for salvage purposes in the Downs whatever the weather may be, and so with the Yarmouth boatmen.

741. But are you aware that the gales of wind come on very suddenly, and that it might be impossible for a pilot boat to get out of Liverpool to Holyhead, for instance, in the teeth of a gale of wind, when the vessels were coming in, and would very likely go on shore for the want of a pilot?—I am inclined to think that if the pilots are so necessary there, the pilots would be sure to be found; and I believe it is so at the ports where pilotage is voluntary. It is suggested that they might have a steamboat. It would be difficult for the Liverpool pilots to have steamboats now, without altogether altering their system of boat-owning; but it is very possible that if the

thing

thing were rather freer, that might be found to be a thing which would pay all parties.

742. But are you aware that by the present system, a boat is obliged to be constantly at the station, blow high, blow low?—In the first place, I see no reason why that regulation should not continue if the pilotage authorities of the place think it right to continue it; but I believe that it is not by virtue of the compulsion that the boat is there so much, as by the knowledge that the boat is wanted there; and if the pilots want to earn their money, that is the course which they must take.

743. But, of course, you are aware that those boats cost a great deal of money; how would you make it compulsory, if the pilotage were voluntary, on a number of people to associate themselves together for the purpose of having a pilot always on the station, provided they had no security that they should receive pilotage at all?—I do not know how you can insure any person undertaking any dangerous or difficult employment, except by his knowledge that he will be properly remunerated for it; that is the best motive; and, as a matter of fact, in pilot ages which are not so important as those at Liverpool, but I should think almost equally difficult, there is found to be no difficulty whatever in supplying those boats. It is a very curious thing in what a quantity of different ways those boats are found and supplied; we have just called, for the information of the Committee, for a return from all the pilotage authorities, of the boats employed in the pilotage service, and the mode in which they are owned and kept up, and I think it will be found that in some ports they are owned, as at Liverpool, under very strict regulations, whereas in other ports the supply of the boats is left entirely to the pilots themselves, and there the boats are perfectly good and perfectly efficient.

744. I think you stated that there was a disinclination on the part of masters and mates of coasting steamers to apply to the Mersey Board for a license?—There certainly is such an objection. Whilst on this subject let me mention that I did a great injustice to Mr. Simpson. I put in a letter of his, in which he spoke of an "unholy alliance" between the pilots and steamship owners, and I find that that letter was a private letter of his to Admiral Bedford. It had been previously treated as a public letter, and I therefore put it in; but I ought to apologise to him for having done so, and having done so, I may say that he need not be ashamed of his letter, for it has done more credit to the Mersey Board than anything else that I have put in.

745. Does that arise from the difficulty of the examination which they would have to undergo?—I really cannot tell. I only know that the owners of those steamers have come to us, constantly saying: We will not; or we cannot get our masters and mates examined by the Mersey Board. We come to you for certificates.

746. Do they not like the examination?—I do not know what their reason was, or at least I can only guess at it. They will tell it to you themselves.

747. Does it not arise, that under the Order in Council of January 1854, reducing the pilotage to one shilling per foot on coasting steamers, the licensing of masters and mates is unnecessary?—No doubt that Order in Council relieves the owners of coasting steamers from a large part of the tax which they would otherwise have had to pay to the Liverpool Pilotage Establishment under the Local Acts, and to that extent it rendered it the less necessary for them to obtain certificates; but as I have explained before, there was another obligation under the 354th section of the Merchant Shipping Act, and it is in respect of that obligation that this question has arisen. I gave an answer to the honourable Member for Liverpool as to that, which was not quite correct. I said, that the present Mersey Board were in no way responsible for that order of January 1854, but that is not exactly the fact, because although it was passed before the present Mersey Board came into existence, it has continued in existence ever since the Mersey Board have taken the pilotage in hand.

748. You stated that the present Bill to abolish compulsory pilotage is only a step in the right direction; what do you consider the next step, and what is the ultimate point to be aimed at?—I think that that is a thing to be worked out by the pilotage authorities; I said that it was quite obvious in certain places (I did not say in all), such as the Thames; that there were a great number of persons doing pilotage work who ought to be admitted to whatever privileges a pilot may have; but I think it is quite impossible to foresee how things will work in different ports; and if the pilotage boards represent, as they do in Liverpool, the shipping interest, they probably will work it out in a perfectly satisfactory manner.

749. Do you not think that if the obligation to employ a pilot is done away with, it is only fair to remove all the restrictions as to pilotage dues upon the pilot, except, of course, his holding a license?—I do not think that it is at all necessary, or at all desirable to abolish such a restriction as that which fixes the price. It would be perfectly impossible for the captain of a ship, when he comes into a port at sea, to make a bargain with the pilot; he is at the mercy of the pilot. You go as a matter of convenience, exactly upon the same principle as that upon which you fix cab fares; but you must necessarily fix them with reference to the value of the service in the market, or at any rate you would do so if the pilotage was voluntary.

750. But is it not a certain interference of the law of supply and demand to fix the rates?—Just as much as it is in the case of cabs; I should mention that even in the case of salvage, you have an exception to the ordinary freedom of contract, because the Admiralty Court holds that it will always set aside a salvage contract made at the time when the salvage service is offered, if they consider that the demand has been extravagant.

751. I think one reason which you had for abolishing compulsory pilotage was because you wanted to get rid of the immunity of the ship?—I want to get rid of that anomalous state of the law which I described.

752. I suppose it would be possible to abolish the immunity of the ship and still retain compulsory pilotage, would it not?—It would be possible to do so; that is to say, there would be no logical impossibility in it; but I think you would find great difficulty in persuading shipowners to assent to such a law; that when you had passed it they would be more than ever opposed to compulsory pilotage, which must in the end be repealed;

Mr. *T. H. Farrer.*

1 April 1870.

repealed; and I believe you would only be making two bites of a cherry in doing it.

753. Colonel *Bourne.*] In the year 1860, when Mr. Dunbar gave his evidence before Mr. Lindsay's Committee, was that after the case of the Gravesend pilot, or before it?—That I think was before the case of the Gravesend pilot; to the best of my recollection the Committee was in the summer of 1860, and I think that that case occurred in the winter of 1860-61.

754. My impression is that it occurred in 1860, and that the Committee sat in June 1860; was that so?—The honourable Member is perfectly right; Mr. Lindsay's letter is dated the 12th of January 1860, and the Committee sat in June 1860.

755. Then, in point of fact, when Mr. Dunbar gave his evidence in favour of retaining compulsory pilotage, he was aware of that grievance?—I should think it very unlikely that Mr. Dunbar was aware of that, for this paper was not published till July 1862, and I should not think Mr. Dunbar troubled himself about what happened to a Sunderland ship.

756. Do you think that in case compulsory pilotage is done away with, pilots would show as much zeal, and be as attentive to their duties as they are at present?—One of the reasons we had for wishing to do away with it, was that we thought that if their services were voluntary they would show greater zeal.

757. I think just now, in answer to a question of the honourable Member for South West Lancashire, you stated that pilots would be quite as likely to go into dangerous places to meet vessels coming into ports, under the voluntary system, as under the compulsory system?—We think so, because they would be more wanted than otherwise.

758. Of course you are aware that they would receive the same amount for doing less work?—That would be so under the present pilotage rates, but even that is not necessary, for in Holland I am informed that they have different rates in winter from those they have in the summer.

759. And there the compulsory system does not exist, does it?—That is more than I can tell.

760. You stated on the last meeting of the Committee, that the Trinity Board have changed their opinion with regard to compulsory rates; that in 1862 they were very much in favour of them, and that since then they have changed their opinion; did they give any reason for that change?—I quoted from certain proposals which the Trinity House had made to us, what they proposed; and I therefore gathered that they have changed their opinion; but I can only collect in a general way from all that has passed what it is that induced them to change their opinion. But when I see that the London shipowners have changed their opinion, I can hardly doubt that that has its effect on the Trinity House.

761. *Chairman.*] Is it not rather the case, that in the year you speak of they were opponents of the abolition of compulsion, whereas now they are silent on the subject?—They are not only silent, but they have proposed to us to extend considerably the exemptions which they wished to be contracted a few years ago.

762. But in the Bill for the Abolition of Compulsory Pilotage they have been silent, have they not?—They have been officially silent.

763. Colonel *Bourne.*] I was under the impression that you stated that they had quite changed their opinions; was I mistaken?—I stated that their tone was entirely changed; that whereas in 1857 they objected (as will be found in these papers) most strongly to the extension of exemptions in favour of vessels bound to the north of Europe to the cases where those vessels sailed to and from the out-ports, and thought that those exemptions would ruin the local pilots; on the other hand, in the course of this winter they have asked the Board of Trade to extend these particular exemptions by including in them all vessels bound not only to the north of Europe but to any port on this side of Brest.

764. Have they given any reason for that change?—No.

765. Supposing this Bill to be passed into law, will you tell the Committee how you propose to compensate the pilots of Liverpool within two years, and at the same time to insure the service under the voluntary system?—I think I said before that that two years was a matter of detail for the consideration of the Committee.

766. In proposing the abolition of compulsory pilotage you have admitted, have you not, that the question of compensation to the pilot boats would require special consideration?—I said so.

767. If the principle of the Bill were established, would it not be fair that those matters should be determined by an actuary, independent of the Board of Trade?—I do not think that it would be really anything of sufficient complication to render it necessary to employ the services of an actuary.

768. Would there not be conflicting interests?—It really is rather for the Chancellor of the Exchequer, and for the House of Commons, than for me to give an answer upon that point. I feel sure that the Treasury would be willing to anything that is just in the way of compensation; but I am quite sure that they would not be willing to allow any local authority to have an unlimited pull upon the public purse.

769. Have there been any complaints as to the want of attention to their duties on the part of pilots, or as to their incapacity in those particular ports where pilotage is compulsory?—Those complaints, if they exist, would hardly come to the Board of Trade; but I think one reason for the change of opinion to which I have adverted on the part of the London sailing shipowners is that they think that they would be better and more zealously served if the pilotage were voluntary.

770. But, so far as the Board of Trade is concerned, no complaints have reached them?—I do not think that any complaints have reached them with respect to the misconduct and negligence of pilots, either in places where the pilotage is compulsory, or where it is voluntary. But those complaints would not come to them; the complaints about the negligence of pilots would go to the pilotage authority.

771. Are you aware whether the Liverpool Pilot Committee punish with great severity any pilots who neglect their duty?—As I said before, I believe that the Liverpool Pilotage Committee do their duty very efficiently; at the same time I have read (what I was not aware of before this Committee commenced sitting) a letter, and also an extract from a newspaper showing that all the shipowners in Liverpool were not satisfied.

772. Mr. *Grieve.*] You have been on the Clyde, I presume?—I have been on the Clyde.

773. Have

773. Have you been there frequently?—Not frequently, but I have been there.

774. Have you been up the river from Greenock to Glasgow?—Yes, I was down the river this year.

775. Have you formed an opinion of the navigation, and is it your opinion that compulsory pilotage could be safely abolished there, having regard to the sandbanks, and the narrowness of the river, and the great traffic carried on on the river?—I should be very sorry to offer an opinion upon a question of navigation of which I really know nothing; I am no sailor, but upon general principles, I should say that there, as elsewhere, if the pilot is really wanted for the safety of a ship you may perfectly well trust to a voluntary system.

776. From Greenock seaward, I think the pilotage is voluntary?—I believe it is voluntary from a little above Greenock, I think from just above Port Glasgow.

777. Have the Board of Trade had any complaints from shipowners as to the want of or the efficiency of pilots seaward from Greenock?—None.

778. Are you aware that the Pilot Board of the Clyde sit in alternate years in Glasgow and in Greenock?—I think that is so under the Act of 1858.

779. Are you aware that the Board sits this year in Greenock?—I was not aware of that.

780. I see that there is a petition from the Pilot Board, dated Glasgow, 1st March 1870, signed by the Lord Provost as chairman; presuming that is the fact that the Board sits in Greenock, does it not appear a strange thing that a petition should come from Glasgow while the Board sits in Greenock?—One would expect that if they are sitting in Greenock the petition would be dated in Greenock. In answer to a question which was asked me as to the time at which compulsory pilotage began on the Clyde, I said that I thought it was earlier than 1858; I find that it was by an Act which was passed in 1846 that pilotage became compulsory upon the Upper Clyde. The Act is 9 Vict. cap. 23, sect. 28 (Local and Personal).

781. By the Upper Clyde you mean the Clyde above Greenock?—Above Port Glasgow.

782. I think you stated that you considered life rather safer if you were a passenger on a steamer in charge of a volunteer pilot than if it were in a compulsory pilot; do you mean by that that the volunteer pilot would be more alive to his duties, seeing that he was interested in securing the good opinion of the captain, while the compulsory pilot, knowing that his services could not be dispensed with, and that his payment was sure whether he was employed or not, would be less alive to his duty under those circumstances?—I think that the voluntary pilot would be more zealous, and would endeavour more to obtain the approval of his employer; and, in addition to that, I think that the captain would not have the inducement which he now has to neglect the navigation of his own ship.

783. Mr. *Gourley.*] I believe that although you are not a sailor, as you have already stated, yet you have a pretty general knowledge of the whole of the pilotage grounds in the kingdom?—I have a book or map knowledge rather than an actual knowledge of them.

784. Have you not also made a personal inspection of them?—I have been in a good many of the ports.

785. Is it your opinion, from any information which you possess at the Board of Trade, that in those districts where compulsory pilotage exists, the pilots are as watchful in all states of the weather, in looking after vessels, as in those districts where the employment of pilots is voluntary?—I could hardly answer that question either one way or the other.

786. Are you aware that the London Trinity House pilots rarely go beyond the pilotage grounds at Dungeness in search of homeward bound ships, and that the latter have frequently to haul in at Dungeness, and after throwing out signals, have to wait several hours to procure pilots, thereby causing danger not only to property, but to life?—I have frequently heard of complaints from shipowners that the pilots skulk under Dungeness, and that the ships cannot find them.

787. Has it ever come to your knowledge that at night there is also in rough weather a difficulty in getting pilots off at Gravesend, and that vessels, even though the water be sufficiently favourable for going higher up the Thames, have to wait for a Trinity House pilot to take them up the Thames?—I do not think that that fact has come to my knowledge.

788. If compulsory pilotage should be abolished, is it your opinion that pilots will then go beyond their compulsory stations in search of vessels, as the pilots belonging to Holland and Belgium are now in the habit of doing, who are frequently found a long way down the English Channel in search of vessels bound homewards to the ports of Belgium and Holland?—I should think that that was very probable indeed, and I believe that that is the case with some of the Scilly pilots and others; they go out where they hope they will find homeward bound ships.

789. I believe you have stated that there are at present in all 194 persons who are licensed and qualified to act as pilots upon the Thames; if such a number were sufficient for the navigation of the large number of vessels trading to the Thames, do you think that the licensed pilots and those holding licenses, and having a right to supersede non-licensed men, would have permitted the unlicensed men, who now perform a large portion of the river work, to take charge of vessels without making some effort to surpersede them?—No; I think it is quite clear that the licensed pilots' services are confined to a particular class of vessels, and it is quite clear that there are not enough licensed pilots for all the vessels which want pilots in the Thames.

790. How do you propose in the Bill to supply the want which is now supplied by unlicensed watermen in the Thames?—It is not provided for in the Bill, because it can be perfectly well done by the Trinity House, if the necessity is brought to their notice.

791. I believe the Trinity House pilots have alleged that masters of vessels are in the habit of taking unlicensed men, and stowing them away on board their vessels, in other words smuggling them, having them on board dressed up as females; have you ever heard of anything of that kind?—The licensed pilots have told us so.

792. But have you ever had authentic proof of anything of the kind?—No; but I should think it exceedingly probable that if a shipowner could get a waterman to do the service at a smaller sum than a licensed pilot, he would do so.

793. You think that all a shipowner studies is economy, and not the safe and efficient ma-

Mr. *T. H. Farrer.*

1 April 1870.

nagement of his ship?—Not so; but it is quite possible (though I do not say that it is so) that a waterman may do what is required just as well as a licensed pilot.

794. In your opinion, is it a necessary qualification for a pilot in the Thames, that he should serve as master or mate on board a square-rigged ship, or are you of opinion that the seven years' apprenticeship of a Thames waterman is a sufficient qualification?—I do not like to give an opinion upon nautical matters, but it would seem that at any rate for steam vessels coming up from Gravesend, it is scarcely necessary that a man should have perfect knowledge of a sailing vessel.

795. Are you of opinion that the granting of licenses to all who have served an apprenticeship would produce a sufficient and ample supply of pilots, and thus cause them to be more anxious in looking after vessels, than would be the case with a limited number of licenses?—It is very difficult to say what the number of pilots should be; that will generally settle itself. If pilots are to be licensed at all, one would think that the licensed pilots should include all the persons who are habitually employed in the service, and for them there is full employment; beyond that it is very difficult to speak.

796. You have stated that, of the vessels navigating the Thames and its approaches, some navigate those waters with pilots and some without pilots; in your opinion, is it easier for ships exempt from compulsory pilotage to navigate the Thames and its approaches than for those which are subject to it?—I believe that in the upper waters of the Thames almost every ship takes either a pilot or a waterman.

797. Do the sailing colliers take them?—The screw colliers do, I think; I am only speaking of the river above Gravesend.

798. They do not take watermen at Southend or about there, do they?—No.

799. As regards the navigation of the Thames and its approaches in pilotage waters, is it your opinion that the navigation is as difficult as that of any other harbour or river in the kingdom, or, at all events, do you think that it would be as difficult as that of the Mersey or of the Clyde?—I have said before that I am no sailor, and I do not like to give my own opinion upon that; but the Trinity House pilots tell us that it is much more difficult; and very good nautical authorities have told me that, taking the whole pilotage into London, it is more difficult than that of Liverpool.

800. You have been on both grounds, have you not?—I have been on both grounds; but my own opinion is of no value upon such a point.

801. Do you know the harbours of Falmouth and Cork?—I have been at Falmouth, but I have never been at Cork.

802. If it be practicable for amateur sailors (and I apprehend that you are something of an amateur sailor), as in the case of yachtsmen to navigate the Isle of Wight waters and the English Channel ports without the assistance of pilots, must it not be very much easier for regular seamen, that is to say, masters and officers of ships to navigate those waters than for amateur seamen?—I should think so.

803. Therefore in the absence of compulsory pilotage, or of pilotage at all, it is quite possible, is it not, for regular seamen, such as masters and mates to navigate the Isle of Wight waters without their assistance?—I should have thought so.

804. From the experience which you have gained during the last 20 years at the Board of Trade, is it your opinion that compulsory pilotage may be safely abolished?—The Board of Trade would not have brought in this Bill if they had not thought so.

805. In your evidence the other day to the Committee, I think you stated that the late Mr. Dunbar, and other large owners of vessels were in favour of compulsory pilotage, on the ground that it freed them from general liability, but more especially with regard to collision with barges; did you mean to lead the Committee to believe that owners therefore cared less for the safe navigation of their vessels?—I think that an owner is naturally extremely anxious to free himself from any responsibility which he may incur by running down another vessel; and in fact Mr. Dunbar stated that that was his reason for approving of compulsory pilotage.

806. The Honourable Member for Liverpool the other day, in alluding to the evidence given by shipowners before Mr. Lindsay's Committee, referred to the evidence given by Mr. Eustace Smith. Mr. Eustace Smith at that time, I think, gave his evidence in favour of compulsory pilotage. Are you aware whether Mr. Smith still holds the opinion which he then held, or whether he has changed his opinion?—I cannot tell that.

807. Are you aware that Mr. Smith has recently spoken in the House of Commons in favour of the abolition of compulsory pilotage?—I am not aware of that.

808. Are you aware that Mr. Smith has now had cause and seen reason to change the opinion which he gave in 1860, and that he is now in favour of the abolition of compulsory pilotage?—If that is so, it is consistent with other changes of opinion which I have mentioned.

809. You stated that barge-owners had no remedy for damages done by vessels in charge of compulsory pilots; are you aware that barges, as now permitted to navigate the Thames, are a great hindrance to the safe navigation of the river, and that masters of barges frequently foul ships in the course of their navigation, and that after fouling the ships the barges receive damage, and are very often sunk, and that then they make claims upon the owners and the underwriters for new barges?—I said that there was a *per contra* to the case of the barges, or that with the vast increase of steam vessels the barges are very often very much in the way of steamers.

810. If licensed pilots on a free system are to be relieved from liability, and the liability is to be thrown entirely upon the shipowner, what penalty would you impose for careless navigation?—There is no proposal, that I am aware of, to free the licensed pilot from responsibility. The shipowner whose ship does the damage would be liable to the person to whom he does damage; but he would have his remedy over against the pilot.

811. *Chairman.*] Whatever remedy there is now?—Whatever remedy there is now, or whatever remedy the other party has now.

812. Mr. *Gourley.*] In the evidence which you gave on the 25th of March you stated that no alteration would be effected in the law of pilotage by the present Bill; will not the effect of this be to leave the masters of vessels amenable to the hardships which were alluded to by yourself in an answer to a question put to you by the Honourable Member for Rye, viz., making them liable to be taken under the process of a warrant issued by

by magistrates at Gravesend or Greenwich, as in the cases to which you referred as having occurred with Sunderland masters?—That is a case in which the master of a vessel having an unlicensed pilot on board refuses a licensed pilot. In that case he would be subject to a penalty, and he might be subject to that hardship. But the hardship would be less than the hardship I have referred to, because I should say that the law was a just law. But whether it may be desirable to soften the mode of procedure is another question.

813. Would you not recommend a civil rather than a criminal process?—That is a matter for consideration.

814. As regards the navigation of the Thames, will the present Bill interfere with the privileges of those watermen who have been supplying the wants of shipping now for a long period, and whose wants have been so long overlooked by the Trinity House?—I do not think that this Bill will in any way injure the watermen.

815. Then how do you propose to reserve to the watermen the rights which they have of navigating the Thames?—But this Bill does not affect those rights at all. Those rights are in question before another Committee in another room, but they are not affected under this Bill.

816. Under this Bill the watermen will be liable to be superseded by licensed pilots, will they not?—So they are now.

817. But do you intend to leave the law in its present anomalous position, and to leave them to do the work, they being at any time liable to be superseded?—This Bill proceeds upon the principle that there ought to be a body of licensed pilots, and that the pilotage authority licenses as many as are wanted. If that is so I do not see any hardship in allowing the licensed pilot to supersede the unlicensed pilot.

818. But is it your opinion that the present number of licensed pilots is sufficient?—I think it appears from the facts I have stated that there are a great many more persons employed as pilots in the Thames than have licenses.

819. Do you not think that it would be much better to throw the pilotage system entirely open upon the Thames and to leave it open for every one who can pass an examination to obtain his license rather than to keep up the present system of protection?—That may be so on the upper Thames. But, speaking generally, it is a very difficult question, and one which it would probably be better to leave the pilotage authorities to work out. A great many persons who are very strongly in favour of the abolition of compulsion are still in favour of the limiting of the numbers.

820. The Honourable Member for Liverpool said that he was struck with the absence of reference, on your part, to the bearing of the pilotage question upon the protection of life. May I ask you whether in pilotage waters there is much risk of life or of property, and whether it is not the case that pilots generally board vessels in weather which is tolerably safe, if not altogether safe for navigation?—I should be slow to bring an indictment against the pilots generally, and to say that they do not board vessels in dangerous weather.

821. Has not the navigation in pilotage waters been very much facilitated, of late years, by the proper buoyage of channels and approaches to harbours, as well as by the introduction of steam tugs, and so much so that, except in very bad weather, all our pilotage waters are comparatively free from danger?—No doubt a great deal has been done in the buoyage and marking out of channels in pilotage waters of late years, and, I believe, it is very well done.

822. Are the Liverpool pilots compelled or expected to be out in all weathers?—You will get that better from the Liverpool authorities; but, I believe, they are obliged to be out in all weathers.

823. You stated that the steamship owners generally objected to the compulsory pilotage system; can you tell us the reason why they object to it?—They object because they prefer that their steamers should be in charge of their own masters, who from their frequently coming in and out of the ports are acquainted with the navigation and are able to manage them themselves. They therefore wish to be left to employ their own people and not be obliged to employ a pilot if they do not want him, and many of them object to this anomalous state of the law as regards liability.

824. Is it not also in consequence of the masters of steam vessels being able to pursue a direct course with their vessels, rather than a circuitous course, as is the case with sailing ships which have to beat up Channel?—Quite so; it is much easier to navigate a steamer where they have the motive power entirely under their control.

825. You were asked by the Honourable Member for Rye if it were not possible that many ships may be insured to such an extent as to make it beneficial to the owners to have them cast away; is it not the fact that in pilotage grounds ships are rarely in danger of being wrecked, and that for an owner to meet with an accident or for any damage to accrue to his ship would be much more detrimental to him than otherwise, more especially with an outward bound ship; so much so that if an accident should happen to a vessel outward bound, the owner in all probability would lose all the prospects of profit during the entire voyage, even when that voyage might be a voyage of 12 months?—No doubt the interest of the shipowner is to make a good voyage even though he is heavily insured; and in reference to that question I am glad to have an opportunity of saying that the true answer about insurance is in the first place that the law attaches as a condition to the contract of insurance that under certain circumstances a pilot shall be taken; and if the insurer thinks it necessary that a pilot should be taken he can always make it a special condition in his contract, and I have heard that he does so in some cases.

826. I suppose you are aware that the underwriters have all their own surveyors, not only in London, but in Liverpool, in France, and in America; that they are exceedingly strict with the surveys of the ships, and that they exercise a very large amount of vigilance, in order to ascertain that they are not insuring bad property?—I think that the underwriters are perfectly able to protect themselves. On mentioning to Mr. Justice Willes some proposition for protecting the underwriters, he replied, "You might as well get umbrellas for albatrosses; they are perfectly able to take care of themselves."

827. Do you know anything of the River Tyne?—I have been in it.

828. Perhaps you are not able to speak as to the difficulty of the navigation of that river, as

Mr. *T. H. Farrer.*

1 April 1870.

compared with the Mersey?—I would rather not, as my opinion is of no value upon that point.

829. You were asked by the Honourable Member for South-west Lancashire some questions in reference to the boat system which exists upon the Mersey. I suppose it is not, in your opinion, desirable that, upon the abolition of the boat system, the Government should make any compensation to the owners of the boats if that system should be abolished, but rather that the present protective co-ownership should be abolished?—Yes; but there would arise the question in what way that should be done. Those men have invested their money upon the faith of an Act of Parliament, and if that property is to be taken away, they certainly ought to be compensated in some way. So far as concerns the operation of the system on the pilotage of the port, it is quite clear that if they are to be compensated, Liverpool ought to compensate them, and not the public exchequer. On the other hand, if those boats are injured by the effect of this Bill (which we do not expect will be the case), there may be claims on the part of those boat owners upon the public exchequer to that extent.

830. Mr. *Cave.*] You would say, would you not, that the chief object of the Bill is to get rid of the various anomalies in reference to the liabilities of shipowners?—That is one object, but not the whole object.

831. Is it the chief object?—I should be sorry to say that it was even the chief object; these anomalies have undoubtedly brought the whole subject to notice more than anything else.

832. You would say that it is a material object, would you not?—It is a material object.

833. I think you stated that there would be great difficulties in doing that directly?—I think there would be great difficulties in doing that directly.

834. Are you aware that in New York, for instance, the general law with respect to pilotage (without reference at present to the system of liability) is very much the same as it is now in England?—The law in New York, if I remember rightly, is that the ship must either take a pilot or pay the pilotage.

835. Or the master must be qualified?—I am not aware as to that.

836. With regard to a vessel that approaches the harbour of New York, unless it has a qualified master it must take a licensed pilot, must it not?—Yes, or pay pilotage.

837. And yet in America the law with regard to the liability of the master is very different from ours, is it not?—It is; I read the judgment in the case of the "China," in the Supreme Court of the United States.

838. Practically I believe the master is liable for damage, and not the pilot?—The pilot would probably be liable also, but the ship is liable.

839. So that there they have got rid of that difficulty without getting rid of compulsory pilotage, have they not?—Yes; they have never introduced the exemption from liability; it never seems to have prevailed in America.

840. Does not the compulsion to take one out of a few pilots differ only in degree from the compulsion to take the first that offers?—I am not quite sure that I understand the question.

841. Compulsory pilotage, of course, consists in being obliged to take a pilot?—A pilot; whether he be the first that offers or one of a number.

842. It is proposed by the Bill to oblige a man, if he takes a pilot at all, to take one out of a number, is it not?—Yes.

843. Does not that vary only in degree from the other principle?—No, I think it varies in more than degree; I think it is a very different thing to say to a man, "You must employ a servant of a particular description," and to say to him, "If you employ a servant of that description you must employ him from among a particular class."

844. Still, if a foreign vessel that comes in is absolutely obliged to take a pilot, you oblige him to take one out of a certain number, do you not?—Circumstances compel him to take one out of a certain number; even if you had not a system of licensing at all, there would be only a certain number of persons offering themselves.

845. In the Bill, of course, we know that there is no direct statement that the liability of the shipowner shall be altered; it has been suggested that there is sufficient compulsion left to make the law still operative in reference to the non-liability of the ship as to damage; is that so?—I should think, looking to the current of recent decisions, that that would not be the case; but if that were the case, or if there were any doubt about it, it would be well to clear it up. On consideration, I think I can answer that question quite positively. I remember that it, by reference to cases, has been decided, that where a ship is in charge of pilot in a compulsory district, there, unless at the time and under the circumstances the ship is liable to compulsory pilotage the shipowner is liable for damage done; in that case he is obliged to employ one of a certain licensed number.

846. But has not a similar claim for exemption from liability been set up by shipowners on account of compulsion to take certificated masters and mates?—The claim has been suggested in a vague sort of way in deputations to the Board of Trade, but I do not think they have ever ventured to set it up in a court of law.

847. Has it never been set up in Parliament?—I will not say that it has not been set up in Parliament, but it has certainly not prevailed there.

848. Do you not think that it would be more reasonable to consider the pilot rather as a guide to point out currents and shoals than as the provisional master of the ship?—Certainly; that was the whole purport of my evidence, that from all that one could gather from the best shipowners and from the practice of the Admiralty and of the Trinity House, that is the proper position of the pilot.

849. In such a case the running down of a barge in the Thames, for instance, would be the fault of the master, would it not, and not of the pilot?—Certainly.

850. *Per contra* is it not said that the barges are great offenders by getting across the river, and that they are an anachronism?—The pilots tell us so, and the shipowners tell us so.

851. If they could come upon the master for damage, would they not be more reckless than they are now when they can come upon the pilot?—That is the argument of the pilots.

852. But you think, on the whole, that it would be impossible to abolish the exemption of shipowners, and to leave pilotage as now, to be voluntary

voluntary or compulsory as may seem best to the local authorities?—I think it would be practically impossible; I think you would find that such a proposal as was contained in our Bill of last year, the proposal to adopt the New York law, would meet with almost universal resistance from the shipowning interest.

853. In the case of the "Spindrift," which has been mentioned, the passive attitude of the master has been accounted for by this idea of the general liability of the pilot; but in that case the ship was uninsured, was it not?—I think so.

854. And therefore of course the master had the greatest possible object in keeping the ship safe?—Certainly; I did not quote that case, as I mentioned to the Committee before in the least for the purpose of throwing any reflection upon the owner who seems to have done everything he could; I mention that merely as an illustration of the habit and practice likely to prevail where there is a law of that kind; I do not think that that motive would have been applicable in that particular case, so far as regards the owner.

855. Was not the case of the "Earl of Auckland" mentioned, in which Dr. Lushington gave judgment?—It was.

856. Did he make any recommendation upon that case;—No, he merely called the attention of the Board of Trade to the extreme confusion of the law.

857. Is it found that masters and mates who have passed examinations, are usually capable of piloting their vessels?—I have no personal knowledge of it, beyond the fact that they do pilot them, and that we do not hear of losses in consequence of their want of pilotage knowledge.

858. But the system is very partial, is it not?—It is very partial.

859. They, for instance, would not attempt to take charge of a vessel above Gravesend, I suppose?—I think they almost universally take a waterman or a pilot of some kind.

860. After this Bill passes they would cease to require qualification for pilotage, would they not?—There would be no necessity for them to pass that examination; of course it would be possible for the Board of Trade in granting them their certificates, upon their ordinary examination in seamanship, to require some more special local knowledge, if it were thought desirable.

861. You stated generally, I think, your opinion that pilots would be as much employed as at present?—So far as one can judge from experience, and from the opinions of those best qualified to judge, that would be so.

862. If so, there would be no hardship, would there, to owners of vessels, who would then have to do voluntarily what they now do compulsorily?—I think there is all the difference in the world between doing a thing voluntarily and doing it compulsorily; the relation is very much healthier between employers and employed where each is free, than where one is obliged to employ the other.

863. But the compulsion is for their own good, is it not?—It is so assumed; but they are the best judges of their own good.

864. If certain vessels would then cease to employ pilots, either the pilotage fee must be increased, must it not, or the pilots would suffer?—Or the number of the pilots must be diminished.

865. Taking the case of the Bristol Channel, which seems to have been relied upon in Mr. Gray's Paper, he mentions, as an argument in favour of the doctrine, that the pilots would themselves be benefited by the change; that the pilotage has increased, I think, from 41,000*l.* to 47,000*l.*, in the years from 1861 to 1868; but has not the trade of the ports in that Channel increased in a far greater ratio in the same time?—I have not the returns of the trade, but I have no doubt that it is so; the increase of Cardiff is enormous.

866. And Newport too, and other ports; so that would you say that the reasoning in this paper is absolutely to be relied upon for the conclusion which is drawn from it?—I think this paper shows that pilots would be very largely employed; and it also shows that both pilots and shipowners are better satisfied under the voluntary system, than under the compulsory system; I think it is impossible for anyone to say whether the number of pilots in a particular place will be exactly the same, or whether it will be greater, or whether it will be fewer; but this paper shows at any rate that it is not likely to decrease in any very large ratio.

867. *Chairman.*] It also shows, does it not, that the pilots may, under the voluntary system, have very high rates of income?—Certainly, that it shows most distinctly.

868. Mr. *Cave.*] But it does not show that under the compulsory system you might not have had a very much larger employment of pilots, does it?—You might have had a larger employment of pilots, who would not have been wanted.

869. Would it not appear from the figures that you would have had, when you consider that the increase in the earnings of the pilots has not been in proportion to the increase in the general trade?—I should think that if you had the compulsory pilotage there, a great many vessels would have employed pilots between Lundy and the Holms where they did not want them, which, under the voluntary system, did not employ pilots there; and so the sum spent in pilotage would have been larger, and unnecessarily larger.

870. It is alleged, I think, that the pilots now go further west than they did under the compulsory system, is that so?—The people of the ports tell me that they find an ample supply of pilots west of Lundy.

871. If evidence is brought to prove that that is not so, that would be a diminution of the argument in favour of voluntary pilotage, would it not?—I do not think that it would, because that would be perfectly consistent with the fact that the ships did not want pilots so far westwards. All that it is necessary to prove is that the ship which wants a pilot finds him in the place where she wants him.

872. I think you have already stated that the instance of Bristol is not very conclusive, because the pilots have been ranged under different heads?—Quite so; the Bristol pilots had a monopoly of the Channel pilotage, and they have not it now.

873. To proceed with the argument for Government inspection of boilers, and so on, what is the argument in favour of such Government inspection?—I should be very loth to have to undertake the defence of it, because a great deal of it seems to me to do less good and more harm than people are aware of; but the argument

Mr. *T. H. Farrer.*

1 April 1870.

that people use is that it is desirable that Government should interfere for the protection of life and property.

874. And that the desire of economy, and the desire of profit, makes the shipowner run the risk of the liability under Lord Campbell's Act; and that therefore something more than that liability is necessary for the preservation of life?—That, no doubt, is the argument; but when you say that something more is necessary than the liability under Lord Campbell's Act, what people do not bear in mind is that it is not something in addition to the liability, but that it is something which is substituted for the liability under Lord Campbell's Act; because when a Government inspector has said that a thing is all right, it is perfectly impossible for anybody to recover under Lord Campbell's Act.

875. It is said, is it not, that in fact inspection is the greater safeguard of the two?—That is what people say; but I should be sorry to agree with them, and it is not my opinion.

876. The same desire for economy and for profit would be likely to induce masters to run the risk of running into harbour without a pilot, would it not, under the voluntary system?—No doubt; if a man saves a little money by not employing a pilot, that is one motive for not employing him.

877. Is it not the case, that in spite of the underwriters being able to take care of themselves, yet that competition induces insurers to overlook that occasionally?—It is very difficult to say what the insurers do; all that I say is, that they can, and, as I have been told, do, in certain instances, protect themselves by special conditions.

878. But, practically, is not competition so sharp between shipowners, and particularly small ones, that they do run almost any risk to save a 5*l.*-note?—No doubt; and those small shipowners complain in the bitterest way of compulsory pilotage as taking away all their profits. There is a letter that I should like to hand in, which I received upon the subject of the Runcorn pilotage (it is exceedingly badly spelt), from a shipowner of Cornwall, who carries slates to Liverpool, and he gives a number of facts to show, that the compulsory pilotage at Liverpool just swallows up the whole earnings of the vessel.

879. If that is so, it is quite clear, is it not, that he would not take a pilot under the voluntary system?—He considers himself perfectly competent to get into the port of Liverpool without it; but if he thought there was any chance of his losing his vessel he would take a pilot, because that would be a much greater loss than the loss of his freight.

880. At the same time one does know that a great risk is sometimes run to save money; people are sufficiently blind to their own interests for that, are they not?—No doubt that is so.

881. Sir *John Hay.*] May I ask if that illiterate individual still continues his unprofitable trade?—That is more than I can tell. I will put in his letter, but I know nothing about him. (*The same was delivered in,* vide *Appendix* (A), No. 23.)

882. Mr. *Graves.*] Does he include light dues?—He does not like any of the dues, but pilotage is his particular point.

883. Mr. *Cave.*] When we talk of insurance inducing people to run great risks, is it not the fact that in some countries that is so much felt, that a law prevents vessels from being insured at more than a certain proportion of their value?—That is the case.

884. Supposing that we admitted the general advisability of doing away with compulsory pilotage, would you be inclined to allow that there may be some exceptions with regard to localities or not?—I do not think I can consistently admit that.

885. The case of Swansea has been mentioned to me, which is a tidal harbour into which vessels can come only during three hours at each tide, and they must run in during the greater part of the year at night; and unless they can come in and be marshalled in their proper places, great risk will be run, not only to the vessels themselves, but to vessels already in the harbour; in such a case as that, do you think that the marshalling of those vessels might be safely left to the voluntary system?—I think that the question of arranging vessels in a harbour is a different question; and that it would be quite necessary to have some absolute police in a crowded harbour, and to give the harbour master some strong powers.

886. That is no doubt the case with regard to a harbour like Cardiff, where vessels go in through locks; but if you have a tidal harbour where the vessels run in at once, would not the extension of that harbour master's authority be necessary outside the port, to prevent accidents?—I should doubt it; but I am scarcely sufficiently acquainted with the circumstances to give an absolute opinion upon that point.

887. Another point which has been urged in favour of voluntary pilotage is that it would be more of a stimulus to pilots to do their work. That you would admit, I think, might also take place under a compulsory system if the authorities regulated the pilots accordingly; that is to say, promoted them according to their zeal, and according to their readiness, and paid them accordingly?—Of course it is possible that things might be so arranged, but on the whole I would rather trust to the stimulus arising from the voluntary action in search of profit. And I think such a stimulus would be likely to be more effectual than the stimulus of obedience to any authority.

888. Is there any alteration made in the Merchant Shipping Bill as to the limit of the liability of pilots for damage?—Yes, there is an alteration, but I believe the effect of the clause is somewhat doubtful. The Trinity House made some suggestion as to the mode of enforcing the 100*l.* liability, but they did not make any suggestion as to increasing the liability of the pilot beyond; on the contrary, they objected to it.

889. *Chairman.*] Was that alteration made in the Bill last year?—I have not been able to refer, and I am not able to say whether it was so or not.

890. Sir *Charles Wingfield.*] You stated, did you not, in reply to the honourable Member for Sunderland, that the existence of this large body of free watermen, somewhere about 400 in number, is in itself proof that the Trinity House has not licensed a sufficient number of men for the pilotage of that part of the river from Gravesend to London?—I think it proves that a sufficient number of men are not licensed; supposing it to be desirable that men should be licensed.

891. But it is in itself evidence that a sufficient

cient number have not been licensed, is it not?—Supposing that it is necessary to license men at all it is clearly proof of that

892. And therefore may not those free public pilots be considered as much the growth of the system that has been in force as the licensed pilots are?—They are certainly the growth of the circumstances; that is to say they have come into existence, I suppose, owing to the wants of the trade.

893. Do you know the reason why the Trinity House has not licensed a larger number of pilots for the river above Gravesend; I ask this question because the reason that is generally given, namely, that the present number only get a fair living, does not appear to me to be a sufficient answer to the question, because the pilotage fees being fixed, and there being employed several hundred watermen as pilots, and the 72 licensed pilots being able to take any ship they please from the free watermen, their earnings, it seems to me, must depend upon the degree of activity they display, and cannot be increased by the number being limited?—I should think probably the reason of the action of the Trinity House in the matter is historical; that is to say, there have been a certain number of pilots employed for those ships which are subject to compulsory pilotage, and those pilots are licensed by the Trinity House. There is a sort of arrangement between the watermen and the licensed pilots; the licensed pilots take the ships which are subject to compulsory pilotage, and the watermen take the ships which are not subject to compulsory pilotage.

894. That is because the licensed pilots cannot take all the ships, is it not?—It would be impossible for them to do it.

895. And they leave what they do not care to take to the watermen?—Yes; they leave the other ships to the watermen.

896. Do you not think that this fact goes to prove that under a perfectly free system the pilots would have stronger motives for exertion than under a system of privilege?—I think that certainly, so far as it goes, it is in favour of freedom in such waters as these.

897. Do you think it is probable that if the Trinity House were left to their own discretion, they will increase the number of licensed pilots, when you consider that the second clause of the Bill is likely to have a deterrent effect?—They will not increase the number of licensed pilots pending the operation of that clause, I should think.

898. And yet it is clear, is it not, that the number of licensed pilots is insufficient, if there is any object in licensing at all?—If there is any object in licensing at all, the number is insufficient for the river above Gravesend.

899. My remarks are confined to the river above Gravesend; but may we not also assume that the failure of the Trinity House to license an adequate number of pilots may be regarded as an admission that the free waterman is just as efficient as the licensed pilot, and that the Trinity House licenses are not necessary to secure efficiency?—It certainly appears as if in the river above Gravesend the large number of unlicensed persons who have had a great amount of experience and practice, are as capable of doing the work as those who are licensed by the Trinity House.

900. Do you not think that the argument in favour of licensing the number of pilots and fixing their remuneration, which is based upon the assumption that it is necessary to secure to the men certain employment and liberal remuneration in order to induce them to undertake the hardships and perils of cruising off the coast in all weathers, whatever force that argument may have in certain ports, certainly fails of application to the Thames above Gravesend, as, in fact, pilotage there neither involves exposure nor risk, and as, in fact, the pilot need scarcely be a night out of bed?—It involves a certain amount of local knowledge and the management of a ship.

901. That argument, founded upon the perils of a pilot's life, does not apply to that part of the Thames, does it?—Certainly not.

902. Therefore, can you not say that the circumstances of the pilotage of the Thames from Gravesend to London differ entirely from those of sea pilotage?—The services are of a very different class.

903. You have stated that the free watermen charge far less than the licensed pilots; I understand that their maximum charge for any ship is 2 *l.*, whereas, by a return which you gave me, it appears that the charge for a licensed pilot for the same distance varies, according to the draught of water, from 1 *l.* 4 *s.* to 12 *l.*?—That is so. The charges of the watermen, I am informed, vary from 1 *l.* 5 *s.* to 2 *l.*; the charges of the pilots, for vessels drawing seven feet of water, is 1 *l.* 4 *s.*; and, for vessels drawing 23 feet, 12 *l.*; but there is a deduction of one-fourth in the case of vessels moved by steam.

904. Is it fair upon owners to make them pay more for the pilotage of their vessels than they can get the work done for by competent men?—Clearly not. I think that is a case in which the demand and supply would very soon fix the price at its true amount.

905. Do you think that those free watermen who have served a long apprenticeship on the river are as well or better acquainted with the channel of the river as those licensed pilots who have not been free watermen, who are often preferred to them by shipowners, so much so that some owners of vessels, now liable to compulsory pilotage, take a free waterman from London to Gravesend?—It is undoubtedly the fact that a very large number of shipowners do make use of free watermen, and also that on the whole the watermen do the work efficiently.

906. Is it reasonable to tell the owner to turn out one of those competent watermen, and to give his ship over to a licensed pilot in whom he has not such confidence?—I do not think it is; at the same time you must have regard to the existence of the vested interests of the licensed pilots.

907. You said just now, in answer to the question of an honourable Member that you did not think there is any oppression in a shipowner being obliged to employ a licensed pilot in preference to an unlicensed pilot if he employs a pilot at all, and that this is practically no limitation on the power of selection, and you illustrate that by saying that a person cannot employ anybody he likes as his doctor, or attorney, or counsel; that attornies and medical men and counsel must get diplomas or certificates, or permission to practice; that is no doubt true, but the State does not limit the number of counsel or attornies, or doctors, whereas you do limit the

Mr. *T. H. Farrer.*
1 April 1870.

number of pilots; does not this difference destroy the analogy?—I think that it does destroy the analogy in such a case as that of the pilotage above Gravesend, where there is obviously a very insufficient number of licensed pilots.

908. Then does it not seem to follow as a logical conclusion, and as a matter of justice to the owner that if the privilege of the licensed pilot to supersede the unlicensed pilot be maintained the Trinity House should be required to license as many persons to act as pilots from London to Gravesend as can prove their competency?—Yes, or as many as are necessary to do the work; I am inclined to think that in that particular case they might fairly license all that are competent; but it is to be observed that those free watermen are again themselves a limited class. They belong to a body which has certain privileges under their own Act of Parliament; and they are fighting very hard in another room at this very time for those privileges, and for the exclusion of unprivileged persons, not in respect of pilotage, but in respect of the navigation of barges.

909. But I understand that there is, practically, no limit to their number, but that the Watermen's Hall will license any man who serves his apprenticeship?—Yes, but he must have served a five years' apprenticeship, and that is in itself a very considerable limitation of numbers.

910. You are aware that the qualifications and conditions prescribed by the Trinity House for obtaining licenes between London and Gravesend, which require service at sea for three years as mates or as master, are an absolute bar to free watermen being licensed, as very few of them have been to sea, and the most efficient are above 25 years of age; and I think you said, in answer to the honourable Member for Sunderland, that you did not think that a knowledge of sea navigation was at all a necessary qualification for a river pilot. Is not a knowledge of the Channel all that is requisite?—Certainly. In the case of vessels moved by steam it would seem unnecessary for a pilot above Gravesend to have knowledge of the mode of manœuvring a sailing ship.

911. I do not know whether you are aware that there are 100 candidates on the list of the Trinity House for licenses as pilots for the river above Gravesend; if it is decided that the Trinity House should increase the number of licensed pilots, and if the free watermen are postponed to those men a long time would elapse before their turn to be licensed can come. Do you not think that, considering the long employment of those free watermen as pilots and the long apprenticeship they have served, they have prior claims to be treated as candidates?—I do not know what is the position of the candidates at all; but it would be a very great pity if, in largely increasing the number of pilots, persons were imported from a distance to be licensed as pilots when there are other men upon the spot who have long done that duty, supposing them to be of equal competency.

912. Is not the Order in Council of 1854, by which twenty-four men were licensed to act as pilots for home trade passenger ships, a precedent for relaxing the conditions which I have described?—That order, I think, was passed with reference to the obligation which was introduced by the Merchant Shipping Act on home-trade passenger ships to carry a licensed pilot, and I think that those men were licensed in order that the home-trade passenger ships who had been already employing those men should be able to continue to employ them.

913. May it not be held with some reason that the term "unlicensed pilots" is not strictly applicable to those free watermen; may not the licenses which they hold from the Watermen's Hall, which describe them as licensed, to work as wate rmenin the navigation of rowboats, sailing boats, steamboats, and other vessels from Teddington to the Lower Hook (that is close to Gravesend), be considered as good a guarantee as a Trinity House license for pilotage in this part of the river?—I am not acquainted with the laws and customs of the Watermen's Hall, but I have already said that those free watermen are themselves a privileged body against outsiders. They have their own licenses, and their own privileges against the bargemen and lightermen, who have not passed an apprenticeship upon the Thames.

914. You showed me a return, giving the average and highest earnings of the different classes of licensed pilots, and a statement of the earnings of the free watermen was given to me by one of their number, and I think it showed the aggregate earnings to be 26,000 *l.*, while one of them earned as much as 900 *l.*, and another 500 *l.*?—The highest earns 900 *l.*, and the average earning is 62 *l.*, and one earns 500 *l.*

915. And some earn 200 *l.*?—Some earn 200 *l.*

916. But does not this statement, supposing it to be correct, go to prove that assuming perfect free trade in pilotage to be established between London and Gravesend, the supply of pilots would be ample and efficient, inasmuch as this large body of men who have earned so much money have been almost entirely employed in ships not subject to compulsory pilotage?—I am inclined to think that under the peculiar circumstances of the river between Gravesend and London, that would be so.

917. Do you not think that one of these two courses must be followed in respect to the pilotage of the Thames from London to Gravesend; either that all the men should receive licenses who prove their competency, or else that the licenses of Watermen's Hall should be sufficient to entitle them to act as pilots for that part of the river?—I think that there ought to be one single authority, and one description of license or qualification for all the men engaged in the same employment; and I think that the present system is not sufficient for all the number who can find adequate employment, and who are wanted on the river.

918. But we are met by the difficulty that under clause 2 of the Bill the Trinity House are almost debarred from giving any more licenses?—I freely admit that that is a difficulty.

919. Do you consider that that clause absolutely debars them?—The question is, whether if this Bill were passed the present licensed pilots would be deprived of a portion of their earnings or not. If they continued to earn as much as they did before, and if there was continued or larger employment for pilots, the fact that the Trinity House increased their number would not signify, as there would be no case for compensation.

920. But then they are liable under the present system to harassment, and then there is recrimination

recrimination between the parties, is there not?—Yes.

921. And if their position were recognised all this ill-feeling and retaliation would cease, would it not?—I think it would be a great improvement; but there would be this difficulty about the licensed pilots, that they now get much larger sums than the unlicensed pilots, and you would have to equalise their earnings in some way or other. I think that if you did it by raising the earnings of the free watermen the shipowner would complain.

922. But I believe that the free watermen would be perfectly ready to continue at their present scale of charges, if they could be received as licensed and freed from the liability of supercession?—If the free watermen would be content with that, and if they also offered to leave to the existing licensed body their present privileges (that is to say, the class of ships which they now pilot at the present pilotage rates), it seems to me that things would go on quite smoothly.

923. You see some basis for the settlement of the conflicting claims of the parties upon that ground?—Upon that basis.

924. And that you think would do away with the privilege now possessed by the licensed pilots to supersede the free watermen?—Yes, but it is a privilege which I understand is not really exercised except in the case of vessels which are subject to compulsory pilotage. There is a sort of arrangement between them that the licensed pilot shall take the vessels which are subject to compulsory pilotage and that the free watermen shall take the rest.

925. As far as I know and have inquired, that privilege is occasionally exercised; that is to say, if a free waterman made himself obnoxious to the licensed pilots they would chase him off ships; and I believe that some of the leading free watermen are very much afraid that that course will be followed now, in consequence of the line which they have taken about this Bill?—Of course, if the free watermen were at once admitted to all the privileges of the licensed pilots and would take the position which the licensed pilots now take at very much lower rates, the present licensed pilots would suffer very much.

926. In that way it might be fair to confine them to the class of vessels which they take now; but are you aware that the free watermen do not ask to be admitted without license, but that they only ask to be allowed to pass an examination and receive licenses?—No; but the effect of at once licensing them and allowing them to take their present earnings would be to admit to competition with the present licensed pilots a very large additional body of men who would do the duty at a smaller rate than the licensed pilots have hitherto received.

927. But does not that show that the pilotage fees might require revision?—It certainly shows that the present system requires alteration, and at the same time you ought to do that with the greatest possible consideration to existing interests.

928. But if the licensed watermen can earn such large sums of money at such low rates, is it not quite clear that the licensed men could earn a very good living at rates rather lower than the present rates?—One would think so; and it must be said as against the existing licensed pilots, that there is nothing to prevent the Trinity House to-morrow from reducing their rates.

929. *Chairman.*] Or in fact doing away with them altogether by degrees, by refusing to increase their number?—Yes; but if you regard strict legal vested interests, there is nothing to prevent the Trinity House from reducing the whole of their pilotage rates to-morrow.

930. Sir *Charles Wingfield.*] In point of fact, it would be absurd, would it not, to keep up the present distinction and limitation of numbers, and always to continue hereafter to license a certain limited number of pilots, when it is notorious that five times that number is required for the work of the river?—It is quite obvious that the system is wrong altogether.

931. I think you stated that the 50 pilots now licensed between Gravesend and the sea have applied to have their licenses extended to London; do you know if such of those men as are not free watermen ever passed an examination as to their knowledge of this part of the river?—I am unable to speak to that.

932. The free watermen, of course, do know that part of the river, but would it be fair to the mass of the free watermen to allow those men to act as pilots for a part of the river with which they are not acquainted, to the exclusion of men who know it thoroughly?—I think it would be wrong to grant licenses to men to do that which they are not competent to do; but if those men have been in the habit of taking ships from London to Gravesend, I do not see why they should not be licensed for it. If the men from Gravesend to the sea have been in the habit of taking ships from London to Gravesend, and know that part of the river, I see no reason why their licenses should not extend to that part of the river.

933. I think you stated that the abolition of compulsory pilotage, and of the exemption from liability now enjoyed by the owners of vessels subject to compulsory pilotage, would lead to the owners requiring the masters and mates to pilot their vessels?—It might do so, or it might not do so. They would do whichever was clearly best for the vessel, under the circumstances.

934. Do you think that this would lead to a falling off in the employment of the licensed sea pilots, that is to say, pilots up to Gravesend?—I should be inclined to think not, but it would depend upon whether the pilots were really wanted or not; I believe they are really wanted.

935. But anyhow the owners would never be able to dispense with the service of pilots between Gravesend and London, would they?—I think that experience shows that they never would.

936. You said, in answer to the question of an honourable Member, that pilotage rates might be fixed, because it would be impossible to leave the master and pilot to make a bargain; but this is what the waterman do, is it not?—I was speaking then of the sea pilotage, where a ship comes in from the sea and meets a pilot, which is quite a different case; but it is quite a question of convenience; it is possible that it might be more convenient that the rates should be fixed between London and Gravesend, as they are in the case of cabs.

937. You have mentioned instances of hardship inflicted upon the owners of vessels, by being apprehended in distant ports and taken to Gravesend, on the charge of having refused the services of licensed pilots; have your heard of quite a recent case, of the master of an Italian vessel who was served with a warrant at Cardiff, and though he had paid double pilotage and costs

Mr. *T. H. Farrer.*
1 April 1870.

at Cardiff, was obliged to pay 4*l.* 16*s.* costs to Gravesend, besides the expenses of his journey?—I have heard that there is such a case; I have not heard the particulars of it. I have said before that it is only accidentally that the Board of Trade hear of such cases.

938. Are you aware that it was said from the Bench that this master, being an Italian, had been deceived?—I have not heard the particulars of the case, and I am unable to speak to the particulars of that case.

939. That is a very extreme case, is it not?—That is a very extreme case.

940. Would this hardship continue to be inflicted, that is to say, if the penalty of 50*l.*, to which the owner is liable who employs an unlicensed pilot after a licensed pilot has offered his services, is made recoverable in a summary way, as I see it is by the Merchant Shipping Act?—Yes, I think that is so; and I think it will require consideration whether he should have so severe a remedy; at the same time, of course, it is a very different thing to impose a secure penalty for the infraction of a law which is admitted to be just (assuming that law to be just), from imposing that same penalty for the infraction of a law which people feel to be unjust.

941. The Bill which was introduced last Session, in the month of August, abolished compulsory employment but retained compulsory payment, did it not?—It did.

942. The "Spindrift" was not lost until October or November, was it?—I think later.

943. A report has been circulated on the river (and I believe is credited by those who do not like the present Bill) that the loss of the "Spindrift" is the sole cause of its being introduced, but this of course is an entire delusion?—I think if you attach any value to the evidence which I have given, you will see that this question has been dealt with by the Board of Trade and the Government, quite independently of the question of the "Spindrift."

944. I merely put the question because the report has been circulated, and people who are interested in circulating the report, or who are of a disposition to believe it, would probably not look at evidence?—Since I have been at the Board of Trade this question of compulsory pilotage has been perpetually agitated.

945. Mr. *P. W. Martin.*] My constituents have been at it for 10 years at least, have they not?—At least 10 years.

946. Sir *Charles Wingfield.*] Then do you think that the question of the pilotage rates from Gravesend to London may be treated as a special case?—I think it may, so far as the limitation of the number of pilots, and the mode of licensing them, is concerned; at the same time it can be dealt with by the Trinity House under their present powers, and it need not lead to further legislation.

947. But the Trinity House have not apparently as yet seen the necessity of altering the arrangements with regard to licensing, and, unfortunately, as you yourself admit, the second clause of the Bill almost debars them from making any change now?—I do not think that it does do that if their present occupation and present rights are reserved to the existing licensed pilots.

948. Mr. *J. S. Hardy.*] In answer to the honourable Member for Sunderland, you said that the true answer to a question which I put to you the other day was, that in fact in cases of heavy insurance, of insurance without a clause put into the note of insurance that pilots should be employed in pilotage waters?—I said that they could do so in all cases, and that I had heard that they did do in some cases.

949. Do you not think that that is, in fact, a compulsory pilotage by some other person than the Government?—It is a matter of perfect freedom to the shipowner whether he chooses to insure his ship or not, and it is a matter of freedom to the insurer whether he chooses to insure the ship or not, and the two can agree between themselves as to the price at which and the conditions upon which the ship shall be insured.

950. Do you not think that that goes to prove that a person having an interest in a ship apart from the interest of the owner of a ship feels that it is, in fact, a necessary precaution to employ a pilot for the defence of his interest in the ship?—In any case where an insurer insists on that condition, it undoubtedly shows that he does think it necessary that a pilot should be employed, and in that case he insists upon that condition.

951. You stated, did you not, that that was a common case?—I said that I could mention cases in which I had heard that it was done; I have been told that there are a very large number of cases of ships bound from the north channel into the Thames in which it is done.

952. In point of fact, is not the result of that that the public, having an interest in the license entirely apart from the interest of the owner of the ship, have a right to insist upon the employment of pilots?—I said distinctly that the Government, and Parliament, and the public have an absolute right to do whatever they please, and whatever they think necessary for safety, but that is not the question. The question is in what way that safety will be best secured. Will it be secured better by the Government putting a person on board the ship to look after it, or by leaving the person owning the ship liable.

953. But do not the underwriters seem to think it better that a pilot should be employed?—Yes; in those particular cases.

954. *Chairman.*] The underwriters themselves have expressed an opinion in favour of this Bill, have they not?—The underwriters of Lloyd's have expressed decided opinions in favour of the Bill.

955. Mr. *Norwood.*] Have you ever seen a policy of insurance at Lloyd's upon a ship?—Yes, I believe I have; and I have read them in law books.

956. But have you ever seen an actual *bonâ fide* policy?—I am not quite sure whether I have or not; but I think I have.

957. I understood you to state that you believed that it was a custom at Lloyd's (which is the great underwriting authority) to put into a policy upon a ship a clause requiring the employment of a pilot?—I did not say so; what I said was, that if the underwriter thought it necessary for his interests, it was perfectly competent for him, so far as the law goes, to insist upon that condition.

958. I understood the honourable Member for Rye to make it a point, that whereas from your admission the underwriters at Lloyd's required the employment of a pilot, therefore they considered it necessary that compulsion should be used, either by themselves or by Parliament?—If the honourable Member for Rye raised that implication from my words, he raised an

an implication which I myself had certainly no intention of raising. I said that the underwriter can insist upon the condition if he wishes to do so; and in order to show that he can do so, I stated that there were cases in which I was told that it was done.

959. You know that, not from having perused the document itself, but from law reports?—From what I am told is the practice.

960. Should you be surprised, if you were to hear that such a thing does not happen once in 1,000 times?—I am told that in policies of insurance on foreign ships from the north of Europe into the Thames, they are in the habit of inserting a condition that the vessel shall employ a pilot; in Hamburg, for instance.

961. But is not that a very small proportion, and a very special case?—Very possibly; I only say that it can be done if the underwriter wishes it.

962. But the evidence elicited by the honourable Member for Rye went very much further than that; his argument, as I understood, was this: that it was a frequent habit for underwriters in their policies to put in a clause, which was part of the contract between the underwriters and the shipowners that they should employ pilots?—I never said, or meant to say, anything of the kind.

963. That was the reason which induced me to ask you if you ever saw a policy with such a clause; you tell me that you do not recollect whether you have ever seen one, and therefore you will admit, will you not, that you are scarcely an authority upon the usages at Lloyd's upon that subject?—I do not pretend to be an authority upon the usage at Lloyd's.

964. Mr. *Graves.*] You have in the Board of Trade an officer called a nautical adviser, I believe?—Yes.

965. I believe that his duties are very much connected with the questions of light dues and surveying harbours, and also with the question of pilotage?—He advises upon nautical points, arising out of the duties of the Board of Trade with respect to these matters.

966. Have you consulted him with reference to the principle of this Bill?—It is not for me but for the Board to consult him.

967. But as a matter of fact have you consulted him as the nautical adviser of the Board of Trade?—I think that it is rather a question for the political head of the Board of Trade than for me; the nautical adviser is a colleague of mine.

968. But as a matter of fact, for the information of the Committee, can you answer that question?—I would rather that you should get the answer from those who do consult him.

969. I merely ask whether you have consulted the nautical adviser of the Board of Trade upon this question?—It is the business of the head of the department to consult the different officers of the department; it is not my business to consult them.

970. Has the nautical adviser approved of the principle of this Bill?—It is not for me to say.

971. I suppose that we shall have the pleasure of seeing him here probably as a witness?—I suppose so, if the Committee desires it; but that is not for me to answer either. As to the opinion of the former nautical adviser, I would ask you to refer to the opinion of the nautical adviser of the Board of Trade, who appeared before Mr. Lindsay's Committee in 1860. As regards the opinion of the present nautical adviser, I should be very sorry if the inference was drawn, from anything I have said, that he was hostile to the Bill, because I do not think that it is so.

972. *Chairman.*] You have stated, have you not, to an honourable Member of the Committee, that in your private opinion, the measure may eventually have to go somewhat further than it goes at present?—I think that there are certain cases (one of which has just been referred to on the Thames), where it would probably be necessary to increase the numbers of certified or licensed pilots.

973. You had reference solely to the question of licensing a greater or less number of pilots?—Quite so.

974. And that will be within the competence of the pilotage authority of each particular place, will it not?—That will be within the competence of the pilotage authority of each particular place.

975. And you think it will be, on the whole, better to leave it to them, whether to license a limited or an unlimited number?—I think so.

976. You do not think that it would be, on the whole, desirable to legislate on that subject?—I think not, because the practice is different in different ports, and there are a very large number of very competent persons who are entirely opposed to compelling a shipowner to take a pilot, who still think it necessary to keep a restriction upon the number of pilots.

977. At some places, is it your private opinion that it would be better to have an unlimited number of pilots?—I am inclined to think that that would be the case in some places, especially in those cases where there are a great demand for pilots at one time of the year and not at another, and in which men follow other employments at those other times. But really, whether the pilotage authority nominally restrict the number or not, the demand and supply will, as I have said, really determine the number.

978. But you would lay down no general rule as to this point?—I would lay down no general rule.

979. Would you be in favour of a perfectly free system, with reference to an unlicensed corps and an unregulated force?—Certainly not.

980. You think it necessary that there should be a regulated price, and a licensed corps?—I think it necessary that there should be a regulated price, and a licensed corps.

981. And therefore that the licensed pilots should have the right to supersede the unlicensed pilots?—I see no reason why the licensed pilots should not supersede the unlicensed pilots.

982. With regard to the question of insurance, quite apart from what is the condition in a policy of insurance, I think you have also stated that the general law would hold, that a vessel in some cases is not seaworthy, if a master knowing nothing about the particular locality does not employ a pilot?—I believe that under our law, it is a doubtful question under what circumstances the law implies a condition in the policy of insurance, that a pilot shall be employed. It certainly does so in some cases, but it is a question whether it does so in all cases.

983. But, certainly, in some cases it is a general obligation of law, is it not, presuming that the master does not know the locality, that in order to make the vessel sea-worthy the master must take a pilot?—In certain cases.

984. And I think that in some foreign laws it is an universal obligation?—I think that the American law requires the employment of a pilot as a condition of the policy of insurance, in certain cases, where the English law does not.

Mr. *T. H. Farrer.*

1 April 1870.

985. Some question has been raised as to the difficulty of fixing rates under a voluntary system; is it your opinion that there would be any such difficulty?—No, I think that there is considerable difficulty in fixing them under the compulsory system, because you do not know whether the persons who employ the pilots really want them.

986. But under the voluntary system, the pilotage authority is much better able to get at the wishes of the trade, is it not?—Much better; if they put their rates too high, the employment of pilots will fall off. On the other hand, they can raise the rates within the limits within which the shipowner is willing to pay for the service. In that respect I think that a voluntary system is more likely to be beneficial to the pilots where the service is a very important one, than the present system.

987. And under the voluntary system the pilotage authority is much better able to determine the number of pilots required for a trade, than under the compulsory system, is it not?—Much better able; the pilotage authority will not arbitrarily limit the number; it will be really fixed by the supply and demand, and the pilotage authority will only form their opinion upon that.

988. And after this Bill is passed, the pilotage authority will be better able, will it not, to determine what is the real number of pilots required by the trade?—Certainly.

989. Because he will have before him what is the real demand, and will be able to proportion the actual number to that demand?—Yes.

990. Some question has been raised as to the difficulty of compelling pilots to serve, and as to whether vessels are not compelled to take them; do you apprehend that there will be any such difficulty?—I think not; it is rather a nominal than a real compulsion; when a shipowner is not obliged to employ a pilot he will employ him if it is worth his while, and then it becomes really a question far more of supply and demand than of compulsion.

991. You have been asked by some honourable Members, and particularly by the honourable Member for Liverpool, as to the case of the Liverpool pilot boats, and I think that you have intimated to the Committee that that is a case deserving of some consideration?—Yes.

992. I think that you have stated that the number of boats at Liverpool is 12; supposing that after this Bill is passed abolishing compulsory pilotage, it should appear that the same amount of service is not required, and therefore the same number of boats is not required; will you state to the Committee the mode in which that question of the boats might be dealt with?—The result in that case would be to withdraw (say) a single boat, and the number of pilots who belong to that boat.

993. And those pilots are interested in the boat, are they not?—Those pilots may or may not be the pilots owning the boat; so far as that number of pilots is concerned you would withdraw them; you would superannuate them, and you would in compensating them take into consideration anything which they might lose; you might do that perfectly well, either treating them as boatowners or as pilots.

994. Does not a proportion of their receipts go towards the maintenance of the boat?—Yes.

995. And in respect of the boat itself, they themselves receive a portion of those earnings in another capacity, do they not?—Yes.

996. Therefore, in taking into account the superannuation to be given to them under this Bill, the ownership of the boat might be taken into consideration, might it not?—Yes, so far as the owners of that boat; but even if they are not it would be really a small affair; because the only thing which you would have to consider would be that proportion of the earnings of the boat which goes to the owner of the boat, after payment of all the expenses of the boat. If it is true that only 7,000 *l.* went last year to the boat owners, as was stated at a meeting of the Liverpool pilots, and if there are 12 boats, it would be only a question of some 500 *l.* or 600 *l.* a year.

997. Therefore, the interest over and above that of the existing pilots is a very small thing?—It is a very small thing.

998. You also stated, did you not, that the general question of the Liverpool pilot-boats ought to be taken into consideration?—I think so, in the interest of the Liverpool pilotage.

999. But it is not necessarily connected with the Bill, is it?—It is not necessarily connected with this Bill.

1000. And it does not follow that upon the Government should be imposed the responsibility of getting rid of that bad sytem?—No; I think that Liverpool is large enough and wealthy enough to reform its own pilotage system.

1001. Some question has been raised by an honourable Member as to the difficulty which might occur in consequence of the very large number of vessels employing tugs; have you considered that question in regard to pilotage?—One of the largest steam-tug owners in London came to us the other day, and informed us that under no circumstances would the tug-owners undertake the responsibility of piloting the ships. They say that they merely supply the motive power, and they must have the pilot in addition, who shall be responsible for giving them the orders, and for managing the ship.

1002. At present under an ordinary contract between a tug and a ship, the tug simply supplies the motive power?—The tug simply supplies the motive power.

1003. And it is entirely under the control of the master or of the pilot, is it not?—Entirely.

1004. If a tug is to undertake the piloting of a vessel, is not that entirely a different function from that which it now performs?—An entirely separate function.

1005. And is it probable that the tug owner would take upon himself the responsibility which he does not now incur?—He certainly would not do that without being paid something additional for it.

1006. Mr. *W. P. Price.*] I suppose that there is nothing to prevent the owner of a tug-boat passing his examination, and being licensed if he likes, so as to be able to undertake both duties?—I think not.

1007. *Chairman.*] Under the general system now adopted the tug, I think, is under the control of the master, or of the pilot, or some one on board the vessel?—That is so.

1008. I presume, therefore, that if a tug owner were to take out a license for pilotage purposes, and if he put himself on board the vessel, then he would come under the conditions attaching to a pilot?—No doubt.

1009. And then a licensed pilot might supersede him?—Then I should think a licensed pilot might supersede him if he were not licensed himself.

1010. Mr.

1010. Mr. *W. P. Price.*] But could he not be licensed himself so as to be able to undertake both functions?—I do not think that there is anything in the Imperial law to prevent a master of a steam tug from being licensed as a pilot; some of the regulations of some of the pilotage authorities prevent it. I think it is so at Liverpool, if I remember rightly.

1011. *Chairman.*] But I think in the Thames if he takes out such a license that would only give him power to pilot his own vessel?—That would depend upon whether he got a general license as a pilot, or only a license to pilot his own vessel.

1012. I think at law the tug and the vessel are considered as one?—For all purposes of collision, and questions arising against anything which is external to the two vessels themselves, that is so.

1013. Therefore in coming up a crowded river the pilotage of a vessel with a tug is rather more difficulty than the pilot of a single vessel, is it not?—I should think so.

1014. Therefore, in all probability, a vessel being tugged would always be compelled, quite apart from this Bill or from the general law, to take a pilot?—I should think so, and so I understand from those with whom we have communicated.

1015. Have you any further explanation to give to the Committee?—Perhaps I may be allowed to correct the documents which I have put in; I see that they have got in wrong, and I should wish to put in the right documents, and not the wrong ones.

1016. Mr. *P. W. Martin.*] This deputation of mine represented 400,000 tons of shipping, did it not?—The deputation of the barge owners of the Thames, &c.; I think so.

1017. Did they not come before the Board of Trade as owners of what I may call seagoing craft, or vessels under sail, and not of flats drifting up and down the river?—Yes, I think they were vessels under sail; I do not think that they were the lighters that one sees here.

1018. Are you aware that a great many Honourable Members think that they are lighters?—They are small craft.

1019. Mr. *Norwood.*] Are they craft which carry straw and hay?—No; lime, I think.

1020. *Chairman.*] There is one other question with reference to Liverpool; I think, on a previous occasion, you put in a letter from Runcorn, on the subject of the pilotage of Liverpool, from Mr. Steele?—Yes.

1021. And I think that you have since received another letter on the same subject, which you put in to-day?—Yes.

1022. On the whole, the opinion of the shipowners on the Upper Mersey is rather against the compulsory pilotage, is it not?—I am informed by a gentleman who represents largely the interests in the Upper Mersey, in Runcorn, the port of Wigan, Garston, and so on, that they are entirely in favour of this Bill; and he writes to me to-day to ask if I will inform him whether the Committee will hear evidence from those interests in the Upper Mersey in favour of the Bill. That application represents, I believe, the large interests at Runcorn, owners of docks at Garston, who are, I think, the London and North Western Railway Company, and, if I am not mistaken, I think, the Bridgewater Trust, all interested in the Upper Mersey. I will put the letter in.—(*The same was delivered in,* vide *Appendix* (A), *No.* 24.)

1023. With reference to the Thames between London and Gravesend, I think you would admit that that is entirely an exceptional case?—I think that it is a very exceptional and peculiar case.

1024. Mr. *Gourley.*] Can you mention any special case in which underwriters have compelled the employment of a pilot, either in British or foreign ships?—I am speaking now from hearsay, but I am told that all the foreign ships from the north of Europe coming into the northern channels of the Thames by Orfordness, are compelled by their policies of insurance to take a pilot from Orfordness, and I have heard it on such credible evidence that I believe it.

1025. Can you mention any country whose law compels the insurer to insure for only half the nominal value of the ship?—No; but I think I could easily find for the Committee, laws of foreign countries in which the amount for which a shipowner is allowed to insure is limited; whether those laws practically operate or not is another question.

1026. I suppose that you are aware of the law which exists in this country, that if an accident occurs to a ship, although her owner may be paying upon insured value, upon a specific value he would not receive in return more than two-thirds, or perhaps only one-half, of the proportionate amount for the accident?—I am not aware of that law, but I am not sure that I understand the question fully.

1027. Mr. *Malcolm.*] In consequence of the answer which you gave to the Honourable Chairman just now, stating that you consider that the pilotage of the Thames above Gravesend is an exceptional case, I will ask you whether you extend that to the Clyde, because you stated in your examination in chief the fact that the pilotage of the Thames above Gravesend and the pilotage of the Clyde were much the same thing?—When I hear that the circumstances of the Clyde with respect to the number of the persons employed, and especially the number of unlicensed persons employed, are the same as the circumstances of the Thames above Gravesend, then I would say that the same rule applies to the Clyde above Greenock as to the Thames above Gravesend.

1028. Sir *Charles Wingfield.*] Have you heard that many of the licensed pilots in the Thames have shares in steam-tugs, and derive very considerable profits in that way?—Yes; there has been considerable question about that.

1029. Was it not at one time proposed by the Board of Trade to prohibit them from owning steam tugs?—No; the Trinity House found that there were certain evils arising from the fact of pilots owning steam tugs; they thought that the pilots forced the employment of these tugs upon owners when it was not necessary, and they proposed a bye-law by which pilots should be prevented from owning steam tugs; but upon careful consideration of the question, and after hearing the views of shipowners upon it, the Board of Trade thought that the evils of such a course would be greater than the benefits of it.

1030. *Chairman.*] As this is the third day that you have been examined, it is the wish of the Committee that I should thank you for the admirable manner in which you have given your evidence?—If I may be allowed, I would thank the Committee for their courtesy to me.

Tuesday, 5th April 1870.

MEMBERS PRESENT:

Colonel Bourne.	Mr. Malcolm.
Mr. Cave.	Mr. Philip Wykeham Martin.
Mr. Gourley.	Mr. Norwood.
Mr. Graves.	Mr. Pemberton.
Mr. Grieve.	Sir Henry Selwin-Ibbetson.
Mr. John Stewart Hardy.	Mr. Stevenson.
Sir John Hay.	Mr. Charles Turner.
Mr. Shaw Lefevre.	Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., IN THE CHAIR.

Mr. WILLIAM BROWN CLEGRAM, called in; and Examined.

Mr. *W. B. Clegram.*

5 April 1870.

1031. *Chairman.*] YOU are the Superintendent and Engineer of the Gloucester and Berkeley Canal?—I am.

1032. I believe you have taken considerable interest for some years past in the question of the pilotage of the Bristol Channel?—I have.

1033. Do you recollect the first establishment of Trinity Pilots on the River Severn between King Road and Sharpness Point, between 30 and 40 years ago?—I do; nearly 40 years ago.

1034. The pilotage of the Bristol Channel was for many years under the entire control of the Corporation of Bristol?—It was, extending as far, I think, as the entrance of the Gloucester Canal.

1035. It extended from Lundy Island, on the west, to the entrance of the Gloucester Canal?—Yes, and I believe further; I think their powers extended up the river as far as the tide flows; but practically, for all sea-going purposes, it extended to the entrance of the Gloucester and Berkeley Canal.

1036. Was there a separate authority for the pilotage up the canal itself?—Yes.

1037. But the sea pilotage was under the jurisdiction of the Bristol Corporation, was it not, together with the pilotage for Cardiff and Newport?—It was.

1038. I believe that at Newport there were Trinity pilots for the local pilotage; but that the sea pilotage was under the Bristol pilotage authorities?—Solely.

1039. I think there were considerable complaints made of that state of things on the part of Gloucester and of Cardiff?—Very great complaints were made some 24 or 25 years ago, and they were increasing from year to year, until about 17 years ago, when the first steps were taken to remedy the inconvenience arising from the then existing state of things.

1040. You were one of those gentlemen who took an active part, with a view to an alteration of the system?—I was.

1041. Will you state to the Committee the objections which you found to the pilotage as then existing?—The principal objections were, that the lower part of the Channel was capable of being navigated to a very great extent without pilots, and therefore a charge was imposed upon shipowners which was felt to be unnecessary; and although the ports of Newport, Cardiff, and Gloucester had then become places of considerable traffic, they had no control whatever of the pilotage, or in the regulation of the charges; it was felt that the charges were very high, besides being imposed where they were not needed.

1042. Were the objections, in the first place, that the pilotage was imposed upon vessels unnecessarily; and, secondly, that the rates were too high, and that the sole control of the pilots was in the hands of the Bristol corporation?—Yes.

1043. You were one of those, I think, who took an active part in agitating against that state of things?—Yes.

1044. I think that in the year 1853 the first change was made with respect to pilotage?—The first change which was made was in 1853. Representations were made, I think, after the passing of Mr. Cardwell's Act in 1853, which gave power to the existing pilotage authorities to make arrangements with other pilotage authorities in the neighbourhood. Under that Act the Gloucester and Berkeley Canal Company, as representing the authorities for the trade of Gloucester, communicated with the authorities of Bristol, begging for certain changes which they felt were needed to secure their trade from the inconveniences which resulted from the then existing system. Amongst those inconveniences, apart from what I have previously mentioned, were these: that a pilot, taking charge of a vessel bound for Gloucester, could only do so from King Road. The vessels were brought up the Channel by the Bristol pilot to King Road, and there they were anchored, the Bristol pilot having done his duty, and they sometimes lost many tides in getting up to Gloucester, occasioned by the change of pilots. Then on the outward voyage that was felt to be even a greater hardship, because vessels leaving the entrance of the Gloucester canal, outward bound, could always pass down the Channel if the pilot had the authority to do so; but he was compelled to bring up in King Road for a Bristol pilot, there to take charge of the vessel. The authorities of Gloucester asked the authorities of Bristol at that time to extend the limits of the Gloucester pilotage as far down as the Flat Holmes, and that it should be, as far as their vessels were concerned, a non-compulsory pilotage between Lundy Island and

and the Flat Holmes, and also that a certain and reasonable pilotage rate the Gloucester pilots should be permitted to charge over that extended district. The Bristol authorities considered that application, and did not comply with it. Then, for some years after that the grievance still went on, and was felt very much both at Cardiff and Newport, as well as at Gloucester.

1045. I think that you memorialised the Board of Trade upon the subject?—Yes; Bristol not having acceded to the request, the Gloucester Canal Company memorialised the Board of Trade, begging that Board to have the entire question of the pilotage of the Bristol Channel investigated, which was done by the late Admiral Beechey.

1046. And he reported to the Board of Trade upon the subject, did he not?—He did. I was present at the whole of that investigation, and so were the representatives of other ports in the Channel: Newport, Cardiff, Bristol, Bridgewater, and Swansea; I think that all those ports were represented there.

1047. Nothing however was done, I believe, until the year 1860?—Nothing was done until 1860.

1048. Will you state to the Committee what took place in the year 1861, when the application was made to Parliament?—In 1861 the ports of Cardiff, Newport, and Gloucester combined, and made an application to Parliament to be released from the jurisdiction of Bristol over the pilotage of the Channel; that they should have their own limits of pilotage defined, and should have authority to appoint their own pilots and to make their own rates; and that the whole should be on the non-compulsory system.

1049. You took an active part in promoting the measure, which was then laid before Parliament?—I did.

1050. That Bill was referred to a Select Committee in the House of Lords, and also, I think, in the House of Commons?—It was.

1051. And evidence was taken before those Committees, both for and against the Bill?—Yes; a very large amount of evidence was taken, and the Bill was passed in that year.

1052. Was the effect of the Bill to abolish compulsory pilotage as far as Gloucester, Cardiff, and Newport were concerned, freeing them from the control of the Bristol authorities, and leaving compulsory pilotage existing only at Bristol?—That was so.

1053. Before I question you as to the result of that Act, will you shortly describe the nature of the navigation up to Gloucester, from the point at which vessels now generally take their pilots?—Lundy Island is the western-most limit of the Gloucester pilotage, and, indeed, of the Bristol Channel pilotage. There is a difference of charge in the pilotage between Lundy Island and the entrance to the Gloucester Canal, arising at different stations: of which the Nash Point is one, and the others are the Flat Holmes and King Road. The Gloucester Canal leaves the Severn about 20 miles above King Road, and it passes on, cutting off the circuitous route of the river Severn up to Gloucester.

1054. When Gloucester was under the Bristol corporation, as far as pilotage was concerned, where did the vessels generally take their sea pilots?—At the entrance of the canal, at Sharpness.

1055. But inwards?—They were limited to King Road (*pointing to the map*).

1056. But where was the Bristol pilot put on board?—The Bristol pilot was put on board wherever the vessels could find Bristol pilots in the Channel below, and the Bristol pilots had the authority to navigate up to King Road (*pointing it out*), and from King Road the Gloucester pilots under the Trinity House navigated the vessel to the entrance of the canal.

Mr. *W. B. Clegram.*

5 April 1870.

1057. What are now the limits of the Gloucester pilotage district?—From the entrance of the Canal at Sharpness point to Lundy Island (*pointing it out*). This westernmost limit is the limit of all the pilotage authority in the Channel, the Bristol limit.

1058. After the passing of the Act of 1861, a separate pilotage authority was constituted at Gloucester for this district?—It was.

1059. And then there were licensed sea pilots specially for Gloucester?—Yes; it should be quite understood that the Gloucester pilots, under the Act of 1861, have the full authority to pilot from the entrance of the Canal to the extreme limit of the Bristol Channel, Lundy Island being that limit.

1060. And I suppose that a fresh system of rates was established in consequence of that Act?—A fresh system of rates was established.

1061. Were the new rates lower than the rates which had been paid previously?—They were considerably lower, as between King Road and Lundy Island; 33 per cent. lower, I think.

1062. Is the navigation of the Channel, from the extreme point upon that map to below Bridgewater, a difficult one, say to Foreland Ledge?—I am not a seaman, and I can scarcely speak upon that point, but I have heard masters of vessels say that it is very rarely that they require pilots upon the lower part of the Channel, but in the upper part of the Channel decidedly pilots are required.

1063. Is it a difficult navigation?—It is a difficult navigation.

1064. The pilotage authority commenced to license pilots for the separate district which was then created?—Yes.

1065. What is the number of pilots who have licenses for that district?—There are 21 Gloucester pilots now, and they are all pilots for the Channel, excepting one. That depends upon the nature of the examination passed. One is simply a pilot from the entrance of the canal to King Road; the others are all licensed for the Channel as well.

1066. Where do they generally now meet the vessels?—The greater number of vessels which are met by the Gloucester pilots are not lower down than between Nash Point and Lundy Island.

1067. Is that the place where the vessels generally want to take on board pilots?—They generally have their flag flying for a pilot after they pass Lundy Island.

1068. What is your opinion as to the result of the change?—I am decidedly of opinion that it has been an advantageous change. I may say, certainly, that during the eight years it has been in operation the Pilotage Board of Gloucester has had no complaint from shipowners or shipmasters of the want of pilots in the Channel.

1069. Is there full employment for the pilots whom you have licensed?—There is full employment for them, and they are making a very good living.

1070. Can you state to the Committee what are the average earnings made by the Gloucester pilots?

Mr. *W. B. Clegram.*
5 April 1870.

pilots?—I have not a return for the last year; I came rather hurriedly from home; but in the year 1868, according to a Return which has been made to the Board of Trade, I think their average earnings were 230 *l.* a year; some of them, of course, getting very much more than that; those are gross earnings.

1071. Does each man have his separate earnings, or are they lumped together?—Each has his separate earnings. Very nearly each man has a boat. I think there are 18 boats, and there are 21 pilots. Some of the younger ones have not yet been able to procure boats; and under those circumstances the board sometimes allow two pilots in one boat.

1072. Do you limit the number of pilots that you can license, or not?—They are only limited by the necessities of the trade. If we found that the 21 were insufficient for the work of the Channel, more would be licensed, and there would be no difficulty in licensing, because there are apprentices now ready to take the service.

1073. But you do not add to their number unless the trade requires it?—Certainly not.

1074. Therefore, practically, there is a limit to their number?—Yes.

1075. You endeavour to proportion the number of pilots to the requirements of the trade?—Yes.

1076. Has any complaint been made by the trade of the want of a sufficient number of pilots?—No.

1077. On the other hand, has there been any complaint on the part of the pilots of the want of sufficient employment?—Certainly not.

1078. Sir *John Hay.*] Are you speaking only of Gloucester?—Only of Gloucester.

1079. *Chairman.*] Do you know anything of the working of the change at Cardiff?—I only know generally, but I believe that both at Cardiff and at Newport they are as well satisfied with the change as they are at Gloucester.

1080. The Bristol pilots are now occupied in piloting vessels to Bristol only I believe?—To Bristol only; but they have larger boats than the Gloucester boats, and I believe larger than the boats at Cardiff and Newport, and they sail farther to the westward, and occasionally pick up vessels bound for Gloucester and the other ports.

1081. Occasionally, when a vessel wants a pilot rather sooner than in ordinary cases?—The Bristol pilots generally cruise further westward than the Gloucester, Newport, and Cardiff pilots.

1082. Has the change had any effect upon the Bristol pilots?—I think that it has had the effect of stimulating them to greater exertion. I know that some of the Bristol pilots cruise round the land as far as Falmouth, and have brought many vessels into the Channel from Falmouth bound to Gloucester.

1083. Has the result been a saving to the shipowners of Gloucester?—It certainly has.

1084. Have the rates been lowered?—The rates are lower, as I said, by 33 per cent., taking the average between Lundy Island and King Road for all vessels bound to Gloucester, than they were under the old system.

1085. Can you give the Committee any information as to the number of vessels that take pilots coming up to Gloucester?—I may say that all the vessels, or nearly all the vessels, coming to Gloucester take pilots on that portion of the pilotage ground between King Road and the entrance to the canal. The physical character of the river necessitates the taking of pilots over that distance.

1086. Although, therefore, it is perfectly voluntary, as a rule they continue to take pilots?—Quite so, except those masters who are well acquainted with the navigation of the river.

1087. Has any complaint been made of the loss of vessels through the masters not taking pilots?—None; no such complaint has come before the board.

1088. Have you read the Bill which is now before the Committee?—I have.

1089. What is your opinion as to the propriety of abolishing compulsory pilotage generally?—Judging from my experience in the Bristol Channel, I should say that it would be an advantageous thing throughout the kingdom if the change were made.

1090. Do you think that the experience of the change, as far as Gloucester is concerned, from the compulsory system to a voluntary system, is highly satisfactory?—It certainly is.

1091. And no complaints have been made as to the working of the new system at Gloucester?—None whatever.

1092. Nor as far as you are aware at the other ports affected by the change?—None.

1093. Have you heard of any demand on the part of the Gloucester or Cardiff people to revert to a system of compulsion?—Certainly not.

1094. Nor on the part of the pilots?—Certainly not.

1095. Do you believe that the Gloucester pilots are content with the system under which they now work?—I know they are content with it.

1096. Mr. *Graves.*] Are the pilots at Gloucester under a local authority?—Yes, they are under the authority created by the Act of 1861.

1097. Will you state to the Committee how that local authority is constituted?—The Gloucester and Berkeley Canal Company appoint four of the commissioners, and the corporation of Gloucester appoints three. The mayor, for the time being, being one of them.

1098. Has the commerce of the port any direct representative on that board?—Only through the Gloucester and Berkeley Canal Company.

1099. Is that a private company?—It is a private company.

1100. And the corporation represent probably the town rather than the commerce of the port?—That is so; they represent the town and the commerce of the port.

1101. So that there is no direct representative of the commerce of the port, or of the shipping interested on your board?—Excepting through those authorities.

1102. Will you inform the Committee of the nature of the examination which those pilots undergo in order to get a license?—There are three nautical gentlemen on the board, two of whom are commanders in the Navy, and one a retired shipmaster, well acquainted with the navigation of the Channel, and of the others, some are merchants. I am one of them, as representing the Gloucester and Berkeley Canal.

1103. And by whom are the two nautical gentlemen of whom you speak appointed?—They are appointed by the Gloucester and Berkeley Canal Company.

1104. You

1104. You stated, I think, that you were not yourself conversant with nautical matters?—I am not, excepting in so far as my connection with the trade for a great many years goes. I am not a sailor.

1105. And yet you think yourselves qualified to speak of a pilot as properly licensed or not for the navigation?—I do not say that. The pilotage board leave the examination of the pilots in the hands altogether of the nautical men. They are examined by those three gentlemen, and one or two of the oldest pilots.

1106. Can you tell me how many they have examined since 1860?—I cannot do so without looking at the books, but I suppose that they may have examined 10 or 12 since 1865.

1107. Can you inform the Committee how many have been licensed since that time?—I cannot tell you the number, but I know that several have been licensed. On the death or retirement of an existing pilot others are licensed.

1108. Is the trade of Gloucester increasing?—It is very much increasing.

1109. Are you aware that since the year 1865, by a return which has been forwarded, I suppose by the pilotage authorities, only four pilots have been licensed since 1865, notwithstanding the increase of the trade of Gloucester?—That may be so.

1110. Are you aware that five pilots have ceased to be pilots within that time?—Yes.

1111. So that, notwithstanding the increase of the trade, you have absolutely one pilot less in 1870 than you had in 1865?—That may be so, but the pilots who are there are found sufficient to do the work.

1112. The average earnings, I think you stated to the Committee, were about 230*l.*?—I think it was 234*l.*

1113. Are you aware that 240*l.* is the net average earnings on the return which is before me for 1870?—That is for the last year.

1114. Would not those earnings rather indicate that, so far as the pilots were concerned, they are in a flourishing condition?—Certainly.

1115. Do you think that that is owing at all to the closeness with which you restrict the number of pilots?—No doubt; if there were more pilots, the earnings would be less; the board are desirous that the men should get a good living, and yet that sufficient pilotage service should be provided for the work to be done.

1116. Do all who offer, and who prove themselves to be qualified, receive a license, or do you fix the number?—No pilot can be qualified who has not served an apprenticeship on the river for five years, and who has not also been to sea for two years; and then they are examined, and if their examination justifies the board in their appointment, they are appointed.

1117. Do the board exercise any control over the number of apprentices placed on board those boats?—They do.

1118. So that they control the apprentices also?—Yes; there are now eight apprentices.

1119. Is that the only way of getting into the pilot service of Gloucester?—It is; that is one of the bye-laws of the board under the authority of the Act of 1861.

1120. Are your pilots allowed to hold any shares in steam tugs?—No; at least I am not aware that they do; but there is no positive bye-law to the contrary.

1121. Are they allowed to claim salvage?—No, unless with the distinct authority of the board.

1122. You have stated, have you not, that the physical condition of the Port of Gloucester is peculiar?—The navigation of the river between King Road and the entrance to the canal is peculiar; the upper part of it especially is very difficult; the channel is continually shifting.

1123. And very few ships practically, I suppose, go up or down without a pilot?—Very few indeed.

1124. Is that at all owing to the system of compulsory pilotage which you had adopted?—I say that the condition of the river between King Road and the entrance to the canal, renders pilotage in that portion of the navigation compulsory, or nearly so.

1125. Physically compulsory?—Physically compulsory.

1126. Is it your opinion that the fact, that you are acting under a voluntary principle has the slightest bearing upon the number of pilots who are taken up and down from Gloucester?—Not upon that portion of the navigation; but upon all the lower portion, I think it has.

1127. So that whether you had a free system or a compulsory system, practically the number of pilots and the number of masters taking pilots would be the same?—I think so on that portion of the river between King Road and the entrance to the canal.

1128. *Chairman.*] That is, in fact, only in the canal itself?—No, from King Road to Sharpness Point. I believe that the physical nature of the river renders necessary compulsory pilotage over that portion of the river.

1129. Mr. *Groves.*] Then may the Committee assume that Gloucester can hardly be taken as a fair illustration of the voluntary system between Sharpness Point and King Road?—Quite so; I have said that.

1130. Mr. *P. W. Martin.*] Do those pilots take apprentices?—Yes, they do.

1131. And are they limited?—There are eight apprentices at the present time. The board see that there are always apprentices.

1132. I suppose that is rearing up a constant crop for the future?—It is.

1133. Mr. *Stevenson.*] Have you any regulations to secure a constant attendance of the pilots at the lower parts of the districts?—We have.

1134. What are those regulations?—That they shall cruise in all parts of the Channel, and make a periodical return to the board where they are day by day.

1135. Then if you found that they were not going well out to sea to look out for ships, but were taking it easy and keeping well up the Channel, would you take steps to require their attendance at a station well out at sea?—We do as far as we can; but I have stated before that their boats are not sufficiently large to enable them to cruise far to the westward. They cruise down to Lundy Island; but certainly not so much so as the pilots from the Port of Bristol, who have larger vessels, and cruise much farther to the westward.

1136. Then what inducement is there for these large Bristol pilot vessels to go so far round as they do?—They are stimulated to that in consequence of the competition in the Channel, which has been introduced by the non-compulsory system. The Bristol pilots, knowing that the trade to the port of Gloucester is very largely a corn

Mr. W. B. Clegram.

5 April 1870.

trade, and that Falmouth is the great place of call for corn vessels, cruise as far round as that with the expectation of getting vessels there bound for Gloucester.

1137. I suppose that I am right in thinking that the compulsory limit is at Lundy Island?—It is.

1138. And those large Bristol pilot boats have no benefit from any compulsory law to induce them to go beyond Lundy Island, have they?—Certainly not; they go there simply in competition with others, in expectation of falling in with vessels to the westward of Lundy Island.

1139. Are the Committee to understand that they had no such inducement to go so far until voluntary pilotage was established by the other ports?—I think they had not. They knew then that all vessels coming into the Channel were their own, and could be met with there; whereas now, if they come eastward of Lundy, the ports of Cardiff, Newport, and Gloucester have their pilots in the districts, and would board their own vessels, and would take them from the Bristol pilots, and therefore they go farther to the westward.

1140. Supposing that a vessel bound for Gloucester takes a Bristol pilot well out in the Irish sea, is that Bristol pilot entitled to bring her all the way to Gloucester?—If the master of the vessel chooses to keep him after they get west of Lundy to King Road. None of the Bristol pilots are licensed for the navigation between King Road and Gloucester, but they are all licensed up to King Road.

1141. And the Bristol pilot cannot be displaced as unqualified for that district?—Not unless the master of the vessel requires it, and then he can. If a Gloucester pilot came alongside of a vessel which was being piloted by a Bristol pilot, and the master required the Gloucester pilot to go on board, the Bristol pilot must give place to the Gloucester pilot, if the vessel were bound for Gloucester.

1142. Then they must acquire that option, I presume, after the vessel has come eastward of Lundy Island?—Yes.

1143. But has the master any motive for making such a change?—He very rarely makes the change.

1144. By what authority are masters entitled to dismiss the Bristol pilot and take a Gloucester pilot?—Under the authority of the Act of 1861.

1145. Sir *Henry Selwin-Ibbetson.*] Does that give him a power of selection?—It does. A Gloucester vessel piloted by a Bristol pilot has only to pay the Gloucester rates of pilotage according to the regulations of the Board of Gloucester.

1146. Mr. *Stevenson.*] That is to say, that although you have Gloucester pilots the Bristol pilots up to King Road have precisely the same privileges as the Gloucester pilots?—If the master of the vessel chooses to keep them.

1147. Sir *Henry Selwin-Ibbetson.*] And that on a non-compulsory system?—Yes.

1148. Mr. *Stevenson.*] Then that is, in point of fact, an extension of the voluntary system, so that the master has not only the liberty of taking a Gloucester pilot or not, but he may take a Bristol pilot?—If a Bristol pilot has boarded a vessel bound to Gloucester in the lower part of the Channel, and the master of the vessel chooses to retain the services of the Bristol pilot, he can do so up to King Road. That is under the the authority of the Act which I have in my hand.

1149. Then how are those Bristol pilots remunerated for their services westward of Lundy Island?—They are not remunerated at all that I am aware of, westward of Lundy Island. They can only charge the rates levied by the pilotage authorities for that portion of the Channel eastward of Lundy Island.

1150. Is there not, in practice, any additional pilotage rate paid in consideration of that?—I am not aware that there is.

1151. If not, however, it would arise from the fact that the Bristol pilots go that distance in order to secure the pilotage within their proper district?—No doubt.

1152. At Lundy Island do vessels coming up the Channel find pilots to take them either to Bristol, or Newport, or Gloucester, or Cardiff, or Swansea?—There are generally pilots cruising within that district, and if they required a pilot a pilot would be almost sure to be found from one or other port.

1153. To meet the case of a ship going to all those ports, there would require to be five separate sets of pilot boats cruising off Lundy Island, would there not?—Yes.

1154. Has a Cardiff pilot the option of taking a Gloucester ship from Lundy Island to King Road?—Yes.

1155. Then, so much of the Channel as is a common approach to all those ports is common ground for the pilots of those ports, is it not?—For the pilots of those ports; but if a vessel is in the Channel wanting a pilot, and bound to either of those ports she must take the first pilot that comes alongside from the particular port to which the vessel is bound.

1156. So that the master, although he may choose whether he shall have a pilot or not; if he does wish to have a pilot he is bound to take the first that offers belonging to his port of destination?—Yes.

1157. That will have the effect of encouraging the attendance of pilots well out at sea, will it not?—No doubt.

1158. And it would prevent any favouritism on the part of a master towards a particular pilot?—Yes, he must take the first pilot that comes alongside of him, if he is a licensed pilot for the port to which he is bound.

1159. Then there are three separate districts between the sea and the harbour of Gloucester, are there not, and three separate pilotage rates?—There are four districts from Gloucester: one from the entrance of the canal to King Road; one from King Road to the Holmes; one from the Holmes to the Nash Point; and the fourth from the Nash Point to Lundy Island.

1160. *Chairman.*] Are there separate rates of pilotage for all those districts?—There are separate rates of pilotage for all those districts.

1161. So that a vessel is not bound to pay for the whole pilotage up to Gloucester, but she may take a pilot higher up?—Quite so. The highest rate would be where a vessel is piloted for Gloucester from Lundy Island; the next would be from Nash Point; the next from the Holmes; and the next from King Road.

1162. Mr. *Stevenson.*] Have you found in practice that masters put off taking a pilot until they get well up the Channel?—We find that is so. For Gloucester the bulk of the pilotage earned

earned is between Nash Point and Gloucester, and not much below.

1163. *Chairman.*] That is not the furthest point of limit which you have mentioned, is it?—Lundy Island is the furthest point.

1164. Is Nash Point the next limit?—Nash Point is the next limit.

1165. Mr. *Stevenson.*] Then supposing that a master refuses a pilot at Lundy Island, and refuses one again at Nash Point, but takes one at the Holmes, does not that tend to discourage the attendance of the pilots in the seaward districts?—It is not found to do so. The pilot, on the expectation of getting employment, cruises about the whole of his district.

1166. And you have not found it necessary to make any regulations (although you could do so if required) ordering the boats to keep down in the seaward districts?—No, we have no complaints that the pilots are not found in their districts.

1167. Mr. *Norwood.*] You have 21 pilots and eight apprentices, have you not?—Yes.

1168. You have 18 boats, I believe?—We have 18 boats.

1169. How do you arrange your system of apprenticeship, if there are only eight apprentices to 18 boats?—The board feel that eight apprentices are sufficient, for they have a great number of young men who have been apprentices who are quite ready to be made pilots.

1170. You have no power to put an apprentice upon a pilot, have you?—The board would have power to put one apprentice on each pilot, but they feel that the number of apprentices are sufficient to keep up the staff.

1171. The pilot boats belong to the pilots, do they not?—The pilot boats belong to the pilots.

1172. Does the amount of estimated average earnings, which appears to be exceptionally high, cover the boat as well as the pilot?—Those are gross earnings, and they cover the boat as well as the pilot.

1173. *Chairman.*] Is there a considerable reduction to be made for expense of the boats?—Yes; some of the pilots have two men on board, and some have a man and a boy.

1174. Mr. *Norwood.*] Are you aware that there is not the slightest information given in this return as to the gross earnings; but that they state the net earnings, and not the gross earnings?—They are the gross earnings which are returned there. It is intended to be the gross earnings.

1175. The column is headed thus: "Estimated average earnings of a single pilot in one year, gross" not known; net, "244 *l.*," the highest net being 358 *l.*; that is so, is it not?—The returns, which are published in 1869 by the Board of Trade for 1868, give the gross earnings. They vary very little, but I think that the returns for the following year would be rather more. I know those to be the gross earnings.

1176. Then they are not the net earnings, but the gross earnings that are down?—Their gross earnings. I know nothing of the return which is before you unless I see it. The gross earnings for the year 1868 were 4,707 *l.* 13 *s.* among the whole of the pilots.

1177. That would be rather more than 220 *l.* a piece, would it not?—£. 230 a-piece, or something of that kind.

1178. Then that return must be altogether erroneous, because they make the average there above that?—I suspect that is put wrong. I do not know where it is obtained from; I do not know what the 244 *l.* means.

1179. At any rate you repudiate that return?—I do not say that.

1180. But is it correct, or is it not?—I do not know. I have not the figures to go upon; but I can give you a correct return for the year 1868.

1181. In 1868, 21 pilots earned a gross amount of how much?—£. 4,707 13 *s.*, and that amount will be found in the Board of Trade return.

1182. Then that makes a kind of rough average of about 225 *l.* a-piece, out of which they have to provide their boat, and to provide a couple of men to navigate the boat?—Either two men, or a man and a boy.

1183. What would be your idea of the expense of the boat; that is to say, a fair return upon the first cost of the boat, and the wages of the men employed?—The first cost of the boat would be from 200 *l.* to 250 *l.*, I suppose.

1184. Then shall we say 20 per cent. upon that, or 50 *l.* a-year, for depreciation and repairs?—It would not be that.

1185. What do you think it would be?—I should think 10 per cent. would pay it very well.

1186. You are not a shipowner, are you?—I am not, but I know those boats very well.

1187. What would be the remuneration of the two men?—I really do not know what they pay the men.

1188. It appears to me that if 225 *l.* is the gross earning of a pilot for one year, and out of that he has to provide his vessel and keep her in proper order and found, and to find the services of a man and a boy, his net income must be extremely small?—I do not think that it would be. I only know that all the men appear to be doing very well.

1189. Then I am afraid that the figures are not to be relied upon?—Those figures which I have given you I know are to be relied upon.

1190. Mr. *Grieve.*] Is one of the men on board a pilot?—No; some take two boys; they are lads of from 15 up to 18 or 19 years of age. Then the apprentice is no expense excepting his food; he is kept by the pilot, but there are no wages.

1191. Mr. *Norwood.*] But whoever the pilot takes, whether it is a man or a boy, must be capable, must he not, of navigating the boat when the pilot leaves it?—No doubt.

1192. What regulation have you as to the turns which those boats have to take; do the Commissioners, for instance, arrange that the pilots take their turn?—No, certainly not. We leave them free to compete one with the other, only taking care that none shall be idle at the port. We get a monthly return of where they are every day throughout the month, and what they are doing.

1193. Then if you found that one man was in port for a week together, you would call him up, I suppose?—No doubt.

1194. Have you had many complaints?—We have not. I believe that, as a class, they are a very skilful class, and a very well conducted class of men, and I believe they are doing very well.

1195. But they earn more than 4,000 *l.* a-year?—Those are the returns made to the board, and I believe those to be correct returns.

1196. I see that there are no masters and mates licensed as pilots in Gloucester?—There are not.

1197. Have you no regular short trades that would

Mr. *W. B. Clegram.*

5 April 1870.

would render it desirable for an owner to have his master or mate licensed?—I think we have not.

1198. What is your licensing authority at Gloucester?—Bristol would be, I take it, the licensing authority.

1199. Sir *Henry Selwyn-Ibbetson.*] You stated, I think, that the pilots were expected to cruise in all parts of the Channel?—Yes.

1200. But that, practically, Nash Point was almost the limit of a great part of their cruise?—I do not say that; I say that Nash Point is the point from which their chief earnings are obtained. They cruise lower down than that, but not to so great an extent as they do down to Nash Point.

1201. They do not cruise nearly to so great an extent as the Bristol pilots do, do they?—I think not.

1202. Do you think that in bad weather they cruise sufficiently low down to the full extent of the ground, or is it only in calm weather?—They are down there in bad weather as well as in calm weather, but as I have stated before to the Committee their boats are scarcely large enough for very bad weather in the lower part of the Channel.

1203. The navigation above Nash is very intricate, is it not?—Above the Holmes, I should say that it was so.

1204. Are the currents changeable, or does the difficulty of navigation arise only from known sandbanks?—I know very little of the navigation nautically; I only know the fact that it is considered difficult between the Holmes and King Road.

1205. But you cannot state to the Committee whether that difficulty arises from the shifting of the sands, or from merely known and ascertained difficulties?—I cannot.

1206. You stated to the Committee, I think, that in your opinion it would be advantageous to extend non-compulsory pilotage to the whole of the kingdom?—I did.

1207. And you have founded that upon your experience of its working in the Bristol Channel?—I think so, and not only so, but I believe that where the demand exists the supply is sure to follow. I think that the principle would quite apply in pilotage as in other things.

1208. Do you think that any difference would be made by the difference in the danger of the navigation?—No doubt, if the navigation were of a character such as that which I have described between King Road and the entrance to the canal, it at once makes a difference there, being necessarily a compulsory pilotage.

1209. Of necessity, then, in difficult places compulsory takes the place of voluntary pilotage?—It must do so in a place of that kind.

1210. If it could be shown that the navigation of any particular port was from the shifting nature of its sands or from other reasons, more difficult than that of Bristol, your opinion as to the necessity of compulsory pilotage with regard to that port would be a little shaken, would it not?—I think that if the masters of vessels were free to select when they should take a pilot, they would always do so when the difficulties were of such a character that they were not competent to navigate the vessels through them themselves; but in no other case would they do so.

1211. You state that the Bristol pilots cruise further out, always supposing this compulsory pilotage to be extended to a more difficult navigation even than your Bristol Channel; would not that be a practicable advantage to masters in case the navigation was really a difficult one from Lundy Island?—No doubt it would; the greater distances at which the pilots are to be met with, where they are wanted, the better.

1212. That system is now maintained under the compulsory plan of Bristol, is it not?—It is maintained under a non-compulsory system; I believe that the competition under the non-compulsory system established in the Bristol Channel has induced the Bristol pilots to cruise further to the westward than they did before.

1213. They themselves being under a compulsory rule?—They themselves being under a compulsory rule.

1214. And the men who do not go so far out being under a voluntary principle?—They are under the voluntary principle.

1215. Mr. *Malcolm.*] You have been telling us a good deal about the dangers of this Bristol Channel; if the pilotage is entirely met by those Gloucester boats, which, according to your account, cost about 250*l.* new, and which are manned by a pilot and a man and a boy, or two boys, what extraordinary difficulty can there be, because, I suppose, when one of those pilot boats goes alongside of a ship the pilot is taken out?—Yes.

1216. And then she is left in charge of two boys?—Yes.

1217. Do you think that that shows that there must be any very great danger or difficulty, because, I suppose, then the boat has to run up to Gloucester?—I have spoken of no serious difficulty in the Bristol Channel, but I speak of it as between King Road and Sharpness Point; and when I speak of two boys, I speak of boys of ages up to 19 or 20; a boy of 18 or 20 years of age may have been three or four years on board of the pilot boat, and knows the river very well.

1218. But they are not likely to trust boys in a boat of that sort very far out at sea, are they?—Those boys are left very far down the Channel very frequently.

1219. In fine weather?—I think not only in fine weather.

1220. I think you stated that you did not know much about sailing yourself?—I know that fact.

1221. What is the general size of vessels going up to Gloucester?—They range up to a thousand and twelve hundred tons register up to the entrance of the canal, but not to Gloucester.

1222. Are they mostly sailing vessels or steam vessels?—They are almost entirely sailing vessels.

1223. You say that there are separate boards, as I understand you, for Gloucester, Newport, Cardiff, and Bristol?—Yes.

1224. Then who is responsible for the state of the buoys, beacons, and other assistances to pilotage in the Bristol Channel?—The Trinity House, I believe.

1225. Is it altogether responsible?—I think so; I am not aware of the fact, but I believe so.

1226. The Pilotage Commissioners, then, of those various parts have nothing in the world to do with it?—The Gloucester Commissioners have nothing to do with it, and I believe the Newport and Cardiff Commissioners have not. The Bristol Commissioners may have something to do with the buoys in King Road, but I think it is under the Trinity House.

1227. When

1227. Then under this non-compulsory system, the boards who are responsible for the pilots have nothing to do with the buoys marking the Channel, which are of such great consequence to the pilots?—No; there are no buoys in the channel of the River Severn between King Road and Sharpness Point.

1228. But there are a good many between King Road and the Flat Holmes, are there not?—Yes.

1229. You stated, did you not, that you had returns from those pilot boats, of where they were every day?—Yes.

1230. Have you any means of testing the correctness of those returns?—We have not.

1231. Then are they not practically valueless?—I think not valueless. The pilots are under heavy penalties for making false returns, and I think they rarely do so.

1232. Of course one would suppose so; but still, practically, you cannot prove either one way or the other. You merely speak for Gloucester, and you do not know anything about Cardiff and Newport?—I have nothing to do with the pilotage authorities at either of those ports.

1233. And you do not know the increase of the trade since 1861, as compared with what it was before?—The trade since the year 1861 has increased considerably in the Channel. I have no doubt at all the ports.

1234. But not, practically, at Bristol?—I think it has; I think that Bristol has held a fair share of the increase, if not a large share of the increase.

1235. Mr. *Charles Turner.*] What description of vessels are those pilot boats from Gloucester?—They are cutter rigged.

1236. Are they open boats?—No, they are deck boats.

1237. Are they half decked, or completely decked over?—Some are half decked and some are completely decked over. The greater part of them are completely decked over.

1238. As to those returns presented once a month to the pilotage authority, are the pilots required to fill up their returns day by day?—They are; they state where they are at noon every day.

1239. But are they obliged to fill those up every day like the log of a ship, or do they, at the end of the month, take a sheet of paper and fill up the returns?—They fill up the returns, I suppose, at the end of the month, but they are expected to keep a record of their position each day.

1240. But is any care taken, as a matter of check, that those returns should be filled up each day?—The return which is made to the board is filled up at the end of the month; it is a printed form.

1241. But is that examined by their loose sheets (or whatever it may be) on which they keep an account of their daily occupation?—It is examined by the harbour master, who is the officer of the pilotage board at the entrance to the canal, and it would be a dangerous thing for a pilot to make a false return there, because he must have some knowledge where they are.

1242. But if a return is made once a month, and is not filled up day by day, may not a man's memory deceive him as to where he has been three weeks before?—But I think he records in his own book where he has been.

1243. But you have no knowledge how that is done, have you?—I know that fact with regard to some of the pilots, for I have myself frequently inquired where they were on a particular day, and their own book shows it. We have no reason to doubt the accuracy of the returns, and, I believe, for the most part, they are quite true.

1244. Unless some means is taken to check those returns, people are very apt to make them up in a very loose way, are they not?—Yes, but I am not inclined to think they are loosely made; I think that they are very correctly made.

1245. The trade of Gloucester is principally in timber and corn, is it not?—It is.

1246. There is a large timber trade as well as corn trade, is there not?—It is large, but the corn trade is by far the largest trade.

1247. Messrs. Price & Co. are the principal importers of timber, are they not?—They are the principal importers, but there are other large importers.

1248. Has the timber trade increased as well as the corn trade very much?—Not to anything like the extent of the corn trade; I suppose that the timber trade would be about one-third of the tonnage of the corn trade.

1249. You say that there are 21 pilots, 18 boats, and eight apprentices; is not that a very small number of apprentices for 18 boats?—The board think that it is quite sufficient to keep up the stock of pilots required.

1250. Then do they limit them to eight, or is it that no more apply?—I suppose that no more have applied. There always are apprentices, and there are always sufficient who have served their apprenticeship to fill up the vacant places.

1251. But I suppose that if every pilot had an apprentice on board his boat, if you have 18 boats you would have 18 apprentices?—No doubt.

1252. Therefore a great many of them can have no apprentices at all?—More than half have no apprentices.

1253. Do you not think that it would be better if they were obliged to have each an apprentice?—I think that the board would compel them to have apprentices if they saw that the number fell short of what they believed to be the requirements of the pilotage.

1254. The return which has been presented differs very materially from your own figures, does it not?—I would not say that that return is inaccurate.

1255. But it differs from your figures; either your figures, which you state are perfectly correct, must be inaccurate, or the return must be inaccurate, must it not?—It is some calculation which has been made from a return. It is not I think a return from the pilotage authority of Gloucester.

1256. Mr. *J. S. Hardy.*] When was compulsory pilotage abolished in the Bristol Channel?—In 1861.

1257. Then I presume that the boats belonging to the pilots of Bristol have been in use certainly for that time; at all events, they are not new since that time?—I am not aware of that.

1258. Is not the probability that the length of life of a boat is greater than that?—I should say so.

1259. You say that the boats of the Gloucester, Cardiff, and other pilots, are considerably smaller than those of the Bristol pilots; would it not appear, therefore, that under a voluntary system

Mr. *W. B. Clegram.*

5 April 1870.

system of pilotage they are not able to provide the large class of boats which the compulsory pilotage system formerly did provide?—The system at Bristol seems to have been altogether different from that of the other ports in the Channel, inasmuch as I believe that they have two or three pilots on board one vessel.

1260. Are they not able, under compulsory pilotage, to establish large sea-going boats, which the voluntary system does not provide at present?—It does not provide them at present at Gloucester and other ports, but the boats which they provide are considered to be sufficient for the service. The Bristol Channel pilotage was a very costly system, and could afford to do, perhaps, what the others could not.

1261. Colonel *Bourne.*] I think you said there were very few buoys between King Road and Lundy Island?—I said that there were none between King Road and Sharpness Point. There are many buoys between King Road and the Holmes.

1262. Is the Holmes above Sharpness Point, or below it?—The Holmes is far below.

1263. What is the distance from the Holmes to Lundy Island, in round numbers?—It is more than 50 miles.

1264. Do you think that those small boats, manned by one pilot, who may be left on board a ship at Lundy Island, could go out as far as that, to be brought home safely by two boys or two young men?—I know, as a fact, that they are.

1265. The return which the honourable Member for South-West Lancashire has asked you for is made up, I think you said, by the harbour-master at the mouth of the Gloucester Canal?—At Sharpness Point.

1266. How can he possibly know what is occurring at a distance of 60 miles?—Of course he cannot tell where the pilots are in the lower parts of the Channel, but there are means of finding out where those pilots are; and a false return would subject them to immediate dismissal.

1267. But the bulk of the pilots do not go below Nash Point, do they?—I do not say that. I say that their chief earnings are from Nash Point upwards, showing that, certainly from that point upwards, masters of vessels generally take pilots; but the pilots go below that point. They very probably are not required until they get up into the narrower parts of the Channel.

1268. I think I understood you to say that there are four rates of pilotage; one between Lundy Island and Gloucester, one between Nash Point and Gloucester, one between the Holmes and Gloucester, and another between King Road and Gloucester?—There are four stages.

1269. Then a vessel coming up Channel from the westward would avoid taking a pilot as high up the Bristol Channel as it possibly could, would it not?—It would avoid taking a pilot as far up the Channel as the master felt competent to navigate the vessel.

1270. And so it would the extra pilotage escape up to whatever point the pilot came on board?—Yes.

1271. I think you stated that the pilot-boats under the voluntary system are not so large as they were under the compulsory system?—I merely speak of the Gloucester boats, which are of the same class as they have always been. They are no larger now, or not much larger. Some of the last boats built are larger than they were some years ago, but not to any great extent, and they are found sufficient for their purposes.

1272. Do you mean those boats simply which ply between King Road and Gloucester?—No, I mean the boats of the Gloucester pilots. They range from 15 to 20 tons. That is about the tonnage of the boats.

1273. Are those the sea-going pilots which go out as far as Lundy Island?—Yes; they go to the westward of Lundy Island.

1274. But when you stated that the pilot-boats are not so large now as they were 10 years ago, to which boats did you allude?—I think I have not said that. I have said that the vessels employed by the pilots at Bristol are of a larger class than those employed at Gloucester, Newport, or Cardiff, and as a rule they cruise farther to westward than the pilot-boats from the other ports.

1275. Sir *Henry Selwin-Ibbetson.*] Perhaps, having only one pilot on board, the inducement is not so great to go so far out to sea as when, in the case of the Bristol boats, there are several pilots on board?—I think that the fact that each pilot owns one boat is a very great inducement to each man to look after his own interests, and to go as far out to sea as he can.

1276. But they do not go so far out as those boats which carry more pilots, do they?—I say that the Bristol boats go more to westward, with the expectation of picking up vessels farther down Channel, and I think that has arisen largely from the competition induced amongst the pilots by the non-compulsory system.

1277. Colonel *Bourne.*] You are not a sailor, and perhaps it is hardly fair to ask you the question, but has there been much change in the shifting of the banks between King Road and Lundy Island?—I do not know.

1278–9. Mr. *Grieve.*] I think you said that the number of pilots is limited to 21; was it ever more or less?—It has been less, I think. In the year that the Act of 1861was obtained it was 18.

1280. Has there been any complaint from shipowners of the insufficiency of the number of pilots between Gloucester and Bristol?—There has not.

1281. Have you calculated the wages of those two boys, or of the man and the boy, in the boats?—I have not. The apprentices, of course, receive nothing but their food.

1282. I think you said that when an apprentice has served five years he was eligible to be licensed as a pilot?—They are apprenticed for five years, and they must go to sea for two years before they can be examined as pilots, and then they are entitled to be licensed as vacancies occur, if they pass a special examination.

1283. Mr. *Gourley.*] Do you know whether the pilotage supply in the Bristol Channel is as good now as it was previously to the abolition of the compulsory system?—I think it is very much better.

1284. What is your reason for thinking it better?—There is a larger number of pilots on the Channel than there were before.

1285. Do they go farther out to sea than they did before?—I think the Bristol pilots go farther out to sea than they did before; I have no knowledge of Newport and Cardiff.

1286. Do you know anything, or do you know as

as much of the nature of the waters in the Mersey and the Thames as you do of those in the Bristol Channel?—I do not.

1287. Therefore you are not able to speak as to the comparative difficulties in the navigation; that is to say, whether the Bristol Channel is as difficult as the Mersey?—No.

1288. Is the Bristol Channel generally a difficult navigation?—No, it is not considered so between Lundy Island and Holmes.

1289. I believe all masters in command generally take pilots, do they not?—They generally take pilots somewhere within the Bristol Channel, but I think not generally from Lundy Island.

1290. I think that you said, that the Cardiff pilots were not prohibited from piloting vessels up to Gloucester?—Yes; they are not licensed above King Road.

1291. Therefore it is not necessary for the Gloucester Board to license a larger number of pilots, is it?—The Gloucester Board would license as large a number of pilots for Gloucester as they felt the trade of the port required. If complaints were made that the Gloucester pilots were not to be found, and that more pilots were needed, I have no doubt the Gloucester Board would appoint an increased number of pilots.

1292. Do you think it would be much better to leave the piloting of ships open to all who could pass an efficient examination for a license, regardless of numbers, and so destroy the present protective system?—I do not think so.

1293. Why do you think not?—I think that a very large number thrown into any navigation would not get a good living out of it; and it is not desirable to have men employed who are not maintaining themselves fairly.

1294. You are in favour then of a protective system, rather than of a free and open system?—In that direction I should be.

1295-6. For the Bristol district you have the compulsory system, and for Cardiff, Newport, and Gloucester you have a free system, have you not?—Yes.

1297. Are there any difficulties arising out of the existence of the two systems; for instance, if you had a vessel coming into collision with a vessel belonging to any other shipowner, would there be any difference in the liability as between the vessel with the non-compulsory pilot and the vessel with the compulsory pilot?—I am not aware that there would. The Bristol pilot, in so far as the other ports are concerned, is placed under the non-compulsory system. He cannot compel a vessel that is bound to either Cardiff, Newport, or Gloucester to take a pilot.

1298. *Chairman.*] What I understood the honourable Member to ask was this: supposing your vessel under charge of a non-compulsory pilot is to come into collision with another vessel proceeding to Bristol under charge of a compulsory pilot, whether any hardship would occur from the fact that you would be without remedy if the master of the other vessel was to blame; whereas if your master or pilot was to blame, the owner of the other vessel would have a remedy against you?—I am not aware that that is so.

1299. Mr. *Gourley.*] Are you aware of the fact that where a vessel is navigated by a compulsory pilot, in the event of a collision, the master would be freed from responsibility, whereas under the non-compulsory system he would be responsible?—Then it is very desirable to get rid of a compulsory system, in order that that should not arise. I know the question has arisen. I think the whole pilotage ought to be under one system.

1300. What system do you recommend?—I have stated before that I believe a non-compulsory system throughout the kingdom would be an advantage to the trade of the country.

1301. Would that be, in your opinion, an efficient system?—I think so.

1302. Mr. *Cave.*] I think you stated that one of the evils of the old system was the change of the pilots at King Road, did you not?—Yes.

1303. Am I right in supposing that you said a pilot might now be changed at any part of the Channel at the option of the master?—That is so.

1304. Then the old evil is intensified, is it not, by that change?—I think not. I think where a master requires a pilot, and has one on board who is qualified, he would retain the pilot that he had, and not change him.

1305. But that is going exactly in the opposite direction; you say that now the pilot may be changed at the option of the master in any part of the Channel; supposing that option is exercised, would you not consider that a worse system than changing him at a fixed point?—I think not, because the change would take place during the time that the vessel was passing in the Channel, whereas the change before, as regards Gloucester, took place at King Road. The vessel was anchored and stopped in her voyage to Gloucester, and *vice versâ*, and therefore there was considerable loss of time.

1306. If a Bristol pilot takes a ship from Falmouth to the Holmes, for instance, he can then be turned over the side by the Gloucester pilot who has gone no farther than the Holmes, can he not?—If the master chooses there to take the Gloucester pilot.

1307. Do you think that is no hardship to the pilot?—I think not, because the Bristol pilot would get the proportionate pilotage up to that point.

1308. He having gone to Falmouth for it, and the other pilot having remained near home, you think that is no hardship?—I think not.

1309. How is the Bristol pilot remunerated for work beyond Lundy Island?—That I am not at all aware of. It can only be by agreement with the master if he be paid anything. He can only claim pilotage from Lundy Island eastwards.

1310. You do not know, as a fact, how that is done?—I do not.

1311. The Bristol pilots, before 1861, took vessels to Gloucester, did they not?—No, only to King Road.

1312. Then from King Road to Gloucester you are not subject to the Bristol jurisdiction?—We were subject at that time to the jurisdiction of the Trinity Board, and of the Bristol Pilotage Board, only from King Road downwards.

1313. That Bill of 1861, of which Gloucester was one of the promoters, had no reference to the pilotage inside of King Road; between King Road and Gloucester, had it?—No, not as regards Bristol.

1314. You stated, I think, that the Bristol pilots go farther to the west, because of the competition under the voluntary system; do you not mean because the pilotage is thrown open to the other ports?—That is so.

Mr. *W. B. Clegram.*

5 April 1870.

1315. But that is not the voluntary system; that is only an accident of it, is it not?—It is an accident of it, no doubt. The Bristol pilot knows now that if within the limits of the other ports he falls in with a vessel bound to those ports, he cannot take her if a pilot of that port be there; but boarding her beyond those limits, he relies upon the master of the vessel to retain his services, and therefore he gets additional work.

1316. But would not the competition be precisely the same if the pilotage was compulsory to all ports, provided the master took the first pilot he met?—No doubt if the other ports had their own pilotage authority, it would be the same; but when it was wholly in the hands of the Bristol pilots, the Bristol pilots did not cruise so far to westward.

1317. It has nothing to do with the voluntary system, but it is simply on account of the pilotage being thrown open to all the ports, is it not?—Quite so.

1318. Therefore it is not quite an accurate use of terms, is it, to say that the competition has arisen on account of the voluntary system being established in the Bristol Channel?—It has introduced a larger number of pilots into the Bristol Channel who can pilot vessels there than existed before 1861. The Bristol pilotage had the sole control before that, and therefore the pilot now cruises farther to the westward in the expectation of picking up vessels which, if they came within the limits of Lundy Island would be claimed by pilots of other ports.

1319. And you would say that the competition has been caused by the breaking down of the Bristol monopoly and not by the introduction of what we call the voluntary system?—Not exactly so.

1320. I think if I remember rightly that the sole object of the promoters of the Bill of 1861, was to get rid of the Bristol monopoly?—It was; and also to establish the voluntary system.

1321. Is it the fact, that the petitioners were in the first instance opposed to the compulsory system as regarded their own ports?—I can distinctly say so for Gloucester, because in a memorial to the corporation of Bristol as far back as 1853, that was one of the points urged by Gloucester.

1322. But you do not remember whether the voluntary system was rather forced upon the promoters of the Bill during the passage of the Bill through Committee, or whether it was part of the original application?—I think I may say that it was in the original application.

1323. From all the ports?—It certainly was from Gloucester, and I think I may say it was for the ports of Cardiff and Newport; certainly, for Newport; but Cardiff was more under the control of Bristol than Newport. The Cardiff local pilotage, I think, was established or appointed by Bristol.

1324. Is it not one of your arguments in favour of the voluntary system, that the demand and supply would regulate each other with regard to ships taking pilots?—I think so.

1325. But you do not think that that principle of demand and supply can be trusted in the question of licensing pilots?—I think it is undesirable to have too large a number of men appointed for a service that does not need their services.

1326. But if your principle is good it would in itself limit the number of men, would it not?—I have no doubt that it would be so, and that when they found they could not get a living, they would not apply for a license.

1327. At present, however, you think a paternal system is good for the pilot and not for the shipowner?—I think a paternal system is not good for the shipowner, because I believe he pays very much more for pilotage service than he needs.

1328. But it is good for the pilot?—It is good for the pilot.

1329. Sir *Charles Wingfield.*] When you say that the present system of limiting the number is good for the pilots, you mean that it is good for the existing pilots; that is to say, the individuals who are now pilots; but leaving the number to be regulated by the law of supply and demand would not injure any future body of pilots, would it?—No. That is a point which I have not very much considered; but I have always felt it to be undesirable to employ a very large number of persons to do a small amount of work. Neither gets a good living out of it, and the work is not well done.

1330. You do admit that ultimately the ordinary law of supply and demand must regulate the number?—Ultimately it would.

1331. So that it is only a question of the interest of the present men?—Of the present men.

1332. In the Bristol Channel have you any unlicensed men working as pilots?—None that I am aware of. They are under a penalty if they do so.

1333. It seems that the circumstances of the river from King Road up to Sharpness are very much the same as those of the Thames from London to Gravesend; that is to say, there is no danger, or risk, or exposure, but the channel is difficult?—The channel is difficult.

1334. And therefore whether the system there is compulsory or voluntary pilots must be taken, must they not?—Pilots are taken as a rule.

1335. In fact, is not this circumstance of the difficulty of the channel instead of being an argument in favour of compulsory pilotage, a proof on the contrary that that difficulty will always procure a number of competent pilots?—It is so, as I stated before.

1336. The mere fact of the difficulty gives employment, does it not?—Yes.

1337. *Chairman.*] I think you said that the main difficulties of navigation are from King Road up to Gloucester?—The main difficulties, no doubt.

1338. And from King Road to Nash Point the difficulties are not so great, are they?—They are not.

1339. But the great bulk of the vessels take their pilots at Nash Point?—At Nash Point and the Holmes.

1340. Do you see any reason why they should be compelled to take their pilots at a point beyond that at which they want them?—Certainly not.

1341. Under the old system, they were bound to take their pilots at Lundy Island, were they not?—They were bound under the old system to take their pilots at Lundy Island.

1342. And that is still the case with Bristol, is it not?—That is still the case with Bristol.

1343. Can you see any reason why Bristol vessels should be bound to take their pilots at a point

point beyond that at which the Gloucester vessels take them?—I cannot.

1344. You have been asked as to whether the returns made by the pilots are genuine; have you any reason to doubt their genuineness?—I have no reason to doubt their genuineness.

1345. Have you had any complaints from shipowners or masters of pilots not being in their places when required?—We have not, in any kind of weather.

1346. And, therefore, you have no reason to believe that the returns are not accurate?—No.

1347. Are steam tugs largely employed in towing vessels up to Gloucester?—Very largely.

1348. Do vessels take pilots, notwithstanding, in addition to the steam tug?—Yes.

1349. It is not considered sufficient alone to have a steam tug, is it?—It is not considered sufficient to have a steam tug alone, but a vessel taking a pilot with a steam tug is benefited by a deduction of one-fourth of the pilotage rate, and one-fifth is taken off if the vessels are light.

1350. And with that deduction they invariably take pilots as well as tugs?—They do.

1351. How is the pilotage board at Gloucester constituted?—They are seven members, four of whom are appointed by the Gloucester and Berkeley Canal Company, and three by the corporation of the city of Gloucester, the mayor for the time being being one of them.

1352. Is there any difficulty in finding applicants to enter the pilotage?—There has not hitherto been any such difficulty.

1353. If there is a vacancy amongst the pilots, are there plenty of applicants for it?—There are plenty of applicants. We have rather a large staff of young men now, quite competent for the work.

1354. Mr. *Charles Turner.*] I think you said that two of the members of the pilotage board had been officers in the navy?—Two are officers in the navy.

1355. Is it a matter of accident, or is it a matter of necessity, that two members should have been officers in the navy?—They were appointed because of their nautical knowledge.

1356. But was it a matter of necessity that they should be so appointed, or is it optional?—It is a matter of necessity that the pilotage board should have nautical men upon it.

Mr. *W. B. Clegram.*

5 April 1870.

1357. But is it a matter of necessity that they should be nautical men?—The necessities of the case require it.

1358. But is it obligatory by law?—It is not obligatory by law.

1359. *Chairman.*] The Bristol vessels are still bound to take their pilots at Lundy Island; are they not?—They are.

1360. And therefore there is an inducement, is there not, to the Bristol pilots to have larger boats to take them out to Lundy Island, and there to board the vessels?—Yes.

1361. But, in your opinion, is there any more reason why the Bristol vessels should be bound to take pilots than the Gloucester vessels?—Certainly not.

1362. Sir *John Hay*] Do the nautical members of the board concur with you in your belief as to the superiority of the present system over the former system?—I believe they do.

1363. Mr. *Graves.*] You have stated that there are no buoys between King Road and Sharpness Point; does that arise from there being no necessity for them?—I think there is no necessity for them; the landmarks are sufficient to enable the pilots to navigate that portion of the river.

1364. Have there been any complaints as to the want of buoyage?—No, the pilots alone take the vessels in that district, and they know the river very well.

1365. Supposing that they were wanted, upon whom would the obligation rest to place them there?—I think, on the pilotage authority, from King Road to Sharpness Point.

1366. Colonel *Bourne.*] I think you stated that there were 21 pilots; are those 21 pilots attached to Gloucester only?—Yes, they are Gloucester pilots.

1367. Do you know how many pilots there are belonging to Bristol?—Not certainly, but I think there are between 50 and 60 pilots.

Captain Sir Frederick Arrow, Knight, called in; and Examined.

1368. *Chairman.*] For the last five years have you been Deputy Master of the Trinity House?—It will be five years in June.

Capt. Sir *F. Arrow,* Knight.

1369. And previously to that time you were connected with the Trinity House?—I have been in the Trinity House since February 1859.

1370. And previously to that you had had considerable experience in the merchant service, I believe?—Yes, a good deal.

1371. Trinity House, as I need hardly ask, is the pilotage authority for the Thames, and also for a considerable extent of the coast round the country, is it not?—Yes; it is the largest pilotage authority in Great Britain.

1372. With reference to the subject of compulsory pilotage, you are here to speak your own views, rather than those of the Trinity House?—I am very glad to have been asked that question, because I wish most emphatically to state that I am not here to express the opinions of the Elder Brethren of the Trinity House, for two reasons; in the first place, that their opinions have not been asked; and in the next place, that it is many years since we have had any discussion as to the question of the advisability or non-advisability of compulsory pilotage; and therefore I should be perfectly unprepared to say what their opinions were.

1373. I think that on previous occasions, without being asked when the question of compulsory pilotage has been mooted, they have expressed a strong opinion against the abolition of compulsory pilotage?—I think they have, but I may, perhaps, make a little qualification to that which is, that the Trinity House have always been exceedingly ready to grant exemptions, which is, perhaps, rather opposed to the view of their being altogether in favour of compulsory pilotage. But while they certainly have been themselves foremost to grant exemptions from compulsory pilotage, they have, as a body, expressed their opinion that compulsory pilotage should be maintained; I think 1862 was the last time when I remember the subject being discussed.

1374. But the subject has not been discussed by them on the Bill which is now before the House, and they have expressed no opinion upon it?—Not at all; and they expressed no

Capt. Sir *F. Arrow*, Knight.

5 April 1870.

opinion whatever, because they consider that the relation of the pilotage authority to the pilots themselves is one which is very often misunderstood. It is frequently supposed that a pilotage authority necessarily leans towards the pilots, whereas we have always held it to be our duty to hold an even balance between the pilots and the public; and while we wish to do everything on earth that we can for the pilots' benefit, we have always considered that the public were the first consideration.

1375. Therefore, as to compulsory pilotage, you speak your own views?—Entirely.

1376. Will you hand in a return showing the district over which the Trinity House has control?—I will do so.

1377. Will you shortly state to the Committee, geographically, what are the limits of the Trinity House district?—We go all round the coast of England, with the exception of those districts which have special pilotage authorities of their own, such as the Bristol Channel, Liverpool, Hull, the Tyne, Gloucester, Cardiff, and Newport.

1378. Will you state to the Committee what is the number of pilots for the Thames district, and what is the number for the different outports?—There are 50 pilots in the Thames district, who are licensed from London to the sea, both the north and south channels, which have a mileage of about 120 miles. There are 50 more pilots licensed from Gravesend to the sea by both north and south channels, a distance of 95 miles. There are 70 pilots between London and Gravesend, who are called river pilots, who are licensed both up and down.

1379. Are they licensed exclusively for that district?—They are licensed exclusively for that district. There are also 22 who were originally called watermen pilots, but who hold licences, and who really are pilots as much as any others; but they are only licensed for the home trade steam passenger ships. Then by the south channel of the Thames, from Dungenness to Gravesend, there are 128 licensed pilots, who are either called Trinity House pilots, or Cinque Port pilots; and there are 60 pilots in the north channels from Orfordness to Gravesend. In the outports they vary from two and three pilots (I think that the honourable Member for Rye's port, which is the smallest, has only two) up to as high as 83 pilots at the Isle of Wight. At Falmouth there are 50, and at Plymouth there are 32. Those are the largest number, but the rest all vary from two upwards to 15.

1380. In all those districts, including the Thames, pilotage is compulsory, subject to the exemptions contained in "The Merchant Shipping Act," is it not?—It is.

1381. Those exemptions are, however, very numerous, applying to a variety of classes of vessels, and therefore exempting a very considerable number of vessels from the operation of compulsory pilotage?—It is a question whether the exemptions do not really outnumber the compulsory cases; but they are supposed in the Thames, I believe, to be quite equivalent to it.

1382. Taking the north channel of the Thames, by which vessels go to the north of Europe, I think vessels going to the north of Europe are exempted from the compulsory pilotage?—Practically the whole of the north channel is exempt, with about 10 per cent. of exceptions. There may be about 10 per cent. of vessels which are compelled to carry pilots, and the remaining 90 per cent. are exempt.

1383. Therefore those 60 pilots who are licensed from Orfordness to Gravesend, are, in fact, almost under the voluntary system, are they not?—It follows naturally, because they find employment; and as the vessels are not obliged to take them, they are employed in exempted vessels.

1384. Then, again, as regards vessels proceeding from Gravesend upwards, are not a very considerable number exempted?—A great many.

1385. Then the employment of pilots licensed for that district by your board, is, to a great extent, by vessels which are not obliged to carry pilots, is it not?—I believe it is; but I am not in a position to answer that question altogether, because our returns are mostly based upon the earnings of pilots, and they do not discriminate between the one class of vessels and the other. I think that the Board of Trade are in a better position than the Trinity House to give the facts as to that, but no doubt it is the case to a great extent.

1386. So again as to the pilots between Dungeness and Gravesend. Is not a certain proportion of their business derived from vessels which are not compelled to employ pilots?—It is.

1387. And so also with respect to the large out-ports which you have mentioned?—It is so, to a certain extent, as to all of them.

1388. Do you think that the exemptions in the Thames Trinity House district are more numerous than in any other districts, or do the exemptions apply to all?—Our exemptions now apply, and have since 1854 applied to the whole of our out-ports. Those vessels which are exempt in the London district are exempt also in the out-ports.

1389. Will you state to the Committee what is your opinion upon compulsory pilotage?—I should like to guard myself again by saying that it is entirely my own opinion. My opinion is, that pilotage should be either entirely compulsory or that it should not be compulsory at all. I have always thought (and the more I see of it the more I am confirmed in my opinion) that when the first exemption was made as to compulsory pilotage, you really put the axe to the root of the tree. There can be, I suppose, but two reasons for it; the one would be the safety of life and property, and the other would be for the convenience of shipping. Now, I cannot answer the question myself, except in one way, and that is, that if life and property are at stake, the life in a coaster above 60 tons, in which seamen are carried, has as much right to be considered as the life in a large ship of more value. Life is at stake in all of them, and I really believe that the principle was abandoned in practice when the first exemption was made. Perhaps I may say that, singularly enough, it was only a day or two ago that I saw a letter from a gentleman who was for many years connected with the pilotage department of the Trinity House, and although we arrived at different conclusions, they were reached by the same process of reasoning. He said that his view was that compulsory pilotage ought to be maintained, but that every exemption which had formerly been allowed should be done away with, and that it should be pure and simple compulsory pilotage. Now, I am very much of his opinion. I think you should do one thing or the other, although I do not arrive at the same conclusion; on the contrary, I know

(and

(and it must be known to all) that it is impossible to go backwards in the way of imposing a heavier liability upon the trade and shipping of the country. You could not do so, and therefore I am brought to the other conclusion, that what is good for the one cannot be wrong for the other.

1390. Would it, in your opinion, be advisable to go backwards?—It would not.

1391. As regards the safety of the vessel, do you think there is any reason why you should impose the obligation of carrying a pilot on vessels which are not now bound to carry a pilot?—I should think so, if I was not satisfied in my own mind that the necessity of having pilots really would compel masters of ships to take them. There is an instinct of self-preservation which is natural to us all, and I myself believe that pilotage will be as large and as freely made use of as it ever has been under compulsory pilotage.

1392. Then, in fact, the abolition of compulsory pilotage would not, in your opinion, much diminish the employment of pilots?—I think it may vary it. There is no doubt that any violent change or any large change must produce anomalies, and must press unequally upon different classes of people, and there may be peculiarities in some districts which may make a considerable difference; but, taking it in the aggregate, I believe that pilots will be occupied as much as they have been hitherto, and I say so because I think that it is a service which commerce requires, and a necessity which commerce will impose by its own act.

1393. Taking the navigation of the Thames, which I presume from Dungeness upwards may be considered one of the most difficult, if not the most difficult, in the whole of England, will you state to the Committee your experience as to the employment of pilots by vessels which are not now bound to carry pilots?—There is no navigation in this country more difficult than, and I doubt if there is any so difficult as, the Thames. It is a very long mileage, and you cannot get through every stage of it on a tide. You are subject to many things. You must anchor, and it presents great obstacles, not only in the nature of the sands and shoals which guard its mouth, but altogether it is a crowded navigation, and it requires a considerable amount of skill, knowledge, and experience. It is as difficult, I think, as any port that I know in this part of the world.

1394. And there is a great variety, I presume also, in the difficulty of the navigation?—A great variety. In the first place it must not be forgotten (though in these days of steam it is not perhaps of so much consequence, but it is very vital) that the Channel changes when you get to the North Foreland, and the wind which has brought a ship up-channel, is the very wind which will oppose her afterwards, and therefore she cannot by any process have a fair wind all the way.

1395. A sailing vessel without a tug would be compelled to anchor, probably?—Several times before she would get to London.

1396. Will you state to the Committee what is your opinion of the effect of the 388th section of the Merchant Shipping Act, which relieves an owner from liability when there is a compulsory pilot on board?—I apprehend that that is more a question for the shipowner than for me; but I object to it for I think that the effect of that clause is very serious with regard to shipping; and has the effect of placing the pilot and the captain of a ship in a wrong position. I am quite aware, from looking at the Minutes of the Select Committee in 1861, that it was made a very strong point by the owners in London, that the exemption from liability in their minds more than compensated for any amount of pilotage that they might be charged; that, in fact, their pockets were protected. I cannot think that that is a system which is a right one; and I think, moreover, that it has a tendency to evil in more ways than one. One point as to which I certainly can adduce no instance, but which I have often heard openly stated was, that it had this tendency, and I believe more particularly in the upper part of the Thames, that where watermen pilots have been employed by owners of vessels, if any accident happens which might really have been brought home to the owner of the vessel, it not unfrequently occurs that the pilot assumes the whole of the blame, and is authorised by the owner of the vessel to make some arrangement on that basis.

Capt. Sir *F. Arrow*, Knight.

5 April 1870.

1397. Do you think that that Clause tends to cause collusion between the pilot and the owner, with a view of relieving the owner from responsibility?—It has that tendency by common report, not that I know of any case which I can bring before the Committee, for I suppose it is a very difficult thing ever to sift these matters to the bottom; but still it is commonly reported, and not only is it commonly reported, but the pilots themselves know it, and have stated such is the case.

1398. Then, as to the relation between the master and the pilot, in consequence of the compulsory character of this clause, what is your view of that?—I think that it is an influence which is not a right one; I look upon the pilot more as a man to guide and assist, than to take the command of a ship entirely out of the hands of the captain. There was a case in point the other day in the matter of this unfortunate "Spindrift" which has been the source of so much writing and conversation; I do not believe that if that vessel had not been compelled to take the pilot by law, the master of the "Spindrift" would have allowed the pilot to do what was manifestly wrong.

1399. Do you think that the present state of the law tends to alter the relations between the pilot and the captain, and to put the pilot in command of the vessel instead of the captain?—Yes, I think it tends to that, and I think that it tends to give the pilot a position which is not altogether a right one. I think that a captain should defer to the opinion and authority of the pilot as much as possible; but in the case, for instance, of the "Spindrift," it was clear that the pilot was taking the ship in a direction which he ought not to take her, and any man who has ever passed an examination before the local marine board in the Port of London, which contains some portion of the examination for those waters, must know if he attended to it at all, that the pilot was going within a safe line, considering the thickness of the weather, which was the only defence the pilot had. Then, I think, that if the captain had not been rather overborne by the fact that he had a licensed pilot on board, who was there legally to take charge for him, he would have remained on deck, and most likely have remonstrated with the pilot, and said, "I think you are going too much in shore; don't you think you had

Capt. Sir *F. Arrow*, Knight.

5 April 1870.

better keep out into a little deeper water?" I think that he would have done right if he had said so, and I think he would have taken that course if he had not been under the impression that he was entirely superseded.

1400. Do you think that the practice has grown up in the merchant service, that a captain when he takes a pilot on board thinks that he is justified in giving up his command of his vessel?—I am afraid it has; but I do not think that there is any legal definition of it, and for this reason, that the practice varies very much with the class of pilot. Our pilots on the Thames are a superior class of men. They are able men, who know their duty well, and they are men of a certain social position and education, which all carries its weight with it. But if the same thing had happened at the Isle of Wight or Plymouth, where I do not think that the pilots would carry the same weight, in all probability the master there would have taken a course which he would not take with a Thames pilot, who is a superior man.

1401. Do you think that the relations between the captain and the pilot would be more satisfactory if the employment of the pilot were voluntary?—That is my opinion.

1402. Do you think that it would not be sufficient to lay down an alteration in that clause to which I have referred; but that it would be also necessary to leave the employment voluntary?—Yes; I think that the liability clause under any circumstances ought to disappear from the statute; and with that, I believe, the great objections to the voluntary system would disappear too. But at the same time, I believe that the voluntary system of pilotage would be more satisfactory in the end than a compulsory system.

1403. You stated that the great objections to the voluntary system would disappear; by that I presume you mean that one reason for maintaining the compulsory system now is this relief from responsibility which the owners have when they are employing compulsory pilots?—Yes.

1404. Do you believe that that is one of the main grounds upon which it is maintained?—I think so, and one is borne out in thinking so by the evidence which was given before.

1405. Do you think that if that clause were repealed, there would be comparatively few supporters of compulsory pilotage?—I think that would reduce the number of the supporters of compulsory pilotage very considerably.

1406. As to the effect of repealing compulsory pilotage, I think you have already stated that, to a great extent, the pilotage is now voluntary in the north channel of the Thames?—It is so.

1407. Is it not the case that almost all the vessels proceeding by that channel are proceeding to the north of Europe, and are not bound to carry pilots?—They are not.

1408. Is the employment of pilots upon that channel frequent and sufficient?—I have never heard of any complaints; and, comparatively, with the number of pilots to the south channel, there is no great discrepancy between the average earnings of the pilots.

Friday, 8th April 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. Pemberton.
Mr. William Philip Price.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Captain Sir Frederick Arrow, Knight, re-called; and further Examined.

Capt. Sir *F. Arrow.*

8 April 1870.

1409. *Chairman.*] The Trinity House have always endeavoured to carry out that clause enabling them to examine masters and mates for pilotage licenses, have they not?—I think they have, to the full extent that the Legislature intended; I believe that we have examined more masters and mates for pilotage certificates than any other authority in Great Britain.

1410. Can you state what number has been licensed by the Trinity House?—

1411. Those licenses only enable the masters and mates to pilot the vessels belonging to their owners; they are not general licenses enabling them to pilot any vessel, I think?—No, they are simply for the ships of the same owner. I dare say the Committee are aware that the original exemption was simply for piloting one ship; and then, very much on the action of the Trinity House, that exemption was extended further to their being allowed to pilot any ship or ships belonging to the same owners, but no other vessels.

1412. So that if a master changes his employment, he must come again for examination?—He must again come for the transfer of his certificate to another ship.

1413. I think that the Trinity House have also felt the anomalies which at present arise from the exemptions of certain vessels from compulsory pilotage?—I cannot say that we have felt the anomaly; but that there are great anomalies there is no doubt.

1414. The Trinity House have recently considered those anomalies, have they not?—We have at various times considered them, and we have advised the Board of Trade to extend the exemptions where we thought they pressed unduly. I think that one of those cases in point was the case of ships being obliged to pay the gateway pilotage going through Yarmouth Roads. The Trinity House did not do away with compulsory pilotage in that case, but they made such a rate as rendered it impracticable. They charged a penny per foot; and the consequence was that no pilots then offered themselves to board vessels; and afterwards that was confirmed in the amendment of the Merchant Shipping Act.

1415. Will you now state to the Committee your opinion as to the effect of the extension of steam in recent years upon the question of compulsory pilotage?—I think that it has very much simplified pilotage. Every vessel with steam power at command, is much better able to be navigated in difficult waters than a sailing ship, whether her steam power is applied in the shape of a tug, or whether it is applied by her own engines. There is no doubt that the original form of her own engines makes it still easier, and still safer, but the motive power of a tug also goes a very long way to remove difficulties in pilotage matters. The fact that they can pursue a certain course without being necessitated to deviate from it by the wind or the tide makes a very considerable difference; and therefore, pilotage is very much easier with steam than it is without steam.

1416. Therefore, in your opinion, the arguments in favour of compulsory pilotage such as they are, are lessened in consequence of the extension of steam?—I should say that the growth of steam and the question of compulsory pilotage, are very closely connected, and that as the one grew the less necessity there was for the other.

1417. In your opinion, is it even more necessary in the case of steamers that the vessels should remain under the command of their captains, than in the case of sailing vessels?—Certainly, much more so.

1418. I think that the limitation of those pilotage districts which are under the control of the Trinity House, rests very much with the Trinity House, does it not?—It is very much under the Trinity House. The limits are entirely a question for them, but subject to approval by Her Majesty in Council.

1419. Is the number of pilots licensed also under the Trinity House?—That is entirely a question for the pilotage authorities themselves.

1420. What has been the policy adopted by the

Capt. Sir *F. Arrow.*

8 April 1870.

the Trinity House with reference to the number of the pilots?—We endeavour to suit the number of pilots to the necessities of trade; I am bound to say that there has always been a sort of proviso that there were the interests of the pilots at stake, and that they should have the means of gaining a livelihood, and that we should not swamp the pilots by increasing their number to such an extent that they could not earn a fair living.

1421. You have endeavoured to proportion the number of pilots to the exigencies of the trade; and as the trade has increased, you have generally increased the number of pilots, have you not?—Yes.

1422. I think that of late years the number of pilots for the Thames district has not very much increased?—It has not increased at all; it has been the same for many years.

1423. And I think that in some of the outports you have more pilots than you want?—Considerably more. At the Isle of Wight there are really more pilots now than are wanted, or than really can properly attend to pilotage duties; but in some cases we have had to increase the number of pilots. At Falmouth, which is a very great port of call, and where vessels have been increasing yearly, there has been a small increase in the pilots.

1424. In other ports you are slightly reducing the number of pilots, are you not?—In other ports we are slightly reducing the number.

1425. I think that you maintain a certain authority over the pilots through the Trinity House with a view of keeping them to their work and under proper control?—We have a system of control which is not altogether a satisfactory one, but I think that on the whole it has worked very fairly. In districts like the Thames, we have paid superintendents; one at Gravesend, who was formerly in the navy; and at Dover we have another gentleman who is an old mercantile marine officer; both very excellent trustworthy men, who have the control of the pilots. It is one of those things which require a considerable amount of tact, and a good deal of energy and decision of character to deal with them, but it is done very satisfactorily, both to the pilots, I think, and to the Trinity House, certainly.

1426. Are the pilots at Dungeness under control in the same manner?—They are under Captain Cow, who is the superintendent at Dover.

1427. What are the arrangements made with regard to the vessels of the pilots at Dungeness?—There are four cutters belonging to the Trinity House for the pilotage service, and those cutters are entirely maintained and provided for by what is called "boarding money." In addition to the pilotage paid to each pilot there is a tariff of from one pound to three pounds allowed according to size and draught, which is called "boarding money," for putting the pilot on board, and none of that money ever goes to the pilots themselves.

1428. Is that a deduction made from the earnings of the pilots?—None whatever.

1429. Will you explain to the committee what it is?—The boarding money is paid by the ship in the Cinque Ports, and it never goes to the pilot at all. He charges his pilotage earnings by the foot, in the usual way, and that pilotage is paid to him.

1430. But it is a deduction from the pilotage rate, is it not, though not from the pilots' earnings?—No; it is an addition to the pilotage rate. The scale is for putting on board a pilot from either the cutter or from the shore, for 60 tons and under 150 tons, 1 *l.*; and then it goes on up to 1,000 tons gradually—1 *l.* 5 *s.*, 1 *l.* 10 *s.*, 2 *l.*, 2 *l.* 10 *s.*, and 3 *l.* 3 *s.*, which is the highest rate. That money is applied to the support of the pilot cutters when the pilots are supplied from the cutters, but when from the shore it goes to the owner of the shore boat, which takes it all.

1431. Are those cutters managed directly by the Trinity House?—Entirely.

1432. They are not under the control of the men themselves?—Not at all. That has been a matter of complaint sometimes on the part of the pilots, and they have thought that the Trinity House have acted, I will not say harshly, but not quite in accordance with their interests, inasmuch as they have had no voice in the management of the cutters. We on the other hand say that they ought not to have any voice in the management of the cutters; that our duty is to put them on board, and not to give them any option in the matter; and to induce that to be done, we pay the crew by head money; that is to say, that for every pilot shipped, the crew are paid 10 *s.* 6 *d.*, on a scale from the master downwards.

1433. Then the masters generally of those pilot boats are the servants of the Trinity House, are they not?—They are the servants of the Trinity House altogether. Everything is found for the pilots as well as the crew out of this boarding money; the whole of their subsistence while on board the cutter; bedding and every necessary is found for them.

1434. The inward pilots at Dungeness, are bound to take the first vessel that offers, I think, and there is no choice of pilots?—No. In the old time the Cinque Ports pilots managed their own cutter; but it was partly for the reason that there were complaints that men were apt, as perhaps was not altogether unnatural, to shut their eyes to a small ship, and take a larger one, that it was considered by the Elder Brethren of that day that it was better to do away with any chance of anything of that sort, and that the master of the cutter should be responsible.

1435. There is a deduction also from the pilot's earnings for the superannuation fund, I think?—They pay a poundage upon their earnings; there is a little complication about that; the old men, that is, the pilots licensed by the court of loadmanage pay 11 *s.* a turn, and the pilots licensed by the Trinity House pay 2½ per cent., which goes to what is called the pilotage fund.

1436. Is that levied upon all the ports within your jurisdiction equally?—It is.

1437. Do they get eventually the same proportion of superannuation, no matter what their contribution may have been?—No, I am sorry to say that it is not so; the pilotage fund is looked upon and was originated to a certain extent as a charitable fund, and after defraying the expenses of carrying out the Act, was for the benefit of pilots and their widows and families who were in indigent circumstances; and there is a rule by which no pilot who cannot disprove the fact that he possesses property to the amount of 75 *l.* a year in the Thames district, and 50 *l.* a year at the outports, receives any benefit from the pilotage fund, although he may have contributed to it during the whole of his lifetime.

1438. What is the average pension that is given to

to a pilot on superannuation?—The highest scale is 28 *l.*

1439. Then they do not acquire an absolute right to superannuation, but only if they are indigent and without means?—Yes, and the Trinity House are the judges of the case; if they make their claim for superannuation, then it is considered by the Trinity House whether they come within the rules or not and they get superannuation, or not, accordingly.

1440. Then this deduction from the earnings presses rather unequally upon the different classes of pilots, does it not?—Very unequally; I really think that it is a hardship upon the pilots who pay the greater amount of the money. In a place like Scilly, where the earnings are very small, it is very hard that they get the same benefit as those who have contributed very much larger sums.

1441. What is the amount of the superannuation fund now in the hands of the Trinity House?—£. 88,000.

1442. I presume that that is amply sufficient to meet the calls upon them, or even the future calls upon them?—It is a very difficult thing to say how an actuary might value it; but practically we find it quite sufficient, although it makes one very watchful and guardful of the interests of the fund. In licensing men and putting men on the fund, it is necessary to consider the obligations which may come upon the fund afterwards.

1443. Supposing that the change proposed by the Bill before the Committee be affected, and that pilotage be made voluntary in future instead of compulsory, will you state to the Committee your opinion as to the effect of it upon the earnings and the employment of pilots?—I do not think that it will affect the earnings of the pilots materially. There are no doubt some places where it will press upon them to some extent, but those places are more in the outport districts; places which although a man may not know when he goes into them, it is very easy to attain sufficient knowledge to enable him to go out of them; and as to which very probably a man might take a pilot in going in, and say, "Well, I can do without you going out." I think that in a place like Falmouth that would be the case, and also in many of the small outports; but I do not think that it would have the smallest bearing in London or in any large system of pilotage where there was a distance to go, and where the navigation was difficult. In fact my belief is that the difficulty of the navigation will compel pilots to be used wherever they are wanted.

1444. Wherever there is a difficulty of navigation, there you think pilots will be employed?—Then pilots will be employed just as much as before.

1445. I presume also that where the navigation is not difficult, there can be no reason for compelling the employment of pilots?—No; the only thing, I think, to be considered is the interests of the men. There is no doubt that you must consider the interests of the present pilots, but apart from that it seems to me to follow that to make a man take what he does not want cannot be right.

1446. In your opinion will it be at all difficult to maintain an efficient pilotage, notwithstanding that the employment of pilots is made voluntary, instead of compulsory?—I do not think that it will, if as far as I understand the principles of this Bill are carried out, which are that there are still to be a limited number of pilots, and that they are still to have the protection which the law has always given them against unlicensed men.

Capt. Sir *F. Arrow.*
8 April 1870.

1447. In your opinion, it will still be necessary to maintain a licensed corps, I presume?—Undoubtedly.

1448. And you think that unlicensed men should not be permitted to pilot vessels if a licensed man offered?—Certainly not. I am entirely of opinion that there ought to be men who have proved their qualifications, and have been licensed, to show that they do possess those qualifications, and if that is done, that they should be protected in their occupation against men who are not so licensed.

1449. And, I presume, also that you would say that a regulated price is necessary, that it would not be well to leave the charge to be a matter of bargain between the shipowner and the pilot?—No, not as long as there is a limited body, I think.

1450. Quite apart from the limitation of numbers, would you say that there should be a regulated price?—I think so; but I think that when you do away with compulsory pilotage you will probably have to revise the rates, and to make an increase for the winter, which, I think, would only be right and just.

1451. Apart from any special arrangements which may be necessary in consequence of the Bill, do you still think that there should be a regulated price?—I do.

1452. It would not be wise to leave the charge to be a matter of bargain between the shipowner or the master and the pilot, would it?—I think that there should be a regulated price.

1453. With regard to the limitation of numbers, do you think that in the event of this Bill passing, it would still be wise to keep within the power of the local authority the right to restrict the number of pilots?—I think so. I think that it should be left to the discretion of the pilotage authority to do as they have always done, namely, to consult really the wants of the trade, and that where they do want more pilots, they should be at liberty to increase the numbers, and on the contrary, that where they were not wanted, they should be able to decrease their numbers.

1454. In other words, you think they should pursue the same system as they have pursued in the past, of proportioning the number of pilots to the requirements of the trade?—I think so; I have no doubt that it will be a more difficult task, but still I think that it is one that may be carried out.

1455. In your opinion, will it be at all difficult to maintain the number of efficient pilots, provided the limitation of numbers be kept up?—I think it will not be so at all, but that where there is a limitation of numbers there will be plenty of men very ready and willing to take what is a profitable employment.

1456. Will there be any greater difficulty than there is now in keeping those men to their work and to their stations?—No; not so long as they are under the control of any authority who looks after them, because one of the obligations under which they take their licenses is to do what they are told, which is to consult the convenience of the trade.

1457. Will the fact of their employment being voluntary

Capt. Sir *F. Arrow.*

8 April 1870.

voluntary have some effect in increasing the energies of those men, and in keeping them even better to their stations than at present?—I think decidedly so, and I think that it will cause more emulation among the men.

1458. In other words, they will seek their employment, instead of being sought for?—I think it will have that tendency; I would not say that it would be so to the same extent in the London district, because I do not think that there is a margin there for much extension, but certainly at the outports and many other places in Great Britain they will seek for the ships, instead of the ships seeking them.

1459. As regards the pilots now stationed at Dungeness, will it have any effect upon them?—I do not think so; I think that nature has made a cruising ground at Dungeness, and I very much doubt whether you can improve upon that. I have heard it said that pilots will have to go down channel off Beachy Head to meet ships coming in, but I do not believe it. At Beachy Head you get a great, wide, open range, and there is less chance of falling in with vessels than there is at Dungeness, because there the navigation contracts into a channel of only nine miles between the Varne and Dungeness itself. Dungeness therefore seems to me to be the natural place where ships will pick up pilots, and I think it would be a mistake to take them further away down the channel, and get them into the sets of currents and of the tides sweeping the cutters away from their stations. I think that practice will show that the present cruising ground is a much better one than they would get by being taken away to the westward, although I am quite aware that it is an idea which obtains with some people that it will be necessary.

1460. It will be a matter at all events for the pilotage authority, whether and how far to extend the limits of the district, will it not?—That will be entirely a matter of practice and practical trial. If we found in practice that it was wrong, of course we should have to alter our conditions, so as to accommodate the trade.

1461. If you found that the trade required the pilots at Beachy Head instead of Dungeness, you would have your boats cruising there?—I would not say that there would not be difficulties because there are always difficulties in changing a well-organized system, but there will be no insuperable difficulties.

1462. The passing of this Bill may necessitate some changes in the districts, with a view of meeting the requirements of the trade?—It may.

1463. But there would be no difficulty in carrying them out, I presume?—Not at all.

1464. Do you think that there will be any greater difficulty than there is now, in making the pilots keep the sea in bad weather?—There will be a great difficulty, I dare say, if their employment falls short, but I do not think that it will fall short. I believe that the trade require pilots, and that the employment will be there, and if so, the vessels will go to sea.

1465. Just now you stated that it might be necessary to make some change in the pilotage charges, as between the summer and the winter seasons; at present the charges are the same, both in summer and winter; are they not?—Yes. It may be desirable to make a winter rate, and a summer rate, and I believe it is done in some places; I think at Cork they have a winter and a summer rate.

1466. I presume that is upon the supposition that there might be less inducement to take a pilot during the summer season, in consequence of the charge being the same as in the winter?—Yes, but I think that after all the stress will be laid much more upon the pilotage authority than upon the pilot. If we had the same limited number of pilots, and the same means of putting the pilots on board wherever it may be, it will lie mostly with the pilotage authority to insist upon the pilots being at sea; but I do think that it is fair that when every man is not obliged to take them, they should receive more in winter time, when they run greater risk, and when they have to undergo greater discomfort and inconvenience altogether. I think it is right that in the winter they should be rather more highly remunerated.

1467. You have, in fact, in the North Channel an experience which is almost that of a voluntary system, have you not?—It is a voluntary system, as I think I mentioned the other day. There is only 10 per cent. of the vessels that pass through the North Channel that are compelled to take pilots.

1468. Therefore the pilots who are maintained there are, in fact, under the voluntary system, are they not?—They are, in practice, under the voluntary system.

1469. And do you find any greater difficulty in supervising them than under the compulsory system?—I am inclined to think that we have had less trouble with regard to North Channel pilots, if it is fair to draw the line.

1470. In fact, their employment being voluntary, is a great inducement to them to keep their stations, is it not?—It certainly has not given rise to difficulty or trouble.

1471. Have you heard any complaints of the loss of vessels in the North Channel arising from the non-employment of pilots?—I have not; none have come before the Trinity House.

1472. Have you considered the effect and extent of what I may call the compensation clauses in the present Bill as regards the future of the pilots?—That is a very difficult question to answer, and it must be a mere matter of opinion. I should be inclined to say that in districts like the Thames, or if this Bill passes, like the Mersey or any of the large districts, it will be almost nugatory. There may be compensation required in the case which I heard the other day about the pilot boats of Liverpool, and the arrangements which the authorities had allowed there, but I do not think that, as regards pilotage of the larger districts there will be a loss, although in some of the outports there probably may be some.

1473. You think that in some of the outports it may turn out that after this Bill has passed there may be a larger number of pilots than are necesssary for the trade?—I think so. In the ports which are easy of access they might lose some 15 or 20 per cent. of their earnings.

1474. And thereupon it may be necessary to withdraw a certain number of them?—I think it is possible unless there is some extension of trade which compensates for it.

1475. In your opinion will there be any difficulty in withdrawing a certain number on the principle contained in this Bill?—I do not think that there will. It seems to me to be a very fair position which you offer to them.

1476. At

1476. At present, as you have already told us, their prospect of superannuation is a very small one?—Not of the men at the outports who will be affected by this measure; their prospect of superannuation, I think, is a very good one; they are pretty safe to get superannuation, because they are not possessed of property at the end of their period of service which will exclude them from the benefit of the Pilotage Fund.

1477. But the superannuation which they now receive is not a large one, is it?—£. 28 is the outside which is paid to any one.

1478. So that supposing that any of those outports, it were now necessary to withdraw a certain number, it would not be a very extensive or expensive operation?—I do not know how the Treasury would calculate that, but I do not think that the compensation would be based upon what the man's superannuation would be, but rather upon what he is losing.

1479. But also having regard to the superannuation which he would receive after perhaps a few more years of service?—Yes; that would be an element, no doubt.

1480. And in your opinion it would not be difficult to retire some of the older men upon that supposition?—I think not; nor would it be a very onerous burthen upon the public exchequer.

1481. In the case of the Thames district, is it in your opinion probable that there would be any call for superannuation?—I think not; my opinion is that the necessities of the Thames require pilotage so entirely that there would not be any material loss of employment.

1482. You have had some experience as to the navigation in other parts of the country about the coast, have you not?—I have a general knowledge of nearly all parts of the coast.

1483. In your opinion, are there any districts round the coast, where the navigation is more difficult than in the Thames?—Decidedly not.

1484. Do you know the navigation of the Mersey up to Liverpool?—I am not very well acquainted with it; I cannot call myself a pilot for the Mersey, but I generally know the navigation by the chart, and from having been several times there.

1485. Are there, in your opinion, any exceptional circumstances as regards the Mersey which would justify us from exempting it from the operation of the Bill, assuming it to be applied generally to the coast round the country?—I do not think so; there is no doubt that the navigation of the Mersey presents difficulties; in the first place, it is a place which you can only enter with a heavy draught upon a flowing tide; and another difficulty is that it is a lee shore, when the winds are in from the north-west, round to about west south-west; but then there is a fine stretch of water outside, between the Calf of Man and Anglesey, and there is plenty of room for ships to keep the sea, and therefore I do not think there is any case made out for the Mersey more than there would be for any other place; no doubt it is a lee shore, and it can only be entered with a rising tide, and therefore the ships for a certain time must keep to windward, and must keep to sea; but I do not think there ought to be any difficulty in doing so; and I think that if you look at the losses which have occurred in the Mersey, one is borne out in saying that it is not worse than other places.

1486. But just in proportion, I presume, according to the argument already used, as the navigation is difficult, so will the employment of pilots under the voluntary system be necessary and certain?—Quite so; to my mind I should say that Liverpool would not suffer at all; if I was master of a ship I should not attempt the port of Liverpool under such circumstances without a pilot.

Capt. Sir *F. Arrow.*
8 April 1870.

1487. Do you think that there is any reason for making a special exemption in the Hull river, and taking it away from the operation of the Bill?—Decidedly not, because the moment you are inside the Humber, you are safe.

1488. Will you take Falmouth and compare it with Cork, which is a voluntary district?—Falmouth is perhaps one of the easiest places in the whole of the channel.

1489. That is one of the places then where the employment of pilots may fall off in consequence of the pilotage being very easy?—I think it is probable; but I may say that I think that even as regards Falmouth we may qualify that because it is a very large port of call, and the very fact of their being many vessels in it makes it very difficult for a master of a ship to find a berth, or to know where his berth is, and the probability is that he would take a pilot who would know the state of the roadstead, and the vessels in it, as a matter of assistance to get him into a berth. But I think where the pilot would lose would be that a man going out would say, "I am here all safe, and I am berthed, and I can find my way out."

1490. I suppose the condition of Falmouth is very much the same as that of Queenstown, they are both very easy of access, are they not?—Yes; Queenstown is a longer course if I may call it so to get up.

1491. But it is also very much a port of call for vessels proceeding elsewhere, is it not?—Yes, both of them are so.

1492. Then, in your opinion, there are no ports or estuaries round the coast which ought to be dealt with exceptionally in this Bill?—Not to my knowledge; I do not think that I could say that there was one.

1493. Assuming therefore, that the voluntary system answers in the Thames, it will answer in every other part of the country, will it not?—I am very much inclined to think so; I think that it is the most difficult, and the most protracted navigation; there is 120 miles of it.

1494. Then do you think that the maintenance of compulsory pilotage is not necessary, either as a means for adding to the safety of life, or for the convenience of shipowners?—I think that the question as to the safety of life has been settled long ago unless it is to be re-opened; because when you exempted the first vessel you did away with that argument, and I have never considered it in that light. But practice is much better than opinion in those cases; and if it could be shown that the want of pilots had occasioned greater loss of life in those vessels there might be some argument against it; but I am not aware that it is so.

1495. You are not aware of any such cases in districts where pilotage is voluntary?—They are not within my knowledge.

1496. Mr. *Graves.*] In one of your answers on Tuesday, you stated in reply to the honourable Chairman, that your opinion was, that pilotage should either be compulsory, or should not be compulsory at all, and you gave, as a reason

Capt. Sir *F. Arrow.*

8 April 1870.

a reason for that statement, that you knew, and that it must be known to all, that it is impossible to go backwards in the way of imposing a heavier liability upon the trade and shipping of the country?—I did; I think that having granted those exemptions, and a great many being competent possibly after having spent some amount of time in acquiring knowledge for themselves, it would be impossible to go back, and that it would be a great hardship to go back.

1497. Did you arrive at that conclusion upon the ground that you do not see your way clear to go back?—I would not go back; I neither see my way clear to go back, nor would I advise going back if I did.

1498. Is not the cost of maintaining the pilot service of this country now borne by its trade and commerce?—The ship pays for the pilot, undoubtedly.

1499. You say that you would be imposing a heavier liability upon the trade and shipping of the country by going back; is not the cost of maintaining the pilot service of the country at present borne by its trade and commerce?—It is.

1500. Then in what respect would going back alter it?—Because so many more vessels would be obliged to take pilots, and therefore the trade would have to pay more pilotage.

1501. So that it is because fewer vessels would take pilots that the trade and commerce would be relieved of the cost?—I think so.

1502. Do you consider that a licensed pilot on board a ship is a protection to life and property?—I think that the presence of any qualified person on board a ship who has a special knowledge which another man does not possess must be a protection.

1503. Do you think that a ship would be safer in the hands of a licensed pilot than without?—I think, decidedly, that a ship would be safer in the hands of a competent man; I will not say whether it is to be a licensed pilot or not.

1504. Do you see no distinction in qualification between a licensed and unlicensed man?—Yes, there is this difference; that one man has his diploma, and the other has not.

1505. Would you not prefer a doctor to a quack, any day, if you wanted advice?—Undoubtedly.

1506. You have stated that you see no distinction between life and property in a coaster and in a ship of the largest value, and you argue from that that because one vessel is exempt from pilotage, there is no reason why the other should not be exempt?—I do, and I cannot help thinking that it is a legitimate argument, because you cannot navigate a ship without hands on board of her of some sort, and if the State's business is to protect life, it is as much its duty to protect life on board small vessels as on larger vessels.

1507. Are not the exemptions under which a coaster of 60 tons is allowed to go without a pilot largely, owing to the frequency of the departure of such a vessel from a port, and the supposition that her master is perfectly familiar with all the dangers of the navigation?—No doubt, that was the ground of the original exemption.

1508. And that would not apply to the largest vessel, would it?—Not in the same degree, certainly.

1509. So that there would be probably a distinction, and a reason, for making the exemption in one case and not in the other, would there not?—I do not even admit that. I say that if the State is to satisfy itself that any man's life requires protection, the man on the coaster has as much right to be protected as the man on a large ship has. The State has no knowledge of it, but we ourselves know in practice that the most ignorant men are frequently the little traders about the coast.

1510. I think that you are of opinion that as a rule, all prudent masters would take pilots in narrow waters difficult of navigation?—I am.

1511. Would you consider that the giving of an option to a master or owner is in any way throwing overboard a safeguard to life?—Then, I think you come to the principle of whether the State's business is to do this or not. If it is not, I do not see why it should not be left to the master and the owner of the vessel. Naturally one's self-interest is to carry your passengers, or to carry anybody who is with you, safely; and I do not think that you can have a greater incentive than that of your own actual interest.

1512. I suppose that you are aware that a great number of the losses which occur annually round our shores occur in vessels badly found?—I am afraid that it is too true.

1513. Would there not be a fear that an owner who would send his ship, as we know he does, badly found, would be likely also to send her to sea without a pilot?—It is quite possible. There are exceptions to every rule.

1514. Would not the tendency be in that direction?—No, I hope that the tendency would not be in that direction, although there is a possibility of it.

1515. You are probably aware that under the Merchant Shipping Bill it is proposed to treat as a misdemeanant any owner who sends his ship to sea unseaworthy. In the case of a vessel which was lost, and which was proved to be lost through the want of a pilot, would you consider that an unseaworthy act on the part of the owner?—I do not see exactly the inference that it would make a vessel unseaworthy. If I might ask a question, what is seaworthiness? I am afraid no limitation would make a ship seaworthy under some circumstances.

1516. Have you no fear in your own mind that reckless owners would induce their captains to sail their vessels without pilots?—I am sorry to say that a reckless owner would do anything. I am afraid it is perfectly true that they do so sometimes

1517. Mr. Farrer has told us in his evidence that some of the vessels going in and out of the port of London often go in and out under the charge of unlicensed men; is that so?—I do not think that I can answer that question, or I can only answer it in this way: that I believe it is so from hearsay, but the pilotage authorities are the last people to hear of these sort of things. The remedy does not lie with the pilotage authority; we have no power to prosecute an unlicensed man; it rests with the pilots themselves.

1518. *Chairman.*] I think the employment of unlicensed pilots is only between Gravesend and London?—It is very common, not only between Gravesend and London, but between Gravesend and through both the north and south channels.

1519. Mr. *Graves.*] Why is that?—I believe that it is a question of price; I believe that in many cases the unlicensed pilots do it for very little.

1520. So that price has something to do with the

the selection of a pilot?—It has in this way. I stated, in answer to the honourable Chairman, that I thought there must be a revision of the rates to some extent.

1521. Are there not fewer pilots now in the Thames than there were ten years ago?—There are exactly the same number; they have never been altered.

1522. The return which is forwarded from the Trinity House, and presented to Parliament, gives 918 ten years ago, and 889 now; is that correct?—That is including all the pilots round the coast; I understood the honourable Member to speak of the Thames. We have not 918 pilots in the Thames.

1523. Have you the same number in the Thames now as you had ten years ago?—Exactly the same; but they are decreasing round the coast.

1524. I have seen it stated that the number of applicants for pilots' licenses is very considerable; is that so?—There are 48 applications now for licenses in the Thames between London and Gravesend.

1525. Is there any reason why those persons should not receive licenses?—The principal reason, I think, against it is that we have not considered hitherto that the trade wanted more, and that there had been sufficient to supply the trade; and that to put a larger number on would be merely diminishing their earnings without being a convenience to the trade of the port. We should not hesitate a moment if it were shown to us that the trade required more pilots.

1526. Do you consider that the increasing exemptions have anything to do with the diminished demand for pilots?—I should think that possibly it had something to do with it in some places, but I do not think it has really anything to do with it in the Thames.

1527. As a fact, do you know whether the unlicensed men have been increasing or decreasing for the last 10 years?—I am afraid that I have no data upon which I can answer that question, and I do not know anything about it.

1528. Are you quite satisfied with the efficiency of our present pilot service in the Thames?—Yes, I think that it is a very well conducted service, and we are perfectly satisfied with its efficiency; I should be sorry to say that there is not room for improvement, or that there is any finality in it; but both the trade and ourselves, I think, have every reason to be satisfied with it.

1529. Then if all questions of the liabilities and of the anomalies, which have been alluded to, could be settled, would you be satisfied to allow the present service to remain as it is?—I presume that the question is put upon the supposition, that the liability clause and the anomalies could be removed without doing away with compulsory pilotage. That is a very difficult question to answer, because one has a natural leaning to what one has seen in operation for many years, and with some success; but I think, looking to all views of the case, that I should be rather inclined to do away with it; I think that trade can better protect itself than the Government can do it for them. It would make great changes no doubt.

1530. Then have you come to modify your opinion without reference to any undefined question of the master's responsibility, or the pilot's duty at the present moment?—Quite; I did not take that into consideration at all; it is an argument, but it is not one upon which my opinion has been formed.

1531. Is there not a general impression that when a pilot goes on board a ship the master is free from responsibility?—I think that that I said the other day that it very much depends upon the pilot. A man when he saw one of your Mersey pilots or one of our Thames pilots come on his deck, would I think feel that he had a man in whom he might put thorough confidence, and he would feel that he was released from responsibility. Very few commanders of vessels are really men who ever study the law of these cases, or are competent, not from want of ability, but from not being well acquainted with the subject, to form an opinion upon what their legal position really is, if there is any legal position, which seems to me to be a doubtful point; but I am satisfied that the character of the class of men whom they take very much affects the question; I am sure that it would be so with myself. If I had a man who I felt was entitled to confidence, I should refer to him, and consider him in a very different position from a man who was not his equal perhaps in other ways.

1532. Am I not right in supposing that the opinion of the Elder Brethren of the Trinity House is, that the presence of a licensed pilot does not free a master from the obligation to attend to the safety of the vessel?—Certainly.

1533. I have here a letter written by the Secretary of Lloyd's in the case of the "Spindrift," on the 27th of January; the concluding paragraph of that letter is this: "My committee desire me to say that the whole of the facts brought out in this case confirm them in the opinion which they have entertained for some time, that the period has arrived for the abolition of compulsory pilotage, and that the Acts of Parliament by which a captain is compelled, in certain waters, to hand over the charge of his ship to a pilot, and permitted to throw off all responsibility for her safety, should be repealed;" are you aware of any such Acts of Parliament?—No.

1534. As far as you are able to state, that is a misapprehension?—So far as I am able to state, that is a misapprension. My own belief, sorry as I am to condemn any man, or to express any opinion upon any person's conduct, is, that I do not think that the captain of the "Spindrift" did his duty.

1535. *Chairman.*] Was not that a deduction drawn from the law laid down by the magistrate in the inquiry into the conduct of the master?—I would rather that you would not ask me questions of law, and particularly as to the case of the "Spindrift," for it is a very difficult one.

1536. Mr. *Graves.*] Where do the compulsory waters of the Thames cease?—At Dungeness.

1537. Outwards as well as inwards?—Outwards as well as inwards.

1538. Has it always been so?—No; the pilots were licensed only as far as the Downs; a certain number still only hold licenses to the Downs; and therefore, vessels conducted by those pilots are left by them in the Downs, and are really subject to be boarded again. If a pilot offered again, and insisted upon going, that pilot could make the ship take him on to Dungeness; but in practice it is not so. The pilots work, I believe, in a pretty friendly manner together, and nothing of that kind occurs. It is for their mutual benefit that ships should get rid of their pilots in the Downs, or off Dover, or somewhere where it is easy

Capt. Sir *F. Arrow.*

8 April 1870.

easy to put them ashore in a boat, rather than that time should be lost in seeking a cutter.

1539. Can you give the proportion in which pilots leave vessels in the Downs outward bound?—I should think a very much larger proportion of vessels leave their pilots in the Downs, except they are in charge of a London pilot, who has a license to the Isle of Wight.

1540. So that, in practice, there would be no disadvantage if the compulsory waters of the Thames outwards ended at the Downs, as in 1854?—Certainly not, because they have an anchorage under their lee, and they do not want them.

1541. You have now some number of pilots who have no power to take a vessel beyond the Downs?—I think that there are 21 who cannot take a ship further than the Downs.

1542. Am I correct in supposing that you have rather dispossessed your mind of the consideration of the question of the liability of the owner, and the importance of defining that question, in the conclusions at which you have arrived with regard to the abolition of compulsory pilotage?—I think that it has been one of the principal things which has drawn one's attention towards it, but I will not say that it has affected the conclusion, because I think I stated before that it did not affect the conclusion. It was one of the points which was very strongly brought before me.

1543. This Bill proposes to throw the liability entirely upon the owner, does it not?—It does, I believe.

1544. Have you thought at all whether it would be possible to introduce any system which would still throw the liability upon the owner without destroying the compulsory pilotage in a port where it was deemed necessary?—I fancy that that might be done, in this way: that when a pilot was once shipped it should be tantamount to his being placed upon the ship's articles for the time being. He would be the servant of the owner, and, as the servant of the owner, the owner would be liable.

1545. Do you consider it any hardship that an owner should be liable for the acts of a pilot under a compulsory system?—I think that it is a hardship that he should be compelled to take a man who gets him into grief afterwards, and then should be compelled to pay for it.

1546. Then in what respect would this be different under the Bill now under the consideration of the Committee?—He is not compelled to take him.

1547. But if a prudent man would always take a pilot, and it was imprudent to go without one, would you not then be giving a man an alternative which would render life insecure?—It is rather the horns of a dilemma certainly, but I do not think that he could do without a pilot; at the same time there must be a difference between the obligation of the State saying, you must take this man whether you like him or not, and the owners taking a pilot whom he chooses to take as an assistant.

1548. But apart from the undesirability of throwing a man into a position to do an act which you have admitted to be imprudent, in what respect would he be able to select better under the operation of this Bill than under the present compulsory system?—I do not think that he would have any better option at all as regards such a district as the Thames, or as regards such a district as the Mersery, on his inward pilotage: I do not see how it is to be done, because the pilotage authority supply the pilots for them; but in cases like the outports, and in any other places, I do not see why, if he preferred one man to another, he should not employ him.

1549. But supposing that you were acting under what is called a regulated system, in which every man took his turn outwards, what more choice would you have under the free system than you have now?—There is no such system, as far as the Trinity House is regarded, because the choice of pilots is recognised by the Trinity House in all their districts; we recognise that any owner can choose his pilot, and I am sorry to say that it gives rise to a great deal of heartburning among the pilots themselves, but it has long obtained on the river Thames.

1550. *Chairman.*] Not inwards?—No, outwards.

1551. Mr. *Graves.*] But supposing the case of a port where there is that regulated system, by which every man takes his turn, you would have practically no more selection outwards than you have now?—Of course not.

1552. Are you aware, that by the law of New York, the liability attaches to a shipowner even though he has a pilot under a compulsory system on board?—I have heard so.

1553. As a matter of principle, is it not your opinion that a pilot service is, to a very great extent, maintained for the good of the whole community?—Undoubtedly it is maintained to a great extent for the good of the whole community, and to find a livelihood for the pilots themselves.

1554. Is there not some equity in the principle, that where everyone receives a benefit, everyone should contribute to the expense of the benefit?—Upon my word, I think I should want a wig and gown to be able to answer those questions; I do not feel equal to them.

1555. I simply wish to ask you, as a matter of equity, whether as regards that which is kept up for the good of all, there is not a fair reason why all should in some measure contribute to it?—Yes; I think if you can establish that fact, you would have a very strong argument; but I apprehend that the great majority of those persons for whose good it is kept up, object to its being kept up in that way; I think that, as a body, the shipowning interest do not look at it in that light.

1556. Are you aware that there was a Bill introduced by the Board of Trade last year, carrying out that principle of making it compulsory upon all to pay, but leaving it optional to employ a pilot or not?—I know there was such a clause in the Shipping Bill of last year.

1557. May I ask you whether you were consulted at all with regard to that Bill?—Not at all.

1558. Are not the lights of this country (coming to a subject with which you are perfectly familiar) maintained somewhat on the principle that they are for the benefit of all, and that all should contribute to them?—Yes, they are certainly an analogy as far as that goes, inasmuch as they are maintained for the benefit of shipping and commerce, and are paid for by shipping and commerce.

1559. For instance, a steam vessel going from Liverpool to Queenstown, though hugging the Irish coast the whole way down, would probably

pay

pay for Lundy, even though she never saw it?—Yes, I am not going to defend all the limits of lights.

1560. A vessel going from Hull to Norway, I believe, in practice, pays the whole of the lights on the east coast of England?—Yes, but I think I may say in the presence of the Chairman, if he will permit me, that that reproach is one which will shortly be removed. The Trinity House have been consulted on this point, and I hope a very satisfactory solution will very soon be given to you by the Chairman.

1561. You know something of the lights in the Basses Straits, of which we have heard so much in the last few years?—Yes, the Great Basses, off Ceylon.

1562. I think last year Parliament passed an Act for erecting lighthouses to protect those Straits?—To erect a lighthouse on the Great Basses Rock.

1563. A toll was levied upon all vessels going within a certain radius of those lights, I believe?—I have never seen the Order in Council, which stated the limits, but "all ships that derive benefit," is the usual term used.

1564. May I ask you if a vessel going within 1,500 miles of that light, receives any benefit from it?—It depends where she is going to afterwards.

1565. Supposing that she never comes nearer than 1,500 miles?—I should hardly think that she does derive benefit from the light in that case.

1566. Then by that Order in Council, vessels going within 1,500 miles of the light (I believe I might have extended that distance, but I will take that distance to be sure) pay toll to that light?—The exact distance between Cape Guardafui and Point-de-Galle is 1,760 miles.

1567. *Chairman.*] Are you aware that that Act passed last year unopposed by the shipowners?—I daresay it is a very fair question for discussing in Parliament, but I very much doubt if it has anything to do with me; I think I may venture to say this, that I believe that this is not a new point; that the toll that was ordered to be levied upon the Great Basses light is identically the same toll as was levied upon the Little Basses Light Ship, which lay some 18 or 20 miles to the north of it.

1568. Mr. *Graves.*] Is not in practice and in common sense the principle really the same in the case of a vessel going within 1,500 miles of a light which is obliged to pay for the support of that light, as in the case of the ship which may desire at one time to go out without a pilot, and at another time in bad weather requires the services of a pilot?—I think the argument is against the light certainly.

1569. The duties, I believe, of the Pilotage Committee of the Trinity House are of a very onerous and responsible character?—They are.

1570. They have personally to regulate and superintend the pilotage business of the Port of London and they have to see that a sufficient staff is maintained, have they not?—That is so; and not only the Port of London, but every port under our jurisdiction.

1571. I presume that the committee is composed of men of great nautical experience?—Yes, they are a committee of the Elder Brethren, all of whom have considerable nautical experience.

1572. May I ask if that committee, to your knowledge, was consulted with regard to the principle of this Bill?—No.

Capt. Sir *F. Arrow.*

8 April 1870.

1573. Do you yourself think that an important change of this kind should have been introduced without consulting such a local authority as the Trinity House, or the Mersey Docks and Harbour Board?—I think that undoubtedly there would have been stronger ground for the proposers of the Bill if they had been so consulted; but I believe, after all, it is more a question for the trade than for the pilotage authority, who have to supply a want, in whatever way that want is to be supplied.

1574. May I ask, for information, if you yourself at all consulted the Pilotage Committee, with regard to this question?—No, not at all; I am Chairman of the Pilotage Committee, as I am of all other committees, *ex officio*, and when I think it is necessary, or when they think it is necessary, that I should sit with them, I do sit with them. No important business ever occurs in any committee with which I am not associated, and therefore if they had any discussion among themselves I should have been quite aware of it. I think I ought to say that this would be considered a question which would be beyond the competence of the Pilotage Committee to deal with. It would be a question, if it all, for the Board.

1575. Have you taken the opinion of the Board upon it at all?—We have not; we have not been asked. The Board of Trade have not referred to us for our opinion upon the question.

1576. I believe that in the year 1862 the Board recorded its protest against the abolition of compulsory pilotage?—I forget upon what question it was, but at any rate it was tantamount to that; that the Board did object to the abolition of compulsory pilotage.

1577. Has that record ever been altered to the present time?—No.

1578. *Chairman.*] Their opinion was not asked upon that occasion, I think?—No, I do not think it was.

1579. They volunteered their opinion upon that occasion, did they not?—I think so.

1580. On the present occasion they volunteer no opinion, do they?—They volunteer no opinion.

1581. Mr. *Graves.*] Would you see any objection to leaving to local authorities, properly constituted, the determination of what principle or what system was best suited to their own port?—I think there would be an objection to that in practice, and that it is far better to have one rule. It is one of the things that are charged so often against us, as English people, that we are too apt to be local in our opinions and habits, and to have such varieties that nobody else can understand them but ourselves, and I hardly think that that would be wise.

1582. Do you see any objection to allowing local authorities, properly constituted, to examine their own pilots for licenses?—They do so, I think; they examine their own pilots.

1583. And you think that the local authorities may fairly be entrusted with the duty of examining their own pilots?—I think so; I have no data to say otherwise. So far as I am aware they have done their duty very properly.

1584. You have stated that you consider that the navigation from Dungeness into the Thames is the most difficult in the United Kingdom?—I do.

Capt. Sir *F. Arrow.*

8 April 1870.

1585. Do you know the Tyne at all?—Yes.

1586. Would you compare the pilotage of the Tyne with the pilotage into the Thames?—Certainly not; the pilotage of the Tyne is very short. A man comes up to the Tyne, and he is very soon out of his difficulties; in fact, his difficulties do not begin until he gets on to the bar.

1587. A pilotage service suited to a port like the Tyne would not be suited to an estuary like the Thames, would it?—Certainly not; I am not giving any opinion on the principles upon which that should be conducted, but I am saying that the pilotage of the two places is entirely different.

1588. I do not know whether you have sufficient knowledge of the Mersey to be able at all to draw any comparison between the pilotage of the Mersey and of the Thames?—I think with the help of your chart I have quite sufficient knowledge.

1589. Have you been frequently in and out of the port?—Yes, often.

1590. You have stated, have you not, that you saw no reason for any special exemption in the Mersey?—If I may recall your mind to what I said, I gave as my reason that there was plenty of sea room outside for a vessel to keep to windward until she could run in. No doubt it is a lee-shore, and some of the worst weather that we get upon our coast, and you want a rising tide to go in; but still you have plenty of sea room, and you have the means of keeping to windward.

1591. Are you aware that there is no anchorage at all outside?—I am quite aware of that.

1592. Do you think, under all circumstances, that a ship so situated would be able to keep off the banks?—I think generally they would, with the knowledge of men who understand the tides and the positions.

1593. Are the channels of the estuary of the Thames shifting channels, or are they what you would call permanent channels?—I think you may, for practical purposes, call them permanent channels. There are continual changes in them, but these changes are not of that extreme nature that would lead you to say that they are very shifting channels. There is always a channel, although I am quite aware that a spit of sand will grow in one place and in another, and other places will close up, and that is particularly so in the estuary of the Thames, and all along our east coast. There is a considerable amount of change, without any radical change.

1594. Are you at all conversant with the shifting character of the channels of the Mersey?—I am not, but I think I may say that any serious change in your buoys or lights in the Mersey is always sent to the Trinity House for the statutory sanction according to the Act, before it can be carried out, and therefore any large change is a thing that we should be cognisant of. Now, I am not aware that there are such large changes, at any rate they have not been brought before us.

1595. The Mersey Docks and Harbour Board has the control of the buoyage, and lighting of the whole of that estuary, has it not?—As a local authority, but they must have the sanction of the general lighthouse authority for all they do.

1596. Is there any reason why you should not allow them to have the supervision of their own pilots under the Board of Trade in the same way?—I think they have that now; that, again, comes under the general question whether it is a good thing that there should be a variety of system which is so very often charged against us.

1597. The Committee have had before them the system at work upon the Thames; are you aware that it has been stated that there are seven or eight different systems at work upon the Thames?—That arises from bygone circumstances and changes of authority. It is not a different system, but there are several classes of pilots.

1598. Are you quite satisfied that those various systems work in harmony, and that there are not conflicting interests which do damage altogether as a whole?—I hardly think that, although I think they may be improved with some advantage.

1599. Has the Trinity House ever made any recommendation to the Board of Trade to consolidate and harmonise the various systems?—We have not.

1600. You have stated, have you not, that you think that the option to take pilots on the part of a captain, will not materially alter the income of the pilots?—I think it will not.

1601. Is not this a little inconsistent with your view that the increase of steam is tending to diminish the necessity for pilots?—It may be to some extent, but I still think there will not be any very great alteration, taking into account the requirements and the increase of commerce. You may say exactly the same thing with regard to every light and every buoy you put; everything you place is an assistance to navigation; you cannot put a new light at a point where there was not one before; you cannot put a buoy at a point or at some spit or corner which does not all go to some extent to assist a man to navigate his ship, and there cannot be a stronger instance than there is in the chart which hangs upon the wall of this room. There are three light vessels in the Bristol Channel chart, which have been put within the last eight years; surely that renders the navigation very much easier than it was before those light vessels were put there. It might have been necessary at one time to have compulsory pilotage, and I can quite understand that when our shores were comparatively unguarded, as they used to be, compulsory pilotage was certainly much more requisite than it is now.

1602. If there should be a loss, I understand you to say that it could be recouped by reducing the number, by superannuating certain men?—I think so, but I said that I thought that applied more to the out-ports than to the large districts.

1603. And you think that there would be no difficulty in retiring those men?—No; there can be no difficulty in retiring them if they have not employment.

1604. Upon what principle would you select out of a body of 200 men, say 25 men in the prime of life to retire?—That is not a case that I think ever would occur; I think you would find that there would be a necessity of filling up vacancies, and there must be varieties of ages in all large numbers, and you naturally would retire those whose age was making them less and less able to do their work easily.

1605. Then would you reduce them against their will?—I do not think you would have any option but to reduce them; it is a sort of "Hobson's choice"; if they could not get employment they would have to be reduced.

1606. You have spoken of a superannuation of 28 *l.* a year, which I believe is the maximum of Trinity House superannuations, the minimum being

being 10*l.*; would there not be excessive injustice in saying to a man who is earning his 200 *l.* a year, "You shall be superannuated, and reduced to a maximum of 28 *l.*, and a minimum of 10 *l.* a year"?—Yes, I think there would be; I should not compensate upon that ground myself.

1607. How many apprentices has the Trinity House under its charge?—There are 90 apprentices under the Trinity House.

1608. Under this Bill those apprentices who, perhaps, are on the verge of passing for a license, are entirely excluded, are they not?—I think they are.

1609. How many years, as a rule, do those men serve?—Seven years; I do not know whether the honourable Member quite knows it, but there is no such thing as apprenticeship in the estuary of the Thames. We have no sea apprentices whatever there; those are all at the outports, Plymouth, Falmouth, the Isle of Wight, and so on.

1610. I will take the case of Liverpool, where a servitude of seven years is requisite; and I will ask you whether you do not consider it unjust to seek to compensate the licensed pilot, and to ignore altogether the man who, for six years, has been serving his time under a compulsory system?—I think he is entitled to consideration; but I would make one statement which I think, perhaps, clears up the point with regard to the apprentices, as far as the Trinity House goes. They are very small in number; they are not 10 per cent. of the whole number; but in the Thames district there is no apprenticeship ever served by the pilots as pilots. They come for examination, and their qualifications are that they should have been mates or masters of a square-rigged vessel for two or three years; and then they must prove their thorough knowledge of the river, and their ability to handle a ship; but they have never served any apprenticeship whatever on the river. The only men who do serve an apprenticeship are what are called the watermen pilots, and that is an obligation of the Watermen's Company, and not an obligation attached to their pilotage position.

1611. But their apprenticeship would simply be in a little boat on the river, would it not?—Their apprenticeship would be an aprenticeship to another waterman pilot navigating steam vessels.

1612. Do you consider it important, that a pilot should spend some years in a square-rigged vessel?—Yes, I do decidely; I think that that is of very great importance, though less so now than formerly, certainly, because there is more steam; some few years ago, when I was at sea, I cannot conceive how any man could be a pilot without the knowledge of how to handle a square-rigged vessel.

1613. Would that remark apply to any port?—I think so.

1614. Mr. *P. Wykeham Martin.*] You say that in the North Channel, only 10 per cent. of the vessels are compelled to take pilots; but if a vessel has one of those pilots on board of her own free will, and runs into another vessel, and runs down a barge, for instance, she has the benefit of being in compulsory waters, and the pilot, and not the owner, would then be liable, would he not?—Yes, if she had the pilot on board, but it is a doubtful question in law.

1615. Do you not think that very often the pilots are taken on board those vessels, I will not say with a view to run down vessels, but in order that if such misfortunes should happen, the owner may be exempted from liability?—I believe nobody disputes that position, because the owners themselves say so; they say that they take pilots on purpose to protect themselves from accidents.

1616. Were you present on that deputation which Mr. Farrer has mentioned to this Committee from the owners of small craft in the Medway and Thames?—I was not present.

1617. You stated, I believe, that the distance was so great that a vessel cannot come up the Thames in one tide; did you mean if a vessel came out of the Medway into the Thames, and through the Yantlet Swash, she could not get from there to London in one tide?—No; I was speaking of the whole of the estuary of the Thames from Dungeness.

1618. But the practice of those vessels is to come out of the Medway from about Maidstone to the junction of the Thames and Medway in one tide, and to come up to London in another; is it not?—That is so, they take the tide up.

1619. Are you acquainted with those lime barges, which are the vessels for which I am principally interested?—I know them.

1620. They are seagoing vessels, are they not?—Yes.

1621. They are not vessels that "go lumbering about," as Mr. Farrer worded it; are they?—To a certain extent they go lumbering about, but they are not the worst of the class by any means.

1622. They can and do sail races round the Nore, and so on?—Undoubtedly, and they are very fair craft; but still they are not of that peculiar build which you would call excessively handy.

1623. I suppose you have heard great complaints, that those vessels get cut down by steamers with pilots on board?—I have heard of it frequently, because I am a member of the "Thames Conservancy Board," and I very frequently hear of those things there, though I do not hear of them at the Trinity House.

1624. Do you happen to know the case of the "Belvedere," where a pilot was on board the steamer "Ibis," and he said he thought he should either touch the ground himself, or run down a billyboy, or run down the barge called the "Belvedere," and he cut her down?—I do not know the case, but I can quite understand that it may be so; because a man may sometimes be put in a position where he really has no option but to do some harm or other.

1625. There is a Return to the House in which a case was mentioned of one pilot who, on being sued on such an occasion, became bankrupt for the sum of 5 *l.*, and another for the sum of 12 *l.*; is there no redress whatever against a pilot in such a case as that?—There is none whatever under the present law, but under the Merchant Shipping Code, the Board of Trade, under the advice of the Trinity House, will require that each pilot have two sureties to the bond; therefore, in cases up to the extent of his bond of 100 *l.*, there will be not only the pilot to go upon, but also two sureties. That clause was inserted at the wish of the Trinity House to meet this very case, which no doubt is a case of extreme hardship, and a case in which a pilot has no right to take such a method of redress.

Capt. Sir *F. Arrow.*

8 April 1870.

1626. Was that 100*l.* bond intended to secure the owners of vessels which the pilot ran down, or was it not rather for some other purpose?—I think it is a moot point under the present Act whether it was merely a condition of good behaviour, which the Trinity House might have imposed if they pleased; but in all probability it would have come to the same thing, because the Trinity House would have given the money to the sufferer.

1627. Do you know, as a member of the Thames Conservancy, that cases of hardship to this particular class of vessels, small schooners and brigs, as well as my barges, are very frequent?—They are; but I think I may venture to say, on the part of the pilots, that at times it is almost an impossibility to avoid these things.

1628. If the barge was in fault under no law, the owner would be liable, I suppose?—No.

1629. Mr. *Stephenson.*] You describe the arrangement by which cutters for putting the pilots on board vessels in the Channel were maintained by the Trinity House; how is the capital for providing the cutters furnished?—Entirely out of this boarding money.

1630. Is that an old fund?—I think at the present moment there may be a balance of about 2,000*l.* in the hands of the Trinity House. The cutters were turned over when the Cinque Port pilots were placed under the Trinity House in 1853; they then handed over to us two cutters which they used to cruise in, which were in a very indifferent condition indeed, and that was all that we ever received in the shape of capital from them. Since that time we have got four cutters, three of which we have built ourselves; we have still in hand, I think, 1,800*l.* or 2,000*l.*, and we apply that as we think right for the maintenance of those cutters; if we wanted another one we should build it out of that fund. At times it has been granted on the application of the pilots for some particular purposes for their benefit, and small sums, never large ones, are granted to the pilots to assist them in objects of which we approve.

1631. Are those objects enabling them to conduct the pilotage work more efficiently?—Yes; for instance, not long ago they wished to memorialise the Board of Trade, and they wanted some legal assistance in this matter, and we gave them a donation from the cutter fund to assist them in their object. We thought it was reasonable that they should do so.

1632. Are the accounts of that cutter fund accessible to the public in any way?—They are not accessible to the public; but they are at the Trinity House.

1633. Have you any cases where steam cutters have been employed for this purpose?—Not any.

1634. The case of the Tyne has been mentioned, and I believe you stated that it was a less difficult pilotage than some others on the coast?—It is a good deal shorter.

1635. You are aware, of course, that the pilotage on the Tyne has always been a voluntary pilotage?—I did not know that it had always been so, but I know it has been so for some years.

1636. Are you aware that notwithstanding that the pilotage of the Tyne has been voluntary under a purely voluntary system, as many as 200 sea pilots are maintained at the entrance of the Tyne?—I understand so, but I have no knowledge of it myself.

1637. It also appears by the accounts that only eight captains altogether have acquired the right of piloting their own vessels by passing an examination; are you aware of that?—Yes; that might have arisen from two things; either from an indisposition on the part of the pilotage authorities to examine men, and throwing obstacles in their way, as I believe has been done in some cases, or it may be that the owners of ships prefer to pay the pilotage rather than to make their masters take out certificates.

1638. I may say that it is entirely the latter reason, because no obstacle whatever has been thrown in the way of the examination of masters and mates; I asked you the question to bring out the working of a purely voluntary system in that respect?—It certainly goes to show that a voluntary system will answer.

1639. You mentioned that the Trinity House in all districts allow masters and owners requiring pilots to choose any particular pilot outwards; I gather that that is not a rule in regard to employing pilots inwards?—There is only one place where there is an exception, and that is a very recent practice, in fact, I do not think it has been much more than six months in operation, and that is at the port of Southampton, in the Isle of Wight district. We made some six or eight months ago, considerable changes in that district. Instead of having pilots licensed, some for Portsmouth, some for Southampton, and some for Cowes, the pilots were all brought under one general rule, and all pilots were obliged to pass to go to any one of those ports. For many years the practice at Southampton had been for vessels to have their own particular pilots, and the steam companies made a very strong remonstrance with the Trinity House against their being deprived of the services of those men, as they would have been if they had been sent to sea, taking their turn in the cutters; and they said, and with a good deal of reason, "Here we have very valuable ships, long steamships, of large tonnage, and of enormous value; and we cannot consent to take any pilot who may come in turn, whether we know that he is able to handle our ships or whether he is not," because in a screw steamer there is something to know in the ship herself as regards the handling of the ship, and particularly in long screw steamers. Upon that representation we considered how we could best meet the difficulty, because it was obvious that if the choice men were secured for this pilotage service inwards, while the other men would have to cruise outside, the latter would have to take the small fish, whilst the former enjoyed the monopoly of the larger ones. At last we came to this arrangement, that the steam companies should be allowed to have their own pilots who should go out in their boats to meet those vessels coming up; but that in compensation for that one-third of their earnings should be paid to a common fund, to be distributed quarterly among the men not selected. Therefore, the selected men only get two-thirds of the pilotage of the ships that they take; one-third being divided amongst those who are kept outside cruising.

1640. I presume that the pilotage at Southampton is compulsory?—Yes.

1641. In the event of its being made voluntary under the Bill which is now before the Committee, how would you secure that the pilots went to sea?—If it is made voluntary, it will make no difference in practice so long as they take pilots; if

Capt. Sir *F. Arrow.*

8 April 1870.

if they take no pilots, of course the whole question drops to the ground; but so long as they do take pilots, the same thing will continue.

1642. Are large cutters, or comparatively small pilot boats, employed at Southampton?—They are boats of from 30 to 40 tons.

1643. How many pilots go on board a cutter?—Sometimes three and sometimes four.

1644. Where does the pilot who is selected to conduct vessels inwards, wait to go on board the steamer?—He generally goes off the Needles or as far as Peverell Point, looking out for vessels coming in.

1645. Is that farther than the other pilots go?—The other pilots cruise between St. Alban's Head and St. Katherine's, which is a considerably larger range.

1646. Then does not the system land you in this anomaly: that those pilots who go farthest out to look for ships, get less remuneration than those that remain at home?—No doubt; but we compensate them for it by only giving those men who have the privilege of being selected, two-thirds of their own earnings.

1647. Then the one-third which is distributed among the other pilots, I presume, is not distributed among those who have not been out looking for vessels?—No; it is distributed actually among the pilots out at sea.

1648. And you know that?—Yes; we distribute it through our own sub-commissioners.

1649. Is it distributed annually or quarterly?—Quarterly; but we have had hardly time to tell what its practical working is. As far as we have reason to believe it is going on fairly enough.

1650. I am troubling you with questions on this point, because on the river Tyne we have a similar difficulty at present. The transition which is taking place in the coal trade between a large number of sailing vessels carrying comparatively small cargoes, and a small number of screw colliers carrying large cargoes, has necessarily diminished the employment of pilots, because one pilot can now pilot a larger cargo than formerly; but it has also altered the distribution of the pilotage earnings, so that a comparatively small number of pilots, who are, you may say, the favourites of the captains of those screw colliers, have been earning a very much larger proportion of the pilotage earnings than their brother pilots, who, in fact, go further to sea to look for work which under this system they do not get. I am anxious to ascertain from you whether the Trinity House have felt a similar difficulty, and how they have met it?—It may be a rough way to redress the grievance, but the system which I have described is the only one that I see that can well be put in practice, and I think I may say that it is fairly succeeding.

1651. You made a suggestion as to a differential rate between winter pilotage and summer pilotage; probably you are aware that that system prevails on the Tyne?—I have heard that it does. It is very often the case, I am told, in non-compulsory districts.

1652. The shipowners have made a complaint regarding the pilotage at Falmouth, it being there compulsory, that vessels calling for orders have been obliged to wait outside all night for a pilot boat to come out, and that the pilot boat has remained in the harbour, knowing that those vessels must come in, and that they would get on board with less trouble in the morning; would not the abolition of compulsory pilotage, and the adoption of a free system, tend to encourage those pilots to keep out to sea?—Yes; I think, as I said before, that it might be done in two ways: by the authorities enforcing what is right, and by showing the advantages which the men themselves would reap by greater exertion. In this case, which the honourable Member alludes to as occurring under the compulsory system, it has been brought to the notice of the Trinity House that this practice has existed at Falmouth, and we have followed it up; and it is not very long ago since the Pilotage Committee of the Trinity House went to Falmouth to get the matter put to rights. We found that the nearer to the long nights and the short days, so the proportion of pilot boats which kept the sea decreased during the night time, and we put the matter right, and insisted upon seven out of 13 cutters being kept at sea every night. That is now, I am happy to say, working well; but it was only done through the authorities. The pilots kicked very much against it, and made all manner of objections, as you may suppose. They said they were wanted to take ships out, that it would destroy their earnings altogether, that pilotage would not be worth following, and that, in fact, they would give up their licenses; and we were obliged to say plainly, "Very well; then give up your licenses; your idea is that you are licensed for your own particular benefit. The idea of the Trinity House is that you are licensed for the benefit of the trade; and, though they wish to see you do well, they do not license you for your own benefit; and therefore, you must either obey our orders, or somebody else will do it;" and upon that we put the matter straight, and it has been working very well.

1653. Under a free system, you would still continue to enjoy that same authority which you exercised in this case, would you not, with the advantage of having the self-interest of the parties to help you?—I think so; so long as there is a limited number of pilots and an organised body of pilots, the pilotage authority must exercise the authority which is given to them for the good of the trade.

1654. Is the pilotage at Falmouth compulsory both ways, both inwards and outwards?—Yes.

1655. I observe that 3,000 vessels are piloted inwards, and a little above 2,000 are piloted outwards; can you account for that difference?—I do not know that I can account for it, except that it is quite probable that where they were not piloted outwards they were exempt. It is much easier to go out of, than to go into, Falmouth, and therefore, very probably, many vessels were piloted into Falmouth, which, when they were once in, could see their way out again without a pilot.

1656. Is the pilotage at Falmouth partly voluntary?—You may call it partly voluntary. It is a compulsory pilotage, with exceptions.

1657. Mr. *Brassey.*] Are the boats used by the Isle of Wight pilots provided by the pilots themselves, or by the pilotage authorities?—By the pilots themselves.

1658. I think that their tonnage is very much smaller than that of the boats which are stationed off the Ness?—Yes, generally, that is so; I think they seldom run above 40 tons.

1659. Do you know any case in which, under a purely voluntary system, boats of the tonnage and power of those which are stationed off the Ness, or at the entrance to the Channels at Liverpool,

Capt. Sir *F. Arrow.*

8 April 1870.

pool, are provided?—I do not think I do; but it was one of the old causes of dispute years ago between the Deal men and the pilots about the pilotage. The Deal men had magnificent boats, which were fit to go to sea in any weather, and would supply pilots as well as our cutters. There is no argument, I think, in that.

1660. A suggestion has been made that it would be greatly to the advantage of the shipping that the pilotage service should be carried out in much frequented waters by steam pilot boats; do you think that it is likely that under a purely voluntary system, such boats, considering the great cost and expense of a steam pilot boat, could be provided?—No; I confess that we have often thought, at the Trinity House, whether we could have a steam vessel running up and down between Dungeness and Dover so as to save the number of cutters which are out, and keep up the supply, but the objection has been the great cost of it. It would be a very heavy cost.

1661. You do not think that there would be a failure of organisation under the voluntary system in the class of men from whom the pilots are drawn?—That is a very difficult question to answer; but I think that, as a rule, wherever things are voluntary, more money is expended, and more efforts are made, than is the case under any system of restriction.

1662. As regards the sufficiency of the number of pilots for an important service such as that of the Thames, I believe that when the east winds have long prevailed, and the wind veers suddenly round to the westward, large fleets will come up the channel, requiring of course, a great number of pilots; is it likely that under a purely voluntary system a sufficient number of pilots would be at command for a service of that kind?—I suppose that the honourable Member is aware that so long as a licensed pilot does not offer his services, any one is entitled to take a vessel in pilotage waters, and be paid for what he does, until he is superseded. As far as the Thames is concerned, there is no doubt that there are times (and I have experienced them myself) when even all the strong staff of pilots which we have at Dungeness are not sufficient; and we send down our London pilots in a case of that sort, to assist in bringing up ships. But there is another strong reserve, which is, that the boatmen of that part of the coast (and you know what fine boats they have there) are generally at hand; and they are always anxious to earn a mileage by running ships up as far as the masters are inclined to trust them. I do not think that they can go beyond Margate roads, but they do that in case of a long prevalence of east winds, although no doubt the moment a pilot offers himself he supersedes them.

1663. Above Gravesend the insufficiency of the number of pilots for the purposes of meeting the requirements of the shipping has, I believe, very frequently led to a large extent to the employment of watermen?—They say so; I am not prepared to speak upon that point, for I do not know; but I am told that the Board of Trade have evidence that it is so.

1664. In the same way, under the circumstances to which we are alludiug, the Deal boatmen would probably supplant the pilots to a considerable extent, or take their duties to a considerable extent, would they not?—So long as there is an organised body of licensed pilots, they would have the same protection as they have now. With reference to the watermen, there is an impression, I think, on the minds of the Committee that the watermen and the pilots have some tacit understanding as to the watermen being let alone if they only keep to small ships; but I am told by most respectable pilots, who have given me the details, that that is not the case; that there is no tacit understanding between them; and, in fact, I have here the words of a pilot who asked me, if there was an opportunity, to mention this to the Committee. He says, "We most emphatically deny there being any collusion or understanding between the licensed pilots and watermen (commonly called unlicensed pilots), for every vessel arriving at Gravesend, and displaying a flag by day or a light by night, signifying to be cleared by the Customs, is spoken by the pilots on duty, and the master of the vessel so spoken accepts the services of a pilot when pilotage is compulsory, or refuses, as the case may be." They positively deny any collusion on their part, and they say that they endeavour to get the ships honestly if they can, and that they are no parties to allowing unlicensed men to ply their trade.

1665. Some apprehension has been expressed as to the probability of pilot boats keeping their stations in exposed places in bad weather under a purely voluntary system. The principal work of the Deal boatmen is in bad weather, is it not?—Yes.

1666. And their services are of course voluntarily rendered for the handsome remuneration which they receive on those occasions?—Yes.

1667. As under a purely voluntary system, the Deal boatmen are always found in exposed places in bad weather, I suppose we may venture to hope that the pilot boats under the voluntary system will do the same?—I should say that the Deal boatmen, whenever there is anything to be made, will always be there; I do not think that any amount of bad weather or danger is likely to stop them, nor do I believe that it would stop our pilots in doing their duty; I believe that they would be found, as they always have been, perfectly ready to encounter the legitimate amount of danger which their calling requires.

1668. With regard to the station of the Trinity House pilot boats off the Ness, would there be any advantage to shipping if the boats were stationed farther to the westward?—I am only giving an opinion against other opinions; but my opinion is, as I said before, that nature has pointed out the right place from which to supply pilots for the Thames, *i. e.*, where it is like going into the neck of a bottle, and where the vessels naturally come. That is surely better than cruising about all over the Channel. One-half of the ships that come up with a westerly gale, and a following sea, instead of keeping round Beachy Head to the Royal Sovereign Buoy, where they ought to be, get set over into the Boulogne Bight, and come right into the southward, and you could not send pilot vessels to meet them there. The pilot must be near the place where the danger has to be encountered; and the contracted navigation shows that that is the place for a man to lie in wait for his prey (if I may call it so) coming up.

1669. In consequence of the physical configuration of the dangerous bank called the Owers, and Beachy Head; and on the other hand, the coast being perfectly clear between Beachy Head and the Ness, is it not much better for shipping to haul

haul in between Beachy Head and the Ness than farther to the westward?—Yes; the Owers bank is right in their way, but no vessel, except with a working wind, has a right to come in within three or four miles. There is a case in the papers of a ship called the "Benvenue," in which, I think, a more monstrous disregard of common prudence than was manifested by the master it is impossible to conceive. He steers, at least, three quarters of a point to windward of his proper course, and naturally the ship goes ashore, and then some (no doubt) excessively able correspondent writes a leading article, and tells you that this is all because there were no lights or pilots or buoys, whereas it was simply because the man did that which was certain to bring him into trouble, and that he did not use his lead. Another remark was made, that the light vessel did not sound her gong, and that they ought to have seen the flash of a gun; but as it was thick weather, and the vessel was dead to windward of her, it was impossible to see the one or to hear the other.

1670. With regard to the compensation clauses of the Bill, do you consider, as the executive head of the Trinity pilot service, that it is fair to the pilots generally that they should have to wait for a period of two years before the Board of Trade entertains the question of compensation to them?—I think that the Board of Trade can scarcely come to a decision under two years; I do not think it will be an immediate operation.

1671. In the meantime a pilot, who had no accumulated resources, might find himself in a very disadvantage position, might he not?—I think that perhaps it might be right in considering that question that the Exchequer should be empowered to consider any case of particular hardship that might present itself, as long as it was safely and fairly investigated by the pilotage authority, but the danger is that claims may be made which are not properly sifted. I do not think that it would happen under a jurisdiction like the one over which I have the honour to preside, because I think that we have the organisation and the means of sifting a case of that sort, but it certainly would happen in some instances; and, therefore, while it would be right to protect the pilot, it would still be right to protect the public purse, by seeing that it was not taken liberties with.

1672. I think you stated that the superannuation at present is on the very limited scale of 28 *l.* a year; therefore, if you had to superannuate a proportion of the pilots, in consequence of the reduced employment of the service, the scale should clearly be increased beyond that in the case of those men who are forcibly superannuated, should it not?—If it is left to the pilotage authorities, of course they would consider the bearing of the case. If it were left to the Board of Trade, naturally they would have to decide it.

1673. At what age are the pilots now superannuated?—At all ages; they are rarely superannuated unless they are really incapacitated; we know that ourselves. We do not trust to any sub-commissioner, or any superintendent, or anybody else in a case of that kind, but we invariably see the pilots ourselves. There was one old gentleman came to me the other day, an old Yarmouth pilot, who was over 80, and he asked to be allowed to keep his branch till the autumn, so that he might complete his 60 years' service; when I heard of this application I thought it my duty to see this old gentleman myself. He was a wonderful specimen of what a man ought to be. He was as active, and his eye as bright as possible, and he told me he could run up a vessel's side, or be up all night as well as anybody, and it really was the case, and I gladly allowed him to remain and make up his 60 years' service, when he will be superannuated.

Capt Sir *F. Arrow.*

8 April 1870.

1674. With regard to passenger ships under present regulations, are not the engineers compelled to possess certificates of competency?—Yes.

1675. And the masters also?—Yes; the masters of all vessels except coasters.

1676. And therefore, in pilotage waters where the pilotage is more important than a general knowledge of navigation, should not the master of a passenger ship be compelled to possess a certificate for the pilotage service before being allowed to navigate without a pilot?—If there is compulsory pilotage, undoubtedly so; but if it is under a voluntary system, I think you must follow the system throughout.

1677. But is not the knowledge of pilotage in pilotage waters quite as necessary for the safety of the passengers as a knowledge of the art of driving an engine?—Quite so.

1678. You require that knowledge in the case of an engineer, and therefore, by analogy, should you not require it in the case of a master?—The engineer and his engine are simply the means of locomotion; they have nothing to do with where they put the ship to; they do as they are told.

1679. But the management of the engine has everything to do with the safety of the passengers, has it not?—Certainly, so far as damage to engines or any improper use of them is concerned.

1680. But it is upon that ground that he is compelled to possess a certificate, and therefore, upon the same ground, should you not require a certificate of the knowledge of pilotage in the case of a master?—But you require from a master that he should be a good sailor and know his business, and be able to navigate a ship under any circumstances; that does not make him a pilot.

1681. But ought he not to be a pilot on pilotage waters, on the same ground that an engineer should be a good engineer?—I do not see that at all, because he has the means of supplying that knowledge by taking a pilot, whether he is a compulsory pilot or a non-compulsory pilot; but there is nobody to come and supply the engineer's place if he should happen to know nothing about it.

1682. Mr. *Norwood.*] I think that, in answer to the honourable Member for Liverpool, you favoured the Committee with your opinion with reference to shipowners' liability in pilotage waters; have you ever acted as an assessor in the Court of Admiralty?—Yes; for something like five or six years I used to sit there.

1683. Are you not aware that the immunity of a shipowner when his vessel is in charge of a pilot in compulsory waters, when the loss or injury has been caused by the act of the pilot, is founded upon common law?—Yes, I believe that it is so.

1684. Is not that upon the principle that a man should not be held responsible for an act not done by himself or by his servant?—Yes; and I have also heard that if there was no such rule in the Admiralty Court the common law would decide the question in that way.

1685. I presume that the theory in support of compulsory pilotage is, that the waters in which pilotage is compulsory are so exceptionally diffi-

Capt. Sir *F. Arrow.*

8 April 1870.

cult to navigate that it is necessary to have a man specially qualified for the purpose?—I suppose so.

1686. At present, under the compulsory system, the law steps in, does it not, and places on board every ship entering those waters a pilot, whether the master of the ship wishes it or not?—Excuse me, that is what it does not do; the law does not make every one do so; it makes one man do so perhaps, but it does not make the man next him, under almost the same circumstances, do so.

1687. I am talking about a vessel in compulsory waters, subject to compulsion of course; is it not the result of that theory, that by law a vessel is forced to take on board in compulsory waters a pilot?—Yes.

1688. That is upon the presumption that the man has a special qualification to navigate the vessel which the master may be presumed not to have, is it not?—That is so.

1689. Then do you think it unreasonable that the present law of shipowners' exemption should exist under those circumstances?—I do not think that it is unreasonable, and I think that it has been the great shield and safeguard of the compulsory system.

1690. You have been in command of vessels, and have had great experience, and you are a great authority upon this point; would you have considered yourself justified, when in command of a vessel, in interfering with the navigation of a compulsory pilot?—I suppose that the honourable Member alludes to the case of the "Spindrift."

1691. Not especially; I presume that you sailed once as a master of a ship, not being the owner of the ship?—Yes.

1692. Knowing the law, would you have considered that you were acting properly with reference to the interests of your owners, if you had interfered with the navigation of your vessel in compulsory districts in the presence of a compulsory pilot?—I think that I should be neglecting my duty if in my judgment the pilot was doing that which was manifestly improper within my knowledge, if I did not at any rate represent it to him; I might say to him, "Pilot, you are doing what I think is not right, and I think you should do thus;" and I should call his attention to it; and if he said, "Well, sir, I know what I am about, and you must allow me to do what I think is right;" I think that, probably, with a first-class pilot like those in the Thames, I should say, "Very well; I suppose you are aware of it better than I am, and therefore I shall not interfere with you;" unless the man was manifestly drunk, or in some other way unfitted for his work; but I certainly should not think that I had done my duty towards my owners if, thinking that he was doing what he ought not to be doing, I had not brought it before him, and thoroughly fixed the liability upon him.

1693. I think there is no doubt about the law that the master of a ship, even when his vessel is in charge of a compulsory pilot, is bound to see that the navigation of the vessel is properly conducted, and that his men are in a position promptly to carry out the orders of the pilot, and the pilot is only responsible for his own act and deed?—Quite so.

1694. But you would not go further than to hint to the pilot that he might possibly be wrong, and you would not take the responsibility off the pilot's hands if you did not find that that man was drunk or otherwise incapacitated?—In the case of the "Spindrift," I most certainly would have done it; I would not have allowed the pilot to go inside the 12-fathom line of soundings, nothing would have induced me to do so; I would have said, "There is plenty of clear space outside the line, and I insist upon your taking the ship outside it."

1695. Supposing that your vessel were in narrow waters with several vessels passing, there being a possibility of a collision, and that your pilot shouted out "port!" would you consider yourself justified to give the counter-order "starboard!"?—No; you cannot have two captains of a ship; you cannot, both of you, be piloting the ship.

1696. And therefore if the Legislature under a compulsory system forced upon the ship a man who is presumed to be specially qualified, and who possesses a license, that man must practically retain the command of the ship, must he not?—I suppose that he must; but at the same time in the steamers, which belong to the Trinity House, occasionally we take a licensed pilot. If we were going into the port of Liverpool, or any other place, we probably should take a pilot; and in those cases I always insist upon the master of the vessel retaining charge of the vessel to this extent. I say to the pilot, "You keep close to my master, and tell him where you want to go, and where he is to put the ship to, and he will do it."

1697. But your position on board your own yacht is somewhat different, is it not, from that of a captain on board a merchantman?—No doubt it is.

1698. You have very extensive outport districts under your supervision, have you not?—Yes, all round the coast.

1699. I think I shall not be far wrong, that the list begins with Aberdovey and ends with Yarmouth?—Yes; all through the Alphabet.

1700. May I ask you what system of supervision you have at the Trinity House with reference to those outports?—The outports are supervised by sub-commissioners, who are appointed under the Act of Parliament. They are not less than three, or more than five, in number at each port; and the only way of remunerating those sub-commissioners is by the fees which are paid by the pilots of the ports for licenses and renewals. Whenever, therefore, there is a small number of pilots, it is a very small amount indeed, and when it is divided among three men, it comes practically to such a very trifling amount that it is not certainly worth a man's while to lay himself out for it, although many retired masters of ships, and many gentlemen even who take a particular interest in the neighbourhood, will take a sub-commissionership. The collector of Customs is always one of them, and the amount of work is pretty fairly done; yet, still there are very grave objections to it on this ground: that you cannot expect men to do that for which they are not fairly paid. The system of sub-commissioners in small places is not a right one, and from that arise complaints, because they are not properly supervised. The present Merchant Shipping Code which is before the House, has a clause to remedy that inconvenience, by allowing them to be grouped into districts, having a travelling inspector to go round them.

1701. That is scarcely an answer to my question. I want to know what personal supervision the Elder Brethren of the Trinity House exercise over

over those out ports; how often do you go there?—I cannot say how often we go there, but whenever there is a case that wants attending to, a committee goes down there. There is scarcely a month in the year that our vessels are not going into some of those ports, and we make it our business then to make inquiries, and ascertain whether things are going on properly.

1702. Do you visit all those stations once a year?—Every station is visited frequently. There is nothing of importance under the Trinity House which is not visited at least once a year, and generally oftener.

1703. The Trinity House is in this peculiar position as a pilotage authority: that they are not only the licensing authority, but they are the administrative authority, I think?—Yes.

1704. And it stands alone of all the pilotage authorities in the kingdom in that respect, does it not?—I think it does; I am not aware of any other.

1705. There is a Trinity House at Hull. I suppose you are aware that the system is, that while the Trinity House at Hull licenses, it does not administer; but that it only forms a portion of a large representative board; that is not your case, is it?—No.

1706. Do you not think it would be more satisfactory to the trade of the port, and possibly to the Elder Brethren themselves, if they were assisted in their administrative functions by an admixture of the mercantile element of merchants and shipowners?—I think that all elements are what I call fairly represented in the Trinity House. You will remember that the greatest number of the Elder Brethren are men who have passed the greater part of their lives in command of merchant ships and in mercantile operations; and they naturally represent to a great extent those interests.

1707. The acting members of the board are chosen entirely from merchant masters, are they not?—Yes, with the exception of a small percentage, which is supplied from the Royal Navy. There is no actual necessity for it, but it is done by a tacit agreement.

1708. I believe you have two or three from the Royal Navy, have you not?—We have three.

1709. Out of 16?—Out of 20.

1710. I have a Return before me, which was furnished in answer to an order from the House, and I find that there are only 16 Elder Brethren who are not statesmen and honorary Members; is that Return correct?—I think you will find that there are 17 Elder Brethren. There are three vacancies at the present moment.

1711. The Elder Brethren are self-elected, are they not?—They are entirely self-elected.

1712. The outer world has nothing to do with the election of Elder Brethren, has it?—Nothing whatever, except public opinion, I think, which has a great deal to do with it.

1713. Then I suppose I am not very far wrong in saying that there is no representation of the mercantile interest upon your board?—I think you are wrong in saying so; I do not represent your own particular interest. I do not represent, perhaps, Mr. Grave's interest or the interest of many other gentlemen here, but I think, that, as a man connected with commerce all my life, I may be looked upon as a fair representative of the mercantile interest in general. I certainly represent no one else's interest. I represent no Government interest. I represent no class whatever, but I simply do my duty towards the classes mostly interested in the occupation of which I have the honour to be for the time the acting head.

1714. I think you can scarcely apprehend my statement; I fully admit that every gentleman upon your board acts from a sense of public duty, but it is actually the fact, is it not, that no shipowner or merchant in the port of London, or elsewhere, has any elective faculty with regard to your board?—It is quite true.

1715. And occasionally public opinion has not altogether gone with the action of your board, I think?—I think that is perfectly true also. I think that public opinion has not always gone with it, and it has been directed rather against the self-elective system, than the individual, and naturally so.

1716. I think that in the case of the "Spindrift," which you mentioned the other day, the committee at Lloyd's do not exactly coincide with the Elder Brethren of the Trinity House, with reference to the punishment of the pilot of the "Spindrift"?—I think that the committee of Lloyd's did not coincide with the Elder Brethren as to the amount of punishment that was inflicted upon him.

1717. Have any of your Elder Brethren served as masters of steamers in the merchant service?—Yes, several of them.

1718. I suppose you are not assisted in your deliberations with reference to pilotage matters by the Right honourable Benjamin Disraeli, or the Right honourable W. E. Gladstone, or even by His Royal Highness the Prince of Wales?—I have no doubt that they would be very competent advisers if they could find time to devote to it; but as it is they have large public duties, and they very wisely leave us who, perhaps, understand the matter rather better, to our own deliberations.

1719. With reference to licensed watermen, is it your opinion that they have a competent knowledge of the river between Gravesend and London Bridge?—I know nothing at all about the licensed watermen; I know that it is a monopoly, which is a rather extraordinary one in the present day, and I believe it is under the consideration of a Committee of the House, or will be so before long; but further than that I know nothing about them.

1720. You are aware that they pilot vessels up from Gravesend, are you not?—They do; naturally a man who is always on the river must get a knowledge of the river.

1721. Have you ever known a case of this kind, that an owner has kept a waterman on board when he has had a compulsory pilot put upon him?—I believe that they constantly keep a waterman on board, but not for the object of piloting the ship; the waterman is wanted for this purpose: in the present day, when economy is very largely practised, as it always has been in shipping matters, a waterman and his boat are necessities; to lower down a ship's boat takes a number of hands, and if you want to run a line out, or if you want a little job done, it is a much simpler thing to pay a waterman and his boat, and to take him in tow, than to lower away boats which, in a merchant ship, is a matter of a great deal more difficulty than in a man of war; scarcely any ship ever goes up the Thames or down the Thames that does not take

Capt. Sir *F. Arrow.*
8 April 1870.

a waterman with it; but I entirely deny, on the part of the pilots, that it is on account of any knowledge of the river which the watermen do possess which the pilots do not possess; and no greater reflection could be cast on the Trinity House itself than such a statement; the Trinity House are responsible for the knowledge of the pilots of the river; and I say most emphatically that there is no pilotage on the Thames which our pilots are not competent for, and do not perform without any waterman whatever.

1722. You must not imagine that I am making any reflection of any kind; I am only anxious to ascertain facts; do I understand you distinctly to state, that independently of the convenience of a waterman and of his boat, you have not known cases in which a waterman has been retained on board a vessel where a pilot has also come on board for the purpose of navigating that ship?—Certainly not; I know no instance whatever, in which such has been the case; with regard to that point, I was acting as an arbitrator sometime ago in a case of collision between two steamers, where that very charge was made, that the pilot did not know his business, and that he had got a waterman on board to assist him.

1723. I wish it be distinctly understood that I am making no charge whatever against the pilots; but I merely asked you a simple question of fact, and you have answered that you know of no such case; I think that in your evidence in chief you expressed yourself somewhat strongly as to the conduct of the pilot of the "Spindrift"?—Yes, I think I did.

1724. I see in the account of receipt and expenditure from the Corporation of the Trinity House, with reference to pilotage, that a very large portion, 90,000 *l.*, of this fund, is derived from dividends from stock in the New 3 per Cents.; can you explain to the Committee how the Trinity House obtained that stock?—They arose from the differential duties on pilotage, which were compulsory before 1823; and they were appropriated to that purpose.

1725. I see that there is poundage and dues in London and at the outports, and dues and turns to the pilots of the Cinque Ports; are those deductions from their earnings?—They are deductions from their earnings, and they go to the fund.

1726. And that is applied towards pensions and allowances, is it not?—Yes.

1727. I suppose that the system is an equitable one, and that the Cinque pilots fare the same as the others do?—I will not say that I think it is altogether an equitable system, because, as I said before, to a certain extent it is a sort of benefit fund or charitable fund; and it is quite true that the pilots who make the best earnings do not get an adequate return for the contributions which they may make.

1728. Then I understand that the method of applying the poundage and dues is not altogether satisfactory; I think I understood you very clearly to state that you saw no necessity in principle for exemptions over compulsory waters?—I do not know of any necessity for them.

1729. For instance, it makes very little difference in navigating a ship, whether she has a couple of passengers on board, or not, I presume?—I think not.

1730. And yet would not the very fact of two passengers being on board a vessel in the North Channel now make her liable?—No doubt.

1731. And if they were not on board, she would not be liable, would she?—No; and I have heard that sometimes two men go on board for that very reason.

1732. In fact, you think that if non-compulsion were not the law of the land, universal compulsion would be more logical and consistent?—I do certainly; I think it should be either one thing or the other.

1733. Have you many complaints against your pilots?—Very few indeed.

1734. Those complaints, when they do arise, are always investigated, of course?—Invariably.

1735. The House called for a copy of the Minutes of Evidence taken before the Elder Brethren in reference to the "Spindrift;" but the Trinity House have not, I think, furnished that information?—There was no evidence taken down; it was *vivâ voce*, and it was only put down shortly, and the substance of that was given to the Board of Trade in a letter which was included in the correspondence.

1736. There is no very formal investigation, is there?—I think it is a very searching investigation; but certainly it does not approach anything like a court of justice.

1737. Mr. *W. P. Price.*] I think you stated just now that in 1862, the Trinity House expressed their opinion in some form or other, adversely to any change in the system of compulsory pilotage?—They did.

1738. And that that opinion had not been revoked in any way since?—No.

1739. But since that time has there been a very considerable extension of the area of voluntary pilotage?—Yes.

1740. At the Trinity House, have you any official knowledge of the result of that extension of the principle of voluntary pilotage?—I think the only knowledge we have is what I have heard discussed in the Committee. We have heard from former witnesses about the results with regard to the pilotage in the Bristol Channel, which, no doubt, to some extent, proved the case; but I think, at the same time, that it is fair to say, with regard to Bristol, that it must not all be taken merely as the effect of compulsory pilotage. I do not think that the voluntary principle is one upon which the Gloucester and Cardiff pilots have made such large earnings as against the compulsory pilotage. I think circumstances which were mentioned here have a great deal to do with it, and that the one has been a large and increasing trade, while the other has not.

1741. You are rather now reciting the evidence of other witnesses, but the Trinity House have no official knowledge of the fact one way or the other, have they?—None. We have but little jurisdiction in the Bristol Channel.

1742. You stated, I think, that the Trinity House represented primarily the interests of commerce, and only secondarily the interests of the pilots themselves?—Yes.

1743. In point of fact, you think that the pilots exist for the sake of commerce, and not commerce for the sake of the pilots?—Quite so.

1744. Then when you expressed an opinion in favour of voluntary pilotage, you express that opinion rather with reference to the trade of the country than with reference to the pilots themselves, which you think a secondary question; is that so?—Quite so. With regard to the views which the Trinity House have taken as to compulsory

pulsory pilotage, at the same time that they have expressed their opinion in the year 1862 that compulsory pilotage should not be abolished, the Trinity House have always been the most forward in giving exemptions, and many of the exemptions which ships enjoy at the present time, they enjoy from the recommendation of the Trinity House itself; so that while, on the one hand, they were not for the entire abolition of compolsory pilotage at that time, yet, on the other, they have been going on in the direction of extending facilities. I may mention, as an instance of that, that only last year, when the Merchant Shipping Bill was published after it was laid on the table of the House of Commons, and it was sent down to the Trinity House to make any amendment that we liked, we then recommended a considerable further exemption from compulsory pilotage, which does not appear in the present Bill.

1745. So that you would say that the Trinity House, for some time past, have been proceeding tentatively in the direction of voluntary pilotage? —I think that may fairly be inferred so. They have been glad to do anything that having once opened the door would give assistance to commerce.

1746. Then when, in expressing your own personal opinion in favour of voluntary pilotage, you say that where a shipowner takes a pilot at all, he should be compelled to take a licensed pilot, I suppose you give that opinion upon this principle, that while the shipowner may be safely left to determine in what cases he may or may not take a pilot, he cannot be safely left to choose a pilot, because he has no means of knowing whether the man is or is not a qualified pilot except by the production of his license?—Quite so; I think that is the fair way to put it, and, moreover, that where there is a licensed and organised body, it is right for their interests that they should be protected in the exercise of their calling, without which the further proposition, as you have just laid it down, goes for nothing.

1747. Then you think it would be the duty of some competent body to provide that there should always be a sufficient supply of competent pilots; but you would leave it to the shipowner himself to determine in what cases a pilot was required and what not?—Certainly.

1748. Are you aware of the fact, that some years ago the Bristol pilotage authority resisted any relaxation of the compulsory pilotage in their district?—Yes, I believe they did.

1749. Do you know also that in the petition which they presented against this Bill, they have admitted that the compulsory pilotage as between Lundy Island and the Holmes might safely be dispensed with?—I am not aware of it, because I do not look upon the question as a partisan, one way or the other. I have not sought for all the arguments on either side, but I think almost anyone will admit that to say otherwise would be throwing argument away, for the improvements which have been made in the Bristol Channel, as I before observed, have removed any necessity for a compulsory system up to the Holmes.

1750. Have you happened to see this petition of the Bristol pilotage authority?—I have not.

1751. But supposing that it should be stated in this petition (as, in fact, it is) that in their opinion now, contrary to the opinion expressed at a former period, compulsory pilotage might safely be dispensed with between Lundy Island and the Holmes, would you say that that was an indication that the voluntary experiment, so far as regards the Bristol Channel, was successful?—Not altogether, because I look upon it that the main reason is, the facilities given for navigation in the Bristol Channel. If you look at the chart you will see that there are more lights and more assistance to navigation; all of those floating lights, the Scarweather, the Helwicks, and the Brakesea light, which is the one further to the eastward (*pointing to the chart*), have been placed there of late years by the Trinity House. The Trinity House have nothing to do with the jurisdiction of the Bristol pilots, but the Trinity House have the safety of the Channel under their care, and they have placed those lights which have very much simplified and improved the navigation of the Channel, and, with the consent of the Board of Trade, we hope still further to improve it with a light upon Hartland Point at the earliest opportunity.

Capt. Sir *F. Arrow.*

8 April 1870.

1752. Have those lights been placed there since the abolition of compulsory pilotage as respects Gloucester, Newport, and Cardiff?—Yes, since that time. The Helwicks light was before. The other two have been placed since.

1753. Over how many miles does the compulsory pilotage district of the Mersey extend? —It is about 45 miles, I think, from Point Lynas to the Bell buoy.

1754. And there the river pilotage commences? —Yes.

1755. Within that district would there be very great danger if a vessel arriving did not find a pilot immediately?—In Liverpool Bay the great objection is that there is no safe anchorage with the wind on, particularly in the autumnal and winter gales; but there is plenty of sea-room if you strike out to northward, between the Calf of Man and Anglesea, for a ship to be kept in safety, I think.

1756. So that she could keep the sea until such time as she could find a pilot?—Yes.

1757. Do you know enough of the navigation of the Mersey and also of the Bristol Channel to be able to state whether the Mersey navigation is a more difficult one than the Bristol Channel navigation within the limits of the pilot jurisdiction, whatever that may be?—I should think, of the two, that the Liverpool pilotage wanted more knowledge. I do not mean to say that it wants any special treatment, but I think that perhaps it is more difficult than the Bristol Channel, although when you get above the Holmes in the Bristol Channel there are difficulties.

1758. But inasmuch as in that part of the Bristol Channel where the navigation is dangerous, there always is found to be an ample supply of pilots under the voluntary system, do you see any reason whatever to doubt that there would be always an ample supply within the pilotage jurisdiction of the Mersey under the same principle?—Not at all, because I still hold the view I held before, that where there is money to be gained the pilots will go and seek it.

1759. And speaking generally in the interests of trade and commerce, you give it as your opinion, as a practical man, that we might very safely dispense with the compulsory pilotage over the whole of the coast of England?—I think so.

1760. Mr. *Malcolm.*] I thought just now you stated, that even under the compulsory system there was a great difficulty in keeping the Falmouth pilots at sea in the winter, and that you had to go down and interfere?—That is quite true.

1761. Do you not think that, under a voluntary system,

Capt. Sir *F. Arrow.*

8 April 1870.

system, it would be difficult to keep, for instance, the Mersey pilots far enough to seawards?—I do not think that the discussion has ever gone to that extent. I apprehend that by the view that I have put before the Committee the same power still remains in the hands of the pilotage authorities while there is an organisation of pilots. If it came to the question (as it may sometime or other, though certainly in my mind it has not come to that yet) of supply and demand, then I think your position is a right one, but not otherwise.

1762. With regard to the exemption of vessels coming into the Thames, you stated to the honourable Member for Hull, that you thought two passengers made no difference; and I understood you to say to the honourable Member for Liverpool that you did not see why a coaster of 60 tons should be exempted any more than a vessel of 1,000 tons?—Not upon the principle that the State is to take care of life.

1763. But you do not think that it is much safer to exempt a vessel that draws six feet of water, than a vessel drawing 25 feet?—Pardon me, I never said so; I say that all that is a question of degree; but the exempted coaster may be a vessel of 1,000 tons, just as well as one of 50 tons; 60 tons was the first limit of exemption.

1764. But in many ports (I will not say exactly in the Thames, for I do not recollect at this moment), coasters up to a certain tonnage are exempt, are they not?—Yes, I think they are in Liverpool, for instance, where the limit is 100 tons.

1765. Under the voluntary system, do you think you would be able to keep up your pilot cutters at Dungeness?—I think so; I do not see why we should not.

1766. On this boarding money principle?—Yes.

1767. Do you think there would be sufficient employment?—I think so; I have assumed that the employment in the Thames, will not be lessened at all.

1768. I think you stated, that there are the same number of pilots now in the Thames as there were some 10 years ago?—Yes, the same as there were 20 years ago; they are kept at the same number.

1769. But has not the increase of trade in the Thames during that time been enormous?—No representation has ever been made to the Trinity House of the necessity of making more pilots.

1770. Do you not think that that might account for what we have heard stated (and from which you rather seemed to differ) as to the employment of watermen?—That very possibly may be so; but at the same time you must remember the exemptions: I have here a return which will, perhaps, throw a little light upon that subject. This return gives the number and tonnage of British and foreign vessels (sailing and steam) entered and cleared with cargoes, and in ballast, from and to various countries to the Port of London. In the year 1862 there were 11,655 vessels with a tonnage of 3,347,080 tons; there were 8,176 vessels cleared out with a tonnage of 2,508,525. In the year 1868, which is six years afterwards, the entries of vessels had decreased from 11,655 to 11,280 vessels. The figures had positively decreased to something like 400, but the tonnage had increased by nearly 400,000 tons. A pilot can only pilot one ship, therefore that accounts for it; then the number of vessels cleared in the same way, decreased from 8,176 vessels cleared outward to 7,575, but the increase of tonnage cleared out was 200,000 tons; I think that answers the question.

1771. Did you ever happen to go up the Clyde?—Yes; I have often been up the Clyde.

1772. You are probably aware that above Newark Castle, a little below Dumbarton, there is a compulsory system?—Yes.

1773. Do you know that the Clyde authorities are very anxious to keep up the compulsory system there?—As a system of police more than anything else, I fancy.

1774. Do you not consider that the compulsory system there has worked very well in keeping that very narrow river clear and free of accident, and that there is no reason why it should be charged there?—Only upon the general principle that I am afraid you cannot make a principle apply to one place and not to another. It is one of the things commonly charged against us, that we make all kinds of local arrangements and plans, but I should call that a system of enlarged harbour masters. There is no difficulty in going up the Clyde; the river is between training walls, and if they call that pilotage, it appears to me merely a misnomer. It is simply a case of follow your nose, and it is more a harbour master's business than a pilot's.

1775. And if a man happens to follow his nose straight when the river takes a sharp turn, and he gets across the river, he effectually stops the entire traffic, does he not?—Quite so; but I think that is harbour-master business, I think you had much better call them harbour masters instead of pilots.

1776. Mr. *Pemberton.*] The Cinque Ports are, I think, under the jurisdiction of the Trinity House, are they not?—Yes.

1777. They are all one body, are they not?—There are still remaining something like 50 of the old Cinque Port pilots who came under our jurisdiction in 1854, but all the rest are Trinity House pilots. There are no new Cinque Port pilots.

1778. As a rule, do you consider them an efficient body?—Very much so.

1779. You have not had complaints against them?—Very few, not more than, I think, a very fair per-centage. I have a return here of the complaints that have been made against pilots; but I think I may say that, as a rule, they are a very trustworthy and efficient body of men.

1780. You have not more complaints than you might naturally expect?—Certainly not; and I think that, considering the amount of property which those men conduct in and out of the River Thames, it is highly creditable to them.

1781. You have compared the difficulties of the Bristol Channel with those of the Mersey; I suppose you consider the pilotage of the Thames more difficult than either of them?—I do. I think that the Thames is, perhaps, the most difficult navigation in this country, although, as in the case of the Bristol Channel, we have done a great deal to simplify it. The moment you get to the South Foreland the difficulties begin, because you are in among the sands directly.

1782. Do you not think that, there being greater difficulties about the navigation in this district than in the other, it is very essential that there should be a duly-qualified class of men to undertake it?—I think it is very essential that there should be.

1783. I think I understood you to say, that if compulsory

compulsory pilotage was done away with, there would be a more general use of pilots, or, at all events, not less?—I do not think there will be any less, but I will not say that there will be more. It is an idea that I have, perhaps, hardly worked out, but, if I may say so, I think that, with some revision of rates, and with a summer and a winter scale, one might, perhaps, almost induce owners to take pilots rather than the unlicensed men that they sometimes do take, a great deal of it is a question of price, no doubt.

1784. Do you not think that, assuming this Bill to be carried, vessels navigated down the Channel and up the Channel would take pilots from the same class of men as they take them from at present?—I think so.

1785. *Chairman.*] If they take a pilot at all, they would under the Bill be compelled to take a licensed pilot, would they not?—So I understand the Bill.

1786. Mr. *Pemberton.*] But assuming that they would not be compelled to take a pilot, do you think that they would take a pilot?—I think they would.

1787. Do you not think that they would take them from the same body of men as at present?—Yes, as I understand the Bill, and as I hope it will be insisted upon, they will be compelled if they take a pilot to take a duly qualified and licensed pilot; if they elect to take no pilot at all, they can go their own way and do as they please; but if they take a pilot then they shall take a pilot who is proved to be a qualified man and a man upon whom you can rely.

1788. Then, if they do take a pilot, you think that they would take him probably from the same body of men as they would take him from at present?—Yes.

1789. Does it not seem to you, then, that compulsory pilotage is rather a sentimental grievance than a real one?—I do not think that that is a matter for my judgment; I think that is a matter for shipowners themselves; but looking at it, even if you like in a sentimental light, I do not know why I should be compelled to do what is for my own good.

1790. Your opinion is that, even if the compulsory system is done away with, people will take pilots just as often, and from the same class of men?—It is.

1791. Does it not seem to you, then, to be rather a shadowy grievance?—I think there is all the difference in the world between compulsion and non-compulsion; what would be excessively satisfactory to me in one way would not be at all satisfactory if it were forced upon me; but, however, it is merely a matter of opinion.

1792. I think that your opinion seems to be very much the same as the opinion of Mr. Farrer, that the principal objection to compulsory pilotage beyond this question of the grievance being obliged to take a pilot, is the question of liability?—I think that is the point which perhaps has pressed it forward; but I am bound to say that I think the whole system of exemptions is one that tends to one end.

1793. I am not talking about exemptions?—But still I must illustrate what I wish to say; I think that you must take exemptions as a great part of that question, and the question of those exemptions is a great part of this case.

1794. Then I understand that you see three objections to compulsory pilotage: first, that there is an uncertainty as to the liability; secondly, the question of being compelled to do a thing which you do not want to do or which you do not care about doing; and, thirdly, that there are so many exemptions?—I think that I cannot say it better than I said it before; my answer was, "There can be, I suppose, but two reasons for it; the one would be the safety of life and property, and the other would be for the convenience of shipping."

1795. Those are the arguments in favour of compulsory pilotage, are they not?—Those are the arguments in favour of compulsory pilotage.

1796. But will you state shortly the objections which you have to the system of compulsory pilotage?—I object to the system of compulsory pilotage as throwing upon others a duty which you ought to do for yourself, and I think that it is quite unnecessary. I object to it, because I think that if there was any necessity for it, you have removed the ground for its existence by the exemptions which you have made; exemptions which appear to me to have entirely cut the ground from under your feet. I also object to it, because I think that it tends to a relation between the pilots and the owners and masters of vessels, which is an unsatisfactory one.

1797. Do you not think that a scheme might be devised by which this question of the liability of the owner might still be preserved?—I have no doubt that you might make some sort of compromise, or something not so radical as the change now under discussion, but I think it will come to that in the end; I think it will be only a delay in the question.

1798. Might not you provide that the owner should be liable as well as the pilot?—I think the common law provides for that, as was stated by the honourable Member for Liverpool.

1799. Is not the law this, that the owner is not justified in lying by and letting the ship be lost by the wilful neglect of the pilot, but that the pilot being sober, and *primâ facie* competent and duly and properly qualified to discharge his duties, he is solely responsible at present?—That, I think, is the way in which the law was laid down.

1800. I think you alluded to the question of the comparison of coasters with passenger ships; does it not seem to you that there is a great difference between a coaster, which is merely employed for the benefit of the pocket of the owner, and which does not carry passengers, and ships which do carry passengers?—I think that has been put to me before; and I still retain the same idea which I had, that the State is just as much obliged to provide for the safety of any common seaman on board a ship as for the safety of any other member of society.

1801. Is it not different where persons undertake to carry passengers?—I do not see it.

1802. For instance, in the case of a railway which is constructed to carry passengers, they incur additional liability, do they not, on account of their so carrying passengers?—You must not ask me questions which are more of a legal tendency, and I am afraid which I cannot answer satisfactorily; but I fancy the State has imposed very severe obligations upon railways with regard to their carrying passengers, but then I apprehend there are other safeguards. I believe myself that any question of pilotage will be very largely influenced by the decisions of the insurance offices, which have large property at stake. I think it is quite competent for the offices to say that where they have covered goods or passengers they shall have

Capt. Sir *F. Arrow.*

8 April 1870.

have a pilot if they please; and the same principle is adopted now, because the ships under the Emigration Commissioners are obliged to take a number of boats and a number of stores, and are obliged to do many things which ordinary passenger ships are not obliged to do. I think that the Emigration Commissioners might very properly oblige them to take pilots in pilotage waters, but there is also the safeguard that passengers can protect themselves.

1803. I am afraid that they cannot if you do away with compulsory pilotage?—I do not see that at all.

1804. All they can do is to say that they will not go; and in the case of a railway, the railway company are the sole carriers, are they not?—No doubt, but that does not apply to ships which are not a monopoly.

1805. Colonel *Bourne.*] I think you said that in all cases, whether pilotage is free or compulsory, you would have the pilots properly qualified and licensed?—I did.

1806 Supposing that a vessel was coming into a port with an unlicensed pilot on board, having picked one up, would that man be necessarily superseded upon a licensed pilot presenting himself?—Undoubtedly.

1807. Then, with regard to steam tugs, supposing that the captain of a vessel were to employ a steam tug to tow his vessel in, would the captain of that steam tug be regarded as a licensed pilot or an unlicensed pilot?—That is a question of a good deal of difficulty; it is a question which I have asked myself over and over again, how it is to be prevented; and the only way in which I think that it can be prevented would be that the risk which the tug itself runs is so great, by undertaking the pilotage of a vessel, that it will check it in a very great measure; the tug is simply the motive power, and it is pulling behind it the other vessel; and to undertake from a vessel, with another one in tow, we will say behind it, to control all its movements, would be a task of great difficulty; and, remembering that there was a decision, I think only very lately, in one of the courts on that very question, it would incur such a heavy responsibility as almost to deter tugs from undertaking to tow ships without a pilot.

1808. Then do I correctly understand you to say that the captain of a steam tug would really be looked upon as an unlicensed pilot?—Undoubtedly.

1809. In that case he would be liable to be superseded upon a licensed pilot presenting himself, would he not?—But he is not on board the ship you see; there is the difficulty.

1810. I thought I understood you to say that upon a licensed pilot presenting himself he would supersede the unlicensed pilot?—Yes; but the man is not aboard the ship at all, he is in his tug; I think that the ship might be towed by a tug, without the necessity for employing a licensed pilot; but the liability which falls upon the tug is so great for taking that ship. If she gets into trouble that I doubt very much whether they will do it at all.

1811. Then you still hold that the captain of the tug would be looked upon as an unlicensed pilot?—If he told the captain of the ship, "I will not only tow you up to where you are going, but I will undertake to pilot your ship, and keep her clear of all danger." He would be acting as an unlicensed man, and I do not see why he should not be held responsible; but the difficulties are the liabilities are so heavy, that I think tugs will very much hesitate before they undertake such an act.

1812. Is it usual for tugs to do more than simply apply the locomotive power?—It is very unusual indeed, I believe.

1813. In regard to the superannuation fund, I think you said that you thought it would be a great injustice to discharge men on a superannuation fund of between 10*l.* and 28*l.* a year; and you said that you yourself would not do it upon that basis?—I did say so.

1814. Will you be kind enough to tell the Committee upon what basis you would do it?—I should take it upon the basis of what their earnings were, and the length of time during which they would be likely to earn that money before they would be superannuated.

1815. *Chairman.*] But I think that, in answer to a question of mine, you added that you would also have regard to the superannuation which they would be entitled to if they went on?—Yes.

1816. Colonel *Bourne.*] You are tolerably well acquainted with the Mersey, are you not?—I am tolerably well acquainted with it; I have a general knowledge of the Mersey.

1817. Do you know the size of the pilot boats which are used there?—I will not say what the exact tonnage is, but I know that they are very nice boats.

1818. Has not the tendency rather been of late to increase the size of the pilot boats employed in the Mersey?—That I do not know; but as a general question I should imagine that in the Mersey pilotage it was difficult to employ all the number of vessels which they have there; it seems to me from the range which they have to guard, that 12 vessels is a very large number to be required for it.

1819. Do you know the extent of the pilot cruising ground off the Mersey?—I think it is about 45 miles from Point Lynas to the Bell Buoy.

1820. Do you think that it would be safe for open boats to undertake the putting on board of pilots in that district?—Certainly not, in what is commonly called an open boat in anything like weather.

1821. Do you think that under a voluntary system, vessels of the class which are now used, or which are likely to be required in that district, would be likely to be kept up?—I do, because in the first place I do not think that pilotage would decrease under the voluntary system, and in the next place I think that the voluntary system generally would produce better results than any other system.

1822. Do you think that under the voluntary system as large and as effective boats would be provided?—I do not suppose that they will be perhaps such expensive boats, but I think they will be boats quite sufficient for all the service which they will have to perform; they may not be of so expensive a character, or kept in the same way, or managed with the same regard for appearances as they are now, but that the voluntary system is quite sufficient to keep good and efficient boats on, I think, is very clear.

1823. Mr. *Grieve.*] I think you stated that you did not know much of the Clyde?—I have been up it several times, but I do not profess to know much about its pilotage.

1824. Have you been up or down the river between

tween Glasgow and Greenock?—I think I came down last year.

1825. Are you aware of the distance?—I am not.

1826. You stated, did you not, that you thought that the harbour-master might regulate the traffic on the river?—I said that I should call him harbour master, because it appeared to me that it was more in the nature of a harbour-master's office than really pilotage; I mean, transporting vessels about within a limited space, and where there is no difficulty.

1827. The harbour master of Glasgow would not of course exercise any jurisdiction beyond the harbour limits?—No.

1828. Therefore it would be impossible for him to regulate the traffic for 22 or 23 miles down the river, would it not?—I only made use of the term, because I thought that the duties were more the duties of a harbour-master than they were those of an actual pilot.

1829. But you certainly agree that a harbour master's authority could not extend down 23 miles?—Certainly not, the harbour master's assistants might go any number of miles; the harbour master's assistants in the Thames go from London down below Gravesend, which is more than the distance in question; it is 26 miles.

1830. In the case of a ship coming from sea, and having a pilot on board, it would surely be the pilot's duty to regulate the ship from the sea up to Glasgow, would it not?—I think it would be the pilot's duty certainly where there are natural difficulties, but there is really no navigation in that part of the Clyde, though there are a great quantity of vessels in it.

1831. Mr. *Gourley.*] Have you many nautical men upon your board?—We are all nautical men.

1832. Do they examine the candidates for pilotage certificates?—The whole of the examinations for the Thames and the North Sea, right out to the Leman and Ower, and the channels of the Thames from Orfordness to Dungeness, are carried out by the Elder Brethren personally. They have no pilots, and they have no assistance of any sort or kind. It is done from their own positive knowledge of the channels.

1833. Is that the system which you adopt?—That is the system which we adopt, in so far as those districts immediately within our own grasp are concerned.

1834. To what description of men do you grant licenses; do you grant licenses to men other than seamen?—They are all seamen; they must have certain qualifications. For instance, none of our pilots are allowed to be examined, except they have been a certain number of years at sea, and have acquired a competent knowledge of all the channels, and have served as masters or mates in square-rigged vessels for a certain number of years.

1835. I suppose that you would consider masters and officers of ships, who have got certificates of competency, to be as well qualified to navigate in limited as in general waters?—Quite so. They are the same class of men as the pilots themselves come from.

1836. Therefore, would there be any risk whatever, either to life or property, when they were navigated by competent seamen having proper certificates?—No.

1837. Do you recommend any change in the present constitution of the Board of Elder Brethren?—I think that that is a very difficult question to answer, but it is one that is being pressed a good deal upon our consideration.

1838. Would it not be better if you had representatives from the various ports over which you have jurisdiction, for the purpose of examining and doing the work with respect to the ports?—I am not here as the representative of the Trinity House upon this point; but I think that I may fairly say that the Elder Brethren have never shown the least indisposition to do anything which was for the good of the public or of the trade. The question which has been forced upon them several times, as to whether shipowners could have a more direct voice on the board, is one which I think they themselves would have no objection to if it was put before them.

1839. And you individually think, that thus to popularise the governing body, would be beneficial?—I think that anything which popularises a body must be beneficial, unless it is attended with some manifest disadvantages.

1840. Do you consider it as easy for vessels which now are free from compulsory pilotage, to be navigated in pilotage waters, as for those which are compelled to carry pilots?—We have not found practically more accidents or difficulties regarding them.

1841. Have you not found more accidents with vessels not carrying pilots than with vessels carrying pilots?—I believe that to a very limited degree, you may say that it is so; the number of accidents which have happened under the conduct of our licensed pilots is no doubt very small indeed.

1842. And you consider the ship, and life, and property, quite as safe in the hands of properly qualified masters and officers as in the hands of a licensed pilot?—I think so; I think that you should leave it to them to say whether they require assistance, and to take it if they want it.

1843. You know the entrance to the Mersey, do you not?—Yes.

1844. Do you consider the entrance to the Mersey as difficult as the entrances to the Thames channel?—No; I stated before, that with the exception that they have no anchorages off the Mersey in particular winds (and the most dangerous prevalent winds), I do not see that there is anything in the case of the Mersey, which makes it more dangerous than any of our own channels; but if you take it altogether, as a whole, the pilotage of the two places, the Thames and the Mersey, then I apprehend that there is no sort of doubt upon the question, that the Thames and its approaches are more difficult than the Mersey and its approaches.

1845. And I suppose that in consequence of the entrances to the Mersey, being bar entrances, masters can generally keep the vessels out at sea, and would not run too near the coast?—It is clear, that if there is no anchorage, there is nothing else for them to do but to keep to sea until the water is high enough to run in upon.

1846. And I suppose that it is quite competent for the masters and officers of ships to have as good a charge over their vessels in the waters approaching the Mersey, as though the vessels were in the hands of pilots?—I see no reason to doubt that they would do so, but at the same time I have said all through, that I believe the neccessity of self interest, and of looking after property which is confided to them, will in a great

Capt. Sir F. Arrow, 8 April 1870.

great number of instances make men take pilots, although they are not compelled to take them.

1847. Do the banks at the entrance of the Mersey change oftener than in the Thames channels?—I am not very well aware of that; I believe that at times there are changes. We see reports annually of changes which take place which are very carefully looked after, but I do not apprehend that any violent changes have taken place which make it very difficult for men to navigate ships.

1848. I suppose that the navigation of the Mersey, and, in fact, of all pilotage waters, is very much simplified now in consequence of the introduction of steam tugs?—All navigation is very much simplified, and especially that of pilotage waters, because every possible means of improving the pilotage by placing lights, and beacons, and buoys, and also by the use of steam, has been going on, and is every year increasing Therefore there is no doubt at all that, taking it merely as a question of pilotage of itself, it is easier to pilot a ship now in either the Thames or the Mersey, or in any other pilotage waters, than it was 20 years ago.

1849. I suppose that masters generally depend, in a very large measure, upon the guidance of the tugs rather than upon the pilots, and that in compulsory waters the pilots depend, in a large measure, upon the guidance of the tugs, more especially at night?—They do. None know better than a shipowner that time is money; and therefore, a vessel which used to take two or three days in getting from Dungeness up to dock, will now, by the use of a tug, do it in half the time, or perhaps less, and save a day or two's wages and keep.

1850. Therefore, the master of the tug is really the pilot, is he not?—I do not apprehend that he is the pilot, and I do not apprehend that the tug will be very ready to take such a liability.

1851. Do you think that the present price which is charged for the navigator of the pilotage of the Thames is a charge beyond the value of the services rendered?—I do not think that it is, although in some sections of the Thames it possibly may be so. At any rate, it might be wise to reduce it to some little extent to get rid of this unlicensed business, which is a great objection, and I think it would be made up to the men by getting more ships.

1852. What portion of the pilotage money do the pilots themselves receive?—The only deduction which we make from the pilots is their poundage of 2½ per cent.

1853. Does the whole of the money go to the pilots?—Every shilling of it.

1854. Who pays the expense of the boats which are kept at Dungeness?—That is paid by the boarding money which is paid by the ships, and has nothing to do with the pilotage.

1855. The same as landing money. I suppose that you are aware that the shipowners have to pay for the landing of the pilots at Dungeness? It is precisely the same thing: the one is putting them ashore, and the other is putting them on board.

1856. What would be the amount of pilotage chargeable to a vessel drawing, we will say, 16 feet, going down from London to Deal without a steamer?—£. 12. 4 *s.*

1857. Do you not think that an excessive charge for the distance?—If you look at the earnings of the pilots, it does not seem to be very excessive.

1858. What is your opinion of the danger, or otherwise, of pilotage stations generally; do you think that there is much danger for vessels navigating in pilotage grounds?—It varies, no doubt, with the amount of difficulties which there are to encounter, but the very fact that you are in shoal waters, with sands and difficulties around you, necessarily supposes an amount of danger.

1859. You were asked some question with reference to vessels being sent to sea badly found; can you give the Committee any instances of vessels which have come under your knowledge, which have been sent to sea badly found?—I dare say I could give instances, but I am not prepared to do so at the present time; and the knowledge would certainly not come into my possessisn as the deputy master of the Trinity House. I know as a seaman that such things do occur, but I do not think that the Committee would get any information from me on a point of that sort, which they would not get much better from others.

1860. Is it not the fact that underwriters, and not only public underwriters, such as Lloyd's, but mutual insurance companies hold periodical surveys over all the ships which they have insured in order to insure their being sent to sea well found?—No doubt; that is for the purpose of protecting their interests.

1861. Is it not also the fact that seamen themselves exercise a certain prerogative on board ships on which they engage themselves, in order to have a certain gauge for their own safety?—I believe that they can do so by the statute; but seamen themselves are such a very improvident race, that they seldom look beyond the immediate wants of the moment.

1862. Mr. *Cave.*] Do you think that local knowledge of the river, without nautical skill and experience in the navigation and management of sailing vessels and steamers, is a sufficient qualification for a river pilot above Gravesend?—Certainly not; if they have to handle vessels of length and speed, they require some knowledge of those vessels, and a knowledge of navigation.

1863. Are there at present a sufficient number of licensed pilots stationed at Gravesend for the demand?—I think so; no complaint has ever been made of the want of them.

1864. But we have heard that watermen acting as unlicensed pilots make very large earnings; how would you account for that?—I believe that that is in this way: that one owner perhaps has a number of vessels which he keeps entirely in the hands of those men. The telegraph gives great facilities; those men know exactly when to expect those ships, and they frequently go from one ship to another, and by that means they earn a great deal more money than they would earn by merely the turn pilotage; I think that is the answer to that question.

1865. Would you think it prudent to throw open the pilotage between Gravesend and London, or if not, to license the free watermen as a body as pilots?—I do not know whether it might or might not be advisable to throw open the pilotage between Gravesend and London; I do not think that I have a sufficient knowledge of the subject, but I do not think that it is at all requisite to license the free watermen, and the free waterman only. I do not think that the free watermen have any such knowledge of the river

river as to require that they should have a monopoly of the traffic upon it.

1866. From what you said just now with regard to the employment of watermen, do you think any measure requisite for the purpose of protecting the present licensed pilots against their encroachments?—I think that the pilots require to be protected against their encroachments, and that it ought to be very stringently provided for. The Trinity House have licensed a number of those men as far as they thought was legitimately requisite for the trade, and I think beyond that they certainly should be protected if a system of limited pilotage is to go on, which I apprehend is not a question which is raised.

1867. Is there any great difficulty at present in obtaining proof of unlicensed men being in charge of vessels?—A very great difficulty; very great evasion is resorted to. They ship them in all manner of ways, and they get rid of them again in all manner of ways, and it is very difficult to get hold of them.

1868. Is it or is it not a fact that the damage which has been complained of by bargeowners has been occasioned more by vessels in charge of unlicensed pilots than by vessels in charge of licensed pilots?—I do not think so, because the complaint, I think, has only been made in cases where they thought there was a remedy; I do not think that they would bring before you a case where they knew that there was no remedy.

1869. Cases of licensed pilots were mentioned failing for 5 *l.* or 10 *l.*, and being utterly unable to meet their liabilities; are you aware of any such cases?—I will not say that it is very commonly the case, but I am very sorry to say that it is the case; and frequently when a pilot is liable for a large sum of money he simply goes through the court.

1870. Is that the case even with the best of the licensed river pilots?—I do not think that it is the case with the best of them; I think that there are a certain amount of river pilots, men who have means, who would not resort to that at all; but I am afraid that poverty forces it upon a great many of them. I do not defend the practice, far from it. I think that it is very reprehensible; but I believe that their poverty, and not their will, consents, in many cases.

1871. Would you make the same answer with regard to loss of life as you have made with regard to casualties with barges and other accidents?—I do not know the statistics.

1872. Do you think that it would be expedient to license the sea pilots as river pilots, or do you think it better to keep the two services distinct below and above Gravesend?—My own opinion (I do not know that it is one which need necessarily carry any weight with it) is that the fewer changes of pilots the better. A pilot gets on board a ship and knows the ship, and has begun to be able to handle her with something like satisfaction. And then when he comes to a certain place he is obliged to go out to give way for somebody else. But if he has a knowledge of the channels and of the pilotage, it seems to be reasonable that he should take the ship on, and so avoid the delays which occur in changing the pilot at Gravesend, which is a common source of complaint. Time and tide wait for nobody, and a man losing his tide into dock or up to a berth is a very serious matter. Many of those ships are cattle ships, and it is of the greatest importance that those animals should be landed in the shortest possible time. Sometimes at Gravesend complaints are made that ships have to wait because they cannot get a pilot, and the hour or half hour which is lost whilst they are changing the pilot is the very hour which would have enabled them to have got into their berths. I think that is a very reasonable complaint, and looking upon it also in the light that the fewer changes of pilots there are the better, if there were no vested interests at stake as there are in this case, I would rather keep one pilot than change him for another one.

1873. Do you think that there should be a limit to the liability of the pilot in case of collision under the voluntary system?—I think so. I think it would be a cruel weight to put upon the pilot that there should be an unlimited liability over his back, and that it would deaden his energies altogether.

1874. The present limit is 100 *l.*, is it not?—Yes; 100 *l.* is the present limit.

1875. Is not that proposed to be increased by the Merchant Shipping Bill?—I think not. There is a clause to insure the amount up to that by making pilots have sureties, whereby we shall have a better chance of getting the 100 *l.* than we had before.

1876. I think you said that you were satisfied with the proposed mode of compensating pilots in the event of loss?—Yes, if it is based upon their actual earnings, and not merely upon their superannuation.

1877. With regard to the harbour-master question at Swansea, the difficulty has been stated with regard to voluntary pilotage that the master of a vessel running into Swansea harbour might very likely do damage to the shipping which is in it already, and that it is very necessary that there should be great power to the harbour-master, who at present has pilots under his control, to put the ship exactly where he likes; do you think that that power could still be exercised under the voluntary system?—The power of a harbour-master is supreme the moment you get into the bounds of his district. I know of no harbour-master whose authority could be superseded, and I assure you that whenever Bills have been sent to the Board of Trade for making districts and ports where the pilotage has been under the Trinity House, we have always readily inserted clauses by which the harbour-master should have entire control over the pilots in his own authority.

1878. Would the answer to that difficulty be that if a vessel ran into Swansea Harbour without a pilot, and thereby did damage, she would be answerable for all the damage she did?—I would not say that unless the master actually disregarded all the orders of the harbour-master. I think there may be exceptional states of weather when a pilot has very little option, if he goes in at all, but to do somebody damage. It is a sort of Hobson's choice with him; it is that or worse; but if he, in disregard of the harbour-master's orders, took the harbour, or went into a place which the harbour-master told him not to go into, then I should say clearly that he was liable.

1879. But if by taking a pilot who knew the harbour, he would have come in safely, and by choosing to run the risk of taking no pilot he comes in and does damage, what would you say then?—I think that if he did so he would be liable for it.

1880. Do you think that under the voluntary system, when there would be no longer any question

Capt. Sir *F. Arrow.*

8 April 1870.

tion of damage, more masters and mates would qualify to act as pilots than do so now?—It is a question entirely for the owner, I think. It does not depend upon the masters and mates, I think.

1881. Do you think that the American plan of having the tug alongside in towing is better or worse than the European plan?—I think it depends very much upon the place that you are in; if you are in a very narrow navigation you cannot very well have the tug alongside.

1882. I suppose that by the American plan there is more command over the vessel?—There are so many plans; I think the usual plan here is really a very good one, with a hawser, with what is technically called a horse to travel over; I think that is by far the simplest plan, and it enables the ship and the tug to get apart from one another in cases of mischief or damage in the easiest possible way, which any other system does not. If you lash alongside a ship it is much more difficult to get clear of her; and if you have two hawsers it is the same. Taking it altogether, I am inclined to think that the principle of towing a-head with one hawser is the wisest either towing it at long or short scope, as the weather may be, and as the circumstances may render necessary.

1883. Do you remember the "Demerara" getting across the Bristol river?—Yes.

1884. Going round the corner the tug went one way and the ship went the other, did it not?—The tug went one way, and the ship the other; but that might have been obviated if they had had another vessel with a stern rope to her to steer her. It was want of care; it was not want of towage; you might have straightened that vessel without having a tug alongside of her.

1885. Sir *C. Wingfield.*] With reference to the Thames above Gravesend, you have probably heard that the watermen number above 400, and are said to take half the ships in the port?—I have heard so.

1886. Have you reason to think that that is correct?—I really do not know; I have no information upon the subject.

1887. I think you said just now that you were the last person who would hear much of unlicensed pilots?—I am the last person who would hear of people practising as pilots without a license.

1888. You said, in reply to the Chairman, that the Trinity House has endeavoured to fix the number of pilots in proportion to the exigencies of the trade; but assuming that it is necessary for pilots to be licensed, does not the existence of this large body of free watermen show that the Trinity House has not licensed a sufficient number for the work of that part of the river?—My answer is, that if the trade wanted more pilots, they ought to have mentioned it, which they have not done; but it appears to me that the trade wish to get this work done cheaper than it is now done. It may be an argument for revising the tariff, but I do not think that it is an argument for anything else.

1889. Do you not think that it is an argument for increasing the number of licenses, if licenses are necessary?—Then why do they not represent it to the Trinity House; we are perfectly ready to do all that we can.

1890. But it is an anomaly, is it not, that there should be the two bodies doing the same work on unequal terms, the one being a smaller body, which is not liable to supersession, and receiving a comparatively high remuneration, while the other is a larger body, liable to supersession, and receiving lower remuneration?—With regard to the last point, I think you must take that with a qualification; there are some exceptional cases where men have worked themselves into a good business with particular shipowners. But, as a rule, unlicensed men do not make more money than the licensed pilots.

1891. From a statement which has been given to me, it would seem that one earns 900*l.*, another earns 500*l.*, and that there are some eight earning 200*l.* each, but the earnings of the rest are very small, as you say?—That is a matter of choice work, I suppose. Those men are men who work with particular owners and have particular ships; in fact it is very much, I think, what is called in business "a connection" which they have got. It is the same way with our own pilots; some of our pilots earn 800*l.* or 900*l.* a year; they get a connection with shipowners, and they only get that in process of time.

1892. You said just now, I think, in answer to the honourable Member for Hull, that watermen were not employed on board vessels in addition to licensed pilots because they have a more competent knowledge of the river, but merely to lower boats, and for other work: supposing three or four large shipowners were to say that they take watermen on board expressly for the reason that they know the river better, you would admit, would you not, that the impression does prevail amongst some shipowners?—I suppose it must prevail, if you state that such is the case; but all I can say is, that it is very inconsistent with anything that I ever heard with respect to them.

1893. I mention it because it has been stated to me by some great shipowners of the port of London?—It is not within my knowledge, and I should think that it is entirely against all experience.

1894. Have you heard that out of the 72 pilots between Gravesend and London some 12 are physically so weak that they do not work in the winter months?—I am not aware of that, but I am aware of one thing, and that is that all sorts of statements are made by men who are opposed to one another in business which very often have no foundation whatever.

1895. It is of course right that proof of competency to act as a pilot should be required by masters of vessels, but since it is intended to abolish the exemption from damages, which is now enjoyed by the owner, ought you not to endeavour to give the owner as wide a range of selection as possible?—I think you are going to the extreme point, which I do not think is considered under this Bill at all, and upon that Bill you are examining me; you raise the question as to the sufficiency of the principle of supply and demand in pilotage matters, and you ask whether it should be totally without limitation; as I apprehend that that is not the question before me, I do not think that my opinion need be asked upon it, although I am of course bound to answer the question if the Chairman decides that I must do so.

1896. I would explain that I asked the question rather with reference to the inadequate number of pilots in the Thames?—I do not think that there is an inadequate number of pilots in the Thames.

1897. I understood you to say just now that the unlicensed men did a great deal of the work?—

But

But I said that that was a great deal a question of price, and that they have to do the work for a lower price.

1898. But there is work for both, is there not?—There is not full work for the Thames pilots; the licensed pilots could do more work than they do.

1899. Do you consider that those 72 men can do more work than they do?—Certainly.

1900. If there is more work for them, why do they leave so many ships to the uulicensed men?—That I cannot tell you; that is one of the things that really does not come before me; I cannot say what operates upon them, but I am satisfied that the Thames pilots can do still more work than they have at present.

1901. The rules of the Trinity House, which require service at sea for a term of three years as mate, or one year as master, and which fix the limit of age at 25 for the grant of licenses, are a complete bar to free watermen obtaining licenses, inasmuch as few of them have been at sea, and the most efficient are above 25 years of age; is not that so?—I think ability to handle a ship is of very much more consequence than merely to have a simple knowledge of the river.

1902. Even above Gravesend?—Yes.

1903. And now that steamers are so much employed?—Yes, but that does not follow; if a pilot has to take a ship, he has no option whether it is under canvas or under steam, and plenty of ships are handled under canvas right up the river.

1904. Then you have the fact that those great shipowners, as I mentioned just now, employed watermen?—You say so.

1905. The Order in Council of 1854, which licensed 23 watermen for the pilotage of the home trade steam passenger ships is a precedent for the relaxation of that rule, is it not?—It may be a precedent for a relaxation of it, but you asked me, if it gives them a better position than the fact of the men being accustomed to handle square-rigged ships, I say, "No"; on the contrary, my opinion is, that a man who is a pilot ought to be able to handle the ship in which he is.

1906. I think that as I put the question, it was whether it was necessary for a man to have been at sea to be able to navigate a ship?—I do not say that it is actually necessary, but it is highly advisable; steam power may fail at any moment.

1907. Is it likely that the Trinity House, if it be left to their discretion in the matter, will issue any more licenses, particularly with regard to the deterrent effect of the second clause of the Bill?—I do not think that we shall, as long as we have this fact before our face; that our present staff of pilots can do more work than they have to do; if it can be shown that there is more work than the pilots can do, and the trade apply for it, no doubt we should license more.

1908. But is not the conclusion irresistible that there is more work than those pilots can do, because otherwise they would certainly not leave a lot of good paying ships to the unlicensed pilots?—I believe, really, the answer to that is this: that it enters into a sea of litigation, and into a sea of trouble; and that rather than go through it they, to a certain extent, acquiesce in it; I believe that is the real fact of the case.

1909. The Shipping Act of 1854 takes cognisance of the free watermen, and designates them as unqualified pilots, in contradistinction to licensed pilots; but it allows them to take charge of ships in the absence of licensed pilots; this does amount, to a certain extent, to a recognition of the competency of those persons to pilot vessels, does it not?—All the men that we have licensed have passed at the Trinity House, and proved their competency exactly in the same way as a pilot proves his.

1910. You perhaps have seen the license which those free watermen hold from Watermen's Hall, which says that they are competent to act as watermen in navigating every kind of craft, steamers, sailing vessels, boats, and everything in the Thames. Do you think that this may be considered a good guarantee that the holder is competent to pilot ships in the river?—No, for the reason that I do not think that the Watermen's Company is a competent authority.

1911. When you say that they are not a competent authority, do you mean that they are not competent to judge of the requirements of the river?—I do not think that they are a competent authority to say whether those men are fit to navigate steamers and large vessels, though they say they are so.

1912. Have you heard that the watermen say that the licensed pilots have been in the habit of taking vessels east of Boulogne which are liable to compulsory pilotage, and foreign vessels in the Baltic trade, leaving to the watermen the British vessels in the Baltic trade, and the coasters, which do not pay so well?—No; that is exactly the knowledge which would not come to my ears.

1913. You perhaps know that what the free watermen ask, is not to receive higher remuneration, or a right to supersede others, but simply that any man who can pass an examination and prove his knowledge of the Thames above Gravesend, may receive a license, so that he may be allowed to continue to earn a living as he has done hitherto?—I express no opinion as to whether they ought or ought not to have it, but I think they should also be able to show that they are competent to handle a vessel when it is put under their charge.

1914. Are you aware that they also ask that they may not be postponed to the candidates on the Trinity House list for admission, if those candidates are men who have not been working as pilots, but who have been serving at sea?—I should rather like to answer that question, by asking another, if it was competent for me to do so here; and that would be what special reason there was why the watermen should be considered more than any class of seafaring men? I apprehend that it is a large question, and one which would not be within the competence of this Committee to deal with, but it is raised already in another way; and certainly, for my own part, I think it is a monopoly which is productive of evil rather than good to the public, and as far as the Trinity House are concerned, I do not think that we should be inclined to assist what we do not think is for the benefit of the public.

1915. Do you say that the existence of this body of men is an evil?—I do.

1916. Why is it an evil?—I do not speak in particular of the watermen, but I say that the existence of any body of unlicensed men who are in opposition, as it were, to those men who are provided for a certain service, I think is an evil.

1917. There would be, no doubt, an evil if they were competing with, and taking away work from, the other men, which the others could do; but as you have this body of men employed in doing

Capt. Sir *F. Arrow.*

8 April 1870.

doing the work of the Thames, and as they cannot be dispensed with, would it not be better to unite the two bodies and put them upon one footing?—But the pilots deny that statement. They say that the unlicensed men do take away work which they are ready and willing to do. I have heard it assumed here that this is a question of tacit consent; that the body of pilots cannot do the work; and that therefore they wink and connive at others doing it illegally; but I am told that the pilots themselves, whose interests are at stake, deny that statement.

1918. You are not prepared then to admit the correctness of the statement that there are not pilots enough to do the work of the Thames?—Certainly not.

1919. To take every ship?—I will not say every ship; but I say that if the trade of the Thames required more pilots they have only to ask the Trinity House to get more pilots; and they have never done so.

1920. I am not imputing any blame to the Trinity House; but if the shipowners have not applied to the Trinity House for more pilots, that is not in contradiction to the fact that there may be more work than the present staff of licensed pilots can perform, is it?—I think it simply means this: that they get their work done cheaper.

1921. Do you not think that a satisfactory settlement of the claims of the licensed pilots and unlicensed pilots might be arranged on this basis; that the free waterman should keep the pilotage of that class of vessels upon which they have heretofore been employed, without liability to supercession by licensed pilots; but that they should not charge higher rates than they receive now; and that this arrangement should last until the present 72 pilots are exhausted, when the entire body can be placed on a new footing?—Then we get directly to what is very objectionable; and that is making rules for one place which will not apply to others; there is always trouble in that sort of thing.

1922. But do not the circumstances of the Thames, above Gravesend, in reference to its being a mere river, and the absence of hardships and exposure and risk in a pilot's life, differ entirely from those of sea pilotage?—Undoubtedly.

1923. Ultimately, do you not think that it is possible that the number and remuneration of pilots may be left to the laws of supply and demand; the only interference of the Trinity House being to proscribe the rules by which licenses are to be granted?—I think it may be possible in time; I know that it has often been mooted whether one could make any such violent change, which I freely admit is the root of the whole thing, and whether demand and supply should not regulate themselves; but I believe that it is generally conceded that the time has not arrived when you can consider that question; and I do not know why my opinion should be wanted upon it any more than any body else's.

1924. You said, in reply to the honourable Member for Liverpool, as illustrative of the relative merits of the licensed pilots and the unlicensed pilots, that you would rather employ a doctor with a diploma than a quack; but if the State were to limit the number of diploma holders below the public requirements, then do you not think that there would be many highly qualified men practising without diplomas?—I should think it would be most certainly so, because it is quite clear that the present men could not take a tithe of the work.

1925. *Chairman.*] When do the pilots who pilot vessels by the North Channel meet their vessels?—They meet them on various parts of the coast. They meet them all the way from Dudgeon Light to Orfordness. The pilots are distributed at Yarmouth, Lowestoft, and Southwold.

1926. Are there no vessels stationed for them?—No, they use their own boats. They go cruising in their large boats.

1927. Are they very large boats?—Yes.

1928. But they are not vessels of the same class as the Dungeness vessels, are they?—No, they are cutters of 40 tons.

1929. But those are found by the men themselves, are they not?—They are found by the men themselves; they have them in shares.

1930. What is the difference of the average earnings of the pilots in the North Channel as compared to those in the South Channel?—The South Channel pilots, of whom there are 128, earn on an average 310 *l.* a year; but then you have a mileage of 93 miles, which they have to go over. The average of the North Channel pilots, of whom there are 60, is 274 *l.* a-year, but then they have a less district to pilot over; they have only 78 miles as against 93 miles.

1931. Is that 274 *l.* after deducting the expenses of the boats, or not?—Those are their average earnings without deductions.

1932. Whereas the 310 *l.*, on the other hand, is without the expense of boats?—There is no expense of boats in their case.

1933. I think that the vessels who come by the North Channel are usually of an inferior class, as compared to the others?—They are not so valuable, as a rule.

1934. And therefore a pilot could not make the same earnings under those conditions that he would in the South Channel?—He would not.

1935. Mr. *Graves.*] You have had in your mind the homeward-bound vessels, in speaking of keeping to windward in the Mersey, have you not?—Yes.

1936. Take the case of an outward-bound ship in the Mersey, which, having let go her tug at the north-west lightship, meets the wind hard in from the northward, and a heavy gale of wind follows; is she not in a very awkward position?—All he can do is to run back again, I suppose.

1937. But the bar prevents him from running back?—Then he is in a very nasty position, no doubt, if there is not water for him to run back.

1938. Practically, I presume, that you know that we have only two hours of flood and two hours of ebb upon which large vessels go out?—I am aware of that.

1939. And when once they pass the bar, and are desirous of getting back, they are practically on a lee shore with a north gale?—I think that that would require a considerable degree of judgment on the part of the person in charge of the vessel, because it is quite clear that he should not attempt to go out in such weather, unless he sees his way to getting clear away. To go out so as to be in a trap directly he gets out, is neither wise nor seamanlike.

1940. Are you aware that most of the serious accidents that occurred in the Mersey occur with ships putting back?—I am not aware of it.

1941. *Chairman.*] Are the pilots under your jurisdiction precluded from making charges for salvage?

salvage?—They are not precluded from it, but the whole salvage question with regard to pilotage, not only of the pilotage of the Trinity House, but of any other port, I think is very unsatisfactory, and it is very difficult to say where pilotage ends, and where salvage begins.

1942. Are they not allowed to make claims for salvage, without your consent?—At present the London men can make claims for salvage without our consent.

1943. But can the Dungeness men?—No, only the men of the out-ports.

1944. The Dungeness men there are prohibited from making claims for salvage without your consent?—They are, without our license.

1945. And the North Channel men the same?—Yes; but you are aware that we suggested in the Bill before the Merchant Shipping Code that there should be legislation upon that subject, that no pilot should be enabled to make a claim for salvage without the consent of the pilotage authority being first obtained.

1946. Under the voluntary system, as well as under the compulsory system?—Under any system whatever; that instead of their being the judges where salvage began, it should be a question for the pilotage authority.

Capt. Sir *F. Arrow.*

8 April 1870

1947. Do you think that that restriction should be maintained even though the pilotage was voluntary?—Undoubtedly.

1948. Mr. *Graves.*] Are you aware that that is the case with the Mersey Dock and Harbour Board?—I do not know it.

1949. Are your pilots allowed to take shares in steamers?—I am sorry to say that they do so very much against the wish and endeavour of the Trinity House to prevent it; but it is a melancholy instance that public boards are very often open to pressure that the Board of Trade refused to grant us the power which they gave to the Liverpool authorities to prevent it; I will not say from what quarter the obstacle came, but at any rate it was the Board of Trade which stopped it.

Tuesday, 26th April 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Philip Wykeham Martin.
Mr. Pemberton.
Mr. William Philip Price.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Captain Charles Henry Evans Judkins, called in; and Examined.

Captain *C. H. E. Judkins.* 26 April 1870.

1950. Mr. *Graves.*] I believe you are a Captain in the service of the British and North American Mail Steam Company?—Yes.

1951. And you command the "Scotia"?—Yes, I do.

1952. And you have had great experience of the Atlantic?—I have been crossing it for 30 years almost.

1953. Have you any idea of how many passages you have made in that time?—Between 400 and 500.

1954. I believe you have had great experience of the Mersey and the estuary of the Mersey?—I know it as far as the commander of a steamer can know it.

1955. Do you consider it is well lighted and buoyed?—Exceedingly well.

1956. Do you know of any port that is better provided in that respect?—None.

1957. Do you consider that the buoying and lighting of a port, however good they may be, are complete, without an efficient pilotage service?—No.

1958. Do you know the pilot system of Liverpool?—I have had an experience of the pilots there since 1825 when I first went to sea; I served my time out of Liverpool.

1959. You know that the system is what we call here a stationary system; the boats are on four stations?—Four stations.

1960. Do you consider that as good a mode of intercepting vessels as any other that you could adopt?—I consider that they are like beacons, the boats on their stations, and we can almost tell where we are when we see them.

1961. You find them there at all times?—I have never found any difficulty in vessels like mine.

1962. Neither day nor night?—Neither day nor night. When I have not seen the land, and have been only going by soundings when I have been rounding the Skerries, getting off the wind, I have been hovering about for an hour or two in a dense fog, and I have been pulled up by my officer singing out, when he heard I was going to make another turn, that there was a pilot boat under our stern. The pilot has heard our guns, but he could not make out the position of the ship, because I kept moving about.

1963. You have had equal experience of the New York system of pilotage, have you not?—Yes.

1964. It is not stationary there, I believe?—It is not stationary there.

1965. Will you explain in what way that system differs from the system at Liverpool?—The pilots in New York are allowed to go as far as they like; they come out to sea an immense distance; they come out as far as 400 or 500 miles in the summer season, but that is more for the cruise than anything else, I think.

1966. Do you consider that that system, as compared with the Liverpool stationary system, is equally good?—No; it is only by chance that we fall in with the pilots on those occasions; it is like a man going from New York on a pleasure excursion; he goes as far as the George Bank; and on the George Bank he is almost certain to fall in the track of steamers, and he remains there.

1967. Do you often overrun these boats?—We often get up to New York light ship in the harbour without seeing any of the pilot boats.

1968. What do you do if you miss the pilot boat outside?—We run up to the light ship, and on board the light ship there is a pilot to be had.

1969. To provide against the possibility of meeting the boats outside?—Yes.

1970. In coming into Liverpool, you can never miss the pilots?—No, I have never had occasion to get one at the light ship.

1971. In coming into Liverpool, you cannot overrun the pilots?—No; at the Bell Buoy we are certain to find one.

1972. What is your opinion generally of the pilots at Liverpool?—I have always found them in my experience a very clever set of men.

1973. Have you found them thoroughly efficient?—Thoroughly efficient. I have known instances, before I commanded a steam vessel, where a vessel has been in a gale of wind, with her yards braced by the lee, and running before it. I have seen a pilot boat sheer up alongside when we have had a whip rigged on the yard, and

and we have taken the pilot under his armpits, and dropped him into the water. I have known two men killed in that way while being taken on board a ship by the boats sheering back close, and the vessel not having time enough to save the men.

1974. Is the service one of some risk, in your opinion?—I think there is a great deal of risk with certain winds.

1975. You must have had great experience in ascertaining the opinions of the masters in the American service crossing the Atlantic; have you ever heard them make any complaint of the Liverpool pilots?—No, I never heard of a single complaint made by them.

1976. Did you ever hear any complaints of the rates of pilotage?—No.

1977. Are they much lower than the rates of the New York pilots?—Yes.

1978. Can you give the exact difference?—It is five dollars and-a-half a foot which we pay for inland-bound vessels in New York.

1979. And in Liverpool what is it?—In Liverpool it is 9 *s.*, I think; we have two or three rates in Liverpool.

1980. Do you invariably employ pilots yourself?—Yes; I have never gone into Liverpool without a pilot.

1981. Would you consider it prudent to go in or out of Liverpool without a pilot?—I would not take the risk upon myself of doing it except I could not get a pilot and it was a perfectly clear day.

1982. Do you limit that opinion to your own ship, or how far would you extend it to shipping generally; you say you would not go into or out of Liverpool without a pilot?—I speak of vessels of the same as my own ship, and of the same draught of water as she takes.

1983. Can you give the Committee any opinion as to how far it is expedient or otherwise for sailing ships in particular?—I do not think a sailing ship is justified in running down to the Bell Buoy without getting a pilot, for fear of a gale of wind coming on; gales come on there very suddenly from the North Channel, and with a strong flood-tide of 20 or 22 feet; they could not claw off again unless they could carry sail.

1984. It has been stated here that vessels, under those circumstances, could lie-to, near the Isle of Man and Holyhead?—They must not round Point Linas.

1985. Suppose a vessel running into Liverpool in heavy weather to the east of Point Linas, what would she do to pick up a pilot?—She has four stations, with the chance of getting a pilot boat at each; but the captain of a vessel would have to guide his conduct by the state of the weather and the state of the wind. It would not be safe for him to pass the Orme's Head, if it was blowing a gale of wind from the north-west, without a pilot on board; it would not do for him to run the risk of running too close on to the lee shore in the chance of finding a pilot.

1986. Supposing you had come well up towards the north-west light ship before the weight of the gale burst, and there was no pilot, what would it be open to you to do with the tide at half-ebb?—Let go the anchor, and trust to Providence; he could not get away from there with a north-west wind; a ship will not work unless she can carry canvas.

1987. Do you consider it a safe anchorage for a vessel under those circumstances?—No, there is no anchorage whatever; in fact there is no safe anchorage outside the Bell Buoy; there is ground to hold on in a fog or calm weather, where you can wait for the fog to clear up, but nothing more.

1988. Are you aware that it is proposed by the Bill upon which you are now giving evidence, that the system of what is called compulsory pilotage should be altered, and that it should be optional upon a shipowner to take a pilot or not, and if he does not take a pilot he is not to pay for one?—I have heard that it is so.

1989. Do you consider that voluntary employment is desirable?—No.

1990. Do you consider that it ought to be left to the discretion of a shipmaster to decide whether he should take a pilot or not?—I do not think you should put it in the power of the shipmaster to say that he would take the ship in himself; I do not think it is right to put a captain of a ship in such a position as to suppose he can navigate such a channel as that at the entrance of the River Mersey.

1991. Will you state why you consider that is so?—One reason is, from the great changes that have been constantly taking place in the channels. Since I have been sailing out of the port of Liverpool the only channel that we used to come in through in former years is completely blocked up, with only six feet of water; the Victoria Channel which the Cunard ships have gone through for years is now not safe for them to go through; it is now completely blocked up, and there is an angular turn made in it, in consequence of which a long ship like mine would not be able to make it.

1992. Do you consider the abandonment of compulsory pilotage at all involves the question of security of life?—I do not think it should be abolished; I think if you do not make us take pilots it will be a question of life, and I think life should not be estimated at the cost of money.

1993. You think that life is more likely to be safe and secure under the compulsory system where there is no discretion given to masters, than it would be under the voluntary system?—Yes.

1994. Is not the pecuniary liability of an owner a sufficient protection to the passengers and crew?—I should say not; I do not think it gives us any protection for the lives of the passengers or the crew, because a shipowner can ensure himself against such risks.

1995. You say that the channels are continually changing in the Mersey; do they change so much that during the time occupied in the passage to New York and back you find a change?—I cannot tell you in what time the change occurs, but I can say that I have constantly found in the regulations issued that such-and-such buoys are moved 100 fathoms further north, or 100 fathoms further west, and so on, and the lightship's head been moved very often; even the lights are altered now from what they were a few years ago; obstructions very often arise. For instance, within the last two years there was a vessel called the "Ocean Home" sunk on the bar; when one of our ships arrived, the captain was going to run her in; he missed the pilot at Point Linas, and got one at the Bell Buoy, and he thought he would be able to get in, having the mails on board; the pilot told him, "You cannot run in, there is a large ship sunk

Captain C. H. E. Judkins. 26 April 1870.

on the bar." This was a large vessel full of coal; it had sunk in consequence of a gale of wind having come on, and the steam-tug that was towing her not having the power to hold her, she lost her steerage way; the captain could have done nothing in that case.

1996. If he had no pilot on board he could not have avoided it?—No.

1997. Sir *Selwin-Ibbetson.*] He would have lost his vessel?—Yes.

1998. Mr. *Graves.*] You are aware that the masters of coasting-vessels and home-trade ships frequently become qualified for a pilot's license?—I know there is a rule regarding that, but I do not know whether they ever qualify.

1999. They have power to do it?—Yes.

2000. Would you extend that power to the masters of foreign-going vessels in a place like the Mersey?—I do not see how you are to make a pilot, unless you make him from an apprentice.

2001. Do you go against the whole principle?—I go against the whole principle; I say that you cannot make a pilot any more than you can make a seaman without you take him from the apprentice himself, and we shall make as poor pilots for the port of Liverpool as we have in the merchant service. A man and boy working seven years have an opportunity of sounding all the channels, and knowing the different qualities of the ground. The object of the master of a vessel going in and out is to go through the channel as quickly as possible, and he does not care to make any note of the channel so far as he gets safe through. I have seen several of the coasting steamers after a fog high and dry on the banks, in consequence of having had no pilots.

2002. As long as the master of a coasting steamer can see the landmarks and see the buoys, I presume you would consider him qualified to act as a pilot?—Yes; if he could see the buoys.

2003. But when he is unable in thick weather to see the buoys, he is unable to act as a pilot?—The atmosphere around the port of Liverpool is peculiar; you may have it beautiful and clear all overhead, and yet you may have a low haze so that you can discover no object through the haze; you will have a low haze so that you cannot pick out a church or a lighthouse, or any other object by day.

2004. Then where the master of a home trade vessel is unable to see the marks in that hazy weather, do you consider that his ship and the lives of those on board are as safe in his hands as they would be in the hands of a regular qualified licensed pilot?—No.

2005. Is there any port to which you have been in the habit of trading more dangerous in its navigation than the Mersey?—None whatever. I have been as a young man in former years in most of the ports that were in those days ports of note, such as Bombay, Calcutta, the American coast, Charlestown, and all those places; I consider Calcutta and Liverpool about equal.

2006. Would you consider them the two worst ports of any magnitude in the world?—Yes; for the last 30 years I have had nothing to do but with Halifax, Boston, Liverpool and New York.

2007. Do your complaints, with reference to the dangers of the navigation, refer to the outside portion of the Mersey or the inside, what we may call the harbour of the Mersey, or to both?—I think that we require a pilot from the moment we pass the north-west light ship until we get into our dock at Liverpool, or to our anchorage.

2008. Is there much skill required when you get inside the rock?—Yes, there would be if a strange master was going to his dock; it depends upon what dock he is going to; I know if I am going into the Canada Dock that I must run my ship stem on to the north pier, keeping way upon her; then I shall fetch the north pier without doing myself injury, and so get my rope on board; but if a stranger comes along and sheers his ship in a line with the pier there is a set of the tide there so strong that no hawser will hold the bow of the ship after she takes her sheer. In the inside part of the Mersey, along the dock walls, the tide is running down three-quarters of an hour before high water, but you find in the middle of the river that it is running up a strong flood; when a stranger would think he has got a flood tide along the wall of the dock, he would find that it was running a strong ebb, two or three knots an hour; it varies more or less with the wind.

2009. Are we to understand that the sets of the tides differ at the various docks?—The sets of the tides differ at the various docks; from some of the docks it will run from the Prince's pier right over to the Cheshire shore; from the Prince's pier and the St. George's Dock pier your ship will drift over towards Birkenhead, to Mr. Laird's dockyard; and so, higher up, you have the Pluckington Bank; that changes the tide again.

2010. Are the difficulties so great that they could not be overcome by any harbour regulations, or printed instructions?—I do not think that any instructions could be of any use; you have to act upon the moment; it is decision which makes you do your work perfectly. Sometimes, in going to my buoy, the tide will take hold of me, and no power on earth that I am master of will make me catch that buoy fairly; and at other times I can go to it and take it up as easily as possible; the tide will take hold of me at the stern, and the tide will take hold of me at the bow, the two opposites; and I twist round at the danger of fouling some other ship at anchor.

2011. Is it your opinion that vessels coming up without pilots, encountering those difficulties, would be more liable to meet with accident than if they were in charge of pilots?—There would be more risk in the Liverpool river than we have ever seen yet if there is not compulsory pilotage.

2012. *Chairman.*] That is if pilots are not employed?—If pilots are not employed.

2013. Mr. *Graves.*] Do you consider that the Liverpool system could be fairly maintained upon the voluntary principle, that is, making it optional with a shipowner to take a pilot or not?—No, I think not; I hear remarks made such as this, "Oh, if we get non-compulsory pilotage, you will get pilots down at the old Head of Kinsale; or you will get pilots off ——, and we do not want pilots there." For instance, many ships would not take them there; a sailing vessel would not want to take a man on board at Kinsale, to keep him three or four days before he arrives at the place where he is of any use.

2014. I speak now more with reference to the cost of maintaining the service; do you consider that the service could be kept up in its present high state of efficiency if the revenue was materially reduced?—No, I think not; I think that many masters of vessels, from the cupidity of their owners and from their owners finding fault with

with them for not taking the ships in themselves, would be induced to incur the risk of taking them in. They may get in two or three times successfully. I believe that, unless you make all ships pay, you cannot keep up the system that we have at present.

2015. I presume you would be of opinion that, where the service is maintained for the good of the whole community, it is not unreasonable that the whole community should contribute to it?—Yes.

2016. But you would not give to the masters the option of saying, "In fine weather we will not take a pilot, but in bad weather we will take a pilot"?—No; if pilots get into the habit of finding out that the vessels belonging to a certain firm never take pilots, when they see that vessel away to leeward they will not go down to her, and perhaps at that moment the men would give anything to have a pilot; they will say, "No, she is such-and-such a vessel, belonging to such-and-such a man, and never takes a pilot." In the same way at present, if they see a Glasgow boat coming up, no pilot goes to look for a Glasgow boat.

2017. Why?—Because those masters never navigate the boats in themselves. The Isle of Man boats, and such boats as those, I do not believe take pilots. They would not look for a boat coming from Beaumaris; they would not look after vessels of that class.

2018. It has been proposed to make up any deficiency of revenue that might occur by the reduction of the number of pilots; do you consider that a desirable mode of dealing with the pilotage service?—Certainly not. I do not suppose I exaggerate when I say that I have seen as many as 250 vessels arrive in Liverpool on one tide. After a strong spell of easterly winds, we get a south-west wind in the mouth of the channel, and the ships come up hand-over-hand; they come up so rapidly, that if you had not a sufficient number of pilots you could not give them each a pilot.

2019. So that, in order to have an efficient service to meet all the requirements of the trade of the port, it is necessary to keep the number up to the maximum of vessels that would come in in any one tide?—Yes. The number of vessels may have been reduced since steamers have so largely increased. When steam was in its infancy, I have seen 300 vessels leave the Mersey in one tide.

2020. *Chairman.*] But not lately?—Not lately, because I have not been so much at home as I used to be. I am only at home a week every voyage. I have a week in New York, and a week in Liverpool.

2021. Mr. *Graves.*] What is your practice with regard to the management of your vessel when a pilot comes on board; do you hand her over to him to give his orders as he likes?—No; I never considered a pilot as taking charge of my ship at all. All I do is to act as the master of the vessel, but he pilots. The duties of the master of a vessel and the question of pilotage are very different. A man comes to direct me, and show me the way through a narrow channel which I can have no knowledge of, because every time that I go up and down the channel it does not occupy me much more than 40 minutes. I know that my vessel has been taken safely through by the pilot, but what have I learnt of the channel? Nothing whatever, except I can see the marks put on each side of me and I can go through them; I can learn nothing of the channel.

2022. You would consider that a master is better acquainted with the peculiarities and capabilities of his vessel, and that under no circumstances should he ever part with the command of her?—My duty is to stand near my pilot in a steamship, and to see what he is doing, and when his orders are that the boat is to go slower or faster, or if he wants this thing done or that thing done, it is my duty to see it performed as readily and quickly as possible; my pilot never touches the engine, that is all done by me; and in all well-regulated ships, on going to a port or anywhere, the pilot never touches or has any control over the engine; he only asks me to do so-and-so.

2023. You have had great experience at Queenstown, have you not?—Yes.

2024. Are you aware that the system there is a voluntary one?—I believe so.

2025. Is it a difficult port to go in and out of?—Not as long as you can see we have our own pilots and men appointed by the Queenstown Commissioners, and we employ them ourselves; they are kept at the particular stations to wait for our boats, and we take them on board on our homeward passage. On landing the mails, I take a pilot on board, and that man comes up with my ship, say on a Friday, and goes down with our outgoing ship on the Tuesday, so that if it should be foggy so that the master would not know the headlands, though he may see the loom of the land, the pilot points them out to him, and if he does not know the exact position of the land the pilot would know it, and for that reason we carry him down to save our time, so to be in Queenstown to get the mails at the stated hours.

2026. So far as the mere navigation of Queenstown is concerned in fine weather, there is no difficulty in going in?—No, there is no bar there. I consider that at any harbour where there is no bar, a shipmaster may run in if he has been there before.

2027. Do the pilots there partake more of the fisherman class than the class of Liverpool pilots?—They are not of the same class as the Liverpool pilots by any means. In thick weather, when I have not taken hold of the lighthouse and have been in the proximity of the Dant Rock, I have taken a fisherman and trusted to him, and sheered in to get hold of the land. I look out and see white water breaking over a rock; he says, "That is Point So-and-so," Dog Nose, or something like that; I could not have told it but by that means; I have been able to get to the lighthouse and have got my tender alongside.

2028. Do you find the pilot boats off the harbour going from Liverpool to Queenstown?—They are generally cruising between the Dant Rock down to Kinsale, and even as far as Cape Clear.

2029. They have some large cutters and schooners in the service?—Yes.

2030. Are the cutters and schooners owned by the pilots themselves?—They are owned by Lloyd's agents, and so forth, different agencies, and they are sent out principally to intercept vessels that are coming home with cargoes, and which are making for the port of Queenstown for orders.

2031. Their business is not confined to mere pilotage?—No. Last summer I had a telegram sent after me by steamboat after I left Liverpool,

Captain *C. H. E. Judkins.*

26 April 1870.

to tell me not to attempt the harbour of Queenstown, it was so full of vessels waiting for orders that there was not anchorage for me. That was last summer. You may recollect the time: it was a very fine day on the Sunday, and that night the gale came on, and there were a number of wrecks in the channel.

2032. These pilot boats are for carrying out the private business of the owners, as well as for the pilotage service?—Yes.

2033. *Chairman.*] But mainly for pilotage?—They are sent out with these orders. They run after every vessel they see in the offing.

2034. Mr. *Graves.*] But a great number of these pilots have the mere ordinary four-oared boats?—The four-oared boats are all off the harbour; the limit of the pilotage of Queenstown extends a very short distance; you are outside the lighthouse, and the limits of the pilotage do not go so far as the Dant Rock; the Dant Rock is four miles.

2035. That is the limit?—That is not in the limits of the pilotage, it is outside the limits, and it is outside the port. That is the reason we cannot get a light placed upon it, because the Commissioners say that on that side it is out of their jurisdiction, and the Admiralty say that it is out of their jurisdiction, so that we have nothing but a buoy on it.

2036. Will you favour the Committee with an opinion as to how far the service which you have been describing as existing at Queenstown, would be suitable for Liverpool?—It would not answer at all. If you want to sacrifice life, take away the Liverpool pilots, and put it on the non-compulsory system, and then you will see what it will be; there will be more collisions taking place, and more accidents between the Bell Buoy of Liverpool, and the Rock Light than there ever has been known since Liverpool has been a port. When we are sailing through these channels, when you are surrounded by fleets of these vessels, the question arises, Which way is that fellow going to stand; is he going across the channel, or going to tack? Then the pilot knows how much you may sheer on one side to cross that vessel, but the master would not know it, nor cannot know it; he may know it theoretically, but not practically.

2037. You are so satisfied with the present system in Liverpool, that you do not see any way in which it could be improved?—In my experience, I can see no way. I would not change the system; you may improve upon it, but you must not alter the system.

2038. Is that the general opinion of the commanders of the Cunard service?—I think so.

2039. Mr. *Wykeham Martin.*] If one of these vessels whose owner never takes a pilot, were to put up a signal for a pilot, I suppose a pilot would go to him?—He may do so, but perhaps he would not go to it; if he could see another vessel that he was sure of, and it was a bigger one, he would go for the bigger ship.

2040. Could he do that under the present system?—No; by the present regulation every ship can be telegraphed to Liverpool from the moment she passes Point Linas, whether she has a pilot on board or not. Whenever a pilot boards a ship, he hoists the number of his boat under the English ensign, at the staff end or the gaff end, and that is kept flying past every station he may make, and you will find in the Liverpool Exchange a notice, "Scotia coming in, has got a pilot," or "Scotia coming in, has not got a pilot," and so on; and these pilots themselves can be told that a vessel is coming in and has not got a pilot.

2041. Colonel *Bourne.*] That is by signal?—Yes; they have the charts which are laid with squares, and they can tell you the number of the square on which an accident has occurred; on a certain square they will tell you that a vessel is sunk; they will telegraph that to a pilot though he has not been in Liverpool since the vessel was sunk there.

2042. He knows by that exactly where it is?—Yes.

2043. Mr. *Stevenson.*] I presume in any case, whether pilotage was made voluntary or not, you would always employ a pilot?—I would not take the risk myself of running a vessel into the Port of Liverpool, without a pilot on board, unless the weather was very fine, and it was the top of high water and I could see the mark on every buoy. In the 30 years of my experience in the Cunard service, there has only been one instance of one of our captains coming in without a pilot.

2044. I presume you do not stand alone in that understanding of your responsibility; most ship captains are of the same mind in that respect?—I cannot say what other people's minds are; that is my mind.

2045. You attach great importance to having a properly trained pilot service by means of apprenticeship?—Yes.

2046. You are aware that the Bill does not propose to discontinue or abolish that mode of training pilots?—I do not know it, but I think you cannot make a pilot unless you teach him when he is young, and not only that, after he is a pilot he has the different grades to go up before he can take hold of such a ship as mine. He is only allowed to pilot vessels of a certain size, after a number of years' experience, or when he has shown by his behaviour, that he is capable of doing.

2047. You did not advert to the circumstance that the simple alteration of pilots from compulsory pilots to voluntary pilots, does not imply any different mode of training pilots, or of regulating the pilotage service?—I do not think you could keep up the apprentice system unless you had somebody to take charge of the men, and show that they can be made pilots of. If you make it non-compulsory, I do not think that a man who is going out of the harbour of Liverpool to gain his livelihood by pilotage, unless you compel him to take apprentices, would do it; he does not want to keep a boy and teach him for seven years unless he is obliged to do so.

2048. You assume that there would be very little employment for pilots at the port of Liverpool if pilotage is made voluntary?—I know from my experience that some of us think that we are very clever men, and I think many men would be induced when they are young to take risks which they would not take when they were older; that for the mere *éclât* of running a vessel into Liverpool they would take the risk of trying it; and to gain the goodwill of their employer by saving the pilotage money, they would endeavour to run her in. I do not think that it should be left to the option of the captain of a ship upon the money question with the danger of sacrificing human life.

2049. According to that view you would disapprove of the exemptions from compulsory pilotage which now prevail; you would go back to the system of legalised compulsion, without any exemptions

exemptions whatever?—I should say so, for this reason. On looking over some reports, I have found that during the whole of last year there was only one ship lost going into the port of Liverpool with a pilot; there were 50 or 60 ships lost, of a smaller class, of the description you speak of, that tried to get in without pilots; they were composed of schooners, flats, and such like vessels. The greater number that tried to get in without pilots were lost.

2050. You would recommend that this Bill should go in the opposite direction, and go back to a system of universal compulsion?—I want the present system. I do not want to go back. I want it to be compulsory, and that all people should pay in order to support a sufficient number of pilots, and to keep up the class of men that we have at present in Liverpool. I have heard many people say that they are not so good as I represent, but I beg to differ from them as I have had a great deal of experience with them. It is very easy for the owner of a ship to say, if his ship has met with an accident, such as a bump against the pier head, that it is the stupidity of the pilot, and that he would have done better without the pilot. They are apt to say, "My master would have brought the ship alongside without doing that injury;" he cannot tell that till it is over; the tides take hold of your ship, and the owners do not know one-half of the anxiety that a man has who has got charge of a ship at those times.

2051. You advocate compulsion on the ground of security to life?—Yes.

2052. Life is as valuable on a small ship as it is on a large one, is it not?—Yes; but I do not think that the sailors on board small ships think so much of the risk to their own lives as a captain of a ship would think of the risk to those of whom he has got the charge in the shape of passengers. A sailor does not think of the danger he runs until he finds himself in it, and then he cannot help himself.

2053. I still gather from your evidence that it points to the restoration of a system of complete compulsion that all vessels, whatever their size, should be compelled to carry pilots?—I should say so, to keep up an efficient system.

2054. Are you aware that though this system of compulsion is abolished, the authorities who regulate the pilotage service would still have the same control as they have now to appoint the stations of the pilot vessels, and the same system of bye-laws and regulations as they have at present, because your evidence seems to assume that the pilotage system would come to an end?—It seems very strange, if you are going to compel a pilot to go out and not to compel me to take him. It is compulsory on the part of the pilot, but it is not compulsory upon me.

2055. That is the proposal of the Bill?—Yes; I do not think you can ever get the same class of men; you will never get men to go out the distances they do now. They say they will; but wait till the winter months and the bad weather come on, and we shall not find them very willing to do so then.

2056. They would hold their certificate to carry on the business of a pilot, upon the condition of their being upon the station where they are required?—A certificate is not a guarantee.

2057. Would you not have confidence in the persons who regulate the pilots for the port of Liverpool?—I have confidence in them, because I know that the pilot system at present in Liverpool cannot be better. I cannot conceive anything that you can improve upon in it. There are some little local matters, such as the paying and so forth, which I know nothing about, but with regard to the safety of life and property you cannot have a better pilotage than you have at the present moment.

2058. If this Bill were passed, this pilotage which you say is so efficient, would be worked by precisely the same men and administered by precisely the same authorities?—I question that; it would continue as long as these men will live; you must recollect that these men we have now are seven years apprentices; wait for seven years after you pass your Bill, and show me men as good as the present ones.

2059. Perhaps you are not aware that in districts where pilotage has always been voluntary, there has been no difficulty in obtaining a succession of apprentices?—I can speak of nothing more than the ports I am in the habit of sailing to for the last 30 years, namely, Liverpool, Queenstown, Boston, and New York.

2060. You mentioned a case which used to arise of a large fleet of vessels which have been windbound in the Channel arriving altogether?—Yes, coming up all on one tide.

2061. Does not the change of the trade from sail to steam, tend to diminish that accumulation of vessels?—The American War diminished a great many of our sailing ships from the port of Liverpool, and our docks that used to be crowded with American ships are not so crowded now.

2062. The trade is being carried on by steamers?—The trade to a certain extent is being carried on by steamers.

2063. The steamers do not arrive in fleets as the sailing ships used to do?—No.

2064. So that the necessity does not arise for keeping up a very large number of pilots to be in readiness to meet a great fleet?—I cannot tell what number of pilots you have got in Liverpool, but I can only say that I have never found the want of a pilot. I have always been able to find one in all weathers, and from what I have known of my younger days in sailing ships, it was just the same then as it is now.

2065. Do you think that it would ever be possible to keep up such a staff of pilots as would meet such an exceptional case as a large number of vessels arriving at one time?—Before steam was introduced I have seen vessels in Liverpool that could not go to sea for three months; they actually lay in the dock nearly three months. I can quote an instance of a vessel leaving the port of Liverpool, making her voyage to Jamaica, and coming back. Two ships of the same owner left the same day; one put back in a gale of wind; the captain of the other vessel persevered; he went down the North Channel, made his voyage to Jamaica, and came back loaded with sugar, and found his consort not able to get out.

2066. The introduction of steam will enable a single pilot to pilot more tonnage than he used to be able to do?—A single pilot pilots a 4,000 ton ship, whereas a sailing vessel is a much smaller vessel, so that that man is doing what, if the tonnage was divided, would have been done by four ships and would have required four pilots.

2067. That shows that the same number of pilots can do a larger amount of work; is the taking of a pilot upon entering the port of New York voluntary, or compulsory?—It is Compulsory; we are compelled to take a pilot.

2068. *Chairman.*]

Captain *C. H. E. Judkins.*

26 April 1870.

2068. *Chairman.*] You are compelled to pay?—Yes, if he speaks us.

2069. You may employ him or not, as you like?—No, we must take a pilot.

2070. Mr. *Price.*] I did not hear the first part of your evidence, but I understood you to say when I came in that it was absolutely necessary to have pilots for the safe navigation of the Mersey?—Yes.

2071. And that opinion is founded upon your long experience?—Yes.

2072. Nobody would doubt on such a matter as that, that you speak with the greatest possible authority, but you also said that, in your opinion, the voluntary system of pilotage could not be maintained in Liverpool?—I do not think that it could be maintained as it is at present so securely.

2073. Is that opinion also founded upon your own personal experience?—Yes.

2074. What experience have you had of voluntary pilotage?—We have never had such a thing as voluntary pilotage in Liverpool that I know of; I believe there are a certain class of vessels which are so small that they can come into the port of Liverpool without a pilot.

2075. That opinion, in point of fact, is not founded upon your own personal experience?—No, because we have always had compulsory pilotage.

2076. Therefore, you only know what prevails under one condition of things, but you do not know what will prevail under the other condition; that is a mere surmise?—No, we will not know till we try it.

2077. Are you aware that there are some places where voluntary pilotage has been tried?—Yes; but not such places as Liverpool, and not such navigation as the port of Liverpool. There is no other port round the whole coast of Great Britain so dangerous as Liverpool with the tide running in as does there.

2078. Are you at all acquainted with the navigation of the Bristol Channel?—I know the peculiarity of the tides; I have never been up it; I know the height and the rise and fall of the tide; it is very great there, but then the Bristol Channel is a very short channel, and in the Bristol river you have the land on each side of you; you cannot lose your landmarks.

2079. You say that you are aware of the peculiar nature of the tides in the Bristol Channel?—Yes, I know their peculiar nature from their rise.

2080. And the rapidity of the current?—Yes.

2081. Supposing you heard that in any part of that channel there had been the system of voluntary pilotage at work for some years, and that there had never been any scarcity of pilots, or any difficulty in obtaining accomplished pilots, would it at all modify your opinion?—I fancy that Bristol has nothing like the quantity of traffic we have at Liverpool; there is not the same number of vessels.

2082. Supposing in a channel where there was only a small trade there was always an ample supply of pilots, would not you say, *à fortiori*, that there would be an adequate supply in a channel where there was a very large trade?—It must depend upon whether the station at which you would be waiting for a pilot is a safe place or not; if the ports you allude to have entrances such as the Liverpool river, you would not have as many pilots outside waiting for vessels as at the present moment.

2083. You would have no objection to a system of voluntary pilotage, supposing you were confident in your own mind that you would find a pilot where you wanted him?—I do not think that you could keep up an efficient supply of pilots.

2084. It being done in other channels, and there being no great difficulty about it, I want you to show me what peculiarity there is in Liverpool, or in the people about Liverpool, or in the seafaring men of Liverpool, that should prevent them doing there what is done in other places?—In Liverpool we have a great many things by which people may obtain a living besides being a pilot, and therefore we should have a class of pilots in Liverpool who would be a very inferior set of men to the present ones; now they are brought up as pilots after being first apprentices.

2085. I hope you do not think that I am pressing you too much upon this point, but I am told that there are always as many first-class steamers going out of Liverpool as are wanted to carry passengers from there to New York?—No, we cannot get the steamers built fast enough now, we are waiting for vessels which are building in the Clyde to conduct the present emigration trade.

2086. We do not hear of many passengers who want to go to America not being able to go there because there is no shipping to take them?—They would rather have a greater choice.

2087. There is no difficulty in finding men to navigate the ships, is there?—No.

2088. Why should there be any difficulty in finding pilots to pilot them?—A pilot navigating a ship is totally different in point of principle altogether to the captain of a ship.

2089. You told us that in Queenstown there was a system of voluntary pilotage in force?—As far as I know; I never had to take pilots there, except those provided by our own company, and we have had a selection made of them by the harbour-master, and the commissioners, and the board of pilots in Queenstown; men are appointed, and those men are in our pay and at our stations waiting for our boats.

2090. You give a very good reason for keeping your own pilots there; but as you have been so frequently at Liverpool, do you know of any instances of other ships, not being of the Cunard line, who, going to Queenstown, could not avail themselves of pilots?—No; I know nothing of other ships; and you must remember this, that I have been carrying the mail, and my time in either port is very limited; I have only to go in and go out, and remain there only a few hours, therefore I can know nothing of the internal arrangements of the port at all, and on our homeward voyage we are only there 20 minutes; we put the mails in the boats and away we go; we do not go into the harbour in fine weather.

2091. Taking the whole tenour of your evidence it amounts to this, that you have had a large experience of the system of compulsory pilotage, and you are satisfied with that system?—Yes.

2092. You have not had a large experience of the system of voluntary pilotage at all, but you are somewhat afraid that it might not be equally successful?—Yes.

2093. But the one opinion is founded upon experience, and the other is not founded upon experience?—That is so.

2094. Sir *Selwin-Ibbetson.*] You said, in answer to

to the honourable Member for Gloucester, that your opinion as to the navigation of the Bristol Channel was not founded on experience, but your knowledge tells you, I believe, that the navigation of the Bristol Channel is not in the same way dangerous as the navigation of the entrance to the Mersey?—I do not think it is.

2095. When you have to navigate the entrance of a river where you can see the land on both sides in ordinary weather, it is not so dangerous as coming into a place where you are in the open for a long time?—No.

2096. Therefore, though the voluntary system may apply well to the Bristol Channel, it does not apply to the entrance of the Mersey?—No.

2097. You say you have never heard of any difficulty in finding pilots in entering the Mersey in all weathers?—I never have.

2098. And you attribute that to a certain extent to the security there is on both sides; the pilot knows that he must be taken?—Yes, the pilot knows that he must be taken.

2099. And the pilot is certain of employment in all weathers?—Yes, if he sees a ship he is certain of employment.

2100. Do you think that if there were a voluntary system in Liverpool, pilots would be induced to go out on a dangerous coast far enough to meet the requirements of the trade?—I do not think they would; I think they would find it so bad that they would run in for shelter.

2101. That is where it is only voluntary on the part of the master?—Yes; if they knew they were to get some recompense they would persevere.

2102. You think also, that by degrees, if the voluntary system were adopted, the efficiency of the pilots would fall off?—I think so. I think that the present training would cease.

2103. Under those circumstances, considering the dangerous navigation of the Mersey, a greater number of accidents might be looked for?—Yes, I am certain of that.

2104. Do you think that we might look to a large number of vessels risking the dangers of that navigation and going in without pilots, should their employment not be compulsory?—You would not find the masters in a company such as I serve going without a pilot, because the question of pilotage would be of no moment to them; but there are owners in Liverpool who would look nasty at their captains if they put them to the expense of pilotage.

2105. I think you said that the captains of the Beaumaris boats are in the habit of running into the Mersey without pilots?—Yes; I have been a passenger in the Beaumaris boat and I have never seen a pilot on board; they may have had a man who acted as a pilot, but not a Liverpool regulated pilot.

2106. Is it not frequently the case with those vessels which are making constant voyages that they have some sailor on board whom they would call a pilot?—Yes, such as you would have on board a yacht.

2107. Now, with regard to what you said about the pilot being your guide, though he does not take the responsibility, when you have a pilot on board you do not throw over the responsibility on to him?—No man takes the ship out of my hands till I return her to her owner.

2108. By standing by the pilot you carry out his wishes or orders?—Yes, anything he wants done I generally order myself or I pass it through my officers.

2109. Would you consider that you were justified in acting against the pilot's orders if, from the knowledge of your vessel, you thought it wrong to carry out his orders?—I should say to the pilot, "I think you are wrong;" but I would never take the responsibility off the pilot.

2110. Sir *John Hay.*] I think I understood you to say that there had been only one ship lost at Liverpool last year with a pilot on board, and that 59 or 60 had been lost which were without pilots?—Yes.

2111. Probably those ships which were lost without pilots were ships of a small size?—They were coasting vessels.

2112. And therefore, on the whole, they were ships which ought to have been more easily navigated in safety had they had the same appliances and skill?—Certainly; a small draught of water would require a greater space to navigate over.

2113. And a wider channel?—Yes.

2114. Therefore these vessels which were more easily navigated, were lost in consequence of the absence of a pilot?—Yes.

2115. And it is to be supposed that they would have been saved had the pilot been on board?—Yes.

2116. Looking to that fact, does it not seem to you reasonable to suppose that it would have been an advantage to the shipping of the country had these vessels been compelled to take a pilot?—It would have saved the loss of life; I look upon pilotage as much a question of saving life as anything else.

2117. You spoke of certain owners who might look nasty at their captains if they put them to the expenditure of a pilot, and did not themselves take the risk of running the ship in without the service of a pilot?—Yes.

2118. The owner in that case ordinarily has his own risk covered by marine insurance?—He could do it.

2119. And the probability is that he might do it?—Yes; if the captain said, "I can bring in my ship without a pilot," the owner, to sleep quietly and feel easy, might go and insure the vessel, no doubt.

2120. Therefore the owner has not the same pecuniary interest in the compulsory pilotage as the country has, and as the mariners who navigate their ships have?—No.

2121. Therefore, I think, on the whole, your argument would rather go to show that it would be desirable for the advantage and the safety of ships, and for the safety of life at sea, that pilotage should in all cases be compulsory?—Yes; that is my idea.

2122. When we have arrived at our age at sea we probably are more cautious and would be happy to employ a pilot?—Yes.

2123. But there are a number of men in our profession who, being younger or having less experience, have what we call a happy-go-lucky character, and who would naturally not care so much about taking pilots, and who would like the honour and credit of taking their ships in?—Yes.

2124. And yet knowing so well as you do the port of Liverpool, you conceive it to be quite impossible to anybody who is not devoting himself solely and entirely to pilotage to be a competent pilot for that port?—I have been going every five weeks for 30 years, or nearly so; I

Captain *C. H. E. Judkins.*

26 April 1870.

have had one or two stoppages. During the Crimean War I had a spell of staying on shore; but I have been going twice every five weeks on the service, and I know no more about the navigation of the channel of Liverpool than if I had never seen it, except this, that I see my buoys and my lightships as I pass them; I have stood by my pilot and acted under his orders, and have seen that everything he wanted to be done was promptly and strictly obeyed.

2125. And in the majority of cases the atmosphere is not so clear as to enable you to take advantage of that slight knowledge which you possess?—Certainly not; because the banks are so hazy, as every seafaring man knows, that it obstructs your knowledge of any marks which you might otherwise see; you cannot see the Lancashire shore, for instance. The pilot makes the Bell Buoy; he knows the tide, and he sings out, "Look out there, you will see a buoy on your starboard or port-bow immediately." That directs the attention of the men on the look-out, and so we know we are going on safely from his directions, and from his knowledge of how long or short a distance he has to go.

2126. You do not think it possible to suppose that competent pilots will devote themselves to so hazardous a life if their reward were to be precarious?—I do not think that they would; I think that a man has so many ways of getting a livelihood that he would not undertake the risk of a pilot if he could not make a handsome livelihood by it.

2127. For that reason, as well as the other reason you gave with reference to the loss of life and shipwreck, you think it desirable that pilotage should be compulsory?—As far as Liverpool goes, but I have nothing to say as to any other port; I came to give evidence with regard to the port of Liverpool.

2128. Arguing by analogy, I suppose, you would consider that what gave good and well-qualified and skilful pilots to Liverpool, would also give good and well-qualified and skilful pilots for the other ports?—Yes, and good pay.

2129. And certain employment?—Yes; in all cases I should say that certain employment is far better than chance employment, although for the time being you might get a little more; if we have non-compulsory pilotage we shall have ships driven down into the bay, and then the pilots will not go on board without they make a very good bargain, and it will almost amount to salvage.

2130. That is not the time you would desire to be making a bargain?—No.

2131. With reference to the responsibility of the captain and the pilot, I suppose that in a well-found ship, the regulation which obtains in the navy would obtain there. The regulation I refer to is this: "The captain is to order everything that relates to the navigating of the ship to be performed as the pilot shall require, but nevertheless he and the master are to attend particularly to his conduct, and if from his or the master's observations he shall have reason to believe the pilot not qualified to conduct the ship, or that he is running her into danger he is to remove him from his charge and to take such measures for the safety of the ship as circumstances may require, noting the time of the pilot's being so removed in the ship's log-book"?—That is precisely our system; throughout the Cunard service it is so.

2132. I suppose the only order the pilot gives, excepting through you or the officer of the watch, is the immediate order to the quartermaster to starboard or port. The order for the steering of the ship is given to the man in the immediate charge of the helm?—Yes; in our ships we have a telegraph from the bridge to the man at the wheel; an officer stands with the telegraph in his hand; the pilot says to him "starboard" or "port;" he signals the man, and it is immediately answered.

2133. That order does not pass through the captain?—No.

2134. But with reference to the speed of the ship, or with reference to the anchoring of the ship or the taking off canvas, that is done by the captain in consequence of the recommendation of the pilot?—Yes.

2135. Which is so far an order from the pilot that the captain takes considerable risk if he does not obey the instructions?—Yes, if the ship is coming up with a strong breeze from the westward, and the pilot knows he is too late to save his tide over the bar he gives his order to shorten sail, and the captain will see it done; it may be an order to tack off and on under a doubled-reefed topsail, or under reefed topsails, or fifty things of that kind; that is all done under the advice of the captain.

2136. We will assume a pilot not knowing a particular ship, and the captain seeing that she was uneasy under such low sail, or would carry such high sail, what would he do?—Then he would arrange with the pilot what was necessary for the safety of the ship.

2137. Therefore the captain does not give up his responsibility, but he takes a very serious responsibility if he goes against the opinion of the pilot?—Yes. Now, if you make it non-compulsory pilotage, I can give an instance where you have the danger at once. A captain comes up with his ship, and he does not care to have a pilot; the pilots will not go so far out as they do now. I will instance, for example, the case of the "Royal Charter;" if she had had a pilot on board, that ship would not have been lost if the captain had got his pilot at Point Linas, where he missed him in the fog, not being able to see the pilot boat near him; the moment the pilot got on board he would have said, "Captain, heave your ship about on the other tack," and he would not have driven ashore before he rounded the point. After he rounded the point, he tried to get a pilot at the next station, the gale increased, and he had not the power to get off.

2138. You think that under the non-compulsory system, there would be no pilot station at Point Linas?—Pilots would be allowed to go anywhere. We know the moment we pass the rock, two miles from the Skerries, we can haul up and run right into Point Linas, and if we do not fall in with a boarding boat, we meet a boat who will tell us where the boarding boat is, but with the mail boat I do not wait for the boarding boat; I mean by the boarding boat the boat on turn.

2139. I think you have already said that if pilotage becomes non-compulsory the apprentice system will drop altogether, and that lads will not be apprenticed?—Yes, I think that pilots will be induced to go to sea in small craft of their own, and I think they may be induced to get into steamboats, and get steamboats to put them on board a vessel.

2140. I think you mentioned Calcutta; are you aware

aware that the pilotage system there is arranged by the Indian Government?—Yes.

2141. And failing that there would be no pilots?—No, I know we have to pay very smartly for them too.

2142. In the event of pilotage becoming non-compulsory, would you think it fair to fix the pilot rates for the pilots?—I do not think it would be fair if you are going to make it compulsory on the one part, and not compulsory on the other; I do not think it fair to the men who are risking their lives, and trying to make a livelihood; if a man sees a ship in the offing, and he runs to leeward, and finds that the ship will not take a pilot, he has lost his time.

2143. And he has lost all the ships to windward of him?—Yes, which may be coming up behind.

2144. Looking at all the various points you think, on the whole, that compulsory pilotage is the best for the country?—For the Port of Liverpool decidedly so.

2145. Mr. *Hardy.*] There is another point concerned in this matter, you have stated clearly enough that in your opinion a captain having on board a pilot, is still responsible for the safety of his vessel?—While the pilot is navigating he has to execute the pilot's orders; in fact, on board my own vessel I am the pilot's chief mate for the time being.

2146. You would not be justified in seeing him run wilfully into any danger?—No, no more than I should see a man crossing the street with a cab running over him; I would pull him back.

2147. If that is the position a captain would occupy, do you think there would be any injustice in making the owner liable for any damage done by his ship in the way of collision, or anything of that kind?—That ought to fall on the insurance company. I have always considered the pilot the underwriter's servant coming on board my ship.

2148. If you think that the captain is still responsible to such an extent for the safety of the vessel, do not you think he would also be responsible for any collision the vessel made when the pilot was on board?—If the pilot gave the order, and it was acted upon, and it caused a collision, of course the captain would not be responsible.

2149. He is not, under the present law; but do you consider it unjust to make him so?—Decidedly so.

2150. No doubt, at present, if the pilot is on board, he would not be responsible for damage. Taking the view of the captain's responsibility which you have given us, do you think it would be any injustice to make the owner responsible in future?—I think it would be unjust.

2151. Have you any knowledge of the navigation of the Thames and the port of London?—None whatever.

2152. When you say that Liverpool is a most dangerous port, so far as you know, you have no experience of the Thames?—I have been up and down the Thames. I was once wrecked in Pevensey Bay, sailing out of the port of London; and I went out to the Cape of Good Hope after, and I never went to London again. In going into London my experience is, that you have anchorage, which we have not outside Liverpool; the moment we pass the Ness there are anchorages.

2153. But it is a dangerous navigation?—Yes; but not to the same extent as Liverpool, because from the safety of the anchorage in the Downs and such places.

2154. But there is a much longer pilotage navigation?—Yes, there is a longer navigation, of course. I recollect in my time we used to take first a river pilot, and then another man to take us up to the dock, and so forth; but I was only a young man then. We used to have a Gravesend pilot.

2155. Sir *John Hay.*] There is not such a risk of total loss?—There was not such a risk of total loss.

2156. Mr. *Charles Turner.*] I think your experience of the port of Liverpool has been very extensive; for nearly 30 years?—Over 30 years; it is my thirty-first birthday to-day of my connection with the port.

2157. During the whole of that time you have been in command?—Yes; except in one voyage. I made one voyage; I went to Halifax.

2158. Except when you were employed in the Black Sea and the Crimea, you have been in and out of the port of Liverpool twice in every five weeks?—Every five or six weeks.

2159. Has that lengthened experience of the port of Liverpool led you to believe that under a voluntary system the pilotage would not be maintained with the same efficiency as exists at present?—No; certainly not, in my opinion.

2160. Do you think that under the non-compulsory system any condition attached to a pilot's license would afford the same guarantee as exists at present to vessels wanting experienced pilots at all times and seasons?—Under the non-compulsory system we should not obtain it.

2161. You think that no conditions attached to a pilot's license would afford the guarantee which is afforded under the compulsory system?—No; for after all it is only a one-sided affair.

2162. Therefore, no condition attached to his license would afford a sufficient guarantee that the vessel would always find a pilot there?—That is my opinion.

2163. Supposing you had a great abundance of pilots, would you have the same confidence that the pilots would be efficient as you have at present?—No; from the very fact of there being different grades; it is like the mates of a ship; there is a third mate, a second mate, and a first mate; the lower mates are not supposed to be capable of doing what the chief mate can do; they are all rising. So it is with the pilots; there are four grades in the pilot service out of Liverpool now; there are three, at any rate; a man can only, after serving his apprenticeship, navigate a ship drawing a certain depth of water; after he shows, by experience, that he is capable, he is allowed to navigate a larger vessel, and will, therefore, earn more money.

2164. At last he arrives at the head of the pilot service?—Yes.

2165. In going into or out of the port of Liverpool, you meet with a great number of vessels?—A great number of vessels of all sizes and classes; the channel is very narrow.

2166. You have, therefore, great difficulty in avoiding collisions?—Yes; and if it was not that the pilots on board the ships going in and out know what each other are going to do there would be a greater chance of collision. The pilot can tell from the state of the tide, and how the tide is running in that particular part of the channel, what the other men will do; he says, "That man will tack before he goes over so far," or, "He will

Captain *C. H. E. Judkins.*

26 April 1870.

will stand across your bows"; and so on. Perhaps the captain of the ship, if he had no pilot with him, would keep on, and hug himself, so as to get in across a vessel's bows. He would say, "I have got him on my portside, and there I will keep him," and he might lose his ship in consequence.

2167. Not only the safety of your vessel, but of those vessels you meet in the Channel, depend in a considerable degree upon both having pilots?—Yes.

2168. If both your own vessel and those you meet have pilots, you think there is a great deal less risk of collision?—Yes.

2169. And which materially affects both life and property?—Yes.

2170. I think you said that the vessels which were lost last year carried no pilots, with the exception of the one which you mentioned?—That is so.

2171. Colonel *Bourne.*] You were asked by the honourable Member for Rye as to the difficulties of the Thames, and I believe you said you have not had much experience of it?—No.

2172. Do you consider yourself competent to give an opinion as to the relative danger between the Thames and the Mersey?—No; I can only do so by looking at the charts of the river. I have been to Portsmouth up the English Channel, and have looked at my chart all the way up.

2173. In the Thames you are almost always in sight of land, are you not?—I do not recollect; it is a long while since I was there.

2174. You are for many hours quite lost to land in the Mersey?—Yes; although the weather may be fine overhead.

2175. And although you are on the Liverpool pilotage cruising ground?—The great thing for us is to see the Point Linas, and take our departure from that and steer a straight course to the north-west lightship.

2176. You stated, in answer to the honourable Member for Stafford, that you would advocate the compulsory system of pilotage generally?—Yes.

2177. Do you mean that you would only advocate compulsory pilotage as regards the port of Liverpool?—Yes; you must bear in mind that I am only speaking of the port of Liverpool, and all that I state is with regard to what I have known since I have been out of that port.

2178. You speak with reference to the Mersey and the Liverpool pilotage district only?—We have got different tides to contend with; there is the tide into Beaumaris Bay and the Chester River, and as we go along the straight course we have all the sets of the tide to contend with before we get up to the lightship. When I have been navigating, according to the Admiralty regulations, at slow speed, I have suddenly found myself at the Nelson buoy, away down the River Ribble. The tide had taken such a strong hold upon me that, although my soundings and the depth of water corresponded with my right line for the Liverpool lightship, I found I was down at the Nelson buoy.

2179. Mr. *Grieve.*] You have been asked by several honourable Members as to the relative position of pilot and captain on board a ship?—Yes.

2180. I understood you to say that you never gave up the command of your ship to a pilot?—No; the pilotage of a ship is a different thing to the commanding of a ship.

2181. Supposing a pilot were to appoint a certain course for you to steer, and you thought that you would go on a bank, what would you do?—I would say to the pilot, "I think you are going too close to that."

2182. You would not absolutely take the ship out of his charge?—No; I have sometimes said to a pilot, you may go rather closer to a vessel at anchor in the river or you may not do so, or *vice versâ*; those are the remarks which pass between us.

2183. You referred to coasting steamers, such as the Glasgow steamers, coming in without pilots; are you not aware that the masters of those steamers, or some one on board, are licensed?—I am not aware that they are licensed; I know they can be licensed if they apply.

2184. Do you not think it is likely that they are licensed?—I think so; I know the advertisement says with or without pilots they go to sea.

2185. You said, in the early part of your examination, that in your experience Liverpool and Calcutta are the most difficult parts of access?—Yes; and the River Plate navigation is very difficult too.

2186. You also said that almost anyone could take a ship into Liverpool if they could see the marks?—If he could see the buoys as it is at present buoyed; still he would be at the risk of collision with another vessel; he would know his way in. There are two buoys laid down, and in ordinary weather he would know his way in.

2187. Do you know how many pilots there are in the port of Liverpool?—No.

2188. You said that you saw 300 sail leave the port in one day?—Yes.

2189. I presume there would not be a sufficient number of pilots in the port of Liverpool to pilot all those ships out?—No, but a number of them would be small coasters; I have seen 300 sail of vessels go out of Liverpool in one tide; I should say, looking at them from the pier, that there have been 300 sail, big and little, going out.

2190. *Chairman.*] That was 30 years ago?—It is less than 30 years ago.

2191. It is not common now?—No, as far as ships are concerned, we have not so many sailing ships coming to Liverpool; in the first place, the American War destroyed a great many of the sailing ships coming into the port.

2192. Mr. *Charles Turner.*] A great many more vessels take steam-tugs with them than used to do formerly?—Yes.

2193. Mr. *Grieve.*] You give your entire allegiance to the compulsory system?—Yes.

2194. You stated that under the non-compulsory system the pilots would not go out to the full extent?—No, I do not think a man would go to look for work where he would not get any.

2195. Would not his interest rather lead him to go out and watch?—No.

2196. Were not those 50 or 60 vessels which you referred to as being lost in consequence of having no pilots, against one which was lost with a pilot, all coasters?—I believe they were, but you will be able to get that from somebody better qualified to speak upon the subject; I said I had read it from the report.

2197. Are not these coasters generally considered very good pilots?—Some of them are very stupid ones, particularly the Welshmen.

2198. I suppose the Cunard Company, in employing special pilots at Queenstown, did so to facilitate

facilitate their own business by taking them up to Liverpool and bringing them back?—Yes.

2199. Sir *Charles Wingfield.*] Are you aware that in ports where the voluntary system prevails the supply of pilots is found to be abundant and efficient?—I have had nothing to do with ports where there is the voluntary system.

2200. Do you not think that the pilots are more likely to be efficient when their employment depends upon their competency than where an owner must employ them as now under the compulsory system?—No, I do not think so.

2201. You said just now, in reply to an honourable Member, that you think the liability of the owner of a vessel is not a sufficient safeguard for the security of life and property, because the owner can ensure himself against loss?—Yes.

2202. But if it were the belief that a vessel is endangered by going without a pilot would not the underwriters refuse to insure a vessel that did not employ a pilot?—No, you can insure anything.

2203. They would charge a higher rate?—Yes; a man sleeps quietly when he knows he is insured.

2204. Does it not imply a degree of moral depravity that we have no right to impute to any class, that they would decidedly imperil life to save a few pounds?—I cannot go into that question; I am sorry to think otherwise.

2205. You said that certain vessels, the steamers from Beaumaris and Glasgow, do not take pilots into the port of Liverpool?—I said I had been a passenger in them, and I have not seen a licensed pilot on board.

2206. Have you heard that these vessels meet with more accidents than other vessels that do take pilots?—I think I have heard of as many accidents with them as others; we have had collision cases with the coasting boats as often as with the foreign boats.

2207. But you have not heard that they meet with more accidents?—I do not say that they meet with more, but I have not an opportunity of hearing of every accident that they do meet with. I have heard of accidents, and the first intimation that I have received of them, is that we have been paying the damages caused by the collision with such and such a ship.

2208. You said you thought that a man could not become a good pilot without having served as an apprentice?—I do not think that you can make a perfect pilot or a perfect shipmaster, without you have brought them up to the sea as apprentices from their boyhood.

2209. You said you thought that Calcutta and Liverpool are the most difficult ports you know of?—Yes.

2210. Is it not the case that the Government pilotage service in Calcutta, under which lads were trained to be pilots, was discontinued 15 or 16 years ago, and that the certificates were given to such men as proved themselves to be competent under examination?—It is since my time; I have not been in Calcutta since 1834.

2211. That shows that it was not there thought necessary that men should be trained from their youth?—I do not know what kind of pilots they have. I dare say in Calcutta it is the same as it is with us, that they have more towing work to do now than they had formerly; but in my time, if you did not soap the palm of the pilot's hand, as soon as the sun went down your anchor would be dropped, and it would not rise again the next day, if the tide did not answer between sunrise and sunset: the captain of the ship had to do that to get his ship up quickly to Calcutta.

2212. Those men you speak of were the Government compulsory pilots?—Those were the men in those days. As soon as the sun went down, if you gave the pilot a good decent batta, he would work then for an hour or two, if it was moonlight, under canvass, and endeavour to get your ship up; whether the system has been altered now or not, I do not know.

2213. Being in the service of the Government, and bound to be employed, you were in his hands; you felt that he had you in his power?—The pilot regulations were that no ship was to be under weigh before sunrise and after sunset; you can conceive a tide being almost finished, and high water being almost at sunrise. At sunset you would have no tide at all to work, and the consequence is that rather than lift your anchor you would lie still.

2214. Those small vessels that you speak of that were lost in Liverpool, were sailing vessels, were they not?—I fancy some part were; I do not know for certainty; I only read it as a casual remark.

2215. I think you said in reply to the honourable Member for Stamford, that being small vessels, they ought to be more easily navigated than big ones?—Yes.

2216. But are sailing vessels more easily navigated than steamers up the Mersey?—No, not without they are in tow.

2217. *Chairman.*] You told us that all your vessels take pilots in going into Queenstown?—We always have them on board, and I have taken them when the weather has been so thick that the chances were I should not pick my own pilot boat. Our pilot boat is a six-oared boat, but there was a chance of missing it; therefore I would not pass the sailing pilot-boat outside. I therefore took a pilot on board, and then I had to take my own pilot afterwards.

2218. Where do you pick up your pilots inwards at Queenstown?—Our ships pick them up within a mile of the lighthouse, between the Dant Rock and the lighthouse; the fact is, they are living in houses nearly attached to the lighthouse; there is a row of houses on the beach, and when we are signalled from Bow Head round Cape Clear, the signal is sent forward by telegraph that we are coming in; they know then that in from four hours to four and a half hours we shall be off the port of Queenstown, and consequently they are looking out for us; should we come up without the signal being made to Queenstown, we signal as soon as we pass the Dant Rock; our signal is one blue light and three rockets, and these men, who know when to expect us, are on the look out, and put out to meet us.

2219. Are they exclusively employed by you?—They are exclusively employed by us.

2220. They are men who have been licensed by the pilotage authorities?—They are.

2221. Are they thoroughly competent men?—They are competent men as far as their harbour goes; they are not the educated men that our men are.

2222. Are they competent for the work for which you employ them?—Yes.

2223. You are not bound to employ them by law?—I do not know about that.

Captain *C. H. E. Judkins.*

26 April 1870.

2224. But you must know whether pilotage is compulsory at Cork or not?—I do not know; my owners authorise the pilot to be put on board the ship; they employ him and pay him.

2225. Have you never inquired whether pilotage is compulsory at Cork for the port of Queenstown?—No, I do not know.

2226. Should you be surprised to hear that it is quite voluntary?—I should be surprised to hear it.

2227. In point of fact your vessels have always taken pilots there?—Yes. All I know is this, that we take a pilot by the orders of our company, and that pilot has been selected by them.

2228. You do not know whether at law you are bound to take that pilot or no?—No.

2229. Looking at the nature of the port of Queenstown, do you think it would be right to make it compulsory upon the vessels going in to take pilots?—Where there is no bar there is no occasion.

2230. Is it advisable that vessels going into Queenstown should be bound to take pilots?—They should please themselves.

2231. In your opinion, is it desirable?—If I were going into the port of Queenstown and had no pilot on board, I should not want to take a pilot: the same with regard to going into the port of Halifax; I do not want a pilot.

2232. May I take it as your opinion that it is not advisable that vessels should be bound to take pilots going into Cork?—Whether it is desirable or not, I cannot say.

2233. I want your opinion about Queenstown; is it necessary as regards the question of safety?—It is not necessary.

2234. I presume you would say, that in all harbours where there are no bars, and where they are in the same condition as Queenstown, it is not desirable that pilotage should be compulsory; is that your opinion?—It is not necessary that they should take pilots.

2235. Do you think it is advisable that they should be compelled to take pilots?—No; I do not say one way or the other.

2236. In all ports in the same condition as Queenstown, you would think compulsory pilotage is not necessary?—I should say it is not necessary to have compulsory pilotage where it is quite free from danger; I can explain it better if you will allow me to mention the port of Halifax. The port of Halifax is upon the now compulsory system.

2237. Then you do not think it desirable that it should be compulsory?—To the last hour of my going there I never took a pilot.

2238. But you do take a pilot from the harbour of Queenstown?—Because my owners tell me to do so.

2239. Your owners think it desirable to employ a pilot from Queenstown?—Yes; in consequence of the number of fogs that prevail over the land. We are bound to be there at a certain time with the mail; if we were not tied to time we would stand out to sea again.

2240. That is the reason why you take a pilot at Queenstown, in consequence of the foggy nature of the atmosphere and the desirability of the ships being there up to time?—Yes.

2241. You do not think it necessary that other vessels, that are not bound to be so accurate as regards time, should be bound to take pilots?—They may please themselves about it.

2242. I ask whether, in all ports in the same condition as Queenstown, you think it might be left to the option of the owners or masters to take pilots or not?—Queenstown is very well buoyed; there are the buoys to guide them if they could see them.

2243. I speak of other ports in the same condition as Queenstown; there must be other ports as easy of access as Cork and Queenstown?—That I do not know.

2244. Then I presume you would say, as the difficulties of the navigation of Liverpool are so great, you think it an exceptional case?—As far as I know; I have not had any experience of any other harbours, never having been into them.

2245. You cannot therefore say whether the Thames is as difficult in the navigation as Liverpool?—No; the last time I left the Thames, we were standing our course down the channel, but we were hustled up into Pevensey Bay.

2246. You cannot give any opinion as to whether the danger in the Thames is less or equal to Liverpool?—No.

2247. You cannot form any opinion as to whether the Thames is as difficult as the Mersey or not?—I do not think it is as difficult from what I know of it, that is from reading the charts, because there are so many anchorages where ships can be brought up.

2248. You think Liverpool is an exceptional case?—Yes.

2249. And on that ground you think that the pilotage should be compulsory?—Therefore I think that the pilot should be able to make his livelihood, and I do not think he could do that without pilotage is made compulsory.

2250. You think that if pilotage is not compulsory, there would not be employment for the pilots, and there would not be a competent staff?—Yes; I have heard the shipowners in Liverpool argue with me, that the old shipmasters should be the pilots.

2251. What would you say if it were proved, in places where pilotage is voluntary, that there is an adequate staff?—If there is, I should say keep them there.

2252. In such a case would your opinion be at all altered as regards Liverpool?—I should want to know the ports and the localities.

2253. Take the Bristol Channel?—I know nothing about it except from looking at my chart.

2254. Supposing it were proved that the navigation in the upper part of the Bristol Channel is quite as difficult as in the Mersey, and notwithstanding that, there is a complete corps of pilots, and enough employment for them, would that alter your opinion as regards the Mersey?—The ports are very small that you refer to.

2255. Do you think there is any analogy between the Mersey and the Bristol Channel?—No.

2256. Supposing it were proved that the navigation of the Thames was quite as difficult as that of the Mersey, what would be your opinion?—I would not believe it without I had practical experience.

2257. No proof except personal experience would have any effect upon your mind?—No; I like personal experience best.

2258. Now, with regard to the relation of a pilot to the master of a vessel, I believe you stated you did not give up the command of your vessel?—Ever since I have been a shipmaster nobody has taken the charge out of my hands.

2259. But the pilot gives the word of command?

mand?—To starboard and port the helm; whenever he wants to take in the tospail, I do that.

2260. Supposing a collision is imminent, would you give a contrary word of command to that given by the pilot or not?—It would depend upon how you would apply the word "imminent." You may be such a distance away from the other vessel that you may consult the pilot and say, "You are doing wrong"; but if I saw a man was not competent, from drunkenness or anything of that sort, I should certainly take the command out of his hands; in cases of drunkenness, or for conduct proving that he was not fit to be there.

2261. But not otherwise?—No.

2262. Even if a collision was imminent?—No.

2263. I understood you to say, in answer to the honourable Member for Rye, that you did not think it would be right to throw the responsibility upon the owner for acts done through the negligence of the pilot?—No.

2264. That is the rule now in New York?—We know that we have to pay.

2265. Although the vessels have been under the charge of the pilots?—Yes.

2266. You think that is very unjust?—Yes.

2267. Therefore you do not think it desirable to alter the law as far as that is concerned?—No.

2268. You are aware that it is the practice of many captains entirely to give up the command of their vessels to the pilots?—Abuses will get into everything.

2269. Are you not aware that it is a very common practice to do it?—No; how can I be aware of that, when I have been 30 years in one service.

2270. You can only state your own practice?—Yes; I do not know whether our captains do it, but I know their orders are not to do it.

2271. Are you not aware that it is the practice of many captains to go below when the pilot comes on board?—It used formerly to be the practice when I was a young man.

2272. Do not you know that it is so now?—I do not know.

2273. You never inquired upon that point?—No.

2274. You do not know whether any changes have taken place in that respect?—No.

2275. That was the practice when you were young?—When I was young, captains from the port of London seldom joined their ships till they got down the river to Falmouth.

2276. You do not know, and have never inquired, what the practice is now?—No.

2277. Have you any reason to believe that it is changed?—I have no reason to trouble myself about it.

2278. Mr. *Pemberton.*] You said you thought that compulsory pilotage was desirable at Liverpool in consequence of the difficulties attending the navigation?—In order to let the pilots have the means of making a livelihood.

2279. Your opinion of the desirability of compulsory pilotage would be the same in every place where there is a bar or a difficulty?—Yes, where there is a bar harbour.

2280. When there is any difficulty relating to pilotage, you think it not only desirable, but necessary, that there should be compulsory pilotage?—Yes.

2281. When you say that in particular places you do not think it is necessary, you mean those places where there is no difficulty relating to pilotage?—When a man has arrived and cannot go in, the difficulty is very much less.

2282. When you said you thought in some places it was not necessary, you meant those places where there is no difficulty?—Where there is no bar.

2283. *Chairman.*] Then, in places in the condition of Queenstown, you would think it would not be necessary that pilotage should be compulsory?—It must depend upon whether the trade of the port will give the men enough to do to make a livelihood.

2284. Is that the test?—It depends upon whether there is enough of employment to make competent men go out and act as pilots; men of character and education.

2285. You see that they have found no diffi—culty in getting competent men in Queenstown? We have got competent men for their duty; there is no bar harbour to go into; you can go into Queenstown the same as you would walk down the street.

2286. It is a question of degree whether the pilotage should be compulsory or not; it depends upon whether the navigation is sufficiently difficult to require it?—At Queenstown I do not see the necessity.

2287. Mr. *Charles Turner.*] You were asked if it was not likely that if there was competition in pilots, it would make the men more competent to navigate vessels; supposing compulsory pilotage was abolished, and anybody might be a pilot who passed an examination, would it not make men more anxious to become efficient pilots?—I do not know how you could make them efficient pilots; it would make them theoretical pilots.

2288. As to efficiency, supposing compulsory pilotage to be abolished, and with the advantage which now exists, what guarantee would you have, supposing you took a pilot off Point Linas, as to his efficiency beyond the fact that he had passed an examination?—We have none whatever.

2289. You cannot choose your pilot when you come in; the master of a vessel coming in would not be able to elect one man and refuse another on the ground of efficiency, because he would be ignorant of the character of the man?—His certificate would be the only test; there are four grades of pilots.

2290. That is under the compulsory system?—Yes.

2291. Supposing the compulsory system were abolished, and you had nothing but the voluntary system, and with the voluntary system you have only the certificate of competency to guide you, do not you consider it is very possible that a man might get a certificate of competency without being what you would term an efficient pilot?—Yes.

2292. And you have no means of testing a man's competency when he boards your ship, except that he brings his certificate?—No.

2293. Therefore you might get a man who was an inefficient man, or a man who was a drunkard, or anybody else who had passed the examination?—Yes.

2294. You would not have the same safeguard from the surveillance of the Pilot Board over the conduct of the pilots?—No.

2295. Do not you know that that surveillance is of a very stringent description?—Yes.

2296. And if a man was to misbehave in any shape or way, you have to make your complaint

Captain *C. H. E. Judkins.*

26 April 1870.

before the Pilot Board, and that man is brought up and punished in some way or other?—Yes.

2297. *Chairman.*] Have you the choice of pilots in Liverpool?—We never had; we have our own pilots now, but only for this reason: three or four years ago, I pointed out to Mr. McIver the necessity of having our Liverpool pilots to meet us at Queenstown. Between Point Linas and the Skerries we fall in with a great number of ships of all classes making for the Point, and hauling up a course south-east or south south-east if they have passed the Athol Rock any distance, on purpose to get to Point Linas, the station of these boats: in very dangerous and dark foggy weather from these vessels lying to or making a tack, or making their evolutions in any way they may think proper, we have missed our tides repeatedly by having to stop ourselves to look for our pilot. If we put our pilot on board at Queenstown, we navigate the vessel safely, because we take a line of course outside the line these vessels take. If they are hauled up to Point Linas, we come in east-by-south half-south, but a long distance off the Point. These vessels are all in shore of us, and moreover we have a pilot with us; we can come over the bar and thereby save the ships being detained many hours outside.

2298. In consequence of your representation to the Cunard Company, they went to the Pilot Board, and asked for this special provision?—Yes.

2299. Was that a special exemption made in your favour?—I suppose it was.

2300. I think you stated it was very necessary that the stations for pilots should be kept up, and that they should not be allowed to go out to sea for a long distance to meet the special requirements of particular vessels?—Yes; but we were a consequential ship; we were bringing the mails over before the electric telegraph was established across the Atlantic.

2301. I thought you also stated to the Committee, that vessels would not want to carry their pilots to the coast of Ireland?—No, we do so to save the considerable expense of coal. If you take into consideration the quantity of coal a ship like mine consumes, if kept out 12 hours, you would find that the cost of taking a pilot is far less than that would be.

2302. But the employment of a pilot from Queenstown to Point Linas is voluntary?—He is not employed; he is on board to save us having to stop off Point Linas or any other point from there up to Liverpool to look for him.

2303. You have to pay him extra for that?—Yes; I do not know what bargain they have made with the man.

2304. Have you any reasonable doubt, supposing this Bill were to pass, and compulsory pilotage done away with, as to whether your company would employ pilots or no?—I think our company would always have pilots under any circumstances. The public know that everything is done combined with safety and speed to insure the safety and the lives of the people on board the ship; expense is not thought of.

2305. Are there several other lines of steamers running from Liverpool?—There are a few of them.

2306. Is it your opinion that all those vessels would employ pilots even though compulsory pilotage was abolished?—I do not know what they might do, but they do it now. We are getting so economical since you took away the subsidy from us, that we have to consider these questions.

2307. Do any of those vessels pick up their pilots in Ireland as you do?—The Inman line do, and I belive the National line do the same; all these boats that are carrying a great quantity of emigrants do so.

2308. You have expressed an opinion that your company would always take pilots, even if it were voluntary; do not you think that those companies would also do the same?—I do not know.

2309. You cannot form any opinion upon that?—No; I cannot answer that, because the boards of directors might find fault with the pilotage of their vessels.

2310. You have already told the Committee that your company take the pilots on board in Ireland though they are not bound to do so, and they have to pay for them; you told the Committee that the Inman Company and the National line of steamers take their pilots on board at Queenstown?—Yes; they make that their station for taking up a pilot for Liverpool so as not to stop the ship when she comes into the dangerous navigation off Point Linas.

2311. Do you also know whether the Inman line and the National line take pilots at Queenstown?—They go on the same rule as we do, and they did it before we did.

2312. Do not they take pilots specially for Queenstown?—That I do not know.

2313. Have you any reason to doubt that they do take pilots at Queenstown?—I do not know.

2314. In your opinion, would not those vessels take pilots voluntarily, even though compulsory pilotage is abolished?—That I cannot say.

2315. You cannot form any opinion on that?—No; I cannot say what any other company will do except my own.

2316. You have told the Committee that you think there would not be sufficient employment for pilots; is that on the ground that vessels would not employ pilots?—The number of vessels employing pilots is very small.

2317. You told the Committee that in the event of compulsory pilotage being abolished there would not be sufficient employment for the pilots?—Yes; because many of the small vessels would not employ pilots.

2318. Do you include in that opinion vessels of the class that I have been speaking of?—Not of those particular companies of which we have been speaking.

2319. You think that they would continue to take pilots?—I am sure that the Cunard service would.

2320. I talk of other companies?—I cannot form an opinion upon that. The other companies are managed by boards of directors. Our company is managed by a single individual, and we have only to go to him the same as a private merchant, and say we want a pilot, and we should get anything that we wanted.

2321. You have told the Committee that you believe that the employment of pilots will fall off in the event of compulsory pilotage being abolished?—Yes.

2322. And you say that a certain class of vessels will not employ pilots?—Yes.

2323. Now I want to know whether the Inman, the National, and the others, of which there are a great number running from Liverpool, would take pilots or not?—I cannot tell you what they will do. I can only tell you that I think our own company

company will never risk life and property for the sake of saving the payment of a pilot to go any distance.

2324. Mr. *Charles Turner.*] Do not those companies of which the Chairman speaks, employ a very small number of vessels compared with the whole number of vessels coming into the port of Liverpool?—Yes, they go in and out a great many times in the year, but they are a small number of vessels.

2325. Your vessels, though large in amount, comprise but a very small per-centage of the whole trade of Liverpool?—Yes.

2326. And therefore, when you say that if compulsory pilotage is abolished, the number of pilots will be diminished, you are speaking of its effect upon the general trade of the port?—Yes.

2327. Colonel *Bourne.*] And the taking of a pilot on board at Cork, is simply to save the danger of calling at Point Linas?—Yes; when we come past Ballycotton, the pilot can tell us, if he sees the water breaking on the rock, what rock it is. I could not do that; I know the loom of the land is there, but as to telling what land it is or not, it is impossible.

2328. Sir *John Hay.*] I want to ask you another question or two with reference to the explanation of the comparative responsibility of the captain and the pilot, so as to make it quite clear to the Committee. You stated that your pilot, who is shipped at Cork for the purpose of navigating with safety into the port of Liverpool, is taken on board in waters in which he has no charge?—He goes to his bed and sleeps till we get inside his pilotage waters.

2329. At what time do you consider that he begins to pilot the ship?—As soon as he passes Point Linas.

2330. As soon as you pass Point Linas, what change is made in the government of the ship?—The only change is this: if I have been up two or three days and nights in foggy weather, I may go down to wash and change my clothes, until I get to the North West Light; then I leave my mate in charge. Either myself or my mate are always alongside the pilot; my mate has been master of a trading vessel. Before he could qualify himself for mate, he must have been captain of a ship.

2331. You have special confidence in the pilot who is on board; you know him?—Yes.

2332. Supposing that you should receive on board at Point Linas a strange pilot in thick weather, of whom you had no special knowledge, would you at that time, if the weather was thick and dangerous, go down below to rest?—No, decidedly not.

2333. You would still remain on deck?—Yes. We have such a thing as a deviation of the compass to be applied to every course, and when the pilot says my course is to be steered east and by south-half-south, I say, "Pilot, you must steer south-east by east-half-east by that compass," and I see that it is carried out.

2334. Supposing that the pilot, instead of following your advice in that particular, were to deviate half a point on either side, what would be the consequence?—I would tell him he was wrong.

2335. Because he was not steering the course he intended to steer?—He was not making the course he intended to steer. Now, the pilots that we have coming up know from their own experience as well as I do, what deviation is wanted in each different ship; they know what course they took the "Scotia" up the last voyage, and they know that they will bring her up again this voyage in the same way, unless I give them some information that the deviation is altered.

2336. But the pilot has the right of selecting the course which the ship shall steer?—Yes; we know the course as well as he can tell us, because we have our charts, and from the constant going in and out it is like child's play to us.

2337. I want to put a case which may seem almost absurd to you; supposing the new pilot whom you shipped at Point Linas were to order you to steer full speed to the westward, you would then take away his charge?—I would ask him what he was doing that for, or I should otherwise think that the man was mad, and should supersede him; I should go on again and make for another station, and make another signal for another pilot.

2338. It remains with the captain of the ship to decide whether the deviation from that which he thinks is the proper course is reasonable or not?—Yes.

2339. If it seems to him to be unreasonable, he has then the power to take away the charge?—Yes; he would ask the pilot his reasons for taking that course, and if he could not give a sufficient reason, the captain of the ship has to make for another pilot-station, and pick up another pilot.

2340. Then the steerage of the ship, as far as the pilot is concerned, is only for the momentary alteration of the course either to avoid vessels or dangers momentarily imminent?—Yes.

2341. But he has not the power to take the ship in a direction contrary to that which the captain desires him?—No.

2342. But he has the full power to deviate from the course to avoid collision or grounding?—Yes.

2343. That would explain to the Committee the power of the pilot and the power of the captain; is not that so?—Yes.

2344. *Chairman.*] But, in your opinion, during that process, the owner is not responsible if the pilot is on board?—No, if the pilot has given the order, the owner is not responsible.

2345. When you stand by in the way you describe, and advise the pilot, you do not think the owner is responsible if the pilot follows your advice?—No; even then if the pilot thinks my advice good, I do not think when the pilot comes on board the ship for piloting, that the captain has any right to have the responsibility thrown upon his shoulders; the working and the safety of the ship is his only charge, but deviating this way or that way rests with the pilot.

2346. You think it unjust to the owners that they should be responsible for accidents caused by the conduct of the pilot?—Yes; I think that the underwriters are the people whom you should come upon.

Mr. Andrew Tucker Squarey, called in; and Examined.]

2347. Mr. *Graves.*] I believe you are Solicitor to the Mersey Docks and Harbour Board?—Yes.

2348. Before you took that appointment, had you much practice as solicitor in Liverpool?—I had been in practice for 20 years in Liverpool, and had had a good deal of mercantile and maritime

Mr. *A. T. Squarey.*
26 April 1870.

time practice, acting for a great many large steam companies, and other private shipowners.

2349. Would you state shortly to the Committee the history of the Liverpool pilotage, so far as the legal statutory obligations are concerned?—I find that the system of pilotage at Liverpool was originated in the year 1765, by the Act of Parliament of 6th Geo. 3. Before that time, there seems to have been no organised system of pilotage at all, no guild, or anything of that sort; but in 1765 this Act of Parliament was passed, and the preamble contains this recital: "Whereas the entrance into the port of Liverpool "is very dangerous without a skilful pilot, and "many ships and lives have of late years been lost "owing to the negligence and ignorance of persons "taking upon them to conduct ships and vessels "into and out of the said port, and the prices of "pilotage there are not at present settled by any "law or charter: And whereas a proper regulation "of the pilots at the said port, and the ascertaining "of their rates or prices would tend greatly to "promote and encourage trade and navigation, "and be of public utility." That Act of Parliament was passed in 1765, when the trade of the port of Liverpool was very small indeed compared with its present condition. Then there was another Act passed relating to pilotage in 1796, and the system of pilotage which was established by those two Acts was generally this. A body of commissioners was appointed, consisting of the Corporation of Liverpool, 29 merchants, and 26 mariners, and old commanders of vessels, and those commissioners appointed a committee of 13, who were renewed every three years. The first Act made pilotage compulsory upon all inward-bound vessels, but not on outward-bound vessels, and the compulsion was extended to outward-bound vessels by the Act of 1796. In the Act of 1796 there is the first indication of a superannuation fund, which is now called the pilotage annuity fund; it owes its origin to the Act of 1797. That system continued without any further change until 1824, when the old Act was repealed, and the new Act of the 5th Geo. 4, c. 73, was passed, which incorporated almost all the provisions of the former Acts, and introduced for the first time the system of the ownership of boats, which has remained in force ever since.

2350. *Chairman.*] Did that Act contain any regulations with regard to the ownership of boats?—The Act of 1824 did for the first time, but those regulations did not differ materially from those under which the present system works; they were re-incorporated in the Act of 1858.

2351. Mr. *Graves.*] When was the next change?—The next change took place in the year 1857. In 1856 there were Bills before Parliament with reference to the docks at Liverpool and Birkenhead. The Board of Trade at that time reported on those Bills, and they made these suggestions with reference to them; first they recommended the reorganisation of the Liverpool Dock Trust, so as to represent the whole trade of the Mersey on both sides, there being then docks both at Liverpool and Birkenhead; they recommended that the docks on both sides of the river should be transferred to a new trust, which they thought should be formed, and they suggested that the new Bill to be introduced in the following Session should contain provisions to enable Parliament to consider the propriety of vesting all duties connected with the conservancy, rates, and pilotage of the harbour in a new trust. Up to that time, the pilotage body had been perfectly distinct from the dock body in Liverpool.

2352. Were those suggestions carried out?—Those suggestions were carried out. In 1857 a Bill was introduced and passed, by which those objects which I have referred to were carried out; that was 20 & 21 Vict. c. 162; then in the following year, 1858, the new Dock Board, the present Mersey Docks and Harbour Board, which had been brought into existence by the Act of 1857, brought a Bill into Parliament for consolidating all the former Docks Acts and all the Acts relating to the new jurisdiction which had been conferred upon them, including the Pilotage Acts: and it is under that Act of 1858, that the present pilotage system is worked.

2353. The Mersey Dock Board is now the pilotage authority at Liverpool?—At Liverpool the Mersey Dock Board is the pilotage authority. The provisions of the Consolidation Act of 1858 conferred upon the Mersey Docks and Harbour Board the entire management of the pilots, their boats, and the pilots' annuity fund, but the pilotage system is worked by a committee appointed under the provisions of that Act. It is called the pilotage committee. It is appointed annually by the dock board, and it consists of 12 members; four of them are required by the Act of Parliament to be persons who are not members of the board, but who are familiar with the duties and qualifications of pilots, and the other eight members, making up the 12, are selected from the members of the Dock Board.

2354. The object of the Legislature was to enable the Dock Board to bring in four outside members experienced in navigation and in the duties of pilots?—Yes; it appears so from the language of the Act of Parliament, because it expressly provides that they are to be persons who are familiar with the duties and qualifications of pilots.

2355. Has it been acted upon in the selection of those four members since that time?—Always; I believe that they have always been, for the most part, retired ship masters, or men who have been very conversant with pilotage and shipping matters.

2356. Are the proceedings of that committee subject to the control of the Mersey Dock and Harbour Board?—Yes; the committee sits once a week, and its proceedings are brought up weekly for confirmation at the meetings of the board.

2257. The Act of 1858 gave power to the Dock Board to make bye-laws for the government of the pilots?—Yes; with the sanction of the Board of Trade, bye-laws have been made, which have been in existence for some years past for the regulation of pilotage matters.

2358. No change can be made in the pilotage regulations at the port of Liverpool, except subject to the approval of the Board of Trade?—No; everything must be sanctioned by the Board of Trade.

2359. Then, with regard to the examination of pilots, how is that conducted?—The examination of pilots is conducted under the instructions of the pilotage committee, and it is conducted by what is called the examination committee; that is a sub-committee of the pilotage committee, and associated with them are Captain Hills, the marine surveyor of the port, and Mr. Simpson, the pilotage superintendent.

2360. And to that pilotage committee all complaints are made of every character connected with

with pilotage?—Yes, whenever there are any complaints made with regard to the conduct of the pilots they are at once investigated and decided by the pilotage committee.

2361. It would appear from the statement which you have just made that the pilotage system of Liverpool is entirely the creation of Parliament?—Wholly; there is no trace of any pilotage system existing before that.

2362. With reference to the financial operations of the Dock Board and the pilots of Liverpool, do the Dock Board receive any monies in connection with fines or licenses?—I will explain how that stands. The Dock Board receive all the money which arises from licenses granted to pilots and licenses to boats. The board also receive all monies arising from fines for the infraction of the bye-laws, for instance. But the whole of the pilotage money itself, that is the pilotage rates which are paid for piloting, is received by Mr. Leece, who is the treasurer appointed by the pilots themselves, the board having nothing whatever to do with that money or the collection or the distribution of it; all that is done by the treasurer under the direction of the pilots themselves. The treasurer pays over to the board for the Pilotage Annuity Fund a per-centage of 1½ per cent. under the terms of the Act of Parliament on all the pilotage rates collected by him. That is all that the board gets. The rest of the money is received and distributed among the boats, and the pilots who are entitled to it by the treasurer under their direction.

2363. Will you explain to the Committee the distribution of that 1½ per cent., and also the money received for fines, forfeiture, and licenses?—I am speaking now of the provisions of the Act of Parliament. The license fees are charged in the first instance with the cost of managing the pilot system in Liverpool; that is the office expenses, and salaries of superintendents, and charges such as those. Then out of the license fees they pay rewards which the committee have power by the Act of Parliament to grant to meritorious pilots. The maximum amount to be given in any one year is 50*l.*, in sums not exceeding 10*l.* each; then the balance of the license fees goes to the pilotage annuity fund. Then we come to the monies received by the board for fines and penalties of which I have spoken. Those fines and penalties are chargeable in the first instance with any relief the board may think proper to give to distressed pilots and their families who do not come within the legal scope of the pilotage annuity fund; and if there is any surplus arising from the fines after granting such relief, that surplus also goes to the pilotage annuity fund.

2364. So that all the monies which are in any way connected with the pilotage system in Liverpool are disbursed again in the pilotage system of Liverpool?—Yes. The per-centage under the Act of Parliament is 1½ per cent., but, I believe, by an arrangement among the pilots, they add another 1 per cent. to it, voluntarily.

2365. Probably we shall have more details of that from others?—Yes; from the pilotage superintendent. With regard to the annuity fund, I may state how that is applied. This pilotage annuity fund, which is disposed of by the board, is applicable in this way. First of all, in payment, as long as the board may think fit of annuities and allowances, which were granted under the Act of 1824, and which are still subsisting. I believe there are a few, but not many in that category. Next in payment of annuities or weekly or other allowances to the following persons: pilots who, having attained the age of 50, and served 20 years as pilots, retire from the service; pilots incapacitated by infirmity, sickness, or accident, irrespective of age or length of service; and, thirdly, to the widows and children of deceased pilots. The fund is applied strictly in that manner.

2366. *Chairman.*] Is there any fixed annuity to the pilots, or does it depend upon the state of the funds?—It depends upon the fund and the option of the board also.

2367. Mr. *Graves.*] Now will you explain to the Committee the system on which the boats are owned so far as Parliamentary powers are concerned?—I have stated already to the Committee that that system commenced with the Act of Parliament of 1824. I do not know what system prevailed before that time, but from such information as I have been enabled to get from old pilots about it, it seems that practically the boats were, prior to that time, held by pilots as a matter of voluntary arrangement; there was no law upon the subject; but the present provisions, in relation to the ownership of boats which are found in the Consolidation Act of 1858 are these: The board are authorised to license boats to be used by the pilots, and the pilots are prohibited from using any except those licensed boats. Then as to the ownership of boats, the Act provides that none but licensed pilots shall hold shares in those boats, except temporarily, pending a sale which has become necessary from the death of the owner, or from the owner ceasing to be a pilot. When any holder of a share, who is a pilot, dies, or ceases to be a pilot, the Act provides that the shares are to be sold by his representatives within 12 months to some other licensed pilot; but if the parties do not voluntarily effect the sale within 12 months, then the board have power to direct that the shares shall be put up for sale by auction, at a price which they themselves are authorised by the Act to fix; that is, if the executors neglect to sell within 12 months.

2368. *Chairman.*] But they are only to sell to pilots?—They are only to sell to pilots under any circumstances; and the same restriction applies to a sale by auction held under the sanction of the board; none but pilots are to buy. Then the Act provides that in fixing the value of the shares the board is to consider the intrinsic worth of the shares according to the then condition of the boat, and then they are to add such a sum as they think fit, as a reasonable compensation for the privilege of the boat. That is provided by the 158th section of the Act of 1858. Then, supposing that at the sale by auction no licensed pilot is prepared to give the price the board have fixed as the value of the share, the board is then authorised to allow the representatives of the deceased pilot to hold the shares for a further period; they may continue this license from time to time, but it is requisite that once in every year the attempt to sell by auction shall again be made at a new valuation to be fixed by the board prior to the share being put up for sale again.

2369. Is there any limit as to the time in which the executors are allowed to hold?—There is no limit as to time; they may hold for any time, subject to the sanction of the board, and subject to an annual offer of sale by auction.

Mr. *A. T. Squarey.*

26 April 1870.

2370. Mr. *Graves.*] Then the pilots, apparently, have no control over the disposal of the shares of the boats?—They may sell to other licensed pilots as they think proper.

2371. Has the committee to approve of every sale?—I think not, provided it be made to a licensed pilot.

2372. Is there any limitation as to the number of shares a pilot may own?—I think not.

2373. Can you speak with regard to the difference between the actual value of boats as simple vessels, and the actual value as representing the capital of the pilots?—The superintendent of pilotage will be more competent to speak to the details of that; I confine myself to the legal effect of the Act of Parliament.

2374. In the course of your former practice at Liverpool, I believe you have had great opportunity of judging of the working of the pilot system of the country generally?—Yes; I was concerned in a great many collision and salvage cases, which of course led me to consider the question of pilotage a great deal.

2375. You have looked at it in all its larger aspects, not merely as affecting the Mersey?—I have tried to do so.

2376. Do you yourself see any way in which an improvement of the present law might be made with any advantage?—Yes, I think there is one improvement which might be made with great advantage, and that is the abolition of the provision which now protects owners from liability for accidents which occur when their vessels are in the charge of pilots; I think that might well be done away with.

2377. *Chairman.*] I presume you consider it would not be sufficient simply to repeal that provision, but it would be necessary to make some substantive law upon the subject?—Yes; because that provision, although it is now a statutory provision, is based upon the common law rule which existed before this statutory provision.

2378. Mr. *Graves.*] Would you give your reasons for that opinion?—I think, in my experience, it operates badly in this way: a pilot in many cases is certainly placed in charge of the navigation of the ship, in a sense different from that in which I have heard it explained by Captain Judkins this morning. When a pilot takes charge of a vessel in many cases the captain at once abrogates his authority, and the whole matter is left in the pilot's hands.

2379. That you would desire to alter?—I think it might be altered with advantage, because, as a rule, I do not think the pilot is so competent a person to navigate a ship generally as the master of the ship; and that applies particularly in the case of steamers, and more particularly in the case of the deviation of the compasses to which Captain Judkins referred just now. It appears to me that the proper function of a pilot is to supply accurate local information to the master of the vessel, which will enable him to take his ship safely through the peculiar dangers, in respect of which the pilot's knowledge is wanted.

2380. In fact, to act as an adviser?—To act as an adviser, certainly; I am quite aware that by the rule of law at the present time the master is bound to interfere if he sees the pilot doing that which is manifestly wrong and improper; but it has been found so difficult, even in the courts of justice, to draw the line as to where the duties of the pilot end and where the duties of the master begin, that it is not at all wonderful that masters very frequently abstain from interfering, and are prevented from interfering by the dread of incurring responsibility if they in any way interfere with what they consider to be the pilot's office.

2381. *Chairman.*] Has there been any decision to the effect that the captain is bound to interfere?—Yes; it has been laid down in many cases that the captain is bound to interfere, when the pilot is doing that which is manifestly and grossly improper.

2382. Not where he has any discretion in the matter?—No, in every case it is a matter of opinion; it is impossible to lay down any distinct rule upon the subject.

2383. Mr. *Graves.*] Is it your experience that accidents have not unfrequently occurred, in consequence of the reluctance of the master to interfere with the pilot?—Yes, I have often had the impression, in collision cases more particularly, that if the master of the ship, particularly in the case of steamers, had been in charge at the time, and had done what his judgment dictated as the right thing to do, probably collision would have been avoided.

2384. Do you see any difficulty in carrying out such an improvement of the law as would make the pilot the adviser of the captain, and leave the liability resting upon the owner?—No, I do not. I have considered that, but I do not think there would be any real difficulty about it. I have endeavoured to get some information with regard to the rule which prevails in foreign countries upon the subject, and so far as my information extends, England is almost peculiar in this respect.

2385. Is that with reference to the functions of the pilot or with reference to his liability?—Both with reference to the functions of the pilot, and with reference to the immunity which his presence affords to the owner of the vessel in case of accident.

2386. Which countries do you allude to more particularly?—I have made inquiries about the North German and Baltic ports, and the Spanish and Italian ports, and I find that in all those places there is a system of compulsory pilotage which I will explain presently, but I do not find that the presence of a pilot protects the owner from liability according to the law of those countries. At New York that certainly is so; there is a compulsory system of pilotage at New York, just as ours is compulsory, in this sense, that if a captain declines to take a pilot, he is bound to pay pilotage.

2387. *Chairman.*] He is not bound actually to take a pilot?—No.

2388. But he is bound in the terms of the Bill of last year, either to pay or to employ?—Yes; I will read a passage on this subject from this book of Parsons on Maritime Law; it is a great authority in the United States, "No vessel is bound to "take on board a pilot, either going in or coming "out of a harbour, but if a pilot offers and is "ready, the ship must pay pilotage fees whether "he is taken on board or not." That is similar to what we call the compulsory pilotage system here. I also find in the book of Mr. Parsons (this edition is dated 1859) this passage: "While "a pilot is on board (unless with the exception "arising from extreme distance), he has the "absolute and exclusive control in the absence "of the master, nor is the master liable for any "accident which may then happen. How it is "when

" when the master is present, may not be so " certain; so far, however as we can gather the " law from books or from practice, we should say " that the pilot has the control of the ship as he " stands on the deck; but no such absolute control " is wholly to supersede the master; for it remains " in the master's power, and it is his duty to " observe the pilot, and in a case of obvious and " certain disability, or dangerous ignorance or " mistake, to disobey him and dispossess him of " his authority." At that time it seemed to be uncertain, according to the American law, whether the presence of a pilot protected the owner from liability. But there has been a case recently decided in the Supreme Court of the United States (which is a court of great authority upon legal matters), the case of the " China," one of the Cunard steamers which ran down a vessel lately in New York Harbour, being at the time in the charge of a pilot taken compulsorily, and it being quite clear that the accident was due entirely to the pilot's mismanagement, in which it was held that the owners were liable, notwithstanding the vessel was in charge of the pilot.

2389. Mr. *Graves.*] Would you regard that decision in settling a question in New York?—Finally; it must settle it in New York and throughout the United States.

2390. It would be regarded as a precedent?—Yes.

2391. *Chairman.*] It is only decided with respect to the law in New York?—It applies to the law of New York; but the other State laws in reference to pilotage are very similar in their terms to the law of New York; no doubt the same principle would be applicable in all cases.

2392. Mr. *Graves.*] It will guide all future ruling that the liability of the owner is perfectly consistent with the compulsory system?—Yes. Then there is another case to which I may call the attention of the Committee shortly, which I think illustrates this matter rather forcibly. This is a case which occurred in our own Court of Admiralty. It is the case of the steamer " Halley." It seems that by the Belgian law vessels are bound to take pilots or to pay for them; it is compulsory in that respect. The screw steamer " Halley " was going up the Scheldt in charge of a pilot, and in Belgian waters she ran into a Norwegian vessel called the " Napoleon." By the Belgian law the " Halley " was obliged to employ a pilot or pay a pilot; but the Belgian law also provides that the owners are not protected from liability by having a pilot on board. This accident happened, and for some reason or other, the " Halley " was allowed to leave the Belgian port without being interfered with, and she came here. Here the " Napoleon " followed her and brought an action in our Court of Admiralty. The " Halley " pleaded the Belgian law that she was compelled to take a pilot; and therefore by the English law having a pilot she was discharged from liability, but Dr. Phillimore, the present judge of the Court of Admiralty, decided that the Belgian law must apply in both respects. He said, " If you plead the Belgian law to show " that you are bound to take a pilot, you must also " adopt the Belgian law which says a pilot is not to " protect you." Therefore, he ruled that the owners of the " Halley " were liable. That is reported in the second volume of Law Reports, Admiralty and Ecclesiastical Cases.

2393. *Chairman.*] He made some very strong remarks upon our law?—Yes; I will refer you to two or three passages in the judgment which bear very strongly upon the law in this matter. Sir Robert Phillimore says in this case, " I will frankly say " that it appears to me the difficulty is to reconcile " the claims of natural justice with the law which " exempts the owner, who has a licensed pilot on " board, from all liability for the injuries done, by " the bad navigation of his ship, to the property " of an innocent owner. *Obligatio* is (according " to the admirable definition of the Institutes) " '*vinculum juris quo necessitate astringimur alicujus " rei solvendæ*;' it is '*lien de droit*,' as the French " say. No one acquainted with the working of " this law, which exempts the wrong-doing vessel " from liability in this court, can be ignorant that " it is fruitful in injustice. On the one hand, the " master is tempted to abstain from all control over " his vessel, lest he should afford grounds for the " argument that by interference with the pilot he " has deprived himself of the legal immunity which " he would otherwise enjoy. On the other hand, " it is obvious that great inducements may be " offered to the pilot to shield the incapacity or " mismanagement of the master and his officers " by taking all the blame upon himself. It is true " that by so doing he may subject himself to " censures and punishment from the Trinity " House. Certainly, in cases where the evidence " clearly established very gross negligence, or " want of skill on his part, such would be the result; " but the greater number of cases are not of this " extreme description. It is impossible to doubt " that an owner, who, as in a recent case before " me, would, but for the fact of having a licensed " pilot on board, have been compelled to pay per- " haps 25,000 *l.* to the ship which he had sunk, " lies under a very strong temptation to take " whatever measures may be requisite for ob- " taining the two necessary statements of the " pilot, namely, first, that he alone had the " management of the vessel, and, secondly, that " his orders were obeyed; the two stereotyped " questions necessarily and invariably put to the " pilot by those who conduct the defence of the " wrong-doing vessel." Every word of that paragraph is founded on fact, and I can testify to it from experience. These things have constantly arisen. There is a great temptation to induce a pilot to take the blame upon himself where blame is not due to him.

2394. That is the result of your experience?—That is the result of my experience. Then he goes on: " I cannot help thinking that the doc- " trine so clearly explained by Lord Cranworth " in Reedie *v.* London and North Western Rail- " way, of the owner being responsible only for " the acts of his own servant, has been some- " what strained in its application to the case of " the licensed pilot. I do not quite understand " why, because the state insists, on the one hand, " upon all persons who exercise the office of pilot " within certain districts, being duly educated " for the purpose, and having a certificate of their " fitness, and insists, on the other hand, that the " master shall within these districts take one of " these persons on board to superintend the " steering of his vessel, the usual relation of " owner and servant is to be entirely at an end; " and still less do I see why the sufferer is to be " deprived of all practical redress for injuries " inflicted upon him by the ship which such a " pilot navigates. If compulsory pilotage be at " all expedient, a question open to very con- " siderable doubt, it seems to me more just that " the

Mr A. T. Squarey. 26 April 1870.

"the master of the wrong-doing ship should be "left to his action against the pilot who has badly "navigated her, than that the owner of the in- "jured ship should be placed in that predicament. "I incline to the opinion that the Belgian law, "as it appears in these pleadings, is more con- "sonant with natural justice than our own on this "subject." The end of the case was that it went to the Judicial Committee of the Privy Council, and there the Lords of the Privy Council on the same facts, considered that the law of England must be applied to the case. They ruled that the *lex fori* was applicable to the case, and therefore they held that the owners of the "Halley" were discharged.

2395. Mr. *Graves.*] I presume it is your impression, that very great injustice is occasioned between owner and owner by the present immunity?—I think it is so frequently; but if the rule were abrogated, it would not make much difference in the end. I may have a ship in collision to-day, and I am protected by my pilot; the case may be reversed to-morrow.

2396. Placing the liability upon the owner is not a fresh obligation or a fresh liability placed upon the shipowners as a class?—Not as a class; it is merely perhaps shifting it to that person who ought really to bear it rather than the other.

2397. Independently of all questions of pilotage, does your experience lead you to think that such a change would remove many of the existing anomalies, and bring the law to a more satisfactory state than it is in at present?—I think it would have this effect amongst others; if that rule were abrogated, we should find a great many more masters and mates of coasting vessels which are now subject to pilotage, applying to be examined in order to get pilot licenses themselves. I think it is the existence of that rule to a very great extent which prevents the provisions of the Merchant Shipping Act of 1854 being carried out.

2398. Do you yourself attach much importance to the fact that under the compulsory system of pilotage the pilot is not a servant of the owner, and that therefore the owner should be free from liability because the pilot is forced upon him?—I do not, and for this reason; I think it is incorrect to say that a pilot is forced upon him. The law of compulsory pilotage as it stands amounts to this: in those ports where it is found necessary or desirable to maintain a regular pilotage system, every ship which has the opportunity of taking a pilot coming in or going out of port is bound to contribute to that pilotage fund. The compulsion is not to take a pilot. I am not aware of any law that makes it obligatory upon the master of a vessel to receive a pilot on board; but what it does is this, it gives him the option of taking a pilot, and if he declines to take one it compels him to pay the pilotage.

2399. Have you read over the Paper connected with the loss of the "Spindrift"?—Yes.

2400. There is in the concluding portion of the letter, which has been addressed by the secretary at Lloyd's to the Board of Trade, this paragraph: "In conclusion, my committee desire me to say that the whole of the facts brought out in this case confirm them in the opinion which they have entertained for some time, that the period has arrived for the abolition of compulsory pilotage, and that the Acts of Parliament by which a captain is compelled in certain waters to hand over the charge of his ship to a pilot, and permitted to throw off all responsibility for her safety, should be repealed." Are you aware of any such Act in existence as is alluded to in this letter?—No; so far as I am aware there is no such Act.

2401. Mr. *Martin.*] The judgment of the Privy Council which you have just read almost amounts to that?—The decision of the Privy Council turned upon the question whether the law of Belgium or the law of England was applicable to that particular case.

2402. *Chairman.*] You spoke of "compulsory payment" and "compulsory employment" being almost correlative terms?—They have been so considered hitherto.

2403. I understood you to say so yourself?—No; I venture to entertain a different opinion upon that subject.

2404. Mr. *Graves.*] Then the suggestion of Lloyd's, that the system of compulsory pilotage should be changed, is founded entirely upon wrong premises?—So far as stated in that paragraph, it is certainly founded upon wrong premises.

2405. *Chairman.*] In many cases the penalty is much higher than the pilotage rate?—Yes, in some cases it is.

2406. So that there is a very strong inducement, much more than the pilot rate, to employ a pilot?—That is so in some cases.

2407. Do not you think, when the employment is enforced by a penalty of that kind, it becomes compulsion?—Practically it may become compulsion.

2408. It would not be so where the fines are the same amount as the pilotage rate, but when they are more than that it amounts to compulsion?—A legal compulsion to receive a pilot on board your ship, but not to put the ship in his charge.

2409. Mr. *Pemberton.*] There is no law which makes it compulsory on a man to take a pilot on board?—No.

2410. But there is a penalty?—Yes.

2411. Mr. *John Stewart Hardy.*] The master would take a pilot on board, and he would only be liable for the dues?—Yes.

2412. Sir *Charles Wingfield.*] According to that view, the Act which was introduced last Session did not make any important change; it only said that henceforth a person was bound to pay a due, but he was not bound to employ a pilot; according to your view, he never was bound to employ a pilot?—No.

2413. In the former Act there were penalties, and the penalties were higher than the payment of the dues?—Yes.

2414. Mr. *Graves.*] What is the penalty in Liverpool for not taking a pilot?—It stands in this manner: a vessel inward-bound must, on coming into pilotage waters, exhibit a certain signal, and if they fail to do that, they have to pay a penalty of 5*l.*; then, if a pilot offers his services, and they refuse to take a pilot, they have simply to pay to the first of the pilots who offers his services the same pilotage rate which they would pay if they took a pilot.

2415. And beyond that there is no compulsion of any kind to take a pilot?—No.

2416. Mr. *Price.*] I think there is no specific enactment that a ship shall be navigated by a pilot?—No.

2417. There is a fine in the case of Liverpool?—Yes.

2418. But you did not state that it was the case generally?—I have never heard of any case in

in which there is an authoritative enactment that a pilot shall be taken on board and employed.

2419. *Chairman.*] You mean a specific clause that a vessel would be bound to wait for a pilot?—Yes.

2420. As it is now, she is only bound to take a pilot if a pilot offers his services?—Yes.

2421. When that is enforced by penalties equal if not more than the pilotage rate, it becomes a compulsion?—It has been held in a legal sense to be a compulsion.

2422. Mr. *Pemberton.*] It is legal compulsion so far that the pilot taken on board is not the servant of the owner?—Yes.

2423. It is not compulsion so far that you break the law if you do not do it, but it is compulsion so far that the pilot, if taken on board, is not the servant of the owner?—It is the machinery devised to compel every vessel using the port to contribute towards the maintenance of the pilotage fund of the port.

2424. Mr. *Graves.*] In your view the obligation is entirely a pecuniary one to pay or contribute to the maintenance of the pilotage service, and not an obligation to take a man even against his will?—Yes, to pay more or less, as it may be.

2425. If the fine be more than the pilotage rate, would not you hold that it is something more than that?—Only in degree, not in principle.

2426. Suppose it is double the amount?—Then, of course, it is a double punishment to the master for not taking a pilot.

2427. Then it is something more than a contribution to the pilotage fund; it is a direct compulsion by law?—Yes. I should like to make a correction. I find that under the Merchant Shipping Act of 1854, which it appears is made applicable to the Liverpool district, double pilotage is the penalty for refusing to take a pilot.

2428. There is an obligation in the Merchant Shipping Act, if I remember rightly, that no home trade vessel shall carry passengers without a pilot on board?—There is such a provision.

2429. That you would call positive compulsion, I suppose?—Yes, because I believe, if I am correct, that there is some penal consequence in the form of imprisonment.

2430. You have spoken of the law in foreign countries with regard to the liability of the owners; have you at all consulted foreign authorities with reference to their view of this compulsory question, as to what interpretation they put upon the word "compulsion"?—I have found, in reference to the French law, some passages which bear very strongly indeed upon that question.

2431. Will you kindly read them to the Committee?—The Committee may be aware that there is now existing in France a commission, which was appointed, I think, in the year 1866, for revising portions of the Code Napoleon, and that committee has made a report upon the second portion of the code, which is the Code de Commerce; they have proposed certain alterations in that code, one of which has a distinct bearing on this question. According to the present state of the law in France there is a rule (it is Article 407 of the Code de Commerce, in the case of collision of vessels) that if the event has been purely accidental, the loss is borne by the vessel which has sustained it; if the collision has taken place by the fault of one of the captains, the loss is paid by that vessel which has caused it; if there is doubt as to the cause of the collision, the loss is repaired at the common expense, in equal portions, by the vessels which have suffered. Then, in the revised code, it is proposed to introduce an express statement to this effect: "The presence "of pilots does not interpose an obstacle to the "responsibility established by the preceding "clause."

2432. *Chairman.*] That is not the present law, is it?—It is the present law; but they propose now to express it affirmatively in the code. There has been published, by the authority of this commission, which is composed of eminent French jurists and officers, an explanatory note as to the changes they propose to make in the code.

2433. You now quote from the report of the commission?—It is a "Note explicative" as to the changes.

2434 Of whom is this commission composed?—The committee was presided over, in the first instance, by M. Behic, and then by M. de Forçade de la Roquette, and it is composed of a number of senators, the general secretary of the Ministry of Commerce, the general advocate of the Court of Cassation, the Director of the Ministry of Marine, the Vice President of the Council of State, M. de Couray (Director of the Company of Assurance), and M. Denièrè (President of the Tribunal of Commerce), M. Defour (advocate of the Imperial Court of Paris), M. Duvergier (Sectional President of the Council of State), M. Greffier (Director of the Ministry of Justice), M. Jullien (Director of Commerce of the Interior), M. Masse (President of the Chamber of the Imperial Court of Paris), and several others.

2435. Will you proceed to read the extract?—They are now speaking upon the subject of the French law and the liability for collision: "The "liability for collision evidently depends on the "cause of the collision. Now there are two causes "which in themselves at once dispose of the "question of liability, viz., *vis major*, or pure "accident, for which no one is responsible. Re-"sponsibility must be the result of the fault of "the person who is made responsible. Thus "when it is proved that a collision has been "entirely accidental, or caused by *vis major*, "neither of the masters is liable; the losses must "be borne without recourse by those who have "sustained them. If, however, the collision has "arisen from a fault, the whole loss must be "borne by the vessel on board which the fault "has been committed. This is simply the effect "of the general law applied to the case of col-"lision. Here, however, a difficulty presents "itself which is peculiar to navigation, and which "has given rise to much discussion; it arises "from the presence of a pilot on board the vessel "which has caused the collision. Under these "circumstances the owner and master of the "vessel have declined responsibility for the col-"lision on the ground that the law compels them "to take a pilot, that it does not even leave them "free in their choice, and that it imposes on them "men whom they do not know, consequently "they maintain that not being free in the choice "of their agent, they are not responsible for his "faults. But French jurisprudence has always "rejected this argument on two grounds, which "seem decisive. First, that it is incorrect to say "that the employment of a pilot is compulsory. "The truth is that under the laws which regulate "this matter, the payment of pilotage is all that "is obligatory; not the actual employment of the "pilot. The master who does not wish to allow "a pilot

Mr. *A. T. Squarey.*

26 April 1870

"a pilot on board his ship has the matter in his "own power; he is only bound to pay pilotage. "Therefore he cannot avoid liability for the acts "of the agent by representing that the pilot is "forced upon him. The second reason given by "the law goes still further; it rests on the fact "that in all cases the pilot is not in the place of "a tutor (*tuteur*) who substitutes himself for the "master, but simply an assistant who advises "him. That the master in fact deprives himself "more or less of the command in order to give it "up to the pilot, makes no difference in law; he "does so because he thinks proper to do so; he "may if he pleases adopt a different course; that "is, he may follow the advice of the pilot or dis-"regard it. Thus even if the master were com-"pelled to employ a pilot it would not affect the "question, because he is not bound to obey him. "The pilot is the voluntary substitute of the "master who is liable for him, and that liability "naturally extends from the captain to the "owner. The proposed amendment (*projêt*) re-"cognises, in accordance with jurisprudence, that "the presence of a pilot on board is no answer to "the liability of the ship on board which a fault "has been committed." I understand from that, that although the case is not definitely provided for by the present code, the law of France at present does not protect the owner from liability where damage arises through the pilot, and it is now proposed to make it affirmatively part of the code.

2436. Mr. *Graves.*] Does England stand alone amongst the maritime nations in the immunity of owners from liability when the ship is in the charge of the pilot?—So far as I can obtain information, I think it does.

2437. *Chairman.*] Are you speaking of the North German Code, because I think it is otherwise in that code?—I am not certain.

2438. Mr. *Graves.*] The whole tenour of your own consideration of the question appears to be in the direction of simplifying the law by removing that immunity?—Yes, I think that may be done consistently with retaining what we call the system of compulsory pilotage.

2439. You can perfectly reconcile the two in your own mind?—Yes, I think so.

2440. Liverpool, I believe, contributes one-half to the business of the Admiralty Court?—It contributes a very large proportion; I should say at least one-half.

2441. The profession generally in Liverpool must have from that fact a very great experience of the delicate questions of the liability of owners and pilots, which are constantly arising?—Yes, some members of the profession have very great experience.

2442. Those who have the largest proportion of this class of business?—Yes.

2443. Have you conferred with them, and exchanged opinions with them upon this subject?—I have not had an opportunity of conferring with them formally, with the view of ascertaining their opinion upon this question; but it has been a matter of discussion between us frequently. I think the common opinion is, that it would be well to do away with the immunity from liability which is now given to the owner.

2444. Mr. *Martin.*] You say there is no Act of Parliament by which a captain is compelled in certain waters to hand over the charge of the ship to the pilot, and permit him to throw off all responsibility for her safety?—To my knowledge there is no such Act.

2445. You have read this Paper?—Yes, some time since.

2446. Would not the decision of Dr. Lushington, in the "Lochlibo" case, and the decision of the Privy Council in the "Christiana," prove that though there is no decision particularly in point, the courts are bound by the decision of decision of the Privy Council, that if the master does not act in the manner described he runs the great risk of involving his owner in law?—Yes.

2447. Therefore, practically, although there is no Act, still he must do it?—Yes.

2448. Therefore this request, that the Acts of Parliament or the rule of law should be altered, is not unreasonable?—It is not unreasonable to ask that the rule of law should be altered.

2449. The practical effect to the injured party is the same?—Yes.

2450. Mr. *Stevenson.*] Your proposal seems to be, that the pilotage should be in the nature of a tax on all vessels using the port, leaving it optional to those vessels to have something done for that tax in the shape of pilot service?—That is in effect what the present law is as regards Liverpool, and as regards other places similarly circumstanced.

2451. *Chairman.*] But not as regards places where the penalty is more than the pilotage rate?—It is a question of degree; they may take the pilot or refuse him by paying double pilotage.

2452. Mr. *Stevenson.*] Under the present law the shipowner who is subject to that tax has some return in the shape of exemption from liability to damage?—Yes, he has. If your ship were damaged by another vessel in the charge of a pilot, the loss would fall upon you.

2453. It is a transference of the hardship?—Yes.

2454. Would not the shipowner consider it a hardship to lose his exemption from liability which, in some measure, now reconciles him to submitting to the compulsory pilotage?—That is more a question for a shipowner. I do not think that they should reasonably object to it.

2455. You would not like to say that that would not be their feeling?—That would be the feeling of some, undoubtedly.

2456. Under your mode of looking at the question, how would you justify the exemption of any vessels from contributing to this tax for the maintenance of a pilotage service?—If there is to be a pilotage service maintained, it seems to me not unreasonable that every vessel should contribute something to it.

2457. The principle you have laid down would cut away the present system of exemption prevailing in Liverpool?—Yes; assuming there is always to be a pilotage service maintained.

2458. Are you aware whether there are any exemptions in France?—I have referred to the local regulations at Havre with regard to the pilotage, and I find that there are exemptions, and many of them are of the same class as those which we have here: the exemption of lighters and small coasting vessels. I cannot speak of the other French ports.

2459. *Chairman.*] I believe it is only up to a comparatively small tonnage, 50 tons, or something of that kind?—Yes.

2460. Mr. *Stevenson.*] I presume in Liverpool very large vessels come under the class of exemptions

exemptions on account of their destination?—No, I think not. I believe the provision of the Liverpool Act with regard to exemption is confined to vessels not exceeding 100 tons. Coasters above that burthen, if not in ballast, are liable to half the pilot rates in Liverpool.

2461. If in ballast, they are liable to half the pilotage rates, whatever their size?—If in ballast, they are altogether exempt; that applies to vessels of any size.

2462. They are not exempt?—They are exempt, if coasters in ballast.

2463. And their size is not an element in the case?—No.

2464. Under the plan you have described, would you defend the exemption of those large coasting vessels in ballast?—I see no reason why, if the compulsory system is in force at all, all vessels should not contribute to it; it is a question of degree how much they should contribute.

2465. According to the view of the case which you have given us, would you continue the permission to masters and mates of regular traders to exempt their vessels from the employment of ordinary pilots, if they pass their examination and obtain certificates themselves; of course that tells against the maintenance of the general service?—To that extent it does tell against the maintenance of the general service.

2466. And your plan would logically lead to the abolition of that?—Yes; but it all rests upon the supposed actual necessity for the maintenance of the pilotage service.

2467. Mr. *Brassey.*] Do you know whether, as a general rule, pilotage is compulsory at the principal continental ports?—I think it is.

2468. As far as you are acquainted with the pilotage funds at Liverpool, do you believe that you would have a sufficient reliable revenue for the maintenance of the pilotage service in Liverpool if you did away with compulsory pilotage?—That is a question I feel scarcely competent to answer; that is a question for a shipowner; my experience does not enable me to answer it.

2469. The owner escapes the liability under the present state of the law in England, does not he, on the assumption that he has no power in the selection of a pilot?—That is the ground on which the rule of immunity rests, that the man is not his agent because he had not the selection of him.

2470. Even under the voluntary system of pilotage, the owner of an inward-bound vessel would be equally incapable of exercising any selection?—Practically he would; he would have to take the first pilot who presented himself.

2471. And would be therefore grateful for the intervention of the public authority who had previously tested the merits of the person coming on board to take charge of his vessel?—That is essential; if there is to be a pilotage system maintained, it must consist of men who are ascertained to be properly qualified; to throw it open is out of the question.

2472. Mr. *Price.*] From your experience of Liverpool, you think that a shipowner might without hardship be made responsible for any damage done to his ship, upon the ground that the employment of a pilot was not compulsory, although the payment was?—Yes.

2473. May not the payment of the penalties be so severe that the employment of them does in fact become compulsory?—Yes, it may be so heavy as really to compel parties to take pilots; but after having got them, I do not know why the pilots should be placed in the absolute control of the ships.

2474. Will you listen to these words, taken from the Act of Parliament before me: "From "and after the first day in October next after the "passing of this Act, all vessels, sailing, navi- "gating, or passing, up, down, or upon the Bristol "Channel to the eastward of Lundy Island, ex- "cept coasting vessels and Irish traders, should "be piloted, conducted, and navigated by pilots "duly authorised and licensed by the mayor, bur- "gesses, and commonalty of the city of Bristol, "by warrant, under their corporate seal; and that "the master, owner, or owners, of every ship or "vessel which should be navigated in the limits "aforesaid without a pilot licensed as aforesaid, "should forfeit double the sum which would have "been demandable for the pilotage of such ship "or vessel, together with 5 *l.* for every 50 tons "burden of such ship or vessel;" do you think that the liability to pay double pilotage, with 5 *l.* for every 50 tons in addition, does not constitute such a penalty as in point of fact makes the pilotage compulsory?—In the case of the "Great Eastern" it would undoubtedly.

2475. And for a large class of vessel it would be so?—Yes.

2476. In that case, it being the law that, a pilot being on board, the master is bound to act under his directions, you would not think it reasonable to tell the master that he should be liable for an accident arising from the negligence, incompetence, or want of skill of a pilot?—No; not if you assume, first, that he is bound to take a pilot, and next, that he is bound to act under the pilot's directions.

2477. You do not give any opinion as to whether or not there would be an efficient system of pilotage if it were not compulsory?—No.

Wednesday, 27*th April* 1870.

MEMBERS PRESENT:

Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Mr. Shaw Lefevre.
Mr. Philip Wykeham Martin.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. Andrew Tucker Squarey, re-called; and Examined.

Mr. *A. T. Squarey.* 27 April 1870.

2478. Mr. *Gourley.*] You stated that about half of the cases that we have in our Admiralty Courts emanate from Liverpool?—Yes, I believe about one-half.

2479. Is not that evidence of a want of care on the part of your pilots?—No, because these collision cases that come from Liverpool arise from the ships being in Liverpool; the collision itself frequently takes place in foreign parts or upon the seas, not necessarily in the Liverpool waters; of course, there are many collisions that occur in the Liverpool waters, but not all those cases which come from Liverpool for trial.

2480. You said that you thought that the pilot was simply the adviser of the captain. If the pilot is simply the adviser of the captain, would it not be better to leave the ship entirely in the hands of the captain, and leave it at his option whether he would take a pilot or not?—I think so. I have not suggested that it should be made obligatory upon the captain to take a pilot on board; there may be cases where there is peculiar danger in the channel, where it would be desirable that it should be obligatory upon the master to receive a pilot on board; the vessel might otherwise be wrecked and block the channel.

2481. Mr. *Hardy.*] Were the Liverpool Dock Board consulted at all as to this Bill before it was brought in?—No.

2482. I believe that the board has no pecuniary interest in maintaining the system of pilotage?—No, not any whatever; the dock board derives no benefit whatever from the pilotage funds in any way.

2483. Sir *C. Wingfield.*] You said that you thought it was right that all ships should pay pilotage dues, whether they employ pilots or not?—Yes, if you assume that if a permanent and regular pilotage system is necessary, it must be carried on in such a way that all vessels having an opportunity of availing themselves of the pilot service should contribute in some degree to the pilotage fund.

2484. Then if it was held that the system of compulsory pilotage is necessary, it would follow that all exemptions that are now enjoyed from the payment of pilotage dues should cease?—It would follow as a matter of strict principle that it should be so, although the degree in which they should contribute might be varied infinitely.

2485. The exemptions upon the Thames are very great; are you aware that all the modifications of the rules have tended towards extending the exemptions?—Yes.

2486. Do you think it would be possible to retrace our steps and do away with all exemptions?—I think it might be possible in ports where it is really necessary to maintain a regular pilotage system; as I have said, you could graduate the scale of payment in each case according to the possible requirements of the vessels.

2487. You do not undertake to pronounce an opinion as to whether it is possible to maintain a compulsory system of pilotage or not?—No.

2488. You said that the commission that has been sitting lately on the French law of pilotage pronounced an opinion that compulsory pilotage is quite compatible with the liability of owners?—Yes.

2489. Because they say the owner is only obliged to pay for the pilot; he may take him on board, but he need not use him when there?—That is so.

2490. Secondly, they say, that as the pilot is only an aid to the captain, he does not supersede him; that even though it was compulsory to employ a pilot, and he having got the pilot on board, was bound to make the ship over to him, yet this would be no argument for removing the liability of the owner, because the pilot is, at the best, only an adviser?—I so understand the remarks of the French commissioners on the subject.

2491. You would approve of that view?—Yes, I think so.

2492. Is there not something unreasonable in compelling an owner, under heavy penalties, to take a pilot, and at the same time to say that he need not employ him, or if he does employ him, it is simply as an adviser?—No, I cannot say that it appears to me to involve an anomaly.

2493. If he is only an adviser, should his employment be compelled under penalties?—Yes, I think that depends upon a different idea; the compulsion to pay, in my idea, depends upon the necessity of maintaining a pilotage system for a particular port.

2494. Do not you think that the view which the English law takes is more sensible, namely, that by making pilotage compulsory, you imply that a pilot is necessary for the safe navigation of

of the vessel; and as you have forced the pilot upon the owner, he ought not to be responsible for the acts of a man whom he has been compelled to employ?—I should think so: if the law did really force the pilot upon the owner, and compel the owner to follow the pilot's directions, then I think it would be right that he should be relieved from responsibility.

2495. But in practice, would it not be very difficult to draw the line, where the duty of the owner to interfere with the pilot's directions for the navigation of the ship, begins or ends?—That is rather a question for a nautical man, but so far as I can form an opinion upon the subject, I do not think there would be much difficulty; the duty of a pilot is, generally, to indicate to the master, the buoys, marks, depth of water, currents, and so on, which affect the local navigation.

2496. *Chairman.*] I was rather surprised to hear you say, yesterday, that in your opinion pilotage was not compulsory at Liverpool?—That is my opinion.

2497. You arrive at that opinion upon the terms of the Liverpool Act?—I come to that opinion upon the terms of the Liverpool Act.

2498. Which Act only compels the owner to pay the same amount of pilotage if he does not employ a pilot as he would if he did employ a pilot?—Yes.

2499. Are you aware that section 353 of the Merchant Shipping Act imposes a double penalty?—I am quite aware of it; it had slipped from my mind at the moment.

2500. So that there is a penalty at Liverpool as well as at other places of double pilotage, if a captain does not employ a pilot?—Yes, I am aware of it, although the pilotage committee do not enforce it.

2501. That clause which I have mentioned applies equally to Liverpool as well as other places?—Yes.

2502. Are you aware that it has been expressly held in some cases that pilotage is compulsory?—Yes, under the Liverpool Act, in a legal sense, it is compulsory.

2503. I will call your attention to the decision of Dr. Lushington, on the Liverpool Pilotage Act, in the case of the "Maria;" he says, "Now the Liverpool Act provides for the three following cases: 1st. The case of vessels homeward bound; 2nd. Of vessels outward bound; and, lastly, of vessels lying at anchor; and, with reference to homeward-bound vessels, it is provided in the 24th section of the Act that if the master refuses to take a pilot on board he is liable to the payment of pilotage. There is, therefore, this distinction in the two cases, that in the case of a vessel at anchor the taking a pilot on board is perfectly optional with the master, but in the case of a homeward-bound vessel, it is enjoined upon him by the provisions of the Act, and if he refuses so to do he is rendered liable to the payment of the pilotage dues. This, in my opinion, amounts to a compulsion to take such pilot on board, and it was so held by the learned judges by whom the case of Carruthers *v.* Sidebotham was decided." Are you aware of that case?—Yes.

2504. I will call your attention to another paragraph in the same case. "Now the leading principle of the Legislature in exonerating owners from any damage occasioned by their vessels having pilots on board, is this: that the masters are compellable to take such pilots on board, and the owners are not responsible for the acts of persons to whom they are thus forced to commit the management of their property, and over whom they have no control. This, I apprehend, is a rule founded on a great principle of justice and equity." You see that Dr. Lushington there holds that the exemption of an owner from responsibility where he takes a pilot under this Act is on the ground that the employment of a pilot was compulsory?—Yes.

2505. And that it would be so at common law, irrespective of any statute?—Yes; but before I leave that, allow me to say that I am not singular in the view I have expressed upon that point; the late Mr. Edward James, who was Member for Manchester for some time, has often conversed with me upon the matter, and his opinion, which he retained till he died, was, that if that case could ever be brought before the House of Lords he could get that rule reversed.

2506. It was decided before the Privy Council, I believe?—Yes.

2507. Therefore the highest court in the land has already decided that point in opposition to the opinion of Mr. Edward James and yourself?—Yes.

2508. Then, in fact, it is a legal point which you think the courts have wrongly decided?—Yes; I think it is open to reconsideration.

2509-12. And that notwithstanding the fact that the Legislature has put a double penalty upon an owner who does not employ a pilot?—Yes.

2513. I understood you yesterday to say that in your opinion the necessity for the law on the subject of pilotage was, that it was desirable to keep up a competent supply of pilots?—That is in any port where that system is required by the circumstances of the port.

2514. In your opinion it is not fit for the purpose of enforcing the employment of pilots upon the owners or masters?—That may depend upon the peculiar circumstances of the port. I can imagine a case where the danger of the Channel is such that it would be desirable to make it absolutely obligatory in every case that the vessel should be placed in the charge of a pilot.

2515. What is your opinion in respect of Liverpool?—I am not sufficiently acquainted with the channel to form an opinion upon the point.

2516. Have you formed an opinion whether it is necessary to keep up the law with respect to compulsory pilotage in Liverpool, for the purpose of retaining a competent number of pilots?—I should not like to express an opinion upon that point.

2517. You have merely taken the legal view of the matter?—That is all.

2518. You stated yesterday that in your opinion the injustice of the present law might be met by repealing that clause which exempts the owner from responsibility in the event of his taking a pilot?—Yes; I think what is done under the Merchant Shipping Code now before the House corresponds very closely indeed with the suggestions which I made to the Committee yesterday; that is, you retain the system of compulsory pilotage, and you remove the immunity which an owner now has, which is precisely the scope of the Merchant Shipping Code now before the House.

2519. You have admitted to the full the objections urged by Mr. Farrar and others upon that point?—Yes.

Mr. *A. T. Squarey.*

27 April 1870.

2520. First, that it is unjust to exempt the owner from liability; secondly, that it tends to induce masters to give up the control of their vessel to pilots; and, thirdly, that it tends to induce the pilot to collude with the master of the vessel to take undeserved blame upon himself?—Yes, I entirely concur in that.

2521. Many cases have come to your knowledge of the third class, where there is strong reason to suppose it?—Yes.

2522. You think that those cases would be best met by repealing the clause which we have spoken of, and throwing the responsibility upon the owner?—Yes, I think so.

2523. Does your experience in Liverpool tend to show you that it would be possible to carry such a measure, withdrawing the protection from the owner?—Yes.

2524. Are you aware that a proposal was made on the subject, and that a Bill was brought in last Session?—Yes; I believe that there was.

2525. Was there any discussion on the subject at Liverpool?—I do not think there was any discussion, but I have heard a good many shipowners express opinions.

2526. Was any resolution passed by any of the shipowners' societies?—That I cannot say, because I am not now officially connected with any of the shipping associations.

2527. Have the Mersey Dock Board expressed any opinion upon that point?—No.

2528. When the petition against this present Bill, as far as Liverpool was concerned, was before the Committee, did they offer any opinion upon that point?—No, not any whatever.

2529. They did not suggest it as an alternative?—No.

2530. They did not petition against the Bill generally, but only with respect to Liverpool; they petitioned that Liverpool might be exempted?—I do not think that the Dock Board of Liverpool have petitioned against this Bill.

2531. I speak of the Mersey Dock Board; they have passed some resolution to that effect, have they not?—They have passed a resolution, but have not petitioned.

2532. Are they not employing persons here in the interest of the pilots?—No, not at all.

2533. Do you come here in their interest?—I come here simply from the board, not from the pilots.

2534. Are you instructed by the board to come here?—Yes; but not to express all the views which I have expressed in reference to legal matters.

2535. You have been sent here with the view of obtaining exemption for Liverpool from the operation of the Bill?—Yes; that was the feeling of the board.

2536. That was the feeling of the board, although no formal resolution was passed?—Yes.

2537. Were you present when the subject was discussed at the Mersey Dock Board?—Yes, I was.

2538. Was there considerable difference of opinion upon the subject?—There was a difference of opinion; in so far as opinions which were expressed differed very widely from each other there was a considerable difference of opinion, but my impression is that the majority of the members of the board are in favour of retaining the present system; there was one gentleman, a steamship owner, who maintained an opposite view.

2539. Did the chairman at that meeting state that he found there was a very great diversity of opinion prevailing?—Yes; I think he said something to that effect.

2540. So that it appears that the diversities of opinion were pretty equally balanced?—I do not think they were at the board.

2541. Will you give what you consider the general feeling of the board upon the subject?—I think the feeling was that the board should endeavour to ascertain the feeling of their constituents, and the merchants and shipowners of the town upon the subject.

2542. Was there a general expression of opinion of the board that the present state of the pilotage into Liverpool was not altogether satisfactory?—I think that the feeling of the board was that it might be amended in some details.

2543. I do not mean the conduct of the pilots, but the system of pilotage?—It has never been very closely considered; but I think there is a feeling that it is capable of being reformed in some details, retaining the present system.

2544. Is there not an impression that there is a good deal of waste of labour under the present system of pilotage?—I have heard that feeling expressed; but, on the other hand, I have heard it very strongly resisted by others.

2545. Is there any intention on the part of the Mersey Dock Board to bring in a Bill in reference to the Liverpool pilotage?—I am not aware of it.

2546. Not with a view of remedying it?—Any alterations they might think it desirable to make, it is within their power to make by bye-laws, with the approval of the Board of Trade.

2547. You explained to the Committee yesterday, that under the terms of the Liverpool Act, a certain portion of the earnings of the pilots goes to the boats?—The Act does not define the proportion.

2548. There is a proportion defined, is there not?—There is a proportion defined by the bye-laws.

2549. What is the proportion that goes to the owners of the boats?—I could hardly tell you. You will have before you the superintendent of the pilotage, who will give you that.

2550. The consequence is, that a property has grown up in the boats of a considerable amount?—The result is that a considerable value attaches to the share of the boats beyond their mere constructive value.

2551. Then the extent to which the pilotage earnings go towards the owners of the boats, to meet that increased value of the boats, is so much tax upon the Liverpool shipowners, I presume?—I think so; the excess which the boatowners receive beyond what would be a fair mercantile return for the money invested in the boats is no doubt a tax upon the trade of the port.

2552. Has it been considered whether it would be desirable to do away with that peculiar arrangement?—I do not think it has; I have not heard any discussion upon that point.

2553. Supposing it were thought desirable to do away with this arrangement, and to free the trade from this tax which is now imposed upon it, out of what funds could the payment be made?—There are no funds belonging to the board which are applicable to that purpose at all.

2554. The

2554. The Mersey Docks Board has no fund?—No.

2555. Do they keep the pilotage fund entirely separate from the other funds?—Yes, entirely distinct.

2556. Would it not be possible that they should contribute out of their general funds to this special purpose in the interest of the general trade of Liverpool?—It would only be possible if an Act of Parliament were passed for the purpose; they have no power at present.

2557. With a special Act an arrangement might be made for the purpose?—No doubt with a special Act an arrangement could be made for the purpose.

2558. Would it be a reasonable mode of freeing the trade?—That is a matter of opinion; if I might venture to express an opinion upon it, I should think it would be scarcely reasonable to throw upon the trade of the port the cost of an alteration which the trade does not desire.

2559. Assuming the trade did desire it, you would think it quite reasonable?—Yes.

2560. And that would be the best mode of meeting the case?—The question would arise, whether any compensation of that sort for the value of these shares should be paid out of the local funds of the port, or out of the general funds; out of the Imperial funds.

2561. At present it is in the shape of a special tax upon the trade?—No doubt it is so.

2562. Have you considered the clauses of the Compulsory Pilotage Bill generally with regard to compensation; are you prepared to express any opinion yourself upon them?—Scarcely; except that it strikes me that an interval of two years might be attended with great inconvenience and anxiety to the pilots themselves.

2563. You think it would be desirable to limit the time within which the compensation should be paid?—Yes; I think it would be desirable to do it promptly.

2564. Have you any objection, with that exception, to the rate and the particular form of compensation?—The compensation is now left wholly in the discretion of the Board of Trade, as it appears to me; I think that would scarcely be satisfactory to the pilots.

2565. Have you any suggestion to make with reference to it?—No, I have not considered it with the view of placing any alternative suggestions before the Committee.

2566. Mr. *Graves.*] With regard to the question which the Chairman put to you as to the increased amount of capital in the boats being a tax upon the trade of the port, would not the mode suggested of recouping it out of the revenues of the trade of the port be an equal tax?—Clearly; it would be only substituting and capitalising what is now used for other purposes.

2567. And you would have to raise the pilotage, or some other of the revenues derived from the trade of the port, to meet the increased charge?—Yes, because there are no other funds available for it.

2568. The compensation which was made some 10 years ago, when the differential dues were done away with, was paid out of the Consolidated Fund?—Yes, it was paid out of the Consolidated Fund.

2569. Is not that, to some extent, a precedent to be acted upon if there should be any similar reduction made now?—It may be regarded, to some extent, as a precedent for any action that should be taken in any direction now as to the source from which the compensation should come.

2570. In order to carry out a scheme which they do not ask for or think desirable in connection with their port, probably the trade of the port would naturally object that they should be in any way taxed for an alteration of the law?—I think they would, decidedly.

2571. When the Chairman of the Dock Board said that there was some difference of opinion existing outside, had the Shipowner's Association recorded their opinion?—Up to that time they had not recorded any expression of their opinion.

2572. Have they done so since that time?—I believe they have.

2573. Was it favourable or unfavourable to the present Bill?—Unfavourable to the Bill and in favour of the continuance of the present system of pilotage.

2574. *Chairman.*] On the other hand, the steamship owners have passed a resolution favourable to the Bill?—They have.

2575. Mr. *Graves.*] Is there much difference of opinion existing among the steamship owners themselves invidually?—There is considerable difference of opinion among the individual owners.

2576. *Chairman.*] I presume also there is a difference of opinion among the other shipowners?—Yes.

2577. Therefore the result may be, as properly described by the chairman of the Mersey Dock Board, that opinion is very much divided upon the Bill?—Opinion is very much divided.

2578. Since you gave your evidence yesterday upon this subject, have you referred to the North German code?—I have. I find that by the 740th Article of the North German code it is provided that when a ship is in charge of a pilot where pilotage is compulsory, and they carry on and perform the duties required of them, the owner of the ship is not responsible for a collision caused by the pilot.

2579. In that respect the North German code is the same as our own?—Precisely so; I have prepared myself to give you some information upon the subject of pilotage as affecting the law of insurance.

2580. Have you any remarks to make upon that point?—I thought the Committee might probably desire to know how the present law of insurance is affected by pilotage.

2581. Will you just state that to the Committee; of course you are very conversant with that particular question of law?—Yes, I have had a great deal to do with insurance. There is a passage which I am about to read now, which I take from Mr. Arnould's book on the Law of Maritime Insurance, which is a standard work upon the subject, and he sums the law up in this way: "The law seems to be, that supposing the "ship to have been seaworthy when she sailed, "and provided with a competent master and crew, "the underwriter is liable for all loss proximately "caused by the perils of the sea, although remotely occasioned by the negligence or misconduct of the master in entering without a "pilot, an intermediate port where pilots are "kept, and usage requires one to be taken on "board for that purpose; *à fortiori* he is so liable, "if the master on arriving off the port have done "his best to procure a pilot to come off, and has "only

Mr. *A. T. Squarey.*

27 April 1870.

" only entered the harbour without one when it " became the wisest course for him, as a prudent " and skilful man, so to do; if not only usage, but " the positive regulations of an Act of Parliament require a pilot to be taken on board on " entering either an intermediate or a home port, " then it has been held in one case to be unseaworthiness to enter such port without one; and " in all cases where it is necessary, either by law " or usage, for the master to have a pilot on " board in going out of an intermediate port, or " in clearing from his outport homewards, it will " be unseaworthiness not to take one, for it is in " such cases always in his power to do so."

2582. Has it not, however, been held that in the event of a master proceeding from one of our ports immediately after an insurance has been effected, if he has not taken a pilot, and is not himself a competent man, and does not know much about the particular district, the vessel is unseaworthy?—It has been held so.

2583. The particular case you now quote is that of a master declining to take a pilot at some intermediate port?—Yes.

2584. That introduces a difficulty in the law about the warranty of seaworthiness being only a warranty at the first commencement of the voyage?—Yes; on voyage policies.

2585. There is no implied warranty that she shall be seaworthy all through the voyage?—No.

2586. In the case of a time policy it has been held differently?—In the case of a time policy it has been held that there is no warranty of seaworthiness at the commencement of a voyage.

2587. And therefore none running through?—Exactly.

2588. I think, on the point which you have just quoted to the Committee, the American law is rather different to ours?—It differs in this respect: the American law says there is an implied warranty on the shipowner as between him and the underwriters, not only to have his ship seaworthy at the commencement of his voyage, but to take every opportunity of keeping her seaworthy throughout the voyage.

2589. So that, under the American law, assuming that the captain is not himself competent, the master would be bound to take a pilot at any intermediate port?—Yes; unless the captain is competent.

2590. Under our law he is only bound to take a pilot at first starting?—That is clear; but whether he is bound to take a pilot at an intermediate port is not clear.

2591. It is perfectly clear that he is obliged to take a pilot at the first commencement of his voyage?—Yes.

2592. That is always assuming that the master is not a competent man?—Yes; it is a necessary condition of seaworthiness that he should, at the port of departure, take a pilot.

2593. If this Bill passes into law, in every case in which vessels proceed from our ports under policies of insurance just effected, the law would hold that there is an obligation on the part of the master to take a pilot, assuming that he is not competent himself?—Yes, I think so.

2594. Mr. *Gourley.*] If the master holds a certificate, is he not deemed to be a competent man?—Yes, if the master has a pilotage certificate; that of course would obviate the necessity of taking a pilot.

2595. I do not mean a pilotage certificate, but an ordinary master's certificate?—The ordinary master's certificate under the Merchant Shipping Act would not, I think, relieve the ship from the necessity of taking a pilot.

2596. *Chairman.*] Have you ever considered whether the American law is better than our own with reference to insurance?—I think that on that point the American law is better than our own.

2597. Not only with reference to the obligation of taking a pilot, but with reference generally to seaworthiness?—With reference to the question of implied seaworthiness, of which we have been speaking, I think it is more reasonable.

2598. Mr. *Stevenson.*] What is the effect of the few words that used to be inserted in the advertisements announcing the sailing of steamers, that they would sail at such an hour with or without a pilot?—The meaning of it was to reserve the option, on the part of the owner, to take or not to take a pilot; but that was as between himself and those who sent goods, and not as between himself and the underwriters. I think that that only amounts to a statement on the part of the owner of a vessel to those who are about to ship goods, that he is not bound himself to take a pilot.

2599. What was the necessity for putting in such a saving clause?—The words are very old, and it is difficult to know how they originated.

2600. They are out of use now?—Yes, to a great extent; not entirely.

2601. Mr. *Brassey.*] Is the Shipowners Association of Liverpool a numerously constituted body?—There are two bodies, the Steamship Owners Association and the Sailing-ship Owners Association, and they together embrace almost all the shipping of the port.

2602. Was the Sailing-ship Owners Association unanimous in its objection to the abolition of compulsory pilotage?—I am not able to tell you that; I am not cognisant of the discussion that took place upon the subject.

2603. Mr. *Graves.*] In giving your opinion of the possibility of maintaining the present system of pilotage at Liverpool, I presume you speak more with reference to the principle of the system than you do with reference to the details or the incidents upon which the dues are levied?—Yes, quite so.

2604. Apart from the question of dues altogether?—Apart from the question of the amount of the dues altogether.

2605. You express no opinion upon the possibility of remodelling or reconsidering at all the incidents of the tax?—It might be quite possible to reconsider and remodel those.

2606. *Chairman.*] Have you formed any opinion as to the possibility of maintaining an efficient staff of pilots supposing this Bill were to pass into law?—I really should be sorry to put forward my own views upon that subject to the Committee; I do not think they are entitled to weight.

2607. You have no experience of other places where there is a system of voluntary pilotage?—No.

2608. Therefore, you are unable to say whether a competent staff of pilots can be maintained where there is a system of voluntary pilotage?—I am unable to say so; but I should think it would depend very much upon the local circumstances of each port, and the peculiar difficulties of approach to each port.

2609. After

2609. After explaining the law of insurance with reference to this matter, is it not your opinion that the employment of pilots would be very frequent?—I think the employment of pilots would still be very frequent; but I think in very fine weather vessels would not use pilots; in bad weather they would use them.

2610. Even in fine weather the obligation under the insurance law, which you have just pointed out, would still be maintained?—Quite.

2611. Therefore, even vessels of a large character leaving Liverpool in the commencement of a voyage would be bound to take pilots?—Yes, under the implied warranty.

2612. Always supposing that the master is not competent?—Yes.

2613. I presume that the question of competency of the master would be a question of fact for the court to consider?—I think that the question of the competency of the master, according to our law, would depend upon the question whether he held a pilotage certificate at a particular port.

2614. Supposing the system of pilotage certificates was done away with, it would probably become a question of fact?—It would become, as it appears to be now in the American law, a question of fact. I am now quoting from the second volume of Parson's Book on Maritime Law. He is speaking here of the law of American insurance and implied warranties. "So as to "pilotage, the ship is unseaworthy if she is with- "out a pilot, where usage and the reason of the "case require that she should have one, whether "in entering or leaving a port. If a pilot be ne- "cessary, and a person falsely representing him- "self as one, is in good faith, and without gross "negligence received as such, there is no breach "of the warranty of seaworthiness; nor is there, "if the master or some one else on board can "direct the ship over the pilotage grounds, and "has sufficient skill to perform the duty as a pilot "should perform it. Nor should we say on gene- "ral principles that the neglect to receive a pilot "where one was required to be taken by a law "of the port, necessarily made the ship unsea- "worthy. The standard of seaworthiness varies "at different places, and, in general, that must "be taken which rules at the place where the "vessels belong." Then I think I have seen a note in which he states that the competency of the master is a question depending upon the circumstances of each case.

2615. Assuming that the navigation of Liverpool is of that severe and difficult nature which some of the witnesses have stated here, I presume that, under the law that you have now described, it would be considered that a vessel is not seaworthy which does not take a pilot, assuming that the master is not thoroughly competent?—Yes.

2616. Therefore, the great bulk of vessels proceeding from Liverpool would, notwithstanding this Bill passing into law, still be compelled to take a pilot under the general law?—Yes.

2617. All British vessels proceeding upon their voyages would be so compelled, and American vessels, even when they come to Liverpool as an intermediate port?—Yes; I think so, certainly.

2618. With regard to British vessels coming into Liverpool, the point is open to some doubt?—It is still open to some doubt.

2619. But, on the commencement of the voyage, they would be under the general law compelled to carry pilots?—Yes.

2620. Mr. *Hardy.*] This is with reference to vessels which are insured?—Yes.

2621. What proportion of the vessels are insured?—I should think a very large proportion are insured.

2622. You have not any idea of the number?—No; but you will have a gentleman before you who can supply you with the numbers.

2623. Sir *C. Wingfield.*] Are those opinions which you have just read, founded upon judicial decisions?—Yes.

2624. *Chairman.*] You are of opinion that a very large number of vessels would still be compelled to take pilots?—Yes.

2625. Having regard to that opinion, do you think that the employment of pilots would still be very frequent?—Yes.

2626. And under those circumstances, do you think there is any doubt as to the supply of competent pilots?—Different arrangements might be made as to underwriting; it is possible, if the vessels were relieved from the legal obligation they are now under to take pilots, underwriters might be found who would waive this implied warranty, so far as regards pilotage.

2627. Is that your opinion where pilotage is voluntary?—I have no such experience.

2628. You have not ascertained whether that is the fact?—No.

2629. Mr. *Charles Turner.*] No clause is ever inserted in a policy exempting a ship from effecting an insurance?—No.

2630. *Chairman.*] There is an implied condition of sea-worthiness, not expressed at all?—Yes.

2631. Do you think that, probably, the underwriters would waive any such condition?—They might.

2632. Mr. *Brassey.*] I believe there is an increased competition among underwriters to obtain business?—Yes.

2633. And in the spirit of competition restrictions might be waived?—That is what I mean; I think that might possibly take place.

2634. Mr. *Charles Turner.*] Your experience tells you that there are underwriters of all classes, some of whom would take extreme risks and doubtful responsibility?—Yes; I think so.

2635. There are many parties who are ready to take almost any risks, at low terms?—Yes.

2636. The question as to whether the rates of the company would be beaten down is a question of the probable solvency of the underwriters to pay for the risks which they have undertaken?—Yes

2637. Mr. *Gourley.*] The tendency among the underwriters is to get the highest premium possible, is it not?—Yes, with the least risk.

2638. Mr. *Charles Turner.*] So far as this goes you mean that underwriters, like all other people, wish to get as many risks as they can in most cases?—Yes.

2639. They are desirous of getting the utmost premium they can, if they get the risk at all; but rather than let the risk pass them they often take risks at inadequate premiums?—Yes; I have heard that that is so.

2640. Mr. *Gourley.*] The owners do not like such underwriters?—But they underwrite with them. There is a certain class of owners who are not liked by good underwriters.

2641. *Chairman.*] With regard to this implied condition

Mr. *A. T. Squarey.*
27 April 1870.

condition of the policy of insurance, that a vessel is to take a pilot, I believe it applies equally to ports where there is a voluntary system of pilotage, as to ports where there is a compulsory system?—It applies to any port where it is the usage of vessels to take pilots; *à fortiori* where there is a legal obligation to do so.

2642. And where the navigation is difficult?—Yes; but I presume that where the navigation is not difficult it would not be necessary to take pilots.

2643. Mr. *Graves.*] In some ports in which there are exemptions as there are in the Mersey, would a vessel proceeding to sea under those exemptions be regarded as seaworthy without a pilot, while a vessel going out under the present obligation of compulsion would be considered unseaworthy if she had not a pilot?—Yes, if it is not usual for vessels of that class to take pilots; although they are exempt, it may be usual for them to take pilots; if it were usual, notwithstanding the exemption, I think the absence of a pilot would still be unseaworthiness.

2644. *Chairman.*] Take as an illustration the north channel of the Thames, upon which all the vessels from the north of Europe proceed to London; vessels are exempt under the general law from taking pilots, we have been told, as a matter of usage, that these vessels do take pilots; and I presume, therefore, under the law that you have explained to the Committee, if any one vessel refrained from taking a pilot, it would be a breach of the implied warranty of seaworthiness?—I think so.

2645. Sir *Charles Wingfield.*] You also said that if the law were changed, and the obligation to take pilots were entirely removed, that probably this view of seaworthiness would undergo some modification?—That is possible.

2646. *Chairman.*] But it has not done so yet in cases where pilotage is voluntary?—I do not know that.

2647. That fact would, therefore, have a considerable bearing upon the opinion that you gave?—Yes; I will give an illustration in the port of Liverpool; take ordinary coasting steamers, which pass in and out three or four times a week without taking pilots at all; they habitually do not take pilots; there, I imagine, that the absence of a pilot would not vitiate the insurance; it would not be held to be a breach of the implied warranty of seaworthiness.

2648. Probably, in those cases, the courts would hold as a matter of fact that the captain is competent?—Yes; and that there is no usage in that case to take a pilot.

Captain Graham Hewett Hills, R.N., called in; and Examined.

Capt. *G. H. Hills,* R.N.

2649. Mr. *Graves.*] I believe you are a Staff Commander in the Royal Navy?—I am.

2650. You are the Marine Surveyor of the Mersey Docks and Harbour Board?—Yes.

2651. Have you had much experience in marine surveying?—I was four years engaged on the Admiralty surveys on the coast of Ireland, I was sent on a preliminary survey to the Baltic before the Baltic campaign, and I was engaged one year on the survey of Bar's Sound, in the Baltic.

2652. Have you any official connection with the pilots at Liverpool?—I have no other connection except that they rely on me for information respecting the changes of the channels. I am one of the examiners of pilots.

2653. I believe you are yourself a pilot of the Downs?—The Admiralty require that their navigating officers should qualify for certain parts of the coast of England, and I hold a Trinity House certificate for the ports of the south coast of England.

2654. From the Downs to the Land's End?—From the Downs to the Land's End.

2655. When in Her Majesty's ships you must have had a good deal of experience of the ports on the south coast, the Bristol Channel, and Milford?—I spent four years on the home station, and I became well acquainted with them.

2656. Have you any experience of the east coast at all?—Only as far north as the Humber, including the Humber.

2657. In the discharge of your duty as surveyor to the port of Liverpool, have you become very familiar with the approaches to the channels?—It is a special part of my duty to become acquainted with the changes that are constantly going on.

2658. Are you constantly engaged in surveying the bars of the channels?—Our surveys are continuous; we have no sooner completed one than we begin another.

2659. State at what periods those surveys occur?—We usually make a complete survey every year, starting at the beginning of the year, and ascertaining what points seem to require most attention; sometimes it happens that one part will be surveyed two or three times over during the year; in addition to that we make a special survey of the bars every month; we take the lowest tides in every month for a special survey of the bars.

2660. Will you show the principal entrance into the port of Liverpool upon that chart?—The channel principally used now is the Queen's Channel.

2661. Point out the bar?—The bar of the Queen's Channel lies between those two points (*pointing to the chart*).

2662. How many miles is that from Liverpool?—A little better than 10 miles from Liverpool; it is seven miles from the nearest land.

2663. Do you find in the course of your survey that very great changes take place in that channel?—The change is continuous; there is some change always going on; so lately as November last we completely re-arranged the buoys of the Queen's Channel, and already this spring I have had to shift the bar buoys again.

2664. Can you tell at all what causes these great changes?—It would be very difficult to say what the causes are; sometimes it appears as if a gale of wind changes the bars; at other it is freshets, heavy rains coming down the river; and at other times after a series of tides, when the tides are comparatively slack, the bar silts up; again strong tides deepen it. I could give you an instance last summer of the Queen's Channel bar, and the Victoria inner bar shoaling up, the one to six feet, and the other to eight feet; it reached it shoalest point in August; the Victoria bar deepened by October a foot only, and the Queen's Channel bar deepened to 11 feet by October; at the present time the Queen's

Queen's Channel bar has shoaled to nine feet again.

2665. Mr. *John Stewart Hardy.*] Is that during low tides?—Low water, and the tide ebbing 10 feet below the Old Dock Sill.

2666. Mr. *Graves.*] Does the position of the bar itself vary very much?—The bar itself has for five years been moving gradually to the north-westward; it tumbles out into the deep at the same time going to the north-westward; I do not know whether you understand which is the Little Burbo Bank; that bank is growing into the Queen's Channel and forcing the stream over to the north-westward.

2667. From what you state, I gather that it necessarily requires most unceasing vigilance on your part to be able to detect all the minute changes that are taking place?—It requires constant attention.

2668. And I suppose the same remarks that apply to you would apply to the pilots as regards their knowledge of those changes?—The pilots rely upon me to furnish them with information; anything I have worth communicating, I communicate to the Superintendent of Pilotage, and occasionally, if anything very important occurs, I have invited him to bring the master pilots with him in order that I may show them upon the spot what is going on.

2669. From your knowledge of the coast of this kingdom, is there any other portion of it that at all compares with the peculiarities and dangers of the Liverpool estuary?—I know of no place that combines such changes of the channel, with the difficulty of approach to Liverpool caused by want of anchorage and shelter, I do not know of any other place that can be named which would at all compare with it; other places have the advantage of good land-falls, and good anchorages.

2670. In practice, what length of time is there for large vessels to cross the bar?—In fine weather large vessels may take the bar for about three hours before, and three hours after high water; in bad weather the time would be more limited, because it would be very dangerous for a vessel to be making for the bar outward bound, with a falling tide; if the wind was against her it would be doubtful whether she could reach the bar in time; and therefore the time is practically limited for a large vessel to within two hours after high water.

2671. Have many cases of obstructions on the bar occurred during your surveyorship?—On the bar and in the channels since I have held the office of marine surveyor, there have been seven cases where wrecks have occurred in such a way as to be eminently dangerous; two of those cases were actually on the Queen's Channel bar.

2672. Will you state to the Committee what your usual course is when a wreck in the channel is reported to you?—I immediately make such communications as seem necessary; in the first instance to the superintendent of pilotage; then we have our coast line of telegraph, which furnishes us with the means of communicating with the pilot boats, and the information is forwarded to the pilot boats on their stations by means of that coast telegraph; we know whether the pilot boats are on their stations or not, because I furnish to the superintendent, five times every day, reports from the telegraph of the position of the pilot boats on certain stations, so that we always know if the boats are there, and we know whether or not we can communicate with them. In those two instances in which the vessels were actually grounded on the Queen's Channel bar, in addition to the local precautions I telegraphed to all the outports, whence it was likely that coasting steamers might be coming, or to whom I thought it might be dangerous.

Capt. *G. H. Hills*, R.N.
27 April 1870.

2673. Are you able to exercise a most complete check and control over the pilot boats on all stations where you have the telegraph?—Yes, I think we have as complete a knowledge of all their positions as it is possible to obtain.

2674. How often during the day would the position of the boats be communicated to you?—It is communicated at sunrise and at sunset; at nine o'clock at noon and at three o'clock.

2675. Do you attach much importance to the necessity of having the boats upon these stations?—I think one of the most valuable points, in fact the most valuable point in the Liverpool system, is the maintenance of those stations; without it you would have no certainty of finding a pilot. The point at present is that a ship runs up with the absolute confidence that she will get a pilot.

2676. With reference to outward-bound vessels in Liverpool, is it within your general knowledge that they are in as difficult a position from shifts of wind, after they leave the bar and the North-west Lightship, as they are within the bar?—The fact is, the casualties we have in Liverpool occur mostly with outward-bound ships; when a ship is getting away, on account of the strength of the tide, it is almost a matter of necessity for her to go with the ebb tide; she gets over the bar, and if she meets an adverse wind she cannot get back over the bar; the tide has fallen, and she has the banks under her lee; she cannot run back, she must do the best she can to keep off.

2677. Have you formed any opinion as to how far it would be possible to maintain that strict system which you have adopted in Liverpool, provided that the taking of pilots was entirely a matter of option on the part of the shipowners?—I think that a service so strictly regulated must require regular maintenance; I cannot see how a service to be strictly regulated can be maintained upon casual employment.

2678. It is proposed to give the pilotage authority all the powers that they now have, of compelling the pilots to be on those stations?—I am quite aware of that; but the power of making regulations is one thing, and the power of enforcing them is another. It is quite one thing to make a regulation, and another thing to see that it is carried out; there is no practical effect in any regulation, if it carries with it a sense of injustice. If the men feel themselves unduly pressed upon, it induces them to find ways of evading the regulation.

2679. Your opinion is that it would not be possible for any length of time to maintain the present stringent system?—I do not think the present system could be maintained under the system of voluntaryism on the part of the shipowner.

2680. What is the other alternative?—I can see no choice between the present system and adopting as nearly as possible what is called free trade, allowing the pilots to do as the tugs do, make their own bargains.

2681. And be where they think they are most

Capt. *G. H. Hills*, R.N.

27 April 1870.

wanted?—And be where they think they are most wanted.

2682. Is it likely that under such a system as that the pilots would maintain the stations, or would they rather go a little distance out?—I do not think they would maintain their stations at all; their object then would be to cut each other out, the one getting before the other and picking up ships as they come, or in fine weather the pilots would not go out at all; they would say, "No ships will take us now; we will wait for bad weather, and then see what we can do."

2683. Supposing such a change was effected and perfect freedom thus given, both to the pilot and the shipowner, do you consider that, in the interest of the shipping of the port of Liverpool generally, the free system would be as good and efficient a one as the present system?—No, I do not; I consider that the risks of navigation would be very much increased.

2684. Why?—Because pilots would not be found at their posts when they were wanted; it would be a chance where they would be found.

2865. You mean vessels in the channel might overrun these pilot boats, whereas there is no possibility of doing it now?—You find most unexpected cases where pilots are required. I can give you one that occurred only on Monday week, in the case of a little Irish coaster of 25 tons. The master anchored near the North-west Lightship, in a fog; he remained at anchor for the best part of the night; his lights were seen by the North-west Lightship, and in consequence of the fog all the steamers were making for the North-west Lightship, and he found himself getting so many close shaves that he got alarmed, and he sent a boat on board the North-west Lightship and begged them to send a pilot; they said they had not a pilot to send, but they could hear a pilot-boat's gong, and they directed him in that direction. He waited for several hours, and at length he boarded the lightship again, and, as the master would not spare one of his own men, he got under weigh, and the lightship lost sight of him for about half-an-hour, and at the end of that time he came back again, and he said he was afraid to go out of sight of the lightship; the steamers were going about him so fast that he had gone below, so that he might not see the steamers run him down, and he asked whether the master of the lightship would now give him a man to take him up: he said he would, and he gave him one. That man was in want of a pilot then. You find cases occuring in that way, that coasters who are not under any compulsion to take pilots are obliged in some cases to look for pilots; and if you did not know where a pilot was, there would be much greater risk of the loss of ships and life than there is at present.

2686. You must be aware that the system of voluntary pilotage is somewhat general in many ports, and they find no difficulty in getting pilots?—That is entirely according to the necessities of the port itself, and the circumstances of the port; there are some ports in which it is simply surprising that there should be any pilots at all.

2687. Which ports do you refer to?—Queenstown, for instance.

2688. Have you much knowledge of Queenstown?—I have been many times in and out of Queenstown.

2689. Were you then in one of Her Majesty's ships?—I was in command of a small surveying vessel. Queenstown is so simple in itself, that for many years it has been forbidden to Her Majesty's ships to take pilots there.

2690. Is that on account of the simplicity of the navigation?—The Admiralty have considered that the pilotage is so simple, that Her Majesty's ships ought not to be charged with pilotage, and their officers ought to make themselves competent to take their ships in.

2691. Do you know the Bristol Channel at all?—I have spent some little time in the Bristol Channel.

2692. Do you know it sufficiently to form any comparison in your own mind as to how far a system which was adapted for the Bristol Channel would be suitable for Liverpool?—In the first place, the pilotage system of the Bristol Channel was a different thing altogether from the system of Liverpool. If you look into it you will find that the complaint there against compulsory pilotage amounted to this, that Bristol claimed to rule the ports of Cardiff, Swansea, and Gloucester in their pilotage. It is the same thing as if Liverpool should claim to rule Beaumaris; but Liverpool has never claimed any such thing. The pilotage of Liverpool relates to Liverpool itself, and has never given rise to any such questions as those which opened the question of compulsory pilotage in the Bristol Channel. But for the most part the pilotage system of the Bristol Channel is a comparatively simple matter, and until you pass the Holms, there are no considerable difficulties in the Bristol Channel at all.

2693. *Chairman.*] From there up to the entrance of the Bristol River or Gloucester it is a considerable distance?—Yes.

2694 And the navigation there is very difficult?—The navigation to Gloucester is peculiar.

2695. And it is very difficult, is it not?—I should compare the navigation at Gloucester with the navigation of the Upper Mersey from Liverpool to Runcorn.

2696. From the Holms as far as the entrance of the Bristol river it must be a sea pilotage?—It is a sea pilotage; but the Holms themselves form anchorages, and you have shelter all the way up; it is not sea pilotage, in the sense that you are out of sight of land, or exposed to heavy seas.

2697. But it is very difficult navigation?—The difficulty of the navigation there is exactly the same as the difficulty of our Upper Mersey navigation; there you have the very same rise and fall of tides, and consequently very strong tides, and the banks are shifting, but that has nothing to do with the Liverpool pilotage; the Liverpool pilots do not pilot the Upper Mersey.

2698. We have the same difficulties below, namely, shifting banks?—In a very different character.

2699. Mr. *Brassey.*] They are not exposed to any heavy sea?—They are not exposed to a sea at all; it is smooth water.

2700. Mr. *Graves.*] Are the banks of the same shifting character?—I never was at Gloucester, but my studies and general knowledge of the subject, lead me to suppose that the Gloucester banks are sand-banks subject to shiftings; the tidal effects of that part of the Bristol Channel are subjects which are frequently discussed, and well known to those engaged in marine surveying.

2701. *Chairman.*] It is impossible for a person who does not know the navigation to pilot a vessel?

vessel?—I should imagine nobody ever took a ship to Gloucester without a pilot.

2702. Mr. *Graves.*] It has been stated here by one of the pilot authorities of Gloucester that there are no buoys in the river at Gloucester; would not that lead to the impression that there was no great amount of shifting?—It is not quite that, but it is, that with a rise of 44 feet of water, it is absolutely certain that the channel will afford sufficient depth at high-water time for almost anything to pass up it.

2703. Over the banks?—Over the banks.

2704. Still I presume that the difficulties of navigating the Severn arise from physical conditions, irrespective of the weather and the ordinary perils of navigation?—Quite so.

2705. So that whatever the system of pilotage might be, in a place like the Severn no master probably would take vessels up or down, owing to the extraordinary tide, without a pilot?—I do not imagine anybody would go up the Severn without a pilot.

2706. Have you any experience of the Tyne?—No; I never was north of the Humber. I only know the Tyne by reading of it.

2707. Is that chart of South Shields on the same scale as that of Liverpool?—It is upon the same scale; it is enlarged from the Admiralty chart.

2708. The bar there is merely a question of a couple of miles?—The bar is virtually inside the river; there formerly was a bar, but it has been dredged away. There is about five feet of water in the entrance of the river at low water, and it is the same depth all the way up to Newcastle.

2709. Would you consider it a fair inference, because a certain description of pilot system works well in these ports, that it should apply to the Downs or to the Mersey?—It could not apply at all; the system there is entirely different. A vessel approaches within a mile or so of the pier, and a man puts off in a small boat and boards her. There is no system maintained similar to the regular cruising system of Liverpool, neither is there any necessity for it.

2710. It is simple in comparison with the Mersey or the Downs?—It is quite simple.

2711. You know Plymouth very well?—Yes.

2712. Would you class that in the same category as Queenstown?—No; Plymouth is just a point above Queenstown.

2713. Would you class Portsmouth in the same category as Queenstown?—Portsmouth again would rank higher than Plymouth; the approach to Portsmouth is more difficult.

2714. And Cowes?—I put the whole of the Isle of Wight navigation together with Portsmouth; either end of the Isle of Wight must of course be navigated before you can approach Portsmouth.

2715. *Chairman.*] Where would you put Falmouth?—About equal with Queenstown.

2716. Mr. *Graves.*] Is it your opinion that it is a matter of any great moment whether you have compulsory system or the voluntary system at ports similar to those you have named?—I think it is a matter of comparatively small moment.

2717. Have you the same necessity for a pilot in the Mersey inside the Rock that you have outside?—The difficulties of the Mersey are not ended until a vessel gets into dock. In the first place, there are rocks and banks; there is an outlying shelf of rock lying along the frontage of the Clarence and the Bramley Moore Dock; there is Pluckington Bank, extending from George's Landing Stage two miles south. On the Egremont side, there is a bank called the Cow and Calf in the neighbourhood of Egremont Ferry; and again, you have not only the banks, but the tides themselves to consider; it requires a pilot to know that the tide sets up the river half-an-hour or three-quarters of an hour in some parts of the river after it has turned down in certain margins of the river; that the ebb would be making at one part and the flood at another.

2718. Do you find that the changes in the Pluckington Bank are as great as in the banks outside?—The Pluckington Bank is undergoing continuous changes.

2719. Are there portions of the river which it is usual to keep free from the anchoring of vessels?—There is one part of the river with respect to which the Pilotage Committee have given instructions to the pilots that they should avoid anchoring as far as possible, that is, with a view to keeping the ferry track as clear as possible.

2720. You think, independently of all questions of the outside navigation, it is desirable, in order to prevent accidents and collision in the river itself, that there should be some one on board familiar with all these peculiarities of navigation?—At spring tides the stream is going at the rate of seven knots in the Mersey, and it must be a difficult thing for an inexperienced man to make good anchorage with a stream going at that rate.

2721. So that, as a matter of harbour safety or harbour regulations, it is desirable that there should be a pilot on board these vessels?—I consider it is; we have in the Mersey just at the point between the magazines and the Victoria Tower as heavy a sea as there is in any part of the Liverpool bay with certain winds; I have gone down at times off Egremont, and I have found there the heaviest sea that I have met in any part of the bay.

2722. It has been suggested that possibly the harbour regulations might be so defined and put on board vessels coming into the port as to insure certain instruction to those without pilots; do you consider that possible?—I do not consider that a stranger coming into Liverpool with a paper of instructions in his hand can possibly find it of much service to him; in the first place he comes in many times in the dark when he would have to go into his cabin to read them; and, in order to make himself acquainted with those regulations, he would be neglecting the safety of his ship by not being on deck all the time; the harbour proper of Liverpool is in a dock, and is not in the Mersey at all.

2723. From your great experience in connection with the various maritime ports of this country, do you consider that the system of pilotage at Liverpool is as good as any elsewhere?—As good as any I know of. If you will allow me I will put it in this way. You are no doubt aware that Her Majesty's ships are all exempt from compulsory pilotage everywhere, and therefore I may say that a large part of my experience has been under the voluntary system of pilotage so far as my navigation of the Queen's ships is concerned, but I know of no place where the pilotage system has so effectually met the necessities of shipping as at Liverpool.

2724. Would you view with apprehension any change from that system?—I would.

Capt. *G. H. Hills*, R.N.

27 April 1870.

2725. That is the result of your consideration of this question?—Yes, I view it with considerable misgiving.

2726. Are you able to speak at all as to the opinion of the public generally in Liverpool with reference to the service?—I have had conversation with only one shipowner who has spoken in disparagement of it.

2727. Only one?—Only one.

2728. Some of the steamship owners object to the retention of the present system, I believe?—I have heard so.

2729. But have they not the power of entirely relieving themselves from the obligation?—Yes. I first became the examiner of pilotage with the special object of enabling masters of ships to obtain certificates.

2730. You are one of the examiners of pilotage?—I was appointed the examiner of masters of ships before I examined a pilot at all; it was afterwards that the pilots were turned over to me, or that I was ordered to take them.

2731. You examine the pilots themselves as to their qualification?—Yes.

2732. Is there any difference in the mode of examination of pilots, and the mode of examination of masters and mates who seek to be licensed?—There is a decided difference, inasmuch as the pilots are examined under the bye-laws of the board. The bye-laws of the board require that pilots shall be acquainted with Holyhead, Beaumaris, and all the ports within the Liverpool district; whereas the Act of Parliament prescribes that the shipmaster shall be entitled to a certificate if he is properly acquainted with the navigation of the port; therefore the only examination we apply to a shipmaster is as to the port of Liverpool itself; we have never thought ourselves authorised to go beyond Liverpool as regards the masters of ships.

2733. It is not as severe an examination as that of the pilots?—It is a different thing altogether. As a matter of time, a shipmaster, decently well acquainted will get through his examination in three-quarters of an hour, and a pilot's examination will occupy from two-and-a-half hours to three hours.

2734. How is it that you have not had more applications for the examination of masters?—I have my own opinion as to the reason why masters do not come up, and I believe it is this, that a shipowner having a qualified master on board lies under a disadvantage if any casualty happens to his ship in connection with another ship which has a pilot on board.

2735. You are now speaking with reference to immunity from liability?—I mean that a master being in charge of such ship, beyond any question throws the responsibility of his actions upon the owner, whereas in the other case the responsibility is upon the pilot, and even supposing the pilot to be in fault, the owner of the other ship has no real remedy against him, he has nothing but the pilot's liability to depend upon.

2736. *Chairman.*] That has prevented owners from permitting masters to be examined?—That is my opinion.

2737. Mr. *Graves.*] Then it is probable that if that immunity from liability were removed, there might be a much larger number of applications from masters?—Yes.

2738. There is no desire or feeling at all evinced by the examiner as to giving these masters and mates certificates?—The examiners have no feeling whatever in the matter; as a matter of duty, a candidate passing is a much more agreeable and gratifying thing than a candidate rejected; and anybody that has tried it will find that they have a desire to pass any man who shows himself reasonably and properly acquainted with the subject upon which he is to be examined.

2739. Would you state shortly the nature of the examination of the pilots themselves?—The examination of the pilot commences at the Skerries Light, on the coast of Anglesea, and takes him all along by Point Linas into Beaumaris, Orme's Head, into Chester, along the Liverpool shore, by either of its channels, the entrance to the River Ribble, Morecambe Bay, and Walney, which is to the northward of Morecambe Bay, as far north as St. Bees' Head and the Isle of Man.

2740. Are the pilots occupied as part of their duty in sounding the channels?—The pilots, no doubt, take every opportunity of sounding; but, I believe, their chief reliance for that information is upon my department; a pilot would be very foolish to cross a bar without sounding, at any time. The pilot boats are under an obligation to make a round of the whole of their district at least once in every year.

2741. The conclusion which you come to in your own mind is this, that in the interest of life and property the present system of pilotage at Liverpool will render both safer than the voluntary system under the proposed Bill would do?—Of course I do not think there is anybody in Liverpool who would agree in any proposition of finality; that there was nothing to be improved upon anywhere; but, I consider that a change to the voluntary system, instead of being an improvement, would be very great falling off from our present system.

2742. In fact that it would be going back?—It would be going back.

2743. Mr. *Wykeham-Martin.*] Your evidence comes to this, that from the peculiar dangers which you have described as existing at Liverpool, Liverpool wants a special system different from other ports of the United Kingdom?—My opinion is that every port should be considered on its own merits and necessities.

2744. But Liverpool is a peculiarly difficult port?—It is decidedly peculiarly difficult.

2745. And therefore it wants a special system?—I believe so.

2746. Mr. *Brassey.*] I think you said that the Bar of the Mersey was seven miles distant from the nearest land?—Yes.

2747. On the Formby shore is the land very low and flat?—Captain Judkins told you very fairly yesterday the difficulty of making out the land; which is very easily explained when you remember that the prevailing winds of Liverpool are southerly, and that you have the whole smoke of the town all over the land to the northward; sometimes they are three weeks without getting a sight of the land at all.

2748. Therefore there is a peculiar difficulty in making the approach to the bar?—There is very great difficulty.

2749. And the difficulty of approach to Liverpool is therefore very much greater than the difficulty of approach to the Thames?—I believe so. In approaching the Thames you always have a good land-fall. For instance, you have the

the North Foreland before you really get into danger.

2750. And on approaching from the north you have the land about Orfordness as a good guide?—Yes.

2751. I believe you said that the prevailing winds of Liverpool are southerly?—Yes.

2752. Under such circumstances is there no anchorage outside?—Anywhere where the anchor will reach the bottom of the Channel it will hold on, and the southerly wind makes comparatively smooth water, but with west winds, or from west to north-north-east there is no chance for a vessel to hold on.

2753. The Thames is very much more favourably situated with reference to anchorage than the Mersey, is it not?—In the Thames there is anchorage all the way up from the Downs; there is anchorage before you get into the Thames at all.

2754. As regards the shifting of banks, is not the Thames an easier river than the Mersey?—The channels of the Thames are, comparatively speaking, permanent; you find the same channels now as those marked on the earlier charts.

2755. Is there a bar at the mouth of the Thames?—There is no bar in the sense of a bar; the least depth anywhere, at low water, is 20 feet in the approach to the Thames.

2756. Therefore, in that respect, the Mersey is a much more difficult river than the Thames?—Yes.

2757. Then, with regard to the strength of the tides, they do not flow so strong in the Thames as they do in the Mersey?—No.

2758. You have said that the spring tide flows in in the Mersey at the rate of seven knots?—Yes.

2759. And that is in the most crowded part of the anchorage of the Mersey?—It is what is shown in the lower part of the chart; it is not the most crowded anchorage; for this reason, that on account of the strength of the tide, ships avoid that part if possible, but it is the narrowest part of the river.

2760. But do not ships anchor in all parts of the river between New Brighton and the point above Egremont?—Yes; coming in at night a ship has very little choice of anchorage in the Mersey; she is almost bound to anchor in the first safe berth that she finds; the risk of running on to look for a better berth would be so great that the wisest thing to do is to anchor as soon as she can find a safe berth.

2761. The greatest number of ships have to anchor before they go into dock, have they not?—By far the larger number.

2762. As regards the Thames, it is not so frequently the practice to anchor ships before docking them?—I do not know the practice of the Thames as regards docking.

2763. If the pilots were only employed in bad weather, in order to maintain the present rate of income, the pilotage fees would have to be increased, would they not?—Of course they would.

2764. Therefore there would be no real relief to the shipowner in the long run?—On the contrary, I think that the shipowner would pay much more heavily than he does at present; the present rates no doubt are settled upon what was considered a fair average. A shipowner may think that in fine weather he pays more than a day's work is worth, but he is charged no more when the weather becomes bad and the risks are very great; he only pays just the same then as in fine weather.

2765. When the Liverpool pilot boats are out in fine weather is it not the practice to keep the lead constantly going for the instruction of apprentices?—It is of course the business of the masters to instruct their apprentices, and I have no doubt they are keeping their lead going; but I have no special supervision in that matter.

2766. Your belief is that that is the practice?—Yes.

2767. These studies of navigation can be best conducted, and only effectually conducted in fine weather; in very bad weather they cannot be continued?—In bad weather sounding is of very little use; when the sea is rising 10 or 12 feet, even if you put down the lead line, it is impossible to take any soundings that would give satisfaction.

2768. Therefore you think if there was any change in the present system of pilotage, boats would not go out so much in fine weather as they do now, and some of the opportunities which the pilots now possess of becoming acquainted with the navigation would be lost?—Yes; a pilot can only be acquainted with the navigation by paying constant attention to it.

2769. I think you said that you had served a good deal in foreign seas?—Yes.

2770. Do you know of any foreign port as difficult and as much frequented as Liverpool in which the pilotage is voluntary?—No, I do not.

2771. You are not acquainted with any service requiring boats of the same power and tonnage as those employed at Liverpool, which is conducted upon a purely voluntary system?—The Liverpool boats have only come to their present position simply from the necessities of the case. A few years since it was not an uncommon thing for a pilot boat to run for shelter, now such a thing is almost unheard of; but if they had been allowed to keep their small boats they could not have kept the sea; it is a matter of necessity that boats should be fit to keep the sea.

2772. Boats of less power and tonnage, and costing less money, would not be able to do the service as well as those now employed?—No.

2773. Can you conceive it possible that pilots acting individually, and without a central authority, can provide themselves with as good boats as they have now at Liverpool?—No, I do not think it would be done unless they were compelled to do it.

2774. Do you think it would be an advantage to the pilotage service of Liverpool if it were done in part by steam pilot boats?—I could hardly say whether in the course of improvements it might or not be better to have steam pilot boats, but that would be more expensive.

2775. And, therefore, if it were an advantage to have steam pilot boats it would be less likely under the voluntary system that they would be provided?—Decidedly, it would be less likely.

2776. And with the view of the possibility of steam pilot boats being introduced you would not like to see the compulsory system done away with?—I should think that the only chance of getting steam pilot boats is to maintain the present system.

2777. Mr. *Charles Turner.*] You heard Captain Judkins' evidence yesterday?—Yes.

Capt. *G. H. Hills*, R.N.

27 April 1870.

2778. Do you agree in the opinion he expressed, that very frequently when it is quite clear overhead there is a haze looming over the river, and the entrance to the port, which prevents the captain of the ship seeing the buoys and the lightships?—I have just stated the cause of the haze, which is more the smoke of the town than anything else; but in the course of my work I am obliged to see the objects on the shore, and I am frequently two or three weeks without getting a good day's work done, simply from the difficulty of seeing objects.

2779. The result of your experience is, that an alteration from the present system to a system of voluntary pilotage would add danger both to life and property, and render life and property more insecure than they are at present?—I believe it would.

2780. Have your Board any interest whatever in that question of pilotage?—I believe not.

2781. The Board is the controlling power?—The Mersey Board have nothing whatever to do with the pilotage, except that in 1858 the powers of the former Pilotage Commissioners were transferred to the Board, without the Board's consent or wish.

2782. And a committee was then directed to be appointed, consisting of a certain number of members of the Board and a certain number of mariners, who were not members of the Board?—The Act provides that the committee shall consist of 12 persons, eight being members of the Board and four being persons selected from their practical knowledge of the navigation and pilotage generally.

2783. And this committee exercises a very strong supervision over everything connected with pilotage?—Yes.

2784. Without having any interest in the pilotage at all?—I believe so entirely.

2785. Mr. *Gourley.*] What is the size of the largest of the Liverpool pilot boats?—The largest of them would be about 60 or 70 tons.

2786. Would they be adapted for any other purpose than that of pilot boats; could they be adapted for fishing boats?—They are not built for cargo; they are built to be weatherly vessels, to hold a good wind, and to keep the sea, in fact.

2787. What position do you think the pilot ought to occupy when engaged by a master in the Liverpool waters, supposing the captain to be competent; should he be employed as a nurse, or should he have full control over the navigation of the ship?—My own opinion is that the master of a ship is the master under all circumstances, and that the pilot is under his command as well as anybody else.

2788. Do you think that the master of a vessel ought to be acquainted with the dangers of the locality?—No; it would be impossible to expect that, because a master may in the course of a very few years visit a number of different ports; therefore, to expect him to be qualified for every port is most unreasonable; but he should be a man of sufficient experience to know by what the pilot is doing whether he is likely to be doing right or not. You may consider it in this way, that a man going abroad gets a pilot on board who cannot speak a word of his language, and the master must simply use his own intelligence to understand the pilot's directions.

2789. Should not the pilot have a certain amount of responsibility in such cases?—The pilot has a certain amount of responsibility, inasmuch as he is obliged to advise the shipmaster correctly, according to his judgment, and in some instances, his responsibility is definitely fixed by a sum of money by a bond, or something of that sort; it is not the case in Liverpool.

2790. Are all vessels in the habit of carrying pilots going into Liverpool?—No; I think I may state in round numbers that the vessels passing through the channels in and out of Liverpool, are about 48,000 a year, and the number taking pilots is something close upon 15,000.

2791. Are the 33,000 which navigate the Mersey without pilots as well navigated as those that carry pilots?—A large number of them are comparatively small vessels; a large number of them are tugs, and the men are constantly in and out of the port; they have the local knowledge which the pilot is supposed to supply.

2792. Do not all vessels going in and out of the Mersey use tugs as auxiliaries to assist them?—By far the larger number do.

2793. I suppose where vessels use tugs, pilots would not be necessary?—I apprehend that a great many shipmasters would conclude so, although, in my view of the case, they ought to have pilots. There is a very great difficulty to my mind in accepting tugs in any sense as pilots, because there have been cases which have at any rate looked very suspicious indeed, where tugs have dropped their vessels for the purpose of making a prize, not of their own vessels, but of other vessels; and there have been cases where hawsers have been parted under very suspicious circumstances indeed.

2794. Those circumstances are very rare, are they not?—They are comparatively rare; but still the loss of one vessel may be 60,000 *l.* or 70,000 *l.*, which is the cost of the whole pilotage service for a year.

2795. Do not the masters of the tugs as a rule, know the waters just as well as the pilots?—No, I do not think they do; in the first place, they are not subject to any special supervision, their plain and simple business is to keep inside the buoys.

2796. Who regulates the navigation of vessels in charge of steam tugs?—The pilot on board the ship.

2797. What is the nearest anchorage to Liverpool?—Penman Roads, just at the entrance to Beaumaris.

2798. Is that the anchorage which is generally used by vessels bound for Liverpool to wait for the tide?—No.

2799. Where do vessels wait to make the harbour?—A vessel to make Liverpool ought to keep at such a distance that she would have just the time to run at the right time of the tide.

2800. What time would it occupy?—It depends upon the wind and weather; if it is a light wind, a vessel under sail would have to run all the tide; if there is much wind, she ought not to come nearer than Orme's Head with the falling tide.

2801. Mr. *Charles Turner.*] Is it the fact that vessels when they come near a bar at a time when they cannot get over it, cruise off and on?—That is their only plan; but no vessel in charge of a pilot would run for the bar in that way, because by running for the bar and waiting to cruise off and on there, he is simply in danger all

all the time; because whilst waiting for the tide to rise, the tide is setting him on to the banks; in fine weather many pilots run up as far as the North-west Light Ship and remain there.

2802. Mr. *Gourley.*] In reality, there is no danger which vessels have to encounter till they come within the neighbourhood of the bar?—The danger is occasioned by the set of the tide on to the bar.

2803. There is no danger otherwise than that which an ordinary captain of a ship could guard against without the assistance of a pilot?—I think it would be anything but an ordinary captain of a ship that would guard against the danger.

2804. The captain of a ship must look to the safety of his ship, and he would be quite as capable of taking charge of his ship waiting for the tide without a pilot as with one; is not that so?—I have seen some strange cases happen at Liverpool. Seven or eight years ago, there was a case of a vessel running up to the bar, and somehow or other she had the temerity to pass the pilot boats, and run without a pilot, and it never occurred to the master until they were close on the bar that the ship was in danger; she ran up with stunsails set, and she hauled her wind at the last moment, and her top-gallant mast went over the side as she hauled her wind.

2805. In that instance, the captain ran into danger?—Yes; and if you take the pilots off their stations many ships will have no choice, but to do the same thing.

2806. In the event of compulsory pilotage being abolished, is it your opinion that you will have almost as large a supply of pilots as you have now?—I suppose there will always be men on the look out for what they can get; but I apprehend it will be quite out of the question to maintain a system regulated in anything like the same degree as the present system is regulated.

2807. *Chairman.*] You stated that you viewed this Bill with apprehension?—I do.

2808. I presume that is on the ground that the employment of pilots will fall off, and that, therefore, the number will be reduced?—If the Bill passes, I consider we lose our system of stations for the boats at once.

2809. That is on the ground that the employment of pilots will fall off, and that there will not be the same employment for them?—The employment will be in different hands altogether.

2810. Do you think that the same number of pilots will be required?—It is not impossible that eventually there might be more pilots, because there would be more speculation.

2811. I will assume, for a moment, that the Bill passes in its present shape, and that there is a licensed corps of pilots, and therefore a limited number; you understand by the Bill, it is proposed that a limited number shall be maintained, and that the pilotage should not be thrown open to all the world; with a limited number of pilots, do you think their employment would necessarily fall of?—Yes.

2812. That is, I presume, on the ground that a great number of vessels will not take pilots?—Decidedly so.

2813. You told us that at Queenstown the pilotage was so easy that it is quite suprising there should be any pilots at all?—Yes.

2814. And yet at Queenstown there is a competent supply of pilots?—Yes.

2815. And these pilots obtain full employment?—The pilots at Queenstown do not obtain full employment as pilots, inasmuch as they are engaged in many other employments besides pilotage.

2816. Are you certain of that fact?—Yes.

2817. Is it not the fact that at Queenstown there is a large number of pilots solely maintained by pilotage?—No, only a few.

2818. Do you know what the whole number of pilots is?—No.

2819. Should you be surprised to hear that there were as many as 90 pilots at Queenstown?—It is not surprising, because they are fishers or hovellers.

2820. Are you certain about that fact?—Since I was engaged on the coast of Ireland I have not been to Queenstown except as a passenger in a steamer.

2821. Are you aware that there is rather a considerable corps of pilots at Queenstown?—Yes, but they are under no obligation not to be employed in other employments; the boats they go about in are what are called hoveller's boats.

2822. Are you aware that there is a considerable number of pilots in Queenstown making as large incomes as the pilots in Liverpool?—I have not inquired into that.

2823. If you were informed that that is the fact, should not you alter your opinion as to the employment of pilots at Liverpool?—No; I do not think I should, because the two places do not agree at all, and the difference between the physical conditions of the two places make a material difference in the services which the pilots have to render.

2824. But supposing it was the fact that at Queenstown, where the pilotage is so easy that you are surprised that there should be any pilots at all, and where the captains of the Queen's vessels are directed not to take pilots at all, you find a competent corp of pilots with full employment; does not that bear in your mind some relation to the question of the future employment of the Liverpool pilots?—Not in the least, unless you could show that Liverpool resembles Queenstown.

2825. The difficulties of the Liverpool navigation are very much greater than those of Queenstown, are they not?—I do not see that it is possible to compare the two cases at all.

2826. Do you think it is more probable that the employment of pilots will fall off at Liverpool, on account of the difficulty of its navigation?—No; I apprehend this, that if we attempt to maintain anything like the proposed system, we shall simply lead the men into inducements to evade our service, and that our pilotage service will deteriorate; and that in consideration of the number of steam-tugs at their disposal, many masters will be disposed to take our ships out merely for the sake of a little *éclât* with their owners.

2827. Do you think the pilots will be induced to break the rules laid down for them?—We shall to some extent lose our hold upon them.

2828. They will sail their vessels elsewhere?—No. Take it in this way: the Liverpool pilots, even though their boats are bound to keep the sea, if they choose, have now many sufficient reasons to run for the port on many occasions when it would be very difficult for any pilotage authority

Capt. *G. H. Hills*, R.N.

27 April 1870.

rity to say that they were wrong in doing so. Merely leading a ship into port might be the excuse for the pilot himself running into port. But at the present time the service is so regulated that if a boat runs in it obliges another boat to go out; and the men are so bound together that if one wrong another in that way, he gets such a name amongst them that he could not maintain his position and get his living.

2829. Does not it all turn upon this, whether there is employment for pilots or not; if there is any employment for pilots, will there be any greater difficulty in maintaining the regulations than there is now?—There will be a greater difficulty with the pilots.

2830. Does not it all turn upon the amount of employment that there is for the pilots?—No.

2831. Will there be any greater difficulty of maintaining the present regulations after the change than now, if there is sufficient employment for the pilots?—If you could convince the men at once, perhaps there would not be.

2832. I do not talk about convincing the men; I talk of your own opinion as to whether you think there will be sufficient employment for the pilots?—I have no doubt that the employment will be diminished.

2833. You say that, notwithstanding the fact that at Queenstown, where the pilotage is so very easy, there is a large employment of pilots?—I do not see that the Queenstown question has any relation to the Liverpool question at all.

2834. Have you formed any opinion as to the amount of reduction there would be in the employment of pilots?—No; I do not see that I could form an opinion.

2835. Do you know anything of the pilotage of the North Channel of the Thames?—I have piloted my own ship up and down the Thames.

2836. Are you aware that there is a large staff of pilots there under the voluntary system?—Yes; and they very much wish they were under the compulsory system.

2837. Why?—Because they see that the men taking the South Channel earn more money than they do in the North.

2838. The men in the North Channel earn as much as the pilots in Liverpool, do not they?—I do not know.

2839. Are you aware that they do, on the average, make more than the Liverpool pilots?—I believe that the London rates are higher than the Liverpool rates.

2840. Do not the men employed in the North Channel make a larger income than the Liverpool pilots?—It may be so.

2841. Under the voluntary system?—It is difficult to define where the voluntary system ends and the compulsory system begins; they are really under the compulsory system there, but the exemptions are so large.

2842. Are you aware that the number of vessels that are bound to carry pilots, that come by the North Channel, and that do take pilots, form only five per cent. of all the vessels that come in?—No; I do not know what proportion of the vessels do or do not take pilots.

2843. Supposing you were informed upon that fact, does it show that the employment of pilots in the North Channel is a voluntary one?—It only speaks for that channel itself.

2844. Are you aware that there are 70 pilots there who make a larger income than those on the Liverpool system?—I should say that 70 pilots was a very small number for the North Channel.

2845. Are you aware that there are 70 pilots making a larger income than the Liverpool pilots?—I should imagine that 70 pilots were altogether insufficient for the trade of the Channel.

2846. Why?—You see at Liverpool, instead of limiting the number of pilots to get a good income, the object has been to keep up a sufficient supply of pilots.

2847. Have you any information tending to show that that number is not sufficient for the purpose in the North Channel?—The trade of the North Channel must be very great. I do not know the number of vessels; but the number of vessels that pass down that Channel must be something enormous, and 70 pilots, it seems to me, is a very small number to serve that trade.

2848. They go from the North Channel up to Gravesend, and at Gravesend they change?—It is hardly pilotage above Gravesend.

2849. Are you aware that those 70 pilots are under as strict a regulation as the Liverpool pilots are?—I do not know of any pilots anywhere who have such supervision over them as the Liverpool pilots have.

2850. What is the supervision over the 70 pilots?—I know there are no telegraph stations to report from along that coast.

2851. But the regulations are the same; they are bound to keep their posts in every respect?—I do not know how they are bound to keep their posts; but when you say a man is bound to keep his post, it depends upon who is to see that he keeps his post.

2852. But there is a supervision over the London pilots in the same way as over the Liverpool pilots, is there not?—There is a pilotage authority.

2853. Have you any reason to believe that they perform their duty in the same way as the Liverpool pilots do?—I think it is different, because I heard from Sir Frederick Arrow that in the Upper Thames there were a large number of unlicensed pilots.

2854. We are talking now not of the Upper Thames, but of the lower part of the Thames, and of the sea pilots?—But, seeing the number of pilots is so limited in the upper part of the river, it strikes me that the very same thing is occurring there.

2855. Then you think that it would not be possible, under the voluntary system, to maintain the regulations at all?—Not to maintain any stringent system of regulations.

2856. Supposing it were proved to you that, with pilotage regulations, it is possible to keep men in their places, would your opinion be altered?—I do not know of any system of voluntary pilotage where there is the same system of regulation as at Liverpool.

2857. Not precisely the same system of regulations, but there are places where there is no pilotage and where there are regulations?—The regulations are something of minor effect.

2858. Do you think there is any analogy between the places?—No.

2859. Supposing it were proved that there were places where pilotage is voluntary, and where the regulations are carried out, and where the men are kept to their posts, would that cause any

any change in your opinion?—Of course, what is proved to me must necessarily alter my judgment.

2860. Have you come to the conclusion that there are not any places where pilotage is voluntary where any strict regulations are carried out?—Not where the system of strict regulations as applied to Liverpool is carried out; the same regulations now in force at Liverpool, if applied to other places, would be of very different force.

2861. Is it your opinion that under the voluntary system of pilotage it is impossible to keep the men under a system of strict regulation?—I think so.

2862. Or to keep them to their post?—Or to keep them to their post.

2863. And you have come to the opinion which you have formed under the impression that under the voluntary system of pilotage it is impossible to maintain strict regulations?—You apply the term "voluntary" as a general term; I should say it would be just as unreasonable to put compulsory pilotage upon all ports as it would be to put voluntary pilotage upon all ports.

2864. You stated that very often there are greater difficulties to outward-bound vessels after passing the bar, than to inward-bound vessels?—The risk to them is greater inasmuch as they have only just cleared the bar when the flood-tide is setting them on to the bar again.

2865. Does not the compulsory pilotage cease at the Bell Buoy?—Yes.

2866. Therefore the pilots leave them at the very point where there is the greatest difficulty?—Yes, but there are two pilot boats there on purpose to meet that difficulty.

2867. The pilot that they are bound to take by law leaves them at the point of greatest difficulty?—Yes, the compulsory pilot leaves them.

2868. And beyond there, there are two boats belonging to voluntary pilots?—Between the North-west Light Ship and the Bell Buoy there are two boats stationed.

2869. Ready to send pilots for voluntary employment to vessels that want them?—When you speak of voluntary employment, the pilots taken from them are under the same conditions as any other pilots.

2870. But the vessels are not bound to take them?—Not if they are bound to the westward.

2871. I understand you to say that a compulsory pilot is put off a vessel after it passes the Bell Buoy?—There used to be a penalty for carrying a pilot away. The pilots were carried to the westward and landed at Holyhead, and it being found convenient to do so, the penalty has now been removed, and it has been made optional.

2872. If a compulsory pilot is taken on board at Liverpool he is put off the vessel after passing the Bell Buoy?—Yes.

2873. And there are two boats with pilots stationed, where vessels may take pilots to take them further on if they think fit?—I am not sufficiently acquainted with that part of the regulation to be able to speak upon it.

2874. Mr. *Charles Turner.*] I suppose the pilot is not always put off at the Bell Buoy, he may go on further if he likes, and if the ship wants him?—Yes.

2875. But he is not necessarily put off at the Bell Buoy?—No.

2876. *Chairman.*] The pilotage is compulsory, as far as the Bell Buoy, and beyond that they may take the pilots on by paying something additional?—There is a difference between the inward and outward-bound rates; for the outward rate a man takes the ship to the Bell Buoy, and if he is taken on to the westward they pay the inward rate.

2877. The employment of pilots beyond the Bell Buoy is voluntary?—Yes.

2878. Mr. *Graves.*] Why is it the custom that a pilot should leave after the vessel has got to the North-West Light Ship?—Because if the weather is bright and clear, she is clear of all danger.

2879. So that any outward-bound vessel would not require a pilot?—No; the only condition is, that if she puts back again she requires a pilot.

2880. In coming back the pilot-boats are there to supply pilots?—Yes.

2881. So that, practically, the ship suffers no inconvenience whatever from the pilot leaving it at the accustomed point?—Their object is to be rid of the pilot, as soon as possible, in order that they may not have the delay of looking up the pilot-boat to the westward and putting the pilot on board her.

2882. But by your system there is always a certainty of supplying a vessel with a pilot inside if she wants one?—Yes.

2883. *Chairman.*] Do you find that a considerable number of vessels take their pilots beyond the compulsory district?—I believe some do.

2884. I believe a rule has recently been passed in order to enable them to do it?—Yes.

2885. You stated that you furnished the pilots, from time to time, with information as to the shifting of sand-banks?—Yes.

2886. Do you publish that information?—We publish a new chart every year.

2887. But you do not publish any changes in the papers?—Unless there is something very special. When we make any considerable change involving absolute change in the arrangement of buoys, we always apply to Admiral Evans, the Acting Conservator of the Mersey, and, on his approval, to the Trinity House, before carrying out the changes; but if it is a question of shifting a buoy north, south, east, or west, to avoid any immediate danger, that I do without publishing it, Admiral Evans having authorised me to make any alterations which are urgently necessary, reporting my proceedings to him.

2888. Any considerable shifting of buoys you publish in the papers?—Yes.

2889. But you do not publish any changes in the sandbanks or otherwise?—No, unless there is some actual danger in the matter.

2890. If there is a wreck, do you publish that?—Yes.

2891. Then, I understand from you, in your opinion, that the navigation of the Mersey, from the Bell Buoy to Liverpool, is more dangerous and difficult even than that of the Thames?—For its length it is.

2892. But taking the length of the navigation from Dungeness up to London, is it not a more difficult navigation on the whole?—There is no difficulty in the navigation until you leave the Downs.

2893. Taking the voyage of a vessel coming from Dungeness, up to London is it not a more

Capt. *G. H. Hills*, R.N.

27 April 1870.

difficult navigation than Point Linas to Liverpool?—No, because she has good halting-places and anchorages on the road.

2894. Is it not a very difficult thing to know where to anchor?—A vessel, after rounding the North Foreland, may anchor anywhere between there and the inner end of the Prince's Channel. Take the case of the Great Eastern, drawing 26 or 27 feet of water, if it were such bad weather that she could not anchor outside, she might anchor anywhere between the North Foreland and the inner end of the Prince's Channel

2895. We have been informed by Sir Frederick Arrow that it is difficult to determine where to anchor up the Thames, and that most sailing vessels have to anchor at a particular point?—Most sailing vessels depend on the tide, but they wait for tide where it is most convenient. A ship comes up the channel before a north-west gale; she rounds the North Foreland, and she is in smooth water immediately. What has been bringing a heavy sea with her before now brings her into smooth water.

2896. Unless there is a change of wind the vessel has to anchor somewhere?—In all probability.

2897. You say that a vessel coming to Liverpool, if there is no change of wind, has not to anchor?—Usually not; she has nowhere where she could anchor.

2898. Mr. *Brassey.*] You would never see so heavy a sea above Margate as you stated occurs in the Mersey from time to time?—A north-east wind will bring in a very heavy sea.

2899. Take Whitstable?—I should say the difficulties of the Thames navigation ended at the Nore.

2900. *Chairman.*] But eastward of that they must be exposed to very heavy seas?—Yes; with regard to the English ports I should place the Thames next after Liverpool.

2901. But you think that Liverpool is an exceptional case?—Liverpool has the great disadvantage that you have no anchorage at which you can wait.

2902. Does not the great difficulty of the navigation of Liverpool tend to show that the employment of pilots will be greater there than elsewhere if the pilotage is voluntary?—No, I do not think it does; I think, as Captain Judkins said, there are so many temptations to economise that a large number of ships will be tempted to do so, by not employing a pilot.

2903. Did you hear what Mr. Squarey said about the conditions of the policy of insurance?—Yes.

2904. Does not that tend to show that vessels that are insured will in most cases carry pilots?—There are many vessels now that take pilots that do not insure.

2905. Is it not your opinion that the great majority of vessels going from Liverpool are insured?—No; I think a great many vessels go that are not insured; many coasting vessels you cannot insure.

2906. I mean the foreign-going vessels; should not you say that a great majority of them were insured?—I am no authority on questions of insurance; but I should imagine that foreign-going ships were, for the most part, insured.

2907. And, for the most part, they would take pilots?—I should suppose so.

2908. Mr. *Gourley.*] Do you know the nature of the sands which form the banks of the Queen's and the Princess's Channels, as to whether they are permanent or moveable?—They are always permanent.

2909. And they shift in a similar manner to what the sandbanks do in the neighbourhood of the Mersey?—The channels of the Thames are, practically speaking, permanent channels.

2910. But they do shift at times, do not they?—In every tidal river there is some sort of change going on, but they have nothing there like continuous surveying; I speak without the book, but my impression is that the last survey of the Thames made by the Admiralty was in 1862, that is now eight years since, and if you compare it with former charts you find that the changes are very small.

2911. What is the nature of the sands, are they quicksands or hard sands?—All quicksands are hard when they are dry at low water; I have made no special examination of the sands.

2912. Quicksands are more dangerous than the hard sands or the moveable sands, are they not?—I do not understand what you mean by quicksands; but taking the case of the Pluckington Bank, which was mentioned, a vessel grounding there is in a most dangerous condition; the sand is so quick, that it will wash away under her lee-side. Within my knowledge of Liverpool, two vessels have rolled over and broken their masts off after grounding on that bank.

2913. In your opinion all danger of the navigation of outward-bound vessels ceases after passing Bell Buoy?—A vessel outward bound with a fair wind has then left the Liverpool dangers behind her.

2914. She takes the assistance of a steam tug, does not she, with a foul wind?—With a foul wind she would do so going to the westward.

2915. *Chairman.*] Are you not aware that there is as close an examination of the sandbanks in the Thames by the Trinity House, as there is by the Mersey Board?—I am not aware of that; they have no surveying officers specially employed for the work that I know of; their own returns will show what their officers are. They are engaged twice in the year in shifting their buoys, that is to say, for examining the chains and painting them, and no doubt when they shift their buoys they do what we do on such occasions; if they find a buoy in more or less water than it was when last shifted, they probably make some examination on the spot, and see whether it ought to be shifted further in; but they have no such thing as a staff of surveying officers.

2916. In your opinion there is no periodical examination for the purpose of seeing whether the sands are shifting?—Not in the sense in which such examinations are made in Liverpool. The Admiralty surveyors from time to time are called in, and they have surveyed the Thames entrance.

2917. Mr. *Gourley.*] Then, in every change of sands the buoys are also changed?—Not in every change, it depends upon the degree of the change; from watching them I have some expectation of what is coming about, and if I see that a certain sandbank has been growing for 12 months past, when I shift the buoy I will put it so far out that it shall serve for a few months to come.

2918. How often have you to change the buoys?—

buoys?—Some buoys are changed much oftener than others.

2919. Have you to change them once every twelvemonth?—They are changed once in twelve months, whether the shifting of the banks requires it or not; that is simply with reference to maintaining them properly and having them painted and cleaned; but as a matter of fact our 68 buoys involve something like from 110 to 120 changes in the course of the year.

2920. Do you think the shifting of the banks involves no danger whatever, because you always change the buoys?—You are assuming now that a vessel can see every buoy and know exactly how the bank lies by that buoy; but a very large part of the navigation is done at night when the buoys are not seen; we do the best we can with the buoys to mark the danger, but there are times when not a single buoy is seen.

2921. You have the lights and you have the lead; the banks do not shift between night and morning?—The lead will often be of very little service; a buoy is shown close to the edge of a bank where there is 44 feet of water, and within half a vessel's length the bank is dry.

2922. How long has that buoy been there?—Since November.

2923. And the sands have not changed since?—The sands are still coming up to the northward.

2924. Sir *Charles Wingfield.*] Do you know anything of the Thames above Gravesend?—I know very little of the Thames above Gravesend? I have only been up and down the river occasionally.

2925. The pilotage of that part of the river cannot be compared with the pilotage of the Mersey or with sea pilotage at all, can it?—I should say it is a totally different thing from sea pilotage.

2926. Would you think that a man who had never navigated a ship would be quite competent to pilot a ship from Gravesend to London?—A man should know how to handle a ship if he has to take charge of it as a pilot.

2927. Could not he acquire that knowledge in working vessels between Gravesend and London; it is not necessary for him to have been to sea, is it?—He could acquire some knowledge of working vessels in that way, but any man having respect for his ship would look with great suspicion upon a man who had never worked a square-rigged ship, because even though the captain stands at hand to warn the pilot if he thinks that he is going to do a dangerous thing, yet the pilot should know whether an ordinary ship would tack within such a space or whether there would be room for her to wear in such a space, and so on.

2928. Are you aware it is the case that about half the vessels that come to London are piloted between Gravesend and London by men who have not been to sea at all?—I gathered from the questions put to Sir Frederick Arrow that that was so.

2929. *Chairman.*] Is there any body of men in Liverpool who supplement the services of licensed pilots?—No, none at all.

2930. You never hear of hovellers or other people piloting vessels?—No.

2931. Do the coasters never employ such people?—I do not know; the coasters are supposed to pilot themselves, and being exempt, there is no inquiry made as to who brings them in or out.

2932. You never heard of the employment of any such people?—No; Liverpool is so very unfavourable for small boats, there are men called "Spec boatmen," who go long distances in fine weather; but their object is to get hold of ships to dock them; they are licensed boatmen, and there are certain regulated charges for boats assisting to dock ships by running their lines and ropes to the piers.

2933. They do not act as pilots?—No.

2934. You never heard of such people?—No.

2935. All along the coast at Point Linas and other places, are there any competent persons in case the supply of pilots is not sufficient?—No; I know very little of the pilot service of the other ports on that coast; the Dee pilots go only just down to Helbre Island at the entrance of the Dee.

2936. Supposing that a vessel coming to Point Linas should find that there is not a pilot ready for her, are there persons along the coast who would undertake to pilot her?—No.

2937. There is no such class of people?—No; the coast about Point Linas will not admit of anything of the sort; it is a steep, rocky coast, and there is no shelter for boats or small vessels.

2938. Are there any fishing boats there?—There are no fishing boats there.

2939. Mr. *Cave.*] Are those pilots that go out to Cape Clear voluntary pilots, and are they the same pilots that hold licenses in Liverpool?—No, they are not licensed at all; I only know of them by hearsay, but I believe a few years ago there were about five or six men that employed a small boat to go down the Irish Channel, and they called themselves Channel pilots; I almost doubt whether they exist now; they relied principally upon American ships; few American ships come to Liverpool now.

2940. When I was in Liverpool two years ago, it was said that the number of those who went out to Cape Clear to catch vessels was increasing; are you aware of that?—I have not seen their boat for two years past.

2941. They are not in such numbers as to excite attention?—No; I believe there were five men originally.

2942. Are the licensed pilots in the habit of going beyond their pilotage or not?—They are not allowed to go off their stations.

2943. *Chairman.*] All these men that you speak of hail from Liverpool, do not they?—Yes.

2944. Are they taken aboard in addition to the compulsory pilots?—The ships always used to take these men in the Irish Channel.

2945. Do they put them off again when they took a compulsory pilot?—No; I believe they would bring them on to Liverpool.

2946. Did the same men get employment from Liverpool in outward-bound vessels?—No.

2947. It was only inward-bound vessels that they were employed by?—I do not know that I am right there; I believe occasionally American ships did take them from Liverpool.

2948. Mr. *Cave.*] Were those the ships that were subject to compulsory pilotage?—Yes.

2949. How did they manage to have both on board at once?—They had one man there because they chose to take him, and they had the

Capt. *G. H. Hills*, R.N.

27 April 1870.

the other man because they were obliged to take him.

2950. Is there any instance of a compulsory pilot turning the other man over the side?—There was never any question between them; it was found that some American captains came to Liverpool who were very much afraid of the approaches of the Irish Channel and these men set themselves up as Channel pilots to assist them.

2951. *Chairman.*] We were told yesterday by Captain Judkins, that his Company had obtained special leave to take their pilots on to Queenstown; is that done in the case of other companies or not?—Yes, two or three.

2952. That would show that there is a great demand for pilots as far as Queenstown?—That is a strong testimony in favour of fixed stations for Liverpool pilot boats, when you find that shipowners like these are inclined to make another station at Queenstown.

2953. Is it not also some testimony that the voluntary system of the employment of pilots is found so useful that these shipowners, though they are not compelled to take them, actually want to take them as far as Queenstown?—I agree with Captain Judkins that there are some shipowners, right-thinking men, who would not countenance their ships being worked without pilots under any circumstances.

2954. Mr. *Brassey.*] These men are taken on to Queenstown, not to assist the navigation between Holyhead and the Tuskar, but simply to take the vessel into Queenstown?—Simply that the vessel, instead of having to look for a pilot when she comes into the Liverpool district, may know where to find him.

2955. It is the same as the Royal mail steamers on the Brazilian line; they always take a pilot from Southampton and Lisbon, to navigate the Tagus?—Yes.

2956. Mr. *Gourley.*] Do you know the reason why the Peninsula and Oriental Company carry their pilots from one port to another?—I do not know any other reason except that the chance of getting a pilot in the Channel is so precarious that they prefer to take a man to the Tagus, or elsewhere, where they are sure of finding him.

2957. Is it not done to save time on arrival at the port?—It does save time.

2958. Is not that the only object they have in view?—It is the same in Liverpool; it is a very essential point for a steamer to save her tide; when she arrives at Queenstown she knows by her speed what time she will get into the Mersey, and a loss of half an hour at Point Linas may be very serious; the pilot may make the round of half a dozen ships, before the turn for the mail steamer comes, and a loss of half an hour would lose them seven or eight hours in getting into Liverpool.

Friday, 29*th April* 1870.

MEMBERS PRESENT:

Colonel Bourne.	Mr. Malcolm.
Mr. Cave.	Mr. Philip Wykeham Martin.
Mr. Gourley.	Mr. Norwood.
Mr. Graves.	Mr. William Philip Price.
Mr. Grieve.	Sir Henry Selwin-Ibbetson.
Mr. John Stewart Hardy.	Mr. Stevenson.
Sir John Hay.	Mr. Charles Turner.
Mr. Shaw Lefevre.	Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Captain William Ballantine, called in; and Examined.

Capt. *W. Ballantine.*

29 April 1870.

2959. Mr. *Graves.*] I believe you command one of the steam ships belonging to Messrs. Allens' British and Montreal Mail Company's line?—Yes, the "Scandinavian."

2960. Is she called the Commodore's ship?—She is.

2961. Do you know the Mersey well?—Roughly well.

2962. How long have you been conversant with it?—I have been going constantly out of the north of the Mersey for about from 21 to 23 years.

2963. And you know the course of the estuary thoroughly?—Yes.

2964. And you also know the pilot service of Liverpool?—Yes.

2965. What is your opinion with reference to the Liverpool pilotage?—I have always found it most efficient, and I have never heard it complained of by others; speaking for myself I have always found it most efficient.

2966. I believe one of the peculiarities of the pilotage of Liverpool is what is called the station system?—Yes, there are stations; they are generally divided into four stations, but the boats extend from the bar for 40 miles out.

2967. Do you find that the pilots are at these stations at all times?—At all times.

2968. Do you consider that superior to a system of allowing pilots to go out wherever it suits them best to look for vessels?—Certainly.

2969. The boats themselves being as nearly stationary as possible, are they considered of much advantage to the navigation?—They are marks of themselves, if you pick them up.

2970. They are beacons of themselves?—They are beacons of themselves.

2971. Do you find that the pilots are generally men of ability?—Yes, I think the Liverpool pilots are about mediocrous on the average.

2972. Do you meet any better pilots anywhere than at Liverpool?—No.

2973. Do you always employ a pilot yourself in going in and out?—Always.

2974. Would you consider it prudent to go in and out of the port of Liverpool without a pilot?—On the contrary, it would be most imprudent.

2975. Are there not times and seasons, when owing to the superiority of the buoys and beacons it would be safe to go in and out without a pilot?—One might do it and succeed, but you might be caught with thick weather and fail; many difficulties may arise, it would be very unsafe. Coming from sea, how would I know what is in my way; I could not tell.

2976. Would you see any disadvantage in leaving the employment of the pilot to the option of the shipmaster or shipowner?—The navigation of the Mersey is too dangerous to be left to the option of the shipmaster; his skill is not sufficient, and the risk to life is too great.

2977. Does the risk arise from the individual difficulty with reference to the navigation of the vessel, or does it arise from the crowded traffic, and the difficulty occasioned by meeting so many other vessels?—It is from the track, not from the vessel you are on board of; the ground you have to pass over is so dangerous.

2978. You meet so many vessels?—Yes; you have vessels at anchor and vessels under canvas, and vessels going out and going in, and vessels going of themselves; then there are so many obstructions; buoys get removed, and vessels get wrecked and sunk.

2979. Do you in practise find much difficulty with the smaller class of vessels?—The pilots do, and I also do, because as a general rule you cannot depend upon them. A Liverpool pilot when he is meeting another vessel with a Liverpool pilot on board knows how the man will act; when he meets a vessel without a pilot he cannot tell how he is going to act.

2980. Would you carry your opinion so far as to say that all vessels should have pilots going in and out of the Mersey?—I think so, decidedly.

2981. You are aware, I presume, that the optional system exists in several ports of the kingdom?—Yes, I am aware of that.

2982. Would that influence you at all in your view with reference to the Mersey?—No, the Mersey is exceptional.

2983. If it was found to answer well in all these ports, would it influence your view with reference to the Mersey?—No, because the navigation of the Mersey itself is dangerous and exceptional; we have no other ports in the king-

Capt. *W. Ballantine.*

29 April 1870.

dom with such dangers as we have in the estuary of the Mersey; we have no other part in the kingdom with such narrow channels, and such strong tides all combined, as in the Mersey.

2984. If the navigation is so dangerous as you describe it, might not that probably be a reason for all men to take a pilot whether the system is optional or compulsory?—It may be an inducement with prudent men; but men will run great risks sometimes to make or save money.

2985. Is it your opinion that many would avail themselves of the option and not take pilots?—Some might; I cannot say how many.

2986. The greater the number that would avail themselves of the option and not take pilots, the greater would the difficulty of the navigation be increased, is that your opinion?—If there was a number of masters that did not take pilots that would increase the difficulties with those who had pilots.

2987. Why do you consider Liverpool so exceptional?—For various reasons. First, Liverpool is situated up at the head of a bay; there is a sort of a *cul-de-sac;* our most violent gales are the westerly gales, which make the sand-banks of Liverpool a lee-shore; the tides are very strong, and while we get our fair share of fogs for the coast of England, we are liable along the coast of Lancashire to a great deal of weather that we call hazy; it is not so dense as it is in fogs, but it is sufficiently thick to make the place dangerous, and sufficiently clear to make men who are not prudent try to navigate themselves and not to have a pilot on board; we have strong tides; we have narrow channels, and we have an immense traffic. If a vessel comes down without a pilot towards the bar of Liverpool and does not get a pilot, it becomes a ruin to them; the captain cannot get his vessel off again; if there is any wind down from the westward, blowing strong, he is bound to go in; if the wind is so strong that he cannot anchor his ship, she must go in or go ashore and go to pieces.

2988. Do you consider that the length of the vessels increases the risk?—Yes; the longer the vessel the greater the risk must be, because she takes more space to turn; the larger the vessel is the greater is the momentum; she is not so easily stopped if you want to stop her suddenly.

2989. The tendency is to increase the vessel's length, is it not?—It is.

2990. What is the length of the ships building now?—I go out on Thursday with a ship of 327 feet keel; there is one building in Mr. Laird's, 100 feet longer than her, for the National Company. The ship that I go in next Thursday, is deemed almost a small ship, but she is longer than the "Great Britain," which was the monster of her day.

2991. Do you experience much difficulty in steering your course from the obstructions caused by wrecks and buoys?—I had a very narrow escape within these last two years on the bar of Liverpool. There was a large ship of 1,500 or 1,600 tons sunk on the bar, coal laden, and we had not notice of it, though I had my pilot on board from Londonderry; she had only gone on there an hour or two hours before we were there. It was a flood-tide, and but for the promptitude of the pilot, we must have run a-top of her, and if we had, it would have been fearful, for we had a great many people on board, and running before a flood-tide, we would have torn the bottom out of the ship.

2992. But you had a pilot on board?—Yes.

2993. Did he enable you to detect it?—His eye caught the ship quicker than mine did. His value consisted in this, that had I not had a pilot and had been going in myself, the chance is I might have ported my helm, and gone slap ashore on the south side.

2994. Did you not know of that wreck before you left Londonderry, or before you came in?—No; she had only gone on the bar two or three hours before I approached her, and if I had had no pilot. I might have gone clear by chance, or I might have gone on the top of her, because she was right in the way.

2995. Do you believe that if the present system, which is a compulsory one as to payment in Liverpool, was done away with, that an equally efficient service could be maintained upon an optional system?—You mean by a voluntary system.

2996. Yes, leaving it optional with a master to take a pilot or not?—No, they could not have such a good system under the voluntary principle.

2997. Why do you think so?—It is a very rough coast, and we have very rough weather in winter, and I do not think we should get men to stop out on the stations for the mere chance of picking up a ship, or being refused by the captain; they would wait for better weather or daylight before they tried it.

2998. It is proposed to give the authorities the same control over the pilots as they have now?—If you give the authorities the same power over them as they have now, I question very much whether their authority would be quite as much respected.

2999. You mean that a man would consider it one-sided compulsion, and would not possibly submit to it?—Decidedly; you may send a horse to the water, but you cannot make him drink; at present you have the power, because it is their interest; the men have great privileges at present, and those privileges make them value their position.

3000. There is a double sense of duty now under the compulsory system?—Yes, and also a double sense of interest, which is a great matter.

3001. Would they not have the same interest if they were allowed emulation and rivalry?—No; and even emulation and rivalry may be carried too far; we tried it in the St. Lawrence and failed.

3002. Will you explain that to the Committee?—Our system of pilotage has always been compulsory in the St. Lawrence as far back as I can remember; but while compulsory, there was no arrangement as to stations; each man had his own boat, and could pick up ships where he thought proper; the consequence was that we very frequently in the Gulf had pilots coming and speaking to us 400 or 500 miles below Quebec, when a man was of no use to us, and when we got up to the pilotage limit proper, where the pilots were required, the chances were that we could not get pilots. I think it is a much better system in the Mersey, where I can go to a certain point and generally get my pilot.

3003. Does that system still continue in the St. Lawrence?—No, they had to abandon it.

3004. When did they abandon it?—It must be some six or eight years ago, but I think (I quote from memory) they got incorporated as a body,

body, and now they are under a similar system to what we are under in Liverpool.

3005. They have their stations?—They have their stations.

3006. Do you consider that an improvement on the old system?—It is an improvement for getting a pilot.

3007. Have you any apprehension at all that if the pilotage was voluntary, and a captain could take a man or not, that a pilot would consult his own safety more under that system than he does now?—Yes.

3008. And you think that on a very bad night probably he would not be found on his station so certainly as he is now?—No, certainly not. I know I would not be there if I was a pilot; it is human nature.

3009. There is a moral responsibility independently of the control exercised by the pilotage authority, in consequence of the compulsion?—Yes.

3010. You, as a shipmaster, are dependent upon those men to be there to relieve you in your difficulties of navigation, and you regard it as a moral responsibility placed upon those men?—I do.

3011. A double obligation; the man to be there, and you to take him?—Yes; the organisation is such that the men are there; the motives that influence them I do not know so much about, but they are there.

3012. Now, I will ask you a few questions as to the duties of pilots on board your ship?—To take my ship in safely.

3013. Do you give up unlimited charge to him when he comes on board your ship?—Not unlimited, but I give him the command of the ship within certain points or limits.

3014. Do you give him command of the ship as to its direction?—As to the way he wants the ship steered.

3015. But you retain in your own hands the complete management of your ship?—I retain it to this extent, that if I saw the pilot doing a thing which I felt sure would lead my ship into extreme danger I would remonstrate in the first place, and take my own way in the last place, if I was sure I was right; but I would hesitate before taking these strong measures. The pilot, being primarily responsible, has a right to command the ship to a certain extent; he is pilot and he is commander, he is not captain.

3016. But all the acts to be done on board your ship are done through your own order?—The pilot gives the orders and they are carried out according to the pilot's wishes as long as I do not disapprove of them.

3017. Do not you consider a master is better acquainted with the capabilities and peculiarities of his ship than any pilot can be?—He ought to be, and I believe generally is; but in point of fact, the master has the directing of his ship.

3018. And the pilot is his adviser?—That is the relative position of the parties.

3019. It has been stated here with reference to the Mersey, that if the weather was bad, or thick, or unsuitable for entering the port under ordinary circumstances, a vessel could stand off; is that your experience as a master?—If there are strong westerly winds with a sailing ship, it is an impossibility.

3020. Will you state your reason for that belief to the Committee?—The reason is this; the westerly wind is putting the ship down on these banks, which is a lee shore; she may drag off a little should she chance to have the ebb tide, but whenever the flood comes, away down she goes again. With the short chopping sea that comes down there with westerly winds, vessels cannot beat off if it is blowing hard; steam ships of course can.

3021. Are you aware what the average income of the pilots of Liverpool is?—By hearsay, I believe it to be about 200 *l.* a year.

3022. Do you consider that too much for men of that class?—No; I think, as a general rule, the higher you pay the men, the better standard of men you will get.

3023. Have you consulted many of the captains upon this question of pilotage?—Yes.

3024. What is the general feeling of the masters upon this question?—It is very simple; they think it is better to leave well alone.

3025. That is the general feeling amongst the ship masters in the port of Liverpool?—Yes; if you polled them, nine out of ten would give an answer similar to that.

3026. Sir *Selwin-Ibbetson.*] You stated that you have known of the voluntary system being established at certain ports; have you ever traded between those ports where the voluntary system of pilotage was in existence; the Bristol Channel, for instance?—No, I am not acquainted with the Bristol Channel; with regard to the port of Ireland that I go to, I do not know whether it is voluntary or involuntary; I always take a pilot.

3027. You are not personally acquainted with the system under voluntary working?—No.

3028. Mr. *Malcolm.*] How often do you make your voyages?—We are away on a voyage about five weeks, and we have one week at home; on the average, I make eight voyages a year.

3029. What is the distance of time between your voyages; you say you are away about five weeks?—Yes.

3030. And you sometimes find that great changes have taken place on the bar, and in the passage generally during your absence?—Yes, some of the channels have changed very much in my recollection.

3031. And accidents to ships such as you have quoted are liable to take place?—Vessels do get sunk in a fair-way always.

3032. Mr. *John Stewart Hardy.*] You say that the pilot gives the orders when he is in charge and not yourself; do you mean that in such cases as shortening sail or stopping the ship, that order would be given by the pilot, or that you would give it at his request?—The chances are if it was a question of changing sail he would say, "Take in so-and-so," and I would pass the order.

3033. You would allow him to give it if he thought proper?—Yes; if he sang out, "Clew up that top-sail," I would let it be done, and if it was not smartly acted upon my voice would come out to have it done smartly.

3034. You would not leave the ship entirely in the charge of the pilot?—No, if I have to go I leave a representative, either the chief or the second officer.

3035. *Chairman.*] Does the Allen line employ what they call a "choice" pilot?—Yes, we have two.

3036. Which are exclusively employed by your line?—Yes.

Captain *W. Ballantine.*

29 April 1870.

3037. You do not wait for a pilot at the stations?—No.

3038. You have that privilege from the pilotage authority of having a choice pilot?—We got the privilege from them to have two pilots.

3039. What do the company pay to the two pilots?—They pay the full pilotage and they pay their board in Londonderry, and I am also under the impression that when they run clear for a certain time, either six months or a year, there is a certain bonus given by way of encouragement.

3040. On the whole they make up to these men the average earnings with other men?—Yes.

3041. And perhaps something more?—I think more.

3042. I suppose it is a very good thing for the pilots?—Yes.

3043. Will you state the reason for your company adopting that plan?—I think the principal reason was that the first year or two of the ships running, when the steamers came on towards Liverpool, if it was night time, and the weather hazy there might be a difficulty in getting a pilot; not but what the pilots were there about their proper point, but the captain would not know exactly where he was to within a mile, and he might lose his tide, which involved him stopping out the whole night with many passengers and Her Majesty's mails on board.

3044. Then, in fact, the company have not been altogether content to trust to pilots at their stations?—If the captain could not see he could not pick him up.

3045. Do the company consider it a valuable privilege to be able to take the pilots absolutely into their employment?—I do not know the value they put upon it, but it was their choice.

3046. Do not they value the privilege of being able to choose out of a number of pilots men whom they can rely upon as efficient for their purpose?—I cannot answer that question.

3047. You have never heard anything stated on that point?—No, I have not; my impression is this, that we captains used to go on grumbling that we had lost a night if the weather was thick.

3048. Should you be surprised to hear that one of the reasons was, that they liked to choose their men out of a number instead of having the men thrust upon them?—It would not surprise me.

3049. You think it is not unlikely to be one of the reasons?—It is not impossible.

3050. Do not you think it is very probable that that was one of the reasons?—I do not know; I cannot say as to that; I think it is quite possible.

3051. You take your pilot on to Londonderry and leave him there?—Yes.

3052. Do not you think that other vessels besides the great steamship lines would like the privilege?—They may have it if they like to pay for it, I suppose.

3053. Do you think that the pilotage authorities will give it to others besides the great lines?—I cannot say.

3054. Do you consider the permanency of the stations is of very great importance; if it is important to you why is it not important to the rest of the trade?—It is of importance to us especially, because we have to call at Ireland. It would not be worth our while to call at Ireland to pick up a pilot for Liverpool; but we go to receive mails and passengers.

3055. I presume a great number of vessels from foreign ports on their way to Liverpool stop at Queenstown for orders?—Yes.

3056. Would it not be a great convenience to them to take a pilot on board at Queenstown for Liverpool?—It would depend entirely upon the masters. The chances are, some masters would not have them at all, because they would have to keep them for a few days.

3057. Is it not your opinion that great numbers of vessels would take pilots at Queenstown if they could?—Some would and some would not; but I cannot give an opinion upon the number that would take them or would not take them.

3058. Mr. *Hardy.*] In the case of a casual vessel taking a pilot in that way, would not it increase the expense of having a pilot on board for some days?—It might.

3059. *Chairman.*] I think you stated that you had had no experience of ports where the pilotage is voluntary?—Not much; these last 23 years I have been constantly in the St. Lawrence trade, and it is compulsory for Liverpool and compulsory there.

3060. You have had no experience of the Bristol Channel or the northern channel of the Thames, where it is voluntary?—No.

3061. Are you able to state to the Committee whether any difficulty has been found in coming on to the stations there?—I am not aware of any difficulty.

3062. Are you able or not to state whether the dangers of the Bristol Channel are at all comparable to those of the Mersey?—I am not aware.

3063. You expressed your opinion that Liverpool was altogether an exceptional case?—Yes.

3064. What do you compare it with?—Any other part, as far as I know, of the Bristol Channel. Looking at the form of the land, you are not likely to be jammed up so much as you are upon the banks of the Mersey.

3065. Take the upper part of the Bristol Channel?—Up there it is certainly narrow.

3066. When you are told that the tide rises and falls 50 feet, should not you say that that is an exceedingly difficult channel?—It would be of advantage, if you were ashore, to get off easy with that depth of water, but I cannot give you an opinion upon that.

3067. Are you not sufficiently acquainted with the north channel of the Thames to give an opinion upon it?—No.

3068. You compare Liverpool, I presume, with Londonderry, Bristol, Cork, and all those places?—Where there is an open coast, anywhere that may become a lee-shore.

3069. You also stated that you would always take a pilot if you were not acquainted with the port into which you were going?—Yes.

3070. And you think that every prudent man would do so?—Yes.

3071. But supposing the captain is thoroughly well acquainted with the channel, is there any reason why he should take a pilot?—A captain cannot be so thoroughly well acquainted with any port as a man who is trained to it.

3072. Take, for instance, men constantly going backwards and forwards to the coast of Ireland?—If a man is going constantly out and in, he may know the channel better than a man who goes much more seldom.

3073. Do not you think he must be as well acquainted with the channel as a pilot?—Supposing a man goes out 16 times in a year, and it occupies an hour each time, his experience would amount to about 16 hours in the year, but that would be very little compared with a pilot who has served his apprenticeship there for a long period of years. I am a great believer in the fact, that if you want a skilled man he should be trained to his profession, whatever that profession may be.

3074. Take the case of captains of vessels going to the coast of Ireland, who are constantly going in and out, is there any reason why they should be forced to take a pilot?—I would force all vessels, large and small, to take pilots; they are of great public benefit.

3075. You would compel even small vessels to carry pilots?—I would compel all to do so, to keep up the system.

3076. And to keep up the system even whether the masters were thoroughly acquainted with the pilotage or not?—If they are thoroughly acquainted with it let them prove to the authorities that they are so, and they can get pilotage certificates themselves.

3077. Mr. *Graves.*] With a steamship what would you consider the average time for waiting to pick up a pilot, taking the circle you often have to take?—It is only a question of a few minutes.

3078. I do not mean the mere actual stopping to take the man out of the boat; but what would you think the average stopping time would be, taking into account the detour a vessel has to make to pick up a pilot boat?—If a steamer comes to Liverpool from Holyhead, she comes in the direct line of the pilot boats.

3079. Coming from the North Channel?—Yes; if they chose to go up to Point Linas to take a pilot it is a detour.

3080. Would you think half an hour the average time, day and night?—That will depend more upon whether you go to Point Linas or steer towards the buoy.

3081. Is not the saving of time, with a vessel carrying mails and passengers, one of the principal reasons why you take a pilot on to Londonderry?—That is the principal reason.

3082. Are you aware that the earnings of these pilots so specially employed go into the common fund, and that they receive no greater advantage pecuniarily than any other pilot in the port?—I do not think that is so.

3083. Are you not aware of it?—No; I would imagine if there is a bonus the pilot himself would get it, but I apprehend their earnings fall into the common fund.

3084. *Chairman.*] I suppose you have no doubt that your owners, Messrs. Allen, will continue to employ pilots after this Bill is passed?—I think they will.

3085. In coming here to give evidence do you give their views at all?—No, I give my own views only.

3086. Sir *Selwin-Ibbetson.*] You seem to be uncertain whether a captain would take a pilot by preference, going into Queenstown or not. Would they be influenced by the fact of their having to call at Queenstown or not?—I do not think any ship would go into Queenstown specially for a pilot.

3087. Vessels not having business in Queenstown would naturally prefer the stationary pilot?—Yes.

3088. Mr. *Price.*] I understood you to say that, in your opinion, it would be convenient that every ship should be obliged to take a pilot. If I understand the general tenor of your evidence, the reason for that would be that it would secure your finding a pilot whenever you wanted one?—That is one reason; but the principal reason that I am looking to is the safety of human life. I do not see that either a master or an owner has any right to risk the lives of his men or of his passengers to save a few pounds.

3089. The certainty of finding a pilot on a station where you want him is only one of your reasons?—That is only one reason.

3090. If you found that, without compulsory pilotage, you were always perfectly certain to find a pilot where you wanted him, would that affect the opinion you have expressed that it would be expedient to make pilotage universally compulsory?—I think compulsory pilotage for a dangerous place like Liverpool is a great public benefit, and that it is necessary to maintain it for the preservation of life, and I do not think we do any injustice to shipowners in making them all contribute towards keeping it up. Are we guilty of injustice to shipowners in making them pay for all the lights in the Channel when their ships may not see one-tenth of them going up and down? Upon the same principle, compulsory pilotage is a great public benefit, and the public ought to contribute towards it.

3091. If every ship was obliged to take a pilot it would make it easier to those who do want a pilot, would it not?—Yes.

3092. And you would get a pilot at lower rates on account of the pilotage being compulsory?—I have never heard the rates at Liverpool complained of by anybody; our rates are remarkably low, and the work is efficiently done; we have a magnificent organisation; I should be very sorry to see anything done that would break it up. I am here to-day as a volunteer, simply because I hold those views.

3093. Mr. *Stevenson.*] You propose to abolish all exemptions, and compel all ships, large and small, to take pilots?—I would, in certain proportions.

3094. What do you mean by certain proportions?—The smaller ships might be let off easier with regard to payment.

3095. You would make a difference in the payment, but you would compel every ship to take a pilot?—Yes, I would compel every ship to take a pilot, and if the captain did not take a pilot I would hold him responsible.

3096. Sir *Selwin-Ibbetson.*] You are of opinion that where a vessel with a pilot on board meets a vessel without a pilot, the pilot on board the vessel is not so certain of the working of his vessel as he would be if there was a pilot on board the other vessel?—No.

3097. Mr. *Gourley.*] Could not you find your way into Liverpool by the charts which you have on board ship?—They are of no use; I mean that they are of use when a man is without a pilot, and cannot get a pilot, which event has never happened. I think I could take a vessel out of and into Liverpool, in good weather, by the chart easy enough, and could do it without a chart in good weather; if I could see the buoys, I should only have to keep between the buoys,

Captain *W. Ballantine.*

29 April 1870.

and, if there was no obstacle in my way, I could go in.

3098. You acknowledge that you could navigate your ship in and out of Liverpool by the chart without a pilot?—That would be in some extreme case; it is not a case where a captain can check the actions of a pilot by a chart.

3099. Are not the buoys marked upon the chart?—Yes; but in going in there, looking at the strength of the tide, you have not time to run down and examine your chart.

3100. But you generally have your chart on deck?—In the deck-house, but not upon the bridge.

3101. Do you find that the buoys are generally correctly marked on the chart?—Yes; but the buoys are not always on the places where they are marked; they get displaced, although, if a buoy is moved from its position, the pilots at once report it.

3102. Are they ever replaced by buoys of a different colour, or do they always remain the same?—They do make changes of that kind after having given proper notice by advertisements in the newspapers.

3103. Are the buoys changed more than once in 12 months?—I do not know how often they are changed.

3104. Mr. *Charles Turner.*] Although you can find your way into Liverpool in clear weather, do you find that it is often foggy on the water when it is clear overhead?—Yes; we get more than our share of fogs there.

3105. And although you could find your way into Liverpool without a pilot in clear weather, when you could see the buoys, you would find great difficulty in finding your way in if you could not see the buoys?—I would not do it at all if I could help it.

3106. That frequently happens, does it not?—Very frequently.

3107. Although a large company like yours finds it to their interest to take pilots at Queenstown or Londonderry, according as they may be going north or south, do you think that any isolated vessel coming into Liverpool either north or south would think it worth while to go into Londonderry or Queenstown to get a pilot?—They could not afford it.

3108. And it is the nature of your business that compels you to go into Londonderry or Queenstown as you do?—Yes.

3109. You were asked whether you did not think it a great privilege to be able to make choice of an efficient man among the pilots; as a rule do not you consider all the pilots that go out of Liverpool are efficient men?—In large bodies of men like the Liverpool pilots some may be better than others.

3110. But, as a rule, from the nature of the education they get, do you consider the Liverpool pilots efficient men?—They are efficient. Of course the choice of a pilot is an impossibility with an inward-bound ship, with an outward-bound ship you might have a choice; but I think it would be very bad to adopt that system even with outward-bound ships with a trade like that of the St. Lawrence.

3111. Sir *Charles Wingfield.*] I understood you to say that if you saw a pilot doing a thing which would endanger the vessel you would remonstrate with him, and, as a last resource, you would take the vessel out of his hands; but you would do so with great hesitation, as the pilot is responsible; he is commander?—He is primarily responsible; he is commander, not captain.

3112. Then I understand the danger must be very obvious and inevitable which would, in your opinion, justify you in superseding the pilot?—Yes.

3113. Mr. *Grieve.*] You say you would make it obligatory upon every one to take a pilot?—Do you mean to confine that remark to the port of Liverpool, or to the whole of the United Kingdom?—I speak only of Liverpool. I think it is very likely that the contemplated change in the pilotage laws upon the average might be good; my own opinion is that it would be so. In many of these places, through old custom, there may be pilots where they are not wanted. I have reason to believe that that is the case. In a case of that kind it is good, but why touch a place which is so extremely dangerous as Liverpool? I go out, if all is well, on Thursday afternoon next. I do not know who will be on board, but I guarantee that there will be 900 or 1,000 lives on board, and that is not a thing to play with.

3114. Have you been up the Clyde frequently?—Yes, I was up there the other day.

3115. Do you consider it is necessary to have a pilot there?—No.

3116. *Chairman.*] Are you aware that the owner is not responsible for the acts of a pilot when the vessel is under his charge?—I became aware of that fact only a year or two ago; it was the law for a number of years before I knew of it.

3117. That law exists wherever the employment of a pilot is compulsory?—Such is the law at present I believe.

3118. Do you think it would be just to make the owner responsible for the acts of a pilot, even where he is compelled to employ a pilot?—I am perfectly satisfied with the system as it is at present; it puts less responsibility on me, and I do not want any change in that respect.

3119. Do you think it would be just to owners to make a change, so long as they are compelled to employ pilots?—Sailors are not good abstract reasoners; I am perfectly satisfied with the law as it is, because it throws less responsibility on me. I consider we have too much responsibility. We are responsible if we get our ships on shore, because we endanger human life, and we are responsible if we allow ships to sink, because we do not go down with them, and our certificates are cancelled in consequence.

3120. Do you feel a relief when a pilot comes on board, because you are relieved of responsibility?—Not altogether; the primary responsibility is upon him.

3121. Colonel *Bourne.*] You said you were obliged to call at Londonderry upon your outward passage?—Yes, that is part of our business.

Mr. JOHN TOWNE DANSON, called in; and Examined.

3122. Mr. *Graves.*] I BELIEVE you are Chairman of the Underwriters' Association of Liverpool?—I am.

3123. You are also very extensively engaged in underwriting?—Yes; I am writing one of the largest accounts in the kingdom.

3124. Your attention is constantly drawn, no doubt, to the risks affecting navigation?—It is.

3125. I presume the pilotage of Liverpool often comes under your consideration?—It does; it is of considerable importance to the underwriters of Liverpool.

3126. Are they generally satisfied with the present system?—They are.

3127. Do you consider that the captain of a ship engaged in the foreign trade would be deemed a competent pilot in the Mersey?—So far as I am capable of judging, I should say not.

3128. Why do you give that opinion?—I may refer to the evidence given by the preceding witness, Captain Ballantine; he has stated the grounds very clearly. If I were to restate them, I should say that from all I can learn from practical men, to be an efficient pilot for the Mersey a man must have been trained to it, and that if he is absent so long as one month, or possibly even a shorter time, he cannot be deemed a safe and efficient pilot for those channels. Foreign-going captains are constantly absent for at least a week or two; and if they are absent even two or three days, there is danger, but the danger would be much greater if they were absent two or three weeks or a month. However well they were able to navigate the channels when they went away, they are not fit to do it when they come back; the channels change and become obstructed, and a very slight change may cause great injury.

3129. Would you as an underwriter give preference to a risk that had a pilot on board duly qualified and trained in the Mersey, to a risk commanded by a master who took out his license under the provisions of the Merchant Shipping Act; that is with regard to foreign-going ships?—Most certainly; especially with reference to inward-bound ships.

3130. I suppose the material interests at stake must be very large in connection with the safe navigation of the Mersey?—I have made one or two attempts to arrive at an estimate of the value of property in ships, freights and cargoes, insurable in a year, and I find that great diversity of opinion exists among those with whom I have talked about the matter. But I have fixed upon figures which seem to be deemed under the mark, rather than over, by everyone whom I can deem to be a judge; the value that I have put it at is about four hundred millions sterling in the year.

3131. Mr. *Wykeham Martin.*] Is that in and out of Liverpool?—In and out of Liverpool; the whole of the property passing through the channels in the course of a year.

3132. Mr. *Graves.*] To what extent do you limit your definition of the channel?—The channels described in the chart through the sand banks interposed between the river Mersey proper and the open bay.

3133. Have you formed any estimate of the number of square miles these channels go through?—That can be judged of by the eye; I should say there are 200 square miles of sand banks, measuring from the West Hoyle Bank up to the Jordan Bank.

3134. Have you formed an estimate of the number of lives that pass in and out of the port of Liverpool in a year?—I should put them down at a minimum of 400,000, that is, including emigrants, seamen, passengers on board steamers, engineers, and every one employed.

3135. What is the impression upon your mind, derived from your experience as an extensive underwriter, with regard to the navigation of the Mersey, as compared with other ports not only in England, but throughout the world?—The Committee are aware that my knowledge must be gained entirely from other persons: speaking as an underwriter, I do not think that there is any port in the world involving dangers nearly so great as those involved in the entrance to the Mersey.

3136. Have you formed any opinion as to whether the pilotage in the Mersey should be compulsory or optional?—I have a very decided opinion that it should remain compulsory, as at present.

3137. Are you aware that it was at one time optional?—I believe it was so until the year 1765 or 1766; and having read the preamble of the Act by which the present system was established, I find it there stated that the voluntary system had failed to secure that which was desired by the merchants, shipowners, and underwriters of the port; it had failed in giving security.

3138. Will you give the Committee your reasons for saying that it should be compulsory?—When I say compulsory, I should like to distinguish between the present amount of compulsion and that which I think should exist. At present a man is bound to pay a pilot, but he is not bound to take one. My opinion is, that he should be bound to take one, whoever pays for it; that it is a matter of police. No ship should be allowed to go into or out of the Mersey without a pilot. I think it should be compulsory, because, having considered every method about which I have been able to learn anything, or which has been suggested to me, for making the system less compulsory than it is at present, or making it optional on the part of shipowners to take pilots, I see great disadvantages attending the proposed alteration, as compared with the system we now have.

3139. Are you so satisfied with the principle of the present system that you would view with apprehension any serious change from that principle?—Certainly; I would rather extend the compulsion than in any way diminish it. I would do away with all exemptions. I think all the exemptions have been mistakes; they have introduced anomalies which certainly, to those at a distance, who look at it theoretically, make the present system look very imperfect in some respects.

3140. Do you think that the safety of the port is now ensured with the minimum of cost and with the maximum of effect?—Yes; excepting, only, that I think the compulsion should be a little more strictly applied than it is at present.

3141. In what way would you more strictly apply it?—I should restrict the right now given

Mr. *J. T. Danson.*

29 April 1870.

to a captain to pilot his own ship on passing what I should call a paper examination, not implying any training as a pilot.

3142. Do you call a paper examination the examination provided for by the Merchant Shipping Act?—Any examination that does not imply actual training of a pilot.

3143. Do you consider that anyone is qualified to take a ship in or out of the Mersey who has not served his time or been trained as a pilot?—So far as I can express an opinion, I do not, decidedly.

3144. Would not that be under peculiar circumstances, and not in ordinary weather?—In ordinary weather, so well are these channels buoyed, that I can conceive that a person with very little skill as a pilot could take vessels in or out; but I consider that the staff of pilots should be such as would be sufficient for any emergency; and there are periods, extending sometimes over weeks consecutively, when it would be a mere act of idiotcy for any man to attempt to enter or leave the port except with a pilot.

3145. Do you consider the port of Liverpool to be well buoyed and lighted?—I do: and looking at the result, I think that that opinion is confirmed.

3146. Do you consider that it is superior to most ports?—So far as I can judge; but I know very little of the buoying or the lighting of other ports.

3147. Is that the general opinion of your colleagues?—I have found it to be the opinion of merchants, shipowners, captains of vessels, and underwriters, generally.

3148. Do you consider the details of the present system, on the whole, well arranged?—I think it admits of modifications, which would be changes for the better; but, on the whole, I must admit that I regard it as a very good system, and very well administered.

3149. Are you at all afraid that in an estuary like that of the Mersey, owners would not take pilots as freely under an optional system as they do now under the compulsory system?—I have no doubt that some shipowners would not take pilots, in order to save the pilotage. I cannot state how many, but, perhaps, it might be one-fifth of them who, in favourable weather, would avail themselves of the option not to take pilots.

3150. And, in your opinion, would it thereby make the navigation of the Mersey more difficult?—It would be, in some degree, analogous to an unskilful driver going through a crowded thoroughfare; he would not only risk his own life, but would risk the lives of others.

3151. That is one reason why you think that there should be no exemptions, is it not?—Yes.

3152. Have you any particular reasons for thinking that some would avail themselves of the option?—I have observed in all classes that there are men more or less reckless, ignorant, parsimonious, and regardless of the consequences of their acts with regard to others; there are such persons in every class, and, therefore, among shipowners; and I think those persons would dispense with pilots as much as they could.

3153. Is there any warranty in your policies that the masters should take pilots?—None.

3154. Are you aware of any arrangement of that kind in any other country?—I am not aware of any form of policy that includes that warranty; it might be inserted in special cases.

3155. I suppose if the loss was increased from any inefficient system of pilotage that the premiums would rise in proportion?—Certainly; the underwriters must either get a sufficient premium or go out of the business.

3156. That would press upon the prudent shipowners as well as the imprudent shipowners?—It would, because the danger would be one to which all would become liable; the more valuable vessels and cargoes would be almost invariably in charge of pilots; the vessels of the lowest class, with cargoes of the least value, might be sunk; they would become great obstructions in the channels, and they would be the vessels which would not take pilots.

3157. Would you not be able to protect yourselves to some extent without an increase of premium by warranties in your policies?—I think it not unlikely that an attempt might be made to obtain such a warranty, but I think it unlikely that it would be obtained, partly because competition among the underwriters would prevent the attempt being general, but much more because it would be found not to meet the difficulty: for the danger would attach to those who had pilots, as well as to those who had not. You would not free yourself from the danger implied by the optional system by obtaining such a warranty.

3158. So that you have no great faith yourself that such a safeguard would be introduced?—I should not myself think for one moment of introducing it.

3159. Though property might be protected by insurance, life, I suppose, is not so easy to insure?—With life I have nothing to do. I have no doubt that, looking at the matter incidentally, there would be an increased loss of life under the optional system.

3160. We should be throwing overboard all the securities we are endeavouring to provide for in the legislation connected with merchant shipping?—Yes, which is certainly most important with regard to the great trade of the Mersey.

3161. Do you find that the need for pilot service at Liverpool of the present compulsory character is generally admitted?—I have heard of very few exceptions to the opinion which I hold myself; and the opinion which is generally held by underwriters and shipowners is, that it is better that it should remain as it is than that the optional system should be introduced.

3162. The general opinion is, that the compulsory system is necessary for Liverpool?—Yes.

3163. Is that on the ground that what is for the common benefit of all, should be fairly contributed to by all; is that the principle upon which you go?—I should rather say that there is a great natural obstruction to the carrying on of the enormous traffic of the port, and that that obstruction can be best met by some such method as we now have; that it is at present met with the least practicable cost, and with the greatest efficiency.

3164. Under the optional system I presume it would be your opinion that the prudent men would contribute, and probably in a larger proportion than they do at present to maintain the service, while the imprudent would generally go free?—Assuming it to be necessary, as I do, that some 50,000 *l.* or 60,000 *l.* a year must be spent to maintain an efficient staff of pilots at Liverpool, I think that if it were made optional, the

persons

persons whom I have described would evade their share of the payment, and consequently, if the amount spent is to be made up and the pilotage staff is not to be made ineffective or reduced in numbers and efficiency, the cost must fall more heavily upon those who do employ the pilots, as, in fact, the prudent men would have to pay all.

3165. And therefore the inducement not to take the pilots would be increased?—So far as the cost of the pilots forms part of the inducement to avoid taking them, it would fall with increased force upon the prudent men.

3166. And that consideration would affect any scheme for compensation which was to be levied upon the pilotage rates of the port in future?—I presume you are now referring to some scheme for paying off the vested interests of the pilots; if any tax to meet that cost were levied, the same principle would operate, and of course the same results would ensue.

3167. You would be freeing, in fact, the parties who had incurred that obligation, and taxing the prudent in future; is that your view?—If the taxation by which the pilotage fund is in future to be raised (whether that taxation is to meet current cost or to meet a past obligation) were levied in the way it is proposed, upon those only who chose to take pilots, undoubtedly it would be an additional burden upon the prudent owner, and so far as it formed any motive with him in taking or not taking a pilot, it would tend to induce him to go without a pilot.

3168. You have expressed your opinion that if pilotage were optional, the pilots would be less regularly employed?—They would. It is only in fine weather, in open day-light probably, that many would attempt to do without a pilot. I think it is essential for the keeping of the staff in a state of efficiency, that they should be as constantly employed as possible.

3169. What, in your opinion, would be the effect of such an optional system upon the pilots themselves?—I should think that the pilots would soon begin to distinguish who employed them and who did not. They would prefer, so far as they could do it, to serve those who were their regular customers. The result would be, probably, that they would feel some sense of injustice at the irregularity of the employment, and that they would possibly bring their sense of injustice to bear upon the interest of those who avoided taking pilots, whenever they could do so with any chance of safety. I think a pilot might then be expected not to see a ship which he knew would not take him in fair weather. If the weather were foul, the pilot would prefer taking a ship which belonged to one of his regular customers.

3170. You would regard it, in fact, as a one-sided obligation?—Yes, and I think the pilots would regard it so also; and that it would have a serious effect upon the ultimate efficiency of the system.

3171. Do you think that that one-sided obligation could be long maintained?—No, I think a few years would put an end to it.

3172. What, in your opinion, would be the alternative then?—We must either return to compulsory pilotage, or we must introduce, at a very great cost, a system which would rather resemble salvage than pilotage.

3173. Allowing free bargains?—Free bargains practically, except with outward-bound vessels, would be impossible; free bargains cannot be made under peril.

3174. In the present position of affairs, you regard the pilots of Liverpool as public servants, I presume?—Yes; I regard them as public servants trained for the service of the particular locality, and whose efficiency is dependent upon their being so trained, and that their services are, comparatively, of little value elsewhere.

3175. You stated that the value of the ships' freights and cargoes insured in Liverpool, in the course of the year, amount to the sum of 400,000,000*l.*; what per-centage would the pilotage of Liverpool give as a tax upon that commerce?—If you take 50,000*l.* upon 400,000,000*l.*, the value at risk, you have about 3*d.* per 100*l.*

3176. That would be a small sum, would it not, in proportion to any increase of premium that might be caused by greater insecurity?—What the increase of premium might be it is impossible for me to conjecture, but as I am satisfied that the losses consequent upon the adoption of the optional system would greatly exceed the whole annual cost of the pilotage at present, any premium that would be required to balance it must exceed 3 *d.* per cent.

3177. Is it your opinion, that a large amount of loss of property is avoided by the system of pilotage in Liverpool?—I have no doubt of it.

3178. If it were changed to the optional system do you think that it would have a contrary effect?—Yes; I consider it would lead to a greater loss of life and property.

3179. With regard to the number of pilots, do you consider that it is necessary, in a port like Liverpool, to keep up the number in order to meet the greatest emergencies, or would you fix the number according to the average wants of the port?—The staff cannot in my opinion be efficient unless it be such as to be able to cope with the greatest strain likely to be put upon it during the months of November, December, and January, and, as far as I am able to judge, the present staff is not more than sufficient to meet such an emergency.

3180. With regard to steamers, do you think that they need pilots as much as sailing vessels?—In one sense, no; but regarding the matter as one of police regulation, the regulation of these important roads through the channels, I conceive that it is as necessary that steamers, and especially large steamers, should have pilots, as sailing vessels. I may say that a great number of vessels leaving the port do so in tow of steamers. Probably one-half of the vessels entering are in tow of steamers, and nine-tenths of those going out; but the two classes cannot be regarded as the same with reference to the present question, because the steamers entering have usually been some time absent from the port. The small tug steamers used for taking vessels in and out are in command of men who have generally a great deal of practical knowledge of the channels, and they are generally very fair pilots.

3181. Have you formed any impression at all as to whether the necessity on both sail and steam was so similar as to render unnecessary any reconsideration of the incidents of the tax?—I think that if the question now were whether the cost of pilotage is fairly levied over the property which is rescued from danger by it, there might be good reason for altering the incidence of the tax; but that is a matter to which I have not given particular attention.

3182. Now

Mr. *J. T. Danson.*

29 April 1870.

3182. Now with regard to the question of the immunity of the owner for damage done by a ship when a pilot is on board, have you formed any opinion upon that point?—I have.

3183. Will you state to the Committee what your opinion is with regard to that?—I think the immunity should be entirely withdrawn; it ought never to have been given. Its existence is one of the great difficulties we have had to deal with in putting the pilotage system upon a perfectly satisfactory footing.

3184. Is there not a necessary connection between that immunity and compulsory pilotage?—I do not see any connection whatever, if you regard compulsory pilotage, as I do in reference to the Mersey, as a matter of police, rather than anything else.

3185. You do not think that there is anything in the argument of the non-selection of your own servants?—Not under the circumstances. There are many instances in which we all of us have to accept the services of public officers selected by those who are better judges of their efficiency for the purpose than ourselves; and I do not think that this involves any more injustice than many other instances of the same kind: in fact, I do not see that it involves any.

3186. Would you free the pilot from liability altogether?—I would, except to his masters; that is, to the local authorities.

3187. That is to a limited amount?—That is rather a matter of detail, and I should think it would be well that the local authorities should have the power of fining up to a certain amount a pilot who appeared not to have perfectly done his duty.

3188. According to your general impression of the duties of a master and a pilot, do you consider that the pilot assumes the responsibility of the command of the ship when he comes on board of her?—So far as I may venture to express an opinion, I think the captain's command of the vessel should never for a moment be disturbed, and that he receives the pilot simply as an adviser, as a person skilled in the local navigation of the place, and whose advice he would of course be expected to attend to, because it is supposed to be supplementary to, and in many respects, far superior to his own; but I do not conceive that the pilot should be permitted to indulge the idea that he has the right to command anybody on board the ship; that is especially necessary now with regard to iron ships.

3189. Why do you consider it necessary in regard to iron ships?—One of the most important results of the construction of our ships of iron has been to give an individual character to the steering compass of every iron ship, and the difficulty of adjusting the compass on board an iron ship is such, the result of the best and the most skilful adjustment is such, as to leave the compass liable to variations, of which no man, except the captain or some one who has observed the use of the compass, can be a good judge, or is so far acquainted with it as to enable him to steer the vessel under critical circumstances.

3190. Then you consider that this is an increasing need?—Yes it is. We are yet in the infancy of the art of adjusting compasses so as to make them efficient on board iron ships.

3191. Your idea is that you should so define the duties of the pilot as to make him the adviser of the captain, and that the captain and the owner should be responsible?—Certainly.

3192. Are you aware that the present Bill now before the Committee proposes to remove that immunity?—Yes, and I think it is a perfectly correct course to take.

3193. Are you also aware that the Bill now before the House, called the Merchant Shipping Code, proposes to remove that immunity?—Yes.

3194. But the principle as regards the obligation is different from that?—Yes.

3195. There the obligation is all to pay?—I am aware of that.

3196. Have you formed any impression in your own mind as to what general principle might be laid down in a Bill of this kind, affecting the whole coast of the kingdom, as to the election of a principle suited to each port?—I cannot venture to speak with any degree of confidence except with regard to the Mersey. My own view, if I were to venture to express an opinion, would be that there should be no interference with trade that can be avoided; that is to say, which can be avoided, having regard to those interests which the State alone can efficiently take charge of, and this is why I should describe the Mersey pilotage as a system of police.

3197. You have got at Liverpool a local authority representing completely the commerce of the port?—We have.

3198. And they have only one object in view, that is what best promotes the welfare of the port with regard to the pilotage?—I think that the authorities who are now connected with the pilotage system have acted very efficiently, very honestly, and with a strict regard to the interests of the port.

3199. They have no interest whatever in the pilotage?—None whatever.

3200. Would you not think it a reasonable proposal to leave to a body so constituted, and having such an object in view, the decision of what principle of pilotage was best adapted to that port?—So far as I see any principle in dispute here, I think so, decidedly.

3201. Would it be a good general principle to lay down, that whenever there is a general pilotage authority so constituted as to represent the trade of the port, the election of the system best adapted to its navigation should be left to that authority?—I think as a general principle that it would be safe, but I think it would certainly be so in Liverpool.

3202. Would you prefer some such principle as that, representing the great interest you do, to one stern rule laid down for the whole of the ports of this kingdom?—If I understand the difference between the port of the Mersey and other ports, I should say that one general rule as to whether pilotage should be optional or compulsory could not properly be applied throughout the kingdom. I think that local circumstances should modify the application of any principle whatever; and that, in the case of Liverpool, there are ample grounds for retaining a system which possibly may not be required in any other port of the kingdom.

3203. *Chairman.*] You said that, in your opinion, it would not be possible to lay down any general rule?—I think it is possible in many cases, but I do not consider that it is expedient to do so.

3204. Mr. *Wykeham Martin.*] Two or three witnesses have spoken about reckless owners who save money by not taking pilots; I suppose they would

would be small owners generally?—If what is meant by a small owner is a person owning a small amount of property, it would not always be so; I can conceive some shipowners owning several ships, or having the management of many ships, who might still do that.

3205. If a vessel went without a pilot would not the owner be liable for the full value of his vessel if she came into collision and did any damage?—No doubt, if a collision occurred, and he was in fault, he would be liable, not to the full value, but possibly to a greater value than that, the value being limited to 8 *l.* per ton; but many of the ships I am speaking of would not be worth 8 *l.* a ton.

3206. If a vessel had a pilot and another had not, would not that be *primâ facie* evidence of misconduct on the part of the one who had not a pilot?—I think it would weigh strongly in the decision of the Court.

3207. You say that in that case the competition with the underwriters would be so great that people would not insert that protecting clause that the vessel is to sail with a pilot, and that the competition of underwriters would prevent that clause being inserted?—I think I gave two reasons why such a clause would not be put into the policies; one was, that the competition amongst the underwriters makes them unwilling to impose new limits to their liability; and also I think that when they came to regard the subject with some care they would see, as I see myself clearly, that it would be of no use; that the clause would be of little or no value, if put in.

3208. Surely the pilot would be of value if he was on board?—To speak plainly, it takes only one fool to make a collision; and if I were ever so certain that all the ships that I insured would have pilots on board, I should still feel that the danger of the optional system would not be materially reduced.

3209. Your liability would be reduced, and your chance of coming into collision would be reduced if you had a skilled pilot on board?—The chance of my ship doing damage would probably be diminished, but the chance of damage occurring would not be materially diminished.

3210. Then the compensation would come out of the other ship?—Doing a large business it is not of much consequence to me whether it is my ship or another ship that is damaged on a particular occasion; I shall some day have the converse of the case; if damage occurs the underwriters must pay it, and I must pay my share.

3211. Would not the competition of underwriters soon be very much diminished if so many evils arise as you expect in consequence of this Bill, because so many underwriters would be ruined?—I do not wish to convey to the Committee the idea that a very large increase would take place in the losses positively, but relatively to the present number of losses I think there would be a serious increase.

3212. Mr. *Stevenson.*] I understood you to say that the voluntary system in the port of Liverpool failed to give security, and that therefore in the year 1765 the compulsory system was introduced, but I find from the evidence which Mr. Squarey gave us that previous to the date you mentioned there was no organised system of pilotage at all, that complaints had been made of the negligence and ignorance of persons taking upon themselves to conduct ships into the port, and further that there were no settled prices and no proper regulation of the pilotage of the port; in fact that there was no pilotage at all?—Yes.

3213. So that the benefits you ascribe to the single element of compulsion may really be due to a difference between having an organised system and having no organised system?—I understood that prior to the date referred to the pilotage of Liverpool might be described as a system of free trade without police. The present system is one of free trade, limited only by needful police.

3214. The needfulness of the police is not under our view at present; it is the single question whether it is necessary for that police to be taken advantage of, that the element of compulsion should be introduced, in fact, superinduced on the system?—I conceive that it is necessary. I am quite aware that very little is to be deduced from a comparison of Liverpool in 1766 with Liverpool in 1870. In 1766 the population of Liverpool was about 25,000; the population of the two banks of the Mersey now exceeds half a million. Its trade at that time was the trade of a small port; it is now the trade of the largest port in the world, I should suppose.

3215. You have described to us how very necessary a system of pilotage is at Liverpool, and how well that system is conducted; what I wish you to answer is this: you still think that four-fifths of the vessels now coming to the port would take pilots?—That is a rough guess; the larger number certainly would, the minority would not; but the minority would be large enough to do serious mischief.

3216. For the benefit of the four-fifths, or whatever the majority might be that would take pilots, would there be any difficulty in maintaining in all times the efficiency of the present system of pilotage service, the regulations and all the safeguards attached to it?—Assuming we separate the interests of the prudent from those of the imprudent, I think the optional system would damage the prudent men undoubtedly. The pilotage system might be maintained as efficiently for the prudent men, but they would suffer incidentally from the non-taking of pilots by the imprudent men. I have already adverted to what would be unfavourable in another point of view. I think that less than 50,000 *l.* or 60,000 *l.* a year would not maintain a staff of pilots for the prudent men if the imprudent men were relieved from the tax; that sum must either be deficient or the rate paid by the prudent men must be increased.

3217-18. You wish to provide for every vessel taking pilots, when you only expect four-fifths will take pilots?—There are seasons in the year when no man would be so imprudent as to go in or out of the port of Liverpool without a pilot; the prudent and imprudent would then fall into one class. There would be, I believe, many consecutive weeks in November, December, and January, when every ship would want a pilot; they would so ardently desire them that they would rather pay twice what they do now than do without them.

3219. Are you aware that in some ports the rates are higher in the winter than in the summer?—I have heard of it.

3220. Would not that help to meet your difficulty?—No; I have gathered from practical men,

Mr. *J. T. Danson.*

29 April 1870.

better acquainted with the subject, that the danger is often imminent in summer and often very sudden in its occurrence, and that to maintain a pilotage staff in an efficient state, it must be always there and always equally ready to act, and must be about equal in numbers throughout the year.

3221. Do you think there would be any difficulty in forcing regulations on the pilots to compel them to keep their stations at all times?—I conceive that there would be great difficulty, for this reason: that the disposition of the pilot himself would depend upon the justice or injustice of the arrangements to which he was subjected. I think that the pilots would be induced to give only partial attention to their duty; I think they would learn quickly to know who were their customers, and who evaded paying them when they could do so.

3222. Supposing a vessel made a signal to a pilot, and the pilot paid no attention to it?—It would be rather difficult to prove that a pilot saw the signal. If a pilot wishes not to see a flag, it is very easy for him to do so.

3223. Can you imagine a case in which a pilot would deliberately refuse to go on board a vessel that showed a signal for a pilot?—I can imagine a case in which there would be a tendency to avoid seeing a signal from one ship, and a willingness to see it from another.

3224. Would it not be his interest to go on board any vessel that did show the signal in order to earn the pilotage?—In most cases there are many ships wanting pilots, and if the regulations did not require the pilot to take the first ship that offered, there would be a tendency to selection; I think the tendency to selection in the interest of the pilot would be increased by the knowledge that some men employed him only when in peril, and that others were his regular customers.

3225. Now there is a tendency to selection you say?—The tendency has no material effect. The regulations are so strict and so well observed, and the sense of justice in the pilot's mind is so strong, that I do not think it has any material effect.

3226. You think the pilot would act vindictively?—Not invindictively, but I think he would act under a sense of injustice; and it might occasionally sway him against the interest of particular ships; I think there would be danger of that.

3227. Do I understand you propose to withdraw all immunity from the ship who employs a pilot?—I propose to withdraw all the immunity now given or supposed to be given by the presence of a pilot, while the pilot is on board.

3228. You would make the captain himself as responsible as if he had no pilot on board?—Yes.

3229. Do you think that the shipowners of the port of Liverpool would approve of that proposition of yours?—I think many of the shipowners would object to the withdrawal of that immunity; but I think that they would still prefer compulsory pilotage, though it were withdrawn.

3230. Do you feel confident in giving that as the shipowners' opinion?—I do not speak for the shipowners; I am not representing, them; but I understand from what I have gathered that is the prevailing opinion among them.

3231. Do you look at the cost of pilotage as a sort of moderate insurance, considering the great value of property and life at stake?—No; I regard it in the same light as the employment of police in our streets; as an act of the Government compelling the exercise of a certain amount of skill where it is greatly wanted.

3232. Do I understand you to say that you would do away with all exemption?—Speaking broadly, I should; but there may be cases which, upon consideration, I should not be inclined to apply that rule to. I think that vessels under 100 tons might perhaps be exempted; but I prefer not to speak with great confidence upon the matter, because I have not considered all the exemptions. I think, as a rule, exemptions have been a mistake, and have contributed more than anything else to give that anomalous appearance to a part of our system which seems to justify the present attack upon it. I am prepared to admit that great anomalies have crept into the system of the pilotage of the United Kingdom which seriously demands the attention of the Legislature. I consider the anomalies in our system almost entirely due to the adoption of these exemptions.

3233. Mr. *Price.*] I think I understood you to say that a policy of insurance does not become void by the fact that the master of a vessel fails to take a pilot?—That is a question of law, and I am not here to speak as a lawyer; but I believe the law to be that if it is usual, and especially if it is compulsory, for a pilot to be employed, and a captain does not employ one, the ship may be deemed unseaworthy.

3234. In point of fact, supposing within the limits of the pilotage jurisdiction of Liverpool, which is a compulsory district, a shipmaster failed to take a pilot, and his vessel was lost or stranded, and you had underwritten her, would you or not consider yourself liable to pay the amount of that loss?—If I was not legally liable, I should not consider myself so; but the circumstances would have to be considered before I refused to pay.

3235. But still it must be a very simple question within the knowledge of the underwriters, because it must be a case that frequently occurs; it must be a matter of practice that you do or do not recognise your liability in cases where a ship, within the limit of a pilotage jurisdiction, meets with an accident from not having taken a pilot?—I should say that we are entitled to take the benefit of that exemption; but the circumstances would have to be considered before we declined to pay the loss.

3236. You stated that for two reasons you do not think you could very well enforce a proviso in your policy of insurance which would compel a ship-master to take a pilot?—I do not think that you could well enforce it; and I do not think it would be of much value in Liverpool if you did so.

3237. When you were pressed upon the legal point that it was of no value, you addressed yourself chiefly to collisions; but surely you do not think it would be of no value in the case of wreck or loss, seeing that in your opinion the navigation is not safe without a pilot, whereas it would be safe with a pilot?—The danger that I apprehend from the non-taking of pilots is a danger that would arise from the action of imprudent and foolish persons; that is what I want to see prevented; that danger would come into existence if

if the optional system were established. To require my customers to warrant that their ships should take pilots would be in many cases perfectly unnecessary, because the class of ships with which I have almost entirely to deal are ships that would take pilots. The danger they would incur would not be increased by their acts, but by the acts of the imprudent minority upon whom my policy would have no effect.

3238. That would happen also in the case of an exempted vessel as well as a vessel commanded by an imprudent captain. What you are afraid of is injury to the vessel that you have insured; not by the negligence of its own master, but by the negligence of the master of some other vessel?—Yes.

3239. It would also be true of an exempted vessel?—It would, and therefore it is that I wish to see more strictly limited the right given to owners to put their captains under examination, making paper pilots of them.

3240. Generally, it seems that your view of the question is rather an underwriter's view, and that you think that compulsory pilotage protects you in your business as an underwriter where you could not protect yourself, on account of the excessive competition amongst other gentlemen pursuing the same business; you cannot protect yourself by putting on a differential rate of insurance?—I think it would be impracticable with reference to having or not having a pilot.

3241. If you, as a prudent underwriter, say that you would not insure any vessel that did not come under an engagement with you to take a pilot, supposing you wished to protect yourself by a differential rate, say 5 *l.* 5 *s.* per cent., if the owner would take a pilot, and five and a half guineas if he would not, you think that you would find it impossible to protect yourself in that way by reason of the excessive competition amongst gentlemen in your own line of business?—I gave two reasons: one was that competition would take place, and the other that motives would come into action which would supersede it, and we should all perceive that it was of no use having that clause in the policy.

3242. And therefore, finding it impossible to protect yourself in any way, you desire to be protected by that external compulsion?—As an underwriter simply, I do not desire any such protection; if the risks of entering and leaving the Mersey are increased, my premiums must rise in proportion; but I prefer writing against risks arising from what are termed the acts of God. All intelligent underwriters desire to see the risks arising from folly, imprudence, and ignorance reduced as much as possible. It is not vitally important to underwriters that the risks should be reduced, for the premiums will always balance them with those who are prudent.

3243. Do you consider this a pilot question, or an underwriter's question, or a shipowner's question?—I think it relates to all.

3244. In equal degrees?—In different degrees, according to the interests each may have at stake.

3245. We have heard a good deal of the pilots' view of the case, and some of the shipmasters' view of the case, and we have something now of the underwriters' view of the case; have you reason to believe that the shipowners would generally take the same view of this question that you do?—I think they would with this exception, that the shipowner would desire, if possible, to retain the immunity he now has for certain risks when a pilot is on board; but excepting that, I think an intelligent shipowner and an intelligent underwriter would be nearly at one in their views.

3246. Mr. *Malcolm.*] You have used the expression, several times, "matter of police," with reference to pilotage; I suppose you mean that vessels on board which there are pilots can navigate a crowded water with much greater safety than vessels which have no pilots?—I have no doubt of that.

3247. Do you know the Clyde at all?—I do not; I know the Clyde from having been there, but I have no such knowledge of it as would enable me to speak of its pilotage.

3248. You cannot give me any idea of its traffic?—I know it is very much less than that of Liverpool, but as to the exact relation of one to the other in kind or quality I cannot speak.

3249. Mr. *John Stewart Hardy.*] You say that this is in a great measure in a case between a reckless man and a prudent man; we have been treating this so far as a case of property; is it not the fact that the public have an interest in reckless men being compelled to take a greater care of the lives of their crews and passengers?—I think a very serious interest.

3250. Is it not true that there is a class of shipowners with whom you may be acquainted, who if their ships were fully insured would care very little indeed about the safety of their passengers or crew?—There are such persons; and I have already referred to them as being amongst the imprudent and reckless.

3251. Perhaps even worse than that?—Possibly worse.

3252. Mr. *Grieve.*] From your experience as an underwriter, do you consider the approach to Liverpool more dangerous than the approach to most other ports in the United Kingdom?—I am not aware of any other port in the United Kingdom which is anything like so dangerous.

3253. In taking a risk from Bombay to Liverpool, and on to London, and on to the Clyde, do you make any difference in the premium?—The Clyde would pay a little more, and London and Liverpool are placed on the same footing.

3254. Why would the Clyde pay more?—The distance through our waters is rather greater.

3255. Are you not aware that it is shorter to get to the Clyde from the Atlantic than it is to get to Liverpool?—I am assuming that a vessel in coming from Bombay comes from the Atlantic.

3256. Are you not aware that if she goes to the Clyde, it is a short passage?—It is not altogether the length of the passage which determines our idea of risk; it is rather the experience we derive from examining the results of our previous insurances.

3257. Did you hear Captain Ballantine's evidence?—Yes.

3258. Did you hear him say that he would not take a pilot going into the Clyde?—I did not hear him say so. But, permit me to add, that the Mersey is so well provided for by its pilotage staff, that I consider it by no means a dangerous port to enter as long as the staff is maintained in its present state of efficiency.

3259. I understand you to say that your premium would be greater to the Clyde than to the Mersey?—

Mr. *J. T. Danson.*

29 April 1870.

Mersey?—I do not think the pilotage question would enter into the comparison of the two risks.

3260. I thought you came here to represent your particular business as a large underwriter?—I come for that purpose.

3261. Do you approve generally of free trade principles?—Most certainly.

3262. Then, you would not apply those principles to the pilotage in the Mersey?—I should do so as far as they are applicable; but although free trade may entitle a man to risk his own property, and even his own life, it does not entitle him to risk the property or the lives of other persons

3263. Mr. *Gourley.*] I understood you to say that in all cases you would make the master or owner responsible for the navigation of their ship?—Pardon me; in speaking of the Mersey, I simply proposed to withdraw the immunity now given to an owner through his master for any accident in the nature of collision which shall occur while a pilot is on board, that proposal being based upon the assumption that the pilot, and not the captain, is in command; an assumption which, I think, does not bear examination.

3264. You would abolish the present liability of the pilot, and place it upon the shoulders of the owner; is that what I understand you to say?—No; I would make the pilot as much responsible as I think in effect he now is. As to the liability of the pilot to make up any serious damage to property, it is perfectly illusory; the only liability a pilot can ever be submitted to, looking to the position of the man and the property he possesses, is the risk of punishment or dismissal by those employing him.

3265. Then of what use would a pilot be to a master, because I suppose the master would only take a pilot to take the command of his ship in waters unknown to himself?—These are waters of special danger, and the pilots are assumed to be men well trained in the navigation of these particular waters, and the captains take the pilots with a view of obtaining the benefit of knowledge and skill beyond what they themselves possess.

3266. If a pilot made a mistake, you would make the owner responsible for that mistake?—Yes, I think the responsibility should rest with the owner.

3267. Under such a principle, if a law existed compelling you to employ a certain coachman, and that coachman should capsize your carriage with you or any other person in it, you would be responsible for the act of the coachman; is that your view?—I cannot say that I see any fair analogy between the two cases.

3268. The analogy is simply this, that you would compel a shipowner to take a pilot, and at the same time make him responsible for any defective navigation on the part of that pilot. In the Mersey, you compel the owner under the present system to take a pilot, and under the new system you would still compel him to take a pilot, but if the pilot got the ship ashore, you would make the owner responsible for the acts of the pilot?—I regard a pilot as a public officer supplied to superintend the (commonly) defective skill in these waters of all captains, and I would, on behalf of the State, compel every captain to receive, on entering or leaving the Mersey, such a pilot on board. I assume that these pilots are men well trained to their business, and as efficient as such men can be made; and that whatever may be the result, the ship is far less liable to come to grief with one of these pilots on board, than with the best captain she can possibly have alone.

3269. If she did come to grief, with a pilot on board, you would leave the pilot entirely free from blame, and you would make him responsible to the conservators, but for the loss accruing to life or property you would make the owner responsible?—There is, in effect, no remedy against the pilot at present; and I would give a remedy against those who are the owners of the ship.

3270. In such cases would it not be fair to leave the owner at liberty as to whether he employs a pilot, or otherwise, seeing that he is to have all the responsibility of the navigation?—No, I think not; usually a shipowner does not own more than one-fifth to one-third of the property committed to his charge; he owns the ship and probably the freight, but he does not own the cargo, generally; and therefore, looking only within the limits of the ship itself, he may be taken to be the owner of one-fourth or one-fifth of that committed to his charge.

3271. According as the law stands, he is responsible for something more than his ship; he is responsible also for the defective navigation to the extent of 8 *l.* a ton for the cargo that lies on board, is not that the law at present?—Yes.

3272. Would you consider it very hard indeed, if you were a shipowner, to be compelled to take a pilot, through the law of the land, and at the same time be responsible for the acts of that pilot?—I have no doubt a shipowner, regarding the matter from his own point of view, may think it hard, but I think it would be much harder upon the community, and those engaged in the navigation of the Mersey, to permit the present immunity to continue.

3273. In taking risks, you say you give the preference to vessels carrying pilots rather than to vessels which do not carry pilots?—With reference to the Mersey, I do not think there would be much difference, because the danger would be incurred by the ship in the hands of a pilot to a very considerable extent, although the danger would result from the imprudent acts of those who did not take pilots.

3274. You would not, I think, make any stipulation in your policies as to carrying or non-carrying pilots?—It would be vain to attempt it; and if effected it would be found to be of little value.

3275. You said that a man ought to serve an apprenticeship in order to make a proper pilot for the Liverpool waters; are you aware that something like double the number of vessels pass in and out of Liverpool annually without pilots, compared with those that carry pilots; it was stated in evidence by one of the Liverpool witnesses that 33,000 ships pass in and out of Liverpool without pilots during the year, and 15,000 with pilots?—I am not aware of the relative numbers.

3276. Can you tell whether the vessels which are navigated in and out of the Mersey without pilots are as well navigated as those carrying pilots?—I should say that those not carrying pilots must be worse navigated; that is, with greater liability to danger.

3277. How do you account for the fact, that Liverpool supplies half the collision cases which occur in the whole United Kingdom; is that in consequence of neglect on the part of the underwriters, or of the pilots who are there?—In a great measure I should account for it in the same way as I should for the fact, if asserted, that

in

in Cheapside and Fleet-street there were more collisions with carriages and vehicles of different descriptions than in other parts of London; I should also expect it, because the channels are not only crowded, but they are naturally narrow, and are now more difficult of navigation in consequence of the increased size of the vessels. The tides run very strong, and the difficulties even of a single ship getting in and out are greater there than elsewhere; but the difficulties when 100 or 150 ships come up, and all want to get in, are very materially increased. Therefore I should expect to find in Liverpool the number of collisions unavoidably greater than elsewhere.

3278. Do you think the navigation is more crowded on the Mersey than the navigation of the Thames, where you have every day a continuous arrival of fleets of colliers from all parts of the coast?—Will the honourable Member have the goodness to follow me with reference to what I am now saying: Crosby Channel, which is a continuation of the Mersey, opens out into two channels, called the Queen's and the Victoria Channels; there the two narrow guts run into one channel, through which the whole trade must pass. The Thames is a much wider stream, and though devious in its course, I should suppose does not present a case at all analogous to the Mersey in a crowded state, when many vessels are passing in and out through those channels.

3279. But you have not a fleet of barges to contend with in the navigation of the Mersey; at all times of the tide you have a fleet of barges to contend with going up and down the River Thames. I suppose if you had something like 150 ships passing your bar, or entering your channel, that would be considered a very large number?—I must confess that I speak with great diffidence on anything involving a comparison between the Mersey and the Thames, because I know the Mersey much better than I do the Thames; the facts referred to by the honourable Member are not within my knowledge.

3280. You said that you advocated an increase in the compulsory pilotage system, on the ground that it would be the means of preventing loss of life?—I think if a more strict application of the compulsory system were maintained it would be well.

3281. Can you tell us whether the pilotage system is more effectual than any other in the saving of life from the wrecks which are occurring annually round the coast?—I can speak with confidence only of the Mersey.

3282. Which do you consider is of the most value in saving life, the life-boat system or the pilot system?—The pilots as a class exercise a preventive action; the life-boats are rather curative; the two things can hardly be compared; the pilots save many thousands of lives, I have no doubt, by the exercise of their skill. I can tell you how many lives are saved by life-boats, but it would be impossible to say how many are prevented from being put in peril by the acts of pilots.

3283. Do you think there is much danger, either to life or property, in the navigation, in passing from the Bell Buoy over the bar?—Very considerable, unless averted by competent skill.

3284. Would you consider the fact of a man commanding a steam tug was a proof of his possessing competent skill?—Not the fact of his commanding it, certainly.

3285. Who guides a ship in charge of the steam tug?—That is a question which it would be better to address to a practical man; but, so far as I understand it, the pilot remains on the deck of the ship being towed, and by waving his hands and other signs he lets the master of the tug know if he wishes him to take any particular course; but I think, practically, the captains of the tugs, by long practice, are fair pilots for ordinary emergencies.

3286. Therefore, in your opinion, a vessel in charge of a steam tug would be almost as safe as a vessel in the hands of a pilot?—No, it would not be so safe, inwards or outwards. There is one class of accidents, in particular, the breaking of the tow rope; it is a thing that frequently occurs; and if the tow rope breaks, the tug is away and the ship remains; then, if the pilot is on board there is the difference, perhaps, between total loss and freedom from risk.

3287. That is an accident which very rarely occurs?—I believe it very frequently occurs.

3288. You said that you looked upon the pilots in the Mersey in the light of police who regulate the navigation of the Mersey; does the harbour master rule the pilots?—I think that question would be best asked of the pilotage authorities, who are here. As I understand it, there is a committee of the Mersey Docks and Harbour Board, which is charged with the superintendence and regulation of the pilotage, and the funds derived from the ships in the shape of pilotage fees are applied to the maintenance of the boats and the payment of the men, according to a system that will be described to the Committee in detail.

3289. You compared them to police; I apprehend that there must be river police, for the purpose of regulating the traffic on the Mersey, irrespective of the pilots; therefore it would be unnecessary to look upon the pilots as being the police of those waters?—I used the phrase "police," in order that the Committee might clearly understand that I am by no means an advocate for applying compulsion where it can be avoided; on the contrary, I so much respect the doctrine of free trade, that I would not trench upon it, except in cases of necessity. I used the word "police," to indicate the action of the executive in seeing that certain perils are not needlessly incurred, affecting a large number of persons.

3290. Would you give a man the license of a pilot who proved himself capable of passing a proper examination?—I should restrict it more than it is restricted: I am very doubtful of any man being capable of acting as a good pilot, under emergencies especially, unless he has not only been examined, but previously trained to his work.

3291. Would you give every man a license who has served his apprenticeship, and who proves himself capable of passing an examination?—Yes, but such a man must be a member of the staff.

3292. You would not limit the number?—No, except so far as this, that I think the superintending authority is bound to maintain a certain staff; they receive from the Government certain compulsory power to enable them to do it, and they should use their discretion so as not to employ a larger number of persons than is necessary.

Mr. *J. T. Danson.*

29 April 1870.

In the same way they must see that the number is sufficient.

3293. You spoke of paper pilots, and I did not know what you meant; have you any paper pilots in Liverpool?—I will tell you what I mean; if from my knowledge of that chart, and from my experience as an underwriter as well, you were to give me two or three days to get the subject up by cramming, I believe I could myself pass as a pilot. But I certainly should not deem myself an efficient one, though I might answer the questions that would be put to me in a room, from having been familiar with the charts, and buoys, and lights.

3294. I understand from your statement, that the examination which the Pilotage Board has for pilots is not a stringent one; it is simply an examination which is mechanical, which yourself or myself could pass by preparation?—I think it is as good as it can be made while the examination is not supplemented by training; that is to say, that all the questions you can possibly ask a man as a test of his ability may be answered, and yet he may not possess the required ability to such an extent as would justify his being allowed to navigate a ship under perilous circumstances through those channels.

3295. Mr. *Cave.*] As an underwriter, are you in the habit of insisting upon pilots being used in voluntary waters?—My business is done chiefly in the Mersey, where pilotage is compulsory. I do not know that such a stipulation is common.

3296. Supposing compulsory pilotage were abolished in the Mersey, do you think the underwriters would insist upon the masters of vessels taking pilots before they would insure their vessels?—I do not think they would, for the two reasons which I have already stated. In the first place, competition amongst underwriters, which induces them not to place needless restrictions upon their customers, would induce some of them not to insist upon it if others did; and in a very little time, on examination, they would find that it was no protection to them; personally I should not think of applying such a restriction.

3297. In the first place, will you explain what you mean by needless restrictions; do you mean that you do not consider a pilot necessary to the Mersey?—No. When framing a policy for a customer who comes to me to insure a ship valued at 30,000 *l.*, and I agree to take 5,000 *l.*, if I put in any restriction which is not joined in by the other gentlemen who join me in the risk, it is a disadvantage to the insurer, and he would not have it; he would wish to have a clean policy, unaffected by restrictions, and he would be likely to withdraw his business from me if I insisted upon a special restriction.

3298. Do you think the competition for business would prevent even necessary restriction being made by underwriters?—No; I think that examination would convince an intelligent underwriter that it was not a necessary restriction, and was not one that would benefit him.

3299. That is what I wanted you to explain; you have said that you considered it was necessary for the safety of the vessel that a pilot should be taken in the Mersey?—Yes.

3300. If it is necessary for the safety of the vessel, is it not necessary, for the safety of the underwriters, that pilots should be taken?—The danger with the optional system is this: that a certain number, the minority, would cease to take pilots, except under manifest peril, and that danger would thence accrue to prudent shipowners; perhaps four-fifths would continue to take pilots. Therefore, I should gain nothing, in effect, by insisting upon a pilot being taken by a man whose ship I insured, if his neighbours, parsimonious and reckless, evaded the taking of a pilot, and obstructed the channels, or caused danger by collision, or in any other way.

3301. You mean that the danger would be caused to that vessel by the bad navigation of another vessel which might be in the channel at the same time?—Yes.

3302. I suppose that is only a small part of the danger of the navigation of the Mersey. Would not you say that the chief danger would arise from the vessel itself striking on a sand bank?—A vessel would be far more likely to strike upon a sand bank, when going through a narrow channel, if a badly navigated ship was in the way; by trying to avoid a collision, a well-piloted ship might be run upon a bank.

3303. Independently of that, do you think there would be more danger of running upon a sand bank without a pilot, provided a master was navigating the channel alone?—In clear weather, and in daylight, so well is the channel buoyed, that I think a person with little or no skill in navigation might, with care, take a vessel in or out of the Mersey; but those are exceptional circumstances.

3304. You would say there are circumstances, irrespective of the bad navigation of other vessels, in which it would be desirable for the safety of the vessel that she should take a pilot?—Yes.

3305. Therefore, would it not be to the advantage of the underwriters generally to agree to insist upon pilots being taken under those circumstances?—I do not think that it would be to their advantage to insist upon a stipulation which they could not carry into effect.

3306. Would not they be able to carry it into effect if there was united action amongst them?—I can scarcely say what the effect of united action amongst the underwriters might be, as we have had no experience of it. I think if we were all united, we might have considerable control over the navigation of vessels; but I think we might use it mischievously.

3307. You do not think that the action of the underwriters could be brought to bear so as to oblige vessels to be sent to sea in a better state, or navigated better than they are now?—In one way, yes; in another way, no. The one way would be the increase of premium; but it would go over all the shipping; some would have to pay for the folly or the imprudence of others.

3308. Do you consider if compulsory pilotage was done away with that a great risk would be incurred, and that you would have to put a sort of war risk upon your vessels?—We should most likely wait the event; and no doubt the result would be an increased loss of property, and thence would arrive an increased premium.

3309. And in this way you think the action of the underwriters would be brought to bear?—Yes.

3310. Is it not the fact that in what you call clean policies there are certain well-understood stipulations?—All those that are in the ordinary form are not usually objected to, but they would not have any bearing upon the question.

3311. It would be only an enlargement of the ordinary printed policy?—If the enlargement came into existence under the common pressure of

of the united body of the underwriters, it would establish itself as part of the common form; but I think there is not the slightest prospect of that being effected.

3312. Do you think that competition will be too great among the underwriters for them to have any united action of that kind?—Competition would prevent them doing it if they deemed it advisable in Liverpool; but they would not deem it advisable. I should not myself think of applying any such restriction as to Liverpool. The danger would arise from the imprudence and folly of the minority, and that would affect the whole trade.

3313. And that you think would lead to increase in the premiums?—Yes, if it led to an increased amount of loss.

3314. Sir *Charles Wingfield.*] You said just now that you considered the pilot only as an adviser to supplement the defective skill of the master?—It is assumed to be defective.

3315. Your explanation was that it was to supplement the defective skill of the master in the navigation of a difficult channel?—Yes.

3316. Are you prepared to say under what circumstances you think a captain would be justified in setting aside the pilot's instructions in the navigation of a vessel?—I am not prepared to describe the circumstances, but I think, speaking generally, that it would become the duty of the captain to set aside the directions of the pilot if he were reasonably convinced that they were likely to lead to disaster; but I think it is very seldom that such circumstances would occur; and that only an exceptionally strong-minded captain would probably act upon it.

3317. Is it not the fact that the masters do think, as a rule, that the presence of a pilot on board relieves them of all responsibility?—They do.

3318. I understand you to say that you would withdraw all the immunity that the owners now enjoy, and that at the same time you would make pilotage compulsory?—I would.

3319. And you would abolish all exemptions?—With regard to all exemptions, I speak with a little diffidence; I have not considered all the exemptions in detail; I think possibly some might remain.

3320. Would you make pilotage more complete and compulsory than it is now?—I would apply the principle more strictly.

3321. Are you aware that it is the rule, according to the law of employer and agent, that the owner is not responsible for a man he has not selected?—It has been so considered.

3322. Are you aware that there is a decision of Sir Robert Phillimore in which he has laid that down?—He has laid it down that if the pilotage is compulsory, while the pilot is directing the course of the vessel the owner is not liable for what may result from his misdirection of the vessel.

3323. You said just now that if pilotage were optional, some vessels would dispense with pilots, and they might by blocking up the channel, cause inconvenience and injury to other vessels; would not the class that would go without a pilot be only the least valuable?—They would generally be the ships of least value, and the cargoes of least worth.

3324. I understood you to say, that even if you had your way, you would exempt vessels under a certain tonnage from the liability to employ pilots?—I expressed some doubt as to whether that exemption ought to be abolished; I think, as a rule, I should abolish all exemptions.

3325. Do you think if pilotage were not compulsory it would be impossible to keep up a staff of pilots?—I do not think it would be impossible; if you give to the local authorities in Liverpool 60,000 *l.* or 70,000 *l.* a year, or whatever may be the proper cost of the staff, they can keep up the staff undoubtedly.

3326. I am not supposing that. What I ask is that if the pilots were left to depend upon their own earnings, do you think that you could keep up a sufficient number of pilots?—Unless those who take the pilots, as distinguished from those who do not take them, were taxed more heavily in order to raise the deficiency from the non-taking of pilots, it could not be done.

3327. Are you aware that in the Thames where more than half the vessels have been exempt from compulsory pilotage, an immense number of pilots, over and above the Trinity House establishment, is employed, and that no vessel goes without a pilot?—I know but little of the pilotage of the Thames; but what I do know convinces me that no analogy can, for any useful purpose, be drawn between the two places.

3328. Does not the Thames resemble the Mersey in this respect, that it is a difficult navigation?—At times it has difficulties, undoubtedly.

3329. Would not that show that all that is wanted to create a sufficient supply of pilots is the difficulty and the demand for them?—No, I think not. In Liverpool, to make your staff efficient for that purpose, you must have not only a sufficient number properly trained and regulated as they are now (because I do not think it could be materially improved in that respect); but in order to meet the purpose which I have in view, you must compel every ship to take one of those pilots.

3330. But the same difficulty that practically compels a shipowner to take pilots in the Thames, though he is not obliged to, would equally compel him to do so in the Mersey?—It would compel all the prudent and intelligent, but not the others.

3331. The example of the Thames shows that the mass of shipowners are prudent and intelligent, because they do employ pilots?—I believe the mass of the shipowners in the Thames and Mersey would be found to be prudent and intelligent; but there is a minority of mischievous persons who would not be so.

3332. I cite the example of the Thames to show that the minority is so insignificant as not to be observable?—I believe it would not be insignificant in its effect in the Mersey.

3333. *Chairman.*] You stated that in your opinion the class of vessels which you insure would always take pilots?—I think that most of the vessels which I am in the habit of insuring would go with pilots.

3334. And you are one of the largest underwriters in Liverpool?—Yes.

3335. In your opinion, therefore, a very large number of vessels must still continue to take pilots?—A very large number.

3336. In one portion of your evidence you said that in your opinion not more than one-fifth of the vessels going in and out of Liverpool, even in favourable weather, would neglect to take pilots; do you believe that is the case?—That was a

Mr. J. T. Danson.

29 April 1870.

rough guess simply; I cannot say it should be relied on.

3337. Making a rough guess like that, do you think that not more than one-fifth of the entire number would decline to take pilots even in favourable weather?—I think it might be about that proportion, but I cannot place much reliance upon it.

3338. Then in unfavourable weather I presume all would take pilots if they could get them?—Under manifest peril they would all take pilots.

3339. Therefore, the falling off of the employment of pilots in favourable weather would only be one-fifth?—I think you should explain what you mean by favourable weather. I meant such weather as they would deem favourable.

3340. I will take your own opinion as to what is favourable weather; you stated in your evidence that in your opinion not more than one-fifth of the entire number of vessels would decline to take pilots even in favourable weather; is that so?—It was a rough guess, and probably it ought to be rather one-fourth or one-third.

3341. I take your own rough guess?—It is so rough a guess that it is unreliable for any material purpose.

3342. Is it your opinion that the great bulk of vessels would continue to take pilots?—I think they would.

3343. Even in favourable weather?—Yes.

3344. And in unfavourable weather you believe they would all wish to have pilots?—They would all wish to have pilots when they thought there was considerable danger, but what they might think favourable or unfavourable weather I cannot say.

3345. Have you had any experience of the navigation of any other port besides that of Liverpool?—I cannot say that I have any experience of the navigation of any port whatever, but I have a personal knowledge of the Mersey to a much greater extent than of any other port.

3346. I presume you are in the habit of insuring vessels to other ports?—Yes.

3347. And you must, therefore, insure vessels proceeding to and from some ports where pilotage is voluntary?—Yes.

3348. Do you make any condition yourself in their policies as to the taking of pilots?—None.

3349. Have you any reason to believe that the premium is increased in those places in consequence of the pilotage being voluntary?—It would be very difficult for me to ascertain what proportion of premium is now found sufficient, or is rendered necessary, if there be any additional premium, by the voluntary system; underwriters judge rather by a general inspection of the results of certain risks in certain classes, than by any precise knowledge of the circumstances affecting the risks.

3350. Do you insure any number of vessels proceeding to the Bristol Channel?—No.

3351. Do you insure vessels proceeding to the north of Europe from the Thames?—Not many, and those that I do insure are chiefly steamers.

3352. Which are the ports where pilotage is voluntary to which you do insure?—I am not quite sure whether pilotage is voluntary or not; but I understand that at most of the ports on the east coast, there is so easy an entrance and exit, that the services of pilots are comparatively of little consequence.

3353. Judging from the evidence which you have already given, I presume in most cases where you insure, you have reason to believe that the vessels do take pilots?—Where it is at all necessary.

3354. What reason is there for believing that a higher premium would be charged in the event of the pilotage in Liverpool being voluntary instead of compulsory?—Because I think the number of losses of ships and the amount of property lost would be seriously increased.

3355. You believe that the vessels that you insure would always take pilots?—I think they would; but they would not by that, I apprehend, be exempt from danger.

3356. It is the danger arising from other vessels not taking pilots which makes you think that there would be increased danger to those that do take pilots?—That is a great portion of the danger, and it would fall upon the whole trade.

3357. You stated that, in your opinion, it would not be probable that the underwriters would insist upon any condition of the policy that a pilot should be taken?—I do not think they would.

3358. Were you here the other day when Mr. Squarey gave his evidence as to what is the implied condition of seaworthiness as regards taking pilots?—I was not.

3359. Do you agree that it is already the law and the implied condition of seaworthiness that if a master is not competent, that he should take a pilot?—I understand that that is the law.

3360. Would not that, in your opinion, have a considerable effect in making vessels take pilots?—No; I think the law upon the subject is very little known.

3361. Do you agree with Mr. Squarey?—I do not venture to agree or disagree with Mr. Squarey on the point of law; I should prefer simply taking the record of the law as establishing the fact that it is so; but I do not think it has a material effect, because I do not think it is generally known.

3362. Do you agree that it is the implied condition of seaworthiness, that a vessel on proceeding on its voyage should take a pilot if the master is not competent?—Yes.

3363. Do not you think that that is an inducement for many vessels to take pilots?—I do not think it is, because I do not think it is generally known. I do not think that motive induces them to take pilots; it is a conviction of its necessity as a matter of marine propriety.

3364. Are you aware that it is the actual condition of a great many foreign policies of insurance of vessels proceeding to the north of Europe, that pilots should be taken?—I believe that such a clause exists in such policies; but I have had nothing to do with that trade, and it has not fallen under my observation particularly; neither has its effect.

3365. You have given an opinion that the immunity of owners where pilotage is now compulsory should cease?—Yes.

3366. Is that grounded on your experience that damage occurs to vessels from the fact of masters giving up the charge of their vessels to pilots?—Yes, partly on facts, and partly on the inference, which I cannot but draw from the fact that if the captain is permitted, and much more if he is tempted, to give up the charge of his vessel to anyone else, an increase of danger takes place.

3367. Is

3367. Is it your opinion that a considerable number of collisions in the Mersey itself are due to the immunity of the owners?—I think it might be difficult in most cases of collision to trace the effect of it, but I have no doubt whatever that that is the effect.

3368. But by repealing the immunity of owners, do you think the safety of vessels might be increased?—Yes, I think the captain would then deem it more decidedly his duty than he does at present to remain on deck in charge of his vessel; at present he is tempted, and in fact, he feels more than a temptation; sometimes, though foolishly, he regards it as part of his duty to the owner to abdicate, openly and obviously, the chief command of the ship, in order that the immunity to his owner may be secured.

3369. And you think that immunity does cause an appreciable number of collisions?—Yes.

3370. And adds generally to the danger of vessels in crowded localities?—I think it does.

3371. So far as this Bill before the Committee repeals that immunity you are favourable to it?—Yes.

3372. But you think that that result might be arrived at without abolishing compulsory pilotage?—Yes.

3373. Have you any reason to believe that the shipowners generally would approve of that change?—I have; having conversed with many shipowners on the subject, I have found among the more intelligent and the more deeply interested of them this opinion, that the immunity is one that they would like to retain, but that if it were taken away they would still wish to retain compulsory pilotage.

3374. Mr. *Norwood.*] Do you think the shipowners, as a body, are intelligent?—I presume honourable Members are much better judges of that.

3375. Are you aware that the tendencies of legal decisions of late has been towards throwing increased responsibility upon the shipowners?—I am not aware of such an effect of the decisions.

3376. Are you aware that within the last very few years the shipowners have been held responsible for the damage done to cargo on board a vessel by the negligence of the captain?—Yes.

3377. Are you aware that that is the effect of a recent decision?—Yes.

3378. Supposing that your idea of compulsory pilotage, without exemption of liability to shipowners, was to be the law of the land, do not you think it would be extremely hazardous for a shipmaster to interfere with the pilot's directions?—I do not think it would be more hazardous than it ought to be; the amount of the hazard is for the captain and the owner to consider, but I have sufficient confidence in the doctrine of free trade to feel sure that if any disadvantage were, by law, saddled upon the shipowner, that being a necessary disadvantage, it would balance itself at last.

3379. I do not see how free trade comes into the question. The necessity for compulsory pilotage is based upon this theory, that there is an exceptional danger in the navigation which an ordinary shipmaster is not calculated to cope with, and, therefore, it is desirable for the general safety that a special body of men, specially trained and specially acquainted with the navigation, should be forced upon the shipowners while the ships are in those waters?—Excepting the phrase "forced upon," and so far only as compulsion implies being forced upon, I say, Yes.

3380. If a shipowner, by law, is compelled to receive this man who, as you have just admitted, acts in virtue of his superior knowledge of and training in the great difficulties of the navigation, do not you think that the master who is presumed to be incapable of navigating would be a very rash man indeed if he was to interfere with the navigation of the ship against the opinion of this competent man?—He would be excessively rash unless he had very good grounds, and those very seldom occur.

3381. Supposing in a ship that you had insured the master had acted contrary to the orders of the pilot, what would you say to that?—I should inquire into all the circumstances.

3382. And very likely you would dispute the policy?—That is very unlikely. I think it is extremely unlikely that I should find the captain guilty of anything of that kind, except on what seemed to him very good grounds.

3383. What seemed to him is a very vague statement?—Yes.

3384. What might seem to him to be right, might not seem right to you?—It could only come to me after the result.

3385. Do you think it a fair thing if a man is efficient that you should force a pilot upon the shipowner, and make the owner responsible for the acts of that pilot?—I do under the circumstances existing in the Mersey; I think it is for the general benefit.

3386. All the navigation of England is not confined to the Mersey?—No, I say nothing except as to the Mersey; elsewhere I would avoid it if possible. It is impossible to avoid it here, in short; the risk is so great that I think the shipowners themselves, looking at all the facts, would admit that it is requisite.

3387. In compulsory waters, where a master acts contrary to the orders of the pilot and loses his ship, do not you think that the owner of the cargo would have a fair claim upon the shipowner?—That is a matter of law.

3388. As a matter of practice, have not there been cases very similar to that already?—I would make the owner, through his captain, liable whether the pilot was there or not, and whether he acted in accordance or discordance with the advice of the pilot; and as to the pilot, the captain must have sufficient judgment to get from him whatever guidance he wants, and sufficient energy to put it aside if it is not what he ought to get.

3389. Have you ever thought how it is possible to get an improved breed of captains?—I have considered it with a good deal of anxiety.

3390. Do you think that that cannot be done?—I think it can be done.

3391. Captains are fallible men, are they not?—We all are.

3392. And yet you throw upon them responsibility that no other class of men have to encounter?—I cannot admit that.

3393. But you put upon a ship a pilot who is especially trained and brought up on certain waters; you force him on board the ship because the captain is incapable of navigating in those waters, and you make the captain responsible for the navigation, and you compel the captain in case of need to supersede the pilot; do you call that just?—Yes.

Mr. *J. T. Danson.*

29 April 1870.

3394. I believe a gentleman of the name of Squarey stated, in his opinion, the law of seaworthiness included the presence of a pilot, did not he?—Yes.

3395. Did you ever hear that opinion expressed before?—Yes.

3396. Do not underwriters charge premiums upon their general experience of the risk of certain trades?—Yes.

3397. I presume they were tolerably well able to take care of themselves?—I think they are, as a body.

3398. Do you think underwriters generally will suffer more in pocket if this Bill passes than they will if it does not pass?—I do not think it will make much difference to them; if the risks increase their premiums will rise.

3399. In point of fact, you would charge a premium which would give you a proper return for your trouble, time, and risk?—Yes.

3400. And you have that under any circumstances, I suppose?—We must have it under any circumstances, or we must cease to exist.

3401. Therefore I suppose underwriters are not much concerned in this Bill?—They are to some extent. As Englishmen they would not like to see life or property sacrificed. It would be an injury to the State. Also, they do not like those risks which arise from ignorance, recklessness, or fraud; they prefer writing against the acts of God.

3402. Have you ever considered the question in this point of view; under the present system of compulsory pilotage I think there is little room for individual ability, or room for individual enterprise; for instance, the pilots take their turn at work, and so long as their work is conducted without any serious collision or loss, they are contented with the result of their labour, but there is nothing like free trade, which you are so fond of; there is no competition so as to get a man of superior ability to distinguish himself and earn a larger livelihood?—Looking at the class of men, earning from 200 *l.* to 220 *l.* a-year, I should say that there is in the pilotage staff of Liverpool as good a chance for a man to distinguish himself as men of that class have in any other part of the world.

3403. Does the rate of remuneration vary according to the men?—That I cannot speak of from any knowledge of my own.

3404. Is there any chance of any superior man earning 400 *l.*, while his dull neighbour earns only 200 *l.*?—That question had better be addressed to the pilotage authorities. I am not aware exactly how their earnings are divided as to individuals.

3405. Do not you think that it is a very good rule to leave it very much to the enterprise of the men?—Yes, as long as the enterprise does not trench upon the rights of others.

3406. Our system in the merchant navy is this, that all captains and engineers are obliged to have a certificate of competency, would it be possible to trust our pilotage waters to the same rule?—It would be possible to do it, but it would be very inexpedient in the Mersey.

3407. Your pilots are always out at sea when they are wanted in bad weather, are they not?—Yes.

3408. And they do not skulk at all?—I have never heard of any such case, and the experience of captains and others is decidedly against any such charge being well-founded.

3409. Of course the cargoes of the vessels which you insure are very valuable, and the pilotage is a very small per centage upon the value?—I have given a rough calculation of what it is.

3410. In other ports, of course, it would be much larger?—It may be, but I have no personal knowledge of it. I should think it is extremely likely that to maintain a staff in a small port would, where the trade was small, be much more onerous than in Liverpool.

3411. Your objection to the present system is based upon the principle that pilotage should either be entirely compulsory, or the converse principle, that it should not be compulsory at all?—I think the exemptions should be as few as possible.

3412. In fact, you think there should be none?—I think there should be none. I do not venture to express that opinion very positively, as I have not considered all the difficulties of it.

3413. In your firm I presume you underwrite vessels trading all over the world; in London, I suppose you are aware that a steamer coming from the north of Europe into the Thames is free from pilotage, provided she has no passengers on board?—I believe there is such a regulation.

3414. But if she has a single passenger she is then bound to take a pilot compulsorily?—Yes; I believe there is a similar obligation in Liverpool, but it is not enforced.

3415. The existence of a single passenger on board a steamer would not make the difference of a thousandth part of an inch in the draught of water, would it?—I suppose not, but I have nothing to do with life.

3416. Do you think there is more difficulty in navigating a steamer with one more man on board than without?—I cannot conceive any additional difficulty.

3417. Do you think there is any reason, or sense, in fact, in an exemption of that kind?—I think there is reason for it.

3418. Upon what ground?—I think when a person, who may be assumed to be wholly unacquainted with maritime affairs, goes on board a steamship, which is an ordinary mode of conveyance, such provisions for his safety, especially regarding his ignorance of maritime affairs, as the State may think expedient to adopt, should be enforced in order to the preservation of his life.

3419. Of course you think that one human life is superior to a very large amount of treasure?—I cannot venture to compare them at all.

3420. Mr. *Gourley.*] Are you aware that the underwriters in Lloyds' rooms in London have expressed an opinion in favour of the abolition of compulsory pilotage?—I am personally acquainted with all the leading underwriters in London, more or less. I have conversed with some of them on the subject, and I believe there is a feeling of dissatisfaction with the present system. I have not traced the dissatisfaction to its source, but I think it arises from the very irregular and anomalous condition of the system rather than anything else. I have not perceived in the conversations I have had with any of these gentlemen any distinct objection to compulsory pilotage as a principle.

3421. But if you were made aware of the fact that they had petitioned in favour of the abolition of compulsory pilotage, you would naturally attach some weight to their opinion, would not you?—

you?—I think their opinion should be regarded with great weight as to the Thames, but with very little as regards the Mersey.

3422. Do you think that the Mersey is so much more difficult than the estuary of the Thames?—It is peculiar; it involves great danger; but whether there is more or less danger than on the Thames, I would not say.

Mr. *J. T. Danson.*

29 April 1870.

Mr. Thomas Richard Shallcross, Examined.

3423. Mr. *Graves.*] I believe you are a shipowner in Liverpool?—I am.

3424. And you are also Chairman of the Liverpool Shipowners' Association?—I am.

3425. Does that association comprise nearly all the principal owners of sailing ships in Liverpool?—It does.

3426. Are you at all aware of the proportion of steam to sail ships in Liverpool?—I am not, but I should think that there are at least twice as many sailing ships as there are steam in tonnage.

3427. Has this Bill been considered by the committee of the association?—The committee considered the Bill many times, and the association confirmed their decision.

3428. What result has been arrived at with reference to it?—The committee object to the abolition of the present system.

3429. Has that opinion been confirmed by the association?—It has been unanimously confirmed.

3430. You have heard the evidence of Captain Ballantine, and also Mr. Danson, with reference to the superior efficiency of the pilot service of Liverpool, do you concur in that?—I do.

3431. Is the opinion you have now expressed, so far as you are able to ascertain it, the opinion of the shipowners generally of the port of Liverpool?—It is. I have heard no complaint with regard to the system.

3432. I believe it is the unanimous opinion of the association that the compulsory system of pilotage should be retained?—It is.

3433. Can you give the ground on which that opinion is arrived at?—They think that without the compulsory system an efficient pilotage could not be maintained, in consequence of the necessity there is for the pilot boats to stand out to sea in all weathers waiting for ships coming in. They think that that efficiency would be very much curtailed if it gave to parsimonious people the opportunity of refusing a pilot in fine weather. The weather is very uncertain, and danger might come on very suddenly; therefore it is necessary that the pilots should always be at hand to render assistance when required.

3434. Do you carry your opinion so far as to think that it is not prudent for any vessel to enter or leave the Mersey without having a pilot on board?—I think it is possible, on a fine day, but it is extremely imprudent. A case occurred, in my own experience, within the last few days: one of our own vessels was ready for sea last Saturday, and on Wednesday morning I thought, and we all thought, that the vessel had gone that day; she had not gone simply because the pilot considered that there was too much sea on the bar, and that it was dangerous to go. I think it is extremely likely that the master, urged as he was to go to sea the first favourable opportunity, would have gone then, as the wind was favourable, if it had not been for that; and I think it was very prudent to act upon the advice of the pilot.

3435. There the presence of the pilot overruled your anxiety to go at once to sea?—Yes; the vessel was only drawing 17 feet six; so that her draft of water was not great.

Mr. *T. R. Shallcross.*

3436. Have you formed any opinion as to what extent the shipowners would avail themselves of the option if the voluntary system was introduced?—I cannot tell; I think the cupidity of some men would make them save a few pounds when they thought they could do so, regardless of the safety of life or goods.

3437. They would thus, by refusing to take a pilot, not only render their own vessel less secure, but they would render the navigation of the Mersey more insecure; is that your opinion?—I think so.

3438. In what light is a pilot generally regarded in Liverpool; is he regarded as holding an independent position between the owner and the master of the vessel, or in what light is he generally looked upon?—He is looked upon as a man who is from his education a thorough seaman; he knows all the bearings of the coast and channels, and he is better able to direct the ingress or egress of ships to and from the port of the Mersey than any man who is only there occasionally could possibly be.

3439. Do you consider that the present system of pilotage, the stations and the whole state of the management, is the best suited for the requirements of the port of Liverpool, or is there any change or modification that you could suggest?—I think in the management and the fixing of the stations the plan is admirable; I have never known any of our vessels to have to wait long for pilots; I have never known any inconvenience to arise from the want of a pilot, and I feel very strongly that it is necessary to keep the number of pilots up to the greatest number that is likely to be required in the port for the purpose of bringing in ships or taking them away at all times.

3440. Is it your opinion that if there was the one-sided obligation placed upon the pilots that is proposed by this Bill, there would be any danger of the efficiency of the pilot service being decreased?—I think there would be great danger of it.

3441. That would be caused principally from the decrease of revenue, would it not?—Yes, and not only from the decrease of revenue, but I think that there would not be the same obligation for a man to risk his life in stormy weather as at present exists. At present there is a sort of *esprit de corps* which takes the men out, and they are bound by the rules of the service to be at particular points in all weathers.

3442. Supposing the rules of the service remained the same, would there still be the same *esprit de corps*, or moral obligation?—I do not think so. If a man felt that he might be out for a week, and no man would take his services, I do not think he would feel that he was obliged to go out on difficult occasions to render assistance.

3443. Would he be more likely in bad weather, under a system which left it entirely optional on the

Mr. *T. R. Shallcross.*

29 April 1870.

the part of a shipmaster to take him or not, to consult his own personal safety?—I think he would.

3444. At present there is a moral sense of obligation, almost amounting to compulsion, which obliges him to risk his life?—Quite so.

3445. And are you of opinion that that incentive would be wanting in a free system?—Yes.

3446. Have you any experience of the Tyne or the east coast of Sunderland?—I have been in the Tyne; we have had ships there, and we have had ships in the Wear.

3447. Are you personally acquainted with it?—I am.

3448. Are you aware that there the system of pilotage is voluntary?—I am not aware whether it is voluntary or not.

3449. Would you consider that a system of pilotage that suited such a port as Sunderland or the Tyne was adapted for Liverpool?—Certainly not. I think a pilot could, from the pier-head of Sunderland or Shields, give directions for a vessel to go in and out of the port.

3450. That is your impression of the pilotage of the east coast?—Of those ports, certainly.

3451. Have you any experience of Queenstown?—I have been in Queenstown, but I know very little about the place.

3452. I suppose from your experience as a shipowner, you must know enough to give an answer to the Committee as to how the boats are owned there?—They are owned by private speculators, who are agents for merchants and others, and the main business of those boats, as I understand, is to meet ships outside and place orders on board of them, a source of revenue which could not possibly exist in the Mersey.

3453. Are you aware that those boats are entirely outside and beyond the control of the pilotage authorities?—I believe that is so.

3454. Mr. *Stevenson.*] Have the shipowners whom you represent expressed any opinion on this point; where pilotage is compulsory the owners are free from liability; are they willing to accept the liability which would be involved in the abolition of compulsory pilotage?—The shipowners feel that with a pilot on board, they ought to be free from liability, whether the pilot is a voluntary pilot or whether he is a compulsory pilot; at the same time they feel it is proper that compulsory pilotage should exist in the Mersey, even though that immunity is withdrawn.

3455. Does not compulsory pilotage assume, in a great measure, the unfitness of the captain of the vessel to conduct the ship into the port?—I think that in the Mersey persons who are away for any lengthened period, would be utterly unfit to bring a ship into port.

3456. And the compulsory pilotage imposes upon a captain the services of a person, whether he desires those services or not?—Yes, and I think in the interest of humanity, it is necessary that it should be imposed upon him in the Mersey.

3457. And you think it reasonable that the responsibility should still attach to the captain and owner of the ship?—I do not think it is reasonable that many of the obligations the Legislature has thrown upon shipowners should be continued; but if the Legislature declared that we must have it, the shipowners would prefer to have this additional liability imposed upon them rather than give up compulsory pilotage.

3458. Do you assume that if the element of compulsion were removed, that the efficiency of the pilotage service would break down entirely?—I think it would cease to be efficient.

3459. In what respect?—I do not think you would get the number of pilots that are necessary for an emergency.

3460. Do you apprehend that the pilots would not keep their stations as they do now?—I think they would not.

3461. There would still remain very large employment for pilots, would there not?—I have no doubt there would.

3462. What proportion of ships do you fancy would continue to take pilots?—I can form no opinion; but it occurred to me, in thinking over this question, that if you limit the number of pilots there may be occasions when shipowners who are unaccustomed to take pilots in ordinary weather would take them to the prejudice of those who did employ pilots in all weathers. They would take the pilots in bad weather to the prejudice of those who always take pilots, leaving them without pilots, and I think you would materially increase the cases of salvage and losses.

3463. Is the number of pilots at present sufficient for every vessel to obtain a pilot in all cases without detention?—Practically that is so at Liverpool.

3464. If so many vessels gave up taking a pilot, would there be pilots for those who wished them?—I think they would give up the business.

3465. You mentioned a case in which one of your vessels was prevented from going to sea by having the benefit of a pilot's advice?—Precisely.

3466. Would you not equally have had the benefit of that pilot's advice if the pilotage had not been compulsory?—If we had employed one; but if it had not been compulsory on me to have taken a pilot I might not have done so, and the ship might have been lost.

3467. Would you not always employ a pilot in your own case?—As a prudent shipowner I think I would.

3468. Then, you would have had the benefit of this pilot's advice, in any case?—I should. If I could have got a pilot I should have employed one.

3469. You mentioned the River Tyne and the piers; are you aware of the actual condition of the piers in the River Tyne?—I have not been there for a considerable time, but there was high land round about the mouth of the Tyne by which the directions could be given from the shore almost.

3470. I think your local knowledge is hardly accurate if you think that; but are you aware that the piers have only been commenced within the last few years?—Rough ballast had been thrown out at the mouth of the river upon which I stood, and I could see out to sea from those places; and with a powerful speaking trumpet, I could have given any directions that were necessary.

3471. Are you aware, however, that there has been for many years a very efficient service of pilots at the Tyne under the voluntary system?—I do not know whether it is voluntary or otherwise.

3472. And that they have been able to keep up a regular system of apprentices under it, similar

similar to what you have at Liverpool, and that that is done under the voluntary system?—I do not know at all what the system is in Tyne. We have had ships there, and we have employed pilots and paid for them, because we always do employ pilots.

3473. You were not aware in doing so that it was optional for you not to do so?—No.

3474. Are you aware that the pilots there have been trained in as thorough a system of apprenticeship even as those in Liverpool?—I do not know that.

3475. Mr. *Price.*] Are you of opinion that the navigation of the Mersey is of that character that it cannot be safely conducted without an efficient system of pilots?—I am.

3476. And do you think that the present system of compulsory pilotage always secures you an efficient staff, and that a system of non-compulsory pilotage would not afford you an efficient staff?—I do.

3477. On what ground do you found the opinion that a non-compulsory system of pilotage there would not secure you an efficient staff of pilots?—I found it on human nature, that if a man is not paid for a thing he will not do it, and I do not think there is any prospect of getting a man to stand out to sea in rough weather and at all times to run certain risks unless he was quite sure of being employed.

3478. You do not found that opinion upon any practical experience of ports where the system of non compulsory pilotage obtains; but you simply found it upon a process of reasoning on human nature?—Precisely.

3479. But I suppose human nature is the same all over England, is it not?—I do not know I am sure.

3480. As an abstract question, it is likely to be?—Yes.

3481. Supposing you are told in other places where there is a difficult navigation, that with a system of non-compulsory pilotage there is an equally efficient staff of pilots to what there is under the compulsory system of pilotage at Liverpool, would not that bear somewhat upon the question and modify your opinion as to the prospects of a non-compulsory system at Liverpool?—That would depend upon the nature of the port itself.

3482. I assume that it is a question of a difficult navigation?—No; I have heard it said here to-day, and it is very reasonable, that in moderately fine weather a man might be induced to attempt the passage of the Mersey and fail in doing so, and the consequence would be a serious loss of life and property.

3483. You said in the early part of your evidence that men, from motives of cupidity, might be tempted to run needless risks in order to save the expense of pilots?—Yes.

3484. And shipowners are sometimes influenced by motives of cupidity?—Yes.

3485. But do not they run other risks besides those of not taking pilots from motives of cupidity; do not they go to sea inadequately manned or with an insufficient supply of chains and cables?—Yes.

3486. Then why should you think it necessary to protect them against the consequence of cupidity in one respect, and leave them open to the consequences of cupidity or risks in another; if you protect them in the case of pilots, why should you not protect them against the consequence of insufficient equipage or insufficient stores?—As far as I can understand, it is admitted by everyone that a pilot is necessary to go in and out of the Mersey, whether there is a voluntary or a compulsory system; I think the men are not overpaid at present, and so you will get a better chance of a good and efficient system by compelling everybody to take a pilot; I do not think a man in the case of a long ship has a right to risk the closing up of the port, which he would do by getting a ship 400 feet long across the channel of the Mersey; he has no right to run the risk of such a catastrophe.

3487. Nobody doubts that the navigation of the Mersey is a difficult one, or that it is expedient that there should be pilots, or that it is expedient that they should be generally employed; but do not you think that shipowners in their own interest, and notwithstanding that ordinary feeling of cupidity which influences human nature alike everywhere, as a rule, would take the pilots wherever they were necessary to them?—I think they would take them whenever it was rough; but when it was fine weather I do not think that they would. I think that fact alone shows the great advantage of the compulsory system of pilotage, because the men are able to devote the fine days of the summer to going and improving their knowledge of the coast which they do. The pilots go periodically to examine the coast from Whitehaven to Holyhead; I think that is a very great advantage which the men would not be apt to do if they had to do it at their own special cost.

3488. You say that, generally speaking, in rough weather a shipowner or a shipmaster would take a pilot; just now you stated that your fear was that pilots might not be induced under the system of non-compulsory pilotage to keep the sea in bad weather?—Yes.

3489. If, in your opinion, a shipowner would always take a pilot in bad weather, do not you think that would be the time when the pilot would be there to look out for him?—Yes, if you paid him sufficiently.

3490. It is assumed that the pilot may be paid for his services upon such a rate as would induce him to continue in his profession; upon what grounds do you found your belief that there is such a want of enterprise or want of competition amongst that class of seafaring men in the Mersey that they should abstain from pursuing their profession of pilots there under the voluntary system when they are found to do it in other places?—I think, so far as the Mersey is concerned, it requires a long apprenticeship to fit a man thoroughly for his duty, and, unless there is some certainty as to the payment he is likely to receive, he will be deterred from entering upon it as a profession.

3491. And you think the certainty which now exists, that the shipowners will always take a pilot in bad weather, would not of itself be sufficient to rear up and train an efficient staff of pilots?—I do not think it would.

3492. Mr. *Malcolm.*] Do you know anything of the Bristol Channel?—No, I do not.

3493. There is no use asking you whether you think there is any comparison between the Bristol Channel and the Mersey?—I have heard that there is a great rise and fall of the tide there.

3494. Do you know the Clyde at all?—I do not know much about it.

3495. Mr. *Gourley.*] What are the functions

Mr. *T. R. Shallcross.*

29 April 1870.

of the Shipowners' Association of Liverpool?—They look after all matters affecting the general interests of the shipowners.

3496. Are they generally elected by the shipowners?—They are elected by the members of the association.

3497. How many members have you in the association?—About 60 probably.

3498. That is a small number compared with the large number of shipowners you have in Liverpool?—I do not know how many shipowners there are in Liverpool, but 60 shipowners represent a large number of the managing owners of vessels, and it is the managing owners of vessels who are members of the association.

3499. Would you consider that the association generally represents the shipping interest of Liverpool?—I am quite sure that the association would represent the opinion of the shipowners at large.

3500. And of the steam shipowners as well?—No.

3501. Have the steam shipowners an association of their own?—Yes, independently of the sailing shipowners' association.

3502. You say that you consider it much safer to have vessels placed in the charge of pilots passing in and out of the Mersey, than to leave them without; are you aware that some of the Liverpool shipowners have compromised the amount of compulsory pilotage by paying a particular sum, in order to be rid of the obligation to take the Liverpool pilots, and that they prefer placing their ships in the charge of their own captains?—I do not know of such compromises; I know that there are coasting steamers which go in and out without pilots.

3503. Are those vessels navigated as safely as the vessels carrying pilots?—They are so often in the port that their masters may become aware of the changes of the channels they frequent. I do not know whether they take pilots in circumstances of danger; I think it is very likely that they do, but as long as it is fine weather they know their way about the place.

3504. When do you consider the navigation dangerous?—When it is foggy it is very dangerous; and it is very dangerous when there is a heavy sea on the bar.

3505. Is it not possible that the captains of the steamers to which you have alluded may be quite as able to navigate the vessels in and out as the pilots?—Yes, I think it is very likely they are; but there is this difference, that a man coming from Glasgow to Liverpool in a steamer would always be in one course; supposing that man was driven down to Holyhead, he might find himself in a fix if he had to approach the port of Liverpool from that point.

3506. Sailing vessels are generally under the charge of steam tugs, are they not?—Not always.

3507. But, as a rule, they are, are they not?—They are frequently in the charge of steam tugs.

3508. When they are in charge of steam tugs cannot they make as straight a course as a steamer can?—No doubt; but the breaking of a hawser is very important; that is an event which happens in rough weather, when the necessity for a pilot is most obvious. That would be the very time when a hawser would break, and leave the ship alone to drift.

3509. Are the vessels tugged with one hawser, or do they attach springs to their hawsers?—They are usually tugged with one hawser.

3510. Do you think it safe navigation to have a vessel tugged with one hawser?—In Liverpool they think so.

3511. Nautical men do not think so, do they?—Nautical men do it.

3512. You said, in answer to a question, that one of your captains abstained from taking his vessel to sea because the pilot declined to proceed, and that, in consequence, you found that the captain had acted prudently; do not you think that if there were no pilots, or if the pilot system was a voluntary system, and you were not compelled to carry pilots, your captain would have exercised an equal amount of discretion?—I say, supposing a man had chosen, for fear of disobliging his owner, to decline to take a pilot, he might have gone to sea, and the consequence might have been the wreck of the vessel, because he would not know the state of the bar, which these men know from long experience.

3513. Does the bar alter every day?—It alters very frequently; there is not a dock wall made in Liverpool that does not alter the course of the channels.

3514. The witness who was examined before yourself, the Chairman of the Underwriters' Association, said that the navigation was made easy in consequence of the good system of buoying?—There is no doubt of that; it is the constant watch that is kept upon the buoys, so that when the channel alters, the buoys are shifted, which makes it safe to come in and out with the assistance of the buoys.

3515. If there were no pilots, would you still exercise supervision over the buoys?—The Mersey Dock and Harbour Board would do that part of the business; at the same time every change of the buoys is known to the pilots.

3516. It must be necessary for the good of the port that you should have a proper supervision over the buoys in order to prevent accidents to strangers who frequent your port?—Yes, but you could not send word to a man coming from Calcutta that the channels had altered, if you had no pilots to meet him.

3517. The buoys are always marked down upon the chart, and as you never change the colour of the buoys, the captain would be able to find his way into port with the chart, and with the assistance of the lead, would not he?—I am not a sufficient navigator myself to say what can be done by skilful men.

3518. With a steam tug he could find his way?—A steam tug might take him in, but it would not be safe for the captain himself to try.

3519. Are not the captains of steam tugs accurately informed of the channels approaching Liverpool?—I think it would be very dangerous to place a shipowner in the power of any body of men who make part of their dividends from salvage.

3520. Are you of opinion that owners should be compelled to carry pilots, and at the same time be responsible for the acts of the pilots?—I do not think so.

3521. In the event of the abolition of compulsory pilotage, and the owner carrying a pilot, what is your opinion as to the responsibility which ought to attach to the pilot?—I think that if, from the mistake of a pilot, an accident happens, the owner should be free from responsibility. At the same time, if the Legislature says that the immunity

immunity which at present exists should be withdrawn from them, the shipowners of Liverpool think that compulsory pilotage is better with that withdrawal than without it.

3522. Do you mean to say that the shipowners of Liverpool are willing to take upon themselves the responsibility arising from the negligence of their own servants who command their property?—The shipowners of Liverpool are not satisfied to do it; at the same time if it is forced upon them they cannot but accept it, but they consider that compulsory pilotage is most desirable.

3523. I believe you said you knew something of both the Tyne and the Wear, and that there it is quite possible to navigate the ships by taking a pilot at the harbour's mouth?—What I said was that it was not difficult to give a ship the necessary directions from the mouth of the harbour.

3524. What do you mean by saying that it was not difficult to give a ship the necessary directions from the mouth of the harbour; do you mean simply for passing out of the harbour, as you would mean for passing out of one of your docks in Liverpool, or do you mean for passing out to the sea altogether?—I mean passing out seaward.

3525. You think there are no dangers beyond the harbour's mouth?—Beyond the harbour's mouth there are no great dangers.

3526. Are you not aware that there is a very great danger inside the harbour's mouth at the Tyne?—There may be that, but proper assistance in such case is quite compatible with a pilot living on shore, without standing outside, for days together, waiting for ships to come in.

3527. Do you know cases where pilots remain out for days together, and be found 50 or 60 miles northwards along the coast?—That is to pick up coast pilotage.

3528. It is the coasting trade. I supposed coasting ships are quite as valuable as any other?—There is no pilotage for the open channel, as far as I know, between Ireland and England. I am not speaking of sea-going pilots at all.

3529. You must supply sea-going pilots to take the ships from the harbour and to take the ships out to sea as well, must not you?—Many ships take pilots down to the Downs, and navigate them through the North Sea altogether.

3530. They are a different class altogether to those pilots that take the ships to sea from the harbour. Do you know anything of the dangers of the coast near to the harbour mouths of the Tyne and the Wear?—I know that they are comparatively easy of approach.

3531. Are you not aware that within a mile of the harbour's mouth at Sunderland there is one of the most dangerous rocks upon the coast?—That very much carries out what I said before, that if the dangers are quite in the immediate neighbourhood of the port, it does not seem difficult to give, from the port itself, almost all the directions that are needed.

3532. Now with regard to Liverpool, where does your danger begin?—Sixty miles from the port.

3533. They begin at your bar, do they not?—They begin long before you get to the bar, there are all those banks long before you get to the bar; I have seen ships on the East Hoyle Bank.

3534. You never find captains running so close to those banks any more than they run close to any banks along the coast generally?—Captain Ballantine's evidence showed the danger of those banks with a westerly wind; he is thoroughly acquainted with them.

3535. There is always a certain amount of danger if a ship runs too near the shore when the wind is blowing on the shore from the sea?—Yes.

3536. The same rule would apply to any other part of the coast if the ship approaches too near the shore?—Yes.

3537. What do you consider all prudent captains should do, coming near the coast; would you think they should run themselves into danger or keep the ship out to sea?—They would keep the ship out to sea as far as they could.

3538. Is that the general rule in Liverpool?—The "Royal Charter" with all her efforts to keep at sea could not do so on a particular occasion, and she was blown upon the shore.

3539. That was an extraordinary gale of wind?—Extraordinary gales of wind are constantly occurring round about the mouth of the Mersey.

3540. Do you consider that the captain of a ship would be quite as capable of keeping his ship in safety out at sea as if she was in charge of a pilot?—I do not think he would, he would not have the same confidence in his knowledge as a pilot would.

3541. You would trust the captains in more difficult waters than the Liverpool waters; you would trust them in the Chinese waters, and leave them entirely at the guidance of their charts without pilots?—Yes.

3542. What is the difference between the difficult waters of China, and the difficult waters in the neighbourhood of Liverpool?—I am not a sufficient navigator to give the difference, but there is a very great difference.

3543. Mr. *Cave.*] Are there any exceptions of compulsory pilotage in the port of Liverpool?—I believe there are for small vessels under 100 tons.

3544. There are none for vessels with reference to the ports from whence they come or what their cargo may be, such as there are in the Port of London?—I think all foreign-going vessels are liable to pilotage.

3545. I believe you stated that the shipowners would prefer compulsory pilotage to be kept up, even though they were made liable for the acts of a compulsory pilot?—Quite so.

3546. But you think that is unjust?—I do.

3547. And also that it is unjust that the shipowners should be made liable for the act of a voluntary pilot?—Quite so.

3548. That being the case, upon whom would you shift the responsibility?—I think that the shipowner having complied with every requisition for the efficient manning of his vessel, and having sent her to sea in a proper and efficient manner, his liability as a shipowner ought to cease.

3549. Upon whom would you throw any loss that might occur?—I look upon it as a misfortune of the sea that those who suffer the loss must bear it.

3550. Your argument was that a shipowner having little control over the act of the pilot, ought not to be subjected to the loss?—Yes.

3551. Would it not be more unjust that the shipper of the cargo, who had still less voice in the employment of the pilot, should suffer the loss?—It is an adventure of the sea in which the owner of the cargo takes his risk with the owner of the vessel; he selects his vessel, and he is just

Mr. *T. R. Shallcross.*

29 April 1870.

just bound by the same rule as anybody else would be.

3552. Is it not a matter of fact that the shipowners might protect themselves against all these casualties by insuring?—Some of them.

3553. Therefore, after all, the question is rather a theoretical one than a practical one?—With reference to passengers, very few shipowners protect themselves against that liability, but with reference to goods the policies generally cover it.

3554. So that with reference to ordinary vessels, excluding passenger vessels, it would not make much practical difference to the shipowners whether the law was altered with reference to the liability of the pilot or not?—Precisely; I think the existing law gives rise to a great deal of unnecessary litigation.

3555. Under all circumstances, you are dissatisfied with that state of the law which makes the pilot, and the pilot only, liable for loss?—No, I am not dissatisfied with it; I am perfectly satisfied to let it remain as it is.

3556. I thought you said that it gave rise to litigation in many instances?—It is the liability of the shipowner that gives rise to litigation, not the liability of the pilot.

3557. Is it not the fact that the law with reference to the liability of the pilot is very doubtful?—I have heard it said so; there has been a decision lately making the pilot liable.

3558. I believe in foreign countries the law is generally the other way?—I am not aware of that.

Tuesday, 3rd May 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. J. Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. Pemberton.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair

Mr. William James Lamport, called in; and Examined.

Mr. *W. J. Lamport.*
3 May 1870.

3559. Mr. *Graves.*] I believe you are largely interested in steam shipping at Liverpool?—My partner and I are managing owners of between 30,000 and 31,000 tons of steam shipping.

3560. Are you a member of the Steam Ship Association of Liverpool?—I am.

3561. Are you well acquainted with the system of pilotage at Liverpool?—I am for all practical purposes connected with my own trade.

3562. And of course you are aware that it is now compulsory upon vessels to take pilots or to pay pilotage?—Yes.

3563. Generally speaking, are you satisfied with the efficiency of the present pilot service of the port?—The service is very well conducted indeed, and gives great satisfaction.

3564. Are you in favour of retaining the present system?—No system is so perfect that it cannot be amended. At present I am satisfied with the system, although there are points upon which I venture to think I could suggest amendments.

3565. Do you object to the system proposed by the present Bill?—I do.

3566. Will you state your grounds for that objection?—The point upon which I quarrel with the Bill is that, if the Bill passes, the payment of pilotage is no longer to be made compulsory. Perhaps I may be allowed to explain, that if the Merchant Shipping Code had been left as it was printed, without the addition of this separate Bill, I should have had very little objection to make to any of the improvements embodied in the code.

3567. The principle of that Bill is to leave it optional to take a pilot, but compulsory to pay for one, or to contribute towards the expense of maintaining the pilotage service?—That is the principle of the code.

3568. Do you regard the station system, which is one of the features of the Liverpool pilotage, as being advantageous to the navigation?—I consider it essential for this reason: it is important that the master of every inward-bound ship should know where he is to look for a pilot.

3569. Do you think, under the system proposed by the Bill, that any effective means could be found to compel pilots to be on their stations in all weathers?—The attempt might be made, but I do not think that it would be permanently effectual without the compulsory payment of pilotage.

3570. Do you form that opinion from fear that the control of the pilotage authority would be insufficient, or that the moral obligation which exists now is a stronger obligation than the control of the local authority?—I consider that the control of the local authority would not be effectual without the moral obligation of the present system.

3571. Would you define what you consider that moral obligation to be?—I consider that the effect of the compulsory payment of pilotage on the mind of the pilot is this: first, he says to himself, "as an honest man, I must fulfil my contract. There is an implied contract between me and the captain of that inward-bound ship that I shall be there to meet him, because the captain has agreed to pay me in any case." I consider, also, that the effect of the present system is to make the pilot feel as though he were a public officer, and to give him, in point of fact, something of the feeling of a soldier; something of the duty of not flinching from his post; that as he has taken upon himself the obligation of being there to meet the man who has already agreed to pay him for being there, he looks upon himself as bound to be there. If you do away with the compulsory payment of pilotage, although it may seem a small thing at first sight, I think the effect would be, instead of giving the pilot the feeling of a soldier, you will give him the feeling of a cabman. You may license him; you may restrict him to the exaction of a maximum rate or charge for the piloting, but you cannot, in the case of the cabman, and you cannot in the case of a pilot, compel him to be out in all weathers for the chance of earning a fee. I think a pilot, under the proposed system, will feel that it is optional with himself whether he chooses to risk his life or not for the sake of earning a fee, and he will no longer look upon it as a matter of personal duty.

Mr. W. J. Lamport.

3 May 1870.

3572. You fear that under an optional system on the part of the shipmaster to take a pilot or not, there is a danger of the *esprit de corps*, which exists at present, being destroyed?—I must explain that. I am not in favour of forcing a pilot upon a master whether he will or no, but I am in favour of a system that shall supply a sufficient number of pilots to be ready to pilot the ships that are desirous of employing them, and in return, that you shall tax all inward-bound ships coming to Liverpool (for I am only speaking of Liverpool) for the support of that pilotage system.

3573. As I understand, you regard the present obligation as almost amounting to a contract between both the shipowner and the pilot?—An implied contract.

3574. And that, under a one-sided system of option, it would probably cease to exist in its moral obligations?—There would be no contract between the pilot and the shipmaster.

3575. And the pilot would then probably feel himself more at liberty to consult his own safety and his own convenience?—He would then feel himself more at liberty to consult his own safety, his own convenience, and comfort.

3576. Do you consider, from that circumstance, that he would become more remiss in his duty at times?—Undoubtedly.

3577. Probably in your mind there would be some analogy between the crew of a life-boat and the pilot service?—I never can conceive that the crew of a life-boat would go out in a storm to save men from a wreck merely for the sovereign a-piece that they are to get afterwards. They go out because it is their duty to go. They have brought themselves up by association into a feeling of duty which compels them to go out.

3578. In point of fact, you regard the pilot service in dangerous navigation as being maintained for the good of the whole community; and you think it not unreasonable that the whole community should contribute to its support?—If by the community you mean the shipping interests frequenting that particular port, I do.

3579. Do your own vessels invariably take pilots inwards and outwards?—Always.

3580. Probably, under any system, it would continue to be so?—If we could get them, but under the proposed system we should have great fear of not always finding them when the ships come in.

3581. Is it then on account of the danger of the navigation, or from a desire to render yourself exempt from the liability that attaches to casualty under the present law, that you so constantly take pilots?—It is to avoid the danger of the navigation; with regard to the immunity, I hold with the provision of the code, that the immunity of the owners of the ships, for the fault of the pilots, should be done away with.

3582. You are dissatisfied with the anomalies of the present state of things?—Yes.

3583. And you desire to have them done away with?—Yes.

3584. Can you form any opinion at all as to the extent, under an optional system, to which shipowners would take advantage of a free system?—No, I cannot, I do not think anyone can; my impression is, that in very fine weather and smooth water, many of the small vessels will trust, not to themselves, not to their own masters, but they will be content with taking a steam-tug, which will tow them in between the buoys, and in that way they will attempt to avoid the expense of a pilot; I consider it would be very dangerous and would argue some recklessness, something beyond mere penny wisdom upon the part of those masters, as far as Liverpool is concerned.

3585. It is not the invariable practice in Liverpool with vessels of any size to take tug-boats in and out? — A great many do; I think the majority take tug-boats, but not the majority of the smaller vessels up to 400 or 500 tons. I think nearly all the ships approaching 1,000 tons take tug-boats, though I have seen them coming in under full sail.

3586. Would you regard a vessel towing up without a pilot on board of her as being in a critical position in the event of sudden squalls, or from the tow rope parting?—Yes; and not only that; it is a very common thing for a tug boat to throw the vessel off for her own safety; then the vessel would be helpless.

3587. Thereby not only rendering themselves liable to loss, but also obstructing the channel for those vessels that had pilots?—That is so.

3588. In a crowded thoroughfare like the Mersey, do you place much stress upon having very stringent regulations as to vessels passing each other?—I do.

3589. As a matter of harbour regulations, do you think it has a tendency towards making a vessel more safe that a pilot should be on board every ship?—Yes; I think that would be the tendency.

3590. Are there no circumstances under which you would let a master pilot his own vessel?—I would leave the law as it is at present; any master may be examined, and, if he is found competent, our dock board may give him a license to pilot his own ship. I am not familiar with the local Act of Parliament, but I think it is, "any ship belonging to the same owner." I see no objection whatever to licensing masters who are competent to bring in their own ships, and the ships of the owners who wish them to do so. I would not do it myself.

3591. It has been suggested that a perfectly free system of pilotage might answer in Liverpool; have you at all considered that question?—I cannot say that I have considered sufficiently what the effect of a perfectly free system would be; a great deal might be said in favour of it, but of course you will not expect me to suppose that the proposed change in the law is to go to a perfectly free system; it is anything but a free system. The Bill does not propose a free system; nor does Mr. Farrer in his memorandum advocate a free system.

3592. Do you see any middle course by which a perfectly free system can be maintained as lying between the principle of perfect compulsion and perfect freedom?—Perfect compulsion to pay, I think, is the only permanent alternative of perfect freedom. I do not think that such a system as the Bill proposes to establish will last; it may be carried through Parliament, but you must either leave us perfectly free to make our own arrangements and employ our own pilots, or you must compel us all to be taxed to maintain an establishment something like the present system.

3593. To which of the two principles do you give a decided preference?—The present one, as having borne the test of experience.

3594. You have said that there are alterations that you would desire to see effected in the present

sent system; could you name any; has any struck your mind?—Members of our dock board are present, and perhaps they will excuse me if I say in answer to your question, that I do not think they go sufficiently fast with the times. On the other hand, I do not blame them for that, because they have not been pressed by the ship-owning interests of Liverpool to make any very important changes in the pilotage system. The fact is that our system has been so generally good, and we are all so busy about our own business, that we have been satisfied to go on with it. Now that the case has been started, I do think if we lay our heads together, and are not interfered with by the Legislature—if we are allowed to go on as at present, we shall adopt a great many improvements.

3595. Are there any salient points with reference to change present to your mind at this moment?—I think that the board are wrong not to allow some of the pilot boats to go down the Channel as far as Tuskar, for example. I think arrangements might be made by which, still maintaining all the present defences, scouts should be sent out to assist vessels further down Channel, because I have no doubt whatever that many masters frequenting the Channel for the first time, or vessels very seldom frequenting the Channel, would find very great advantage, and many losses would be avoided by a pilot meeting a vessel down at Tuskar.

3596. You would probably extend the license to pilots to be Channel pilots?—I would; but at the same time you will understand me, that I would not take away any of the present pilot stations. I would maintain them; of course the employment of a pilot for the Channel, as well as for the entrances to the port, would imply a higher rate of charge; and I would not compel any inward-bound ship to employ one of these outlying pilots, or to pay for them, or to pay anything more than the ordinary charge of coming into the port.

3597. You have already stated your desire, that the immunity of the shipowners should be done away with; have you any special reasons for coming to that conclusion?—I have some very serious special reasons, one of which is, the heavy losses that have been sustained by my own firm and by our co-owners, from the consequences of that system of immunity.

3598. *Chairman.*] You mean where your vessels have come into collision with others?—Not only collision, but all sorts of accidents that we can trace to the theory that the pilot is to supersede the captain in the management of the ship; that he is not to be merely an assistant to give the captain the benefit of his local knowledge of currents, of tides, of sand banks and rocks, but that he shall absolutely take the command and charge of the ship out of the captain's hands. Now the ships belonging to my firm are chiefly long, narrow screw steamers, and they require careful handling, and the man who best knows how to handle one of these boats is the captain of the ship; yet the operation of the present law is to take the charge of that ship out of the captain's hands, out of the hands of the man who does understand it, and to put the charge into the hands of the man who does not understand it. Now, I can give instances in which we have suffered very grievously from that.

3599. Mr. *Graves.*] Will you kindly give us an instance?—Not very long ago one of our steamers ran against the New Brighton stage, which caused damage, for which we had to pay 4,600 *l.*; the ship was outward bound with a pilot on board. Both our captain and we ourselves at the time were under the impression that the employment of a pilot under those circumstances was compulsory as to payment; it turned out afterwards that it was not so, that it was optional, because our steamer was bound from dock to anchorage in the river, not going to sea at once, and it appears now that by a defect in the Dock Act (on which Chief Baron Pollock animadverted most severely some years ago, but which our dock board have never set right), though it is compulsory to employ a pilot from anchorage to dock, it is not compulsory to employ a pilot from dock to anchorage; the effect, however, was, that our captain believed the charge of the ship was taken out of the captain's hands. When we heard of the accident and investigated the circumstances under which it occurred, the very first question I myself asked the captain was, "Captain, why did not you anchor?" "Oh!" he said, "it was just what I meant to do; I had ordered everything; I had got everything ready to anchor, and I suggested it to the pilot, but he said, no, it is not necessary;" and when I said "You ought to have done it," "Well," he said, "I dare not; I did not like to interfere with the pilot:" and the consequence was that the damage was done. In another case that we brought lately before the dock board, the steamer was an inward-bound steamer, and the pilot really did not know how to handle her, and he ran her against the pier-head. The captain warned him that that would be the result, but he refused to listen to the captain's suggestion. We were put to a very serious expense in the damage done to the ship. We represented it to the dock board, and the only result has been to tell the pilot not to do it again. Only a month or two ago we had a collision in the Thames, where the captain of our ship assured us that the collision would not have occurred if he had either had no pilot on board, or had not believed himself to be under the direction of the pilot. We had a collision some time ago in the Roads of Flushing, at the mouth of the Scheldt; that was a collision involving a point of international law, and it excited great attention. On this occasion the collision arose from the ignorance of the pilot that the ship was a difficult one to turn; that is, not answering her helm quickly. I myself put the question to the captain, "Why did not you warn the pilot that the ship did not answer her helm quickly?" He said, "I did, but I do not think he understood me." Now, if our captain had been in virtual charge of that ship, that collision would not have happened. It was a very hard case upon the unoffending vessel lying to anchor, which was run into by our steamer, and it was very hard upon us also, because though we were acquitted on the ground that it was the pilot's fault, and that the pilotage was compulsory, yet we had a lawsuit extending over nearly three years, and very heavy costs to pay, for the Judge of the Admiralty Court thought it right that we should pay our own costs, considering the nature of our defence. I have given you four cases, but I could give you more.

3600. You have apparently brought your mind to the conclusion that the fear of incurring liability frequently prevents a master from interfering when

Mr. *W. J. Lamport.*

3 May 1870.

Mr. *W. J. Lamport.*

3 May 1870.

when he sees the pilot doing an act which he knows to be an erroneous one?—Yes; and in addition to that, the master is influenced by the fact that he considers it to be the law that the pilot shall take the charge of the ship out of the hands of the master. Now, I am perfectly aware that that is not the statute law, but it is judge-made law; it has been laid down over and over again by Dr. Lushington in the Admiralty Court that it is a most improper thing for a master to interfere at all with a pilot except in the case of the most absolute emergency (this is one of the instances Dr. Lushington gives), such as the case of a pilot being drunk; but in answer to your question, I would say that we have made up our minds, be the result of legislation what it may, that our captains shall never have the charge of their ships taken out of their own hands by the pilots, or by anybody else, and that we will run all the consequences of that decision.

3601. Therefore, you naturally desire that the law shall be altered in the direction of your own practical experience?—Yes, and also that if we have damage done to us by another ship, we should not suffer then as we now do from the immunity.

3602. So that between shipowner and shipowner, it really makes very little difference whether the law gives immunity, or otherwise?—The man who is most in fault will suffer most, and the man who is least in fault will suffer least, if you do away with the immunity.

3603. Where there is immunity to-day, it may be the contrary to-morrow?—Yes.

3604. Do you see any difficulty at all in determining the relations between the pilot and the master of the ship, supposing your view carried oet?—None whatever.

3605. How would you define the duties of a pilot?—I would supply the master with a pilot, and say, "Now make any use you please of that pilot."

3606. You would make him his adviser, in fact; is that what you mean?—Yes, I have seen the expression made use of by somebody, that he would treat the pilot as a living chart; I would use the pilot as I use a chart.

3607. It has been suggested here that there is something inconsistent in removing that immunity, and at the same time obliging a captain to take a pilot, not of his own free will; do you attach much importance yourself to that argument?—In the way you have just expressed it, I should say that it would involve a hardship, if the captain is compelled to employ a pilot and put a ship under the charge of a pilot, and he has no choice as to the individual pilot, then it would be a great hardship to make either the captain or owner responsible for the default of the pilot; but if it is simply this, that all ships frequenting the port are bound to contribute towards the maintenance of the pilotage system of the port, then there would be no more hardship than there is in a great many other parallel cases. I will give you one: I pay very heavy rates towards the police system of Liverpool; supposing I say I do not want, under any circumstances, to be assisted by the police, I will carry a revolver and protect myself, I am, nevertheless, compelled to be taxed, as others are, for the maintenance of the police system; or if a captain says, "I am perfectly acquainted with the Channel; I do not want a lighthouse; I will not look at it;" and he positively makes no use of the lighthouse, you do not exempt him from payment towards the maintenance of the lighthouse. These are cases in which the individual is bound to pay, as a member of a general body, for the good of the general body.

3608. Do you regard the compulsion to pay, with the option to take a pilot, as really having no bearing whatever upon the question of forcing the pilot upon a master against his will?—I do; a pilot is not forced upon a master; it is simply this, that the master or the owner of the ship is taxed towards the maintenance of the pilotage system, and in return for that tax there is a pilot offered to him to be employed if he wants him. But let me say under the present law, not statute, but again judge-made law, the owner of the ship, to my mind, would be in a very painful position if the ship were lost, and he had a pilot offered to him and he had refused to take him. I believe he would be liable to the owner of the cargo for the value of the cargo lost, and that he would also be unable to recover the value of his ship from his own underwriters, provided it could be shown that the notorious and the well-understood custom of the port was to employ a pilot. I think that both the shipper of the cargo and the underwriters on the ship would have an implied right to assume that, in the absence of any stipulation to the contrary, the custom would be observed.

3609. *Chairman.*] Do you know the law of insurance?—It has been so laid down. I cannot quote any cases, as I am not a lawyer.

3610. Mr. *Graves.*] I presume in practice there would be great difficulty in proving what is the custom, under the large system of exemptions which have been introduced under the Merchant Shipping Act?—As regards Liverpool there would be no difficulty whatever, because it could be decidedly shown that the ordinary mercantile custom is to employ a pilot; but your remark would be perfectly just to my mind in the case of many other ports where the dangers are not so great, and where perhaps not one ship in two employs a pilot.

3611. Supposing that the law which regards a vessel leaving a port, being unseaworthy, without a pilot where the practice is to take a pilot, was well known, would not that law be sufficient to induce shipowners or masters under the voluntary system to take pilots?—I am not sure that it would. Many ships are not insured at all. For example, our ships are only insured beyond a certain amount, and we should do as we pleased. Again, the tendency of the present legislation, with regard to the law of shipping, is to throw the carrying trade into the hands of large companies. In fact, to do for the ocean what has already been done for the land by the railway system; the carrying trade is becoming a system of large monopolies, and under those monopolies a steam company can exact the terms of its own bill of lading. And as a matter of fact, most of the witnesses connected with steam companies, who may be examined before this Committee, will say that in their form of bill of lading which they require the shippers to use, there is a clause "Liberty to sail with or without pilots." The fact is, that the large steam ship owners and steam ship companies can, under any circumstances, protect themselves, and be very independent of legislation; but the mischief will be more felt by the smaller shipowners—by the smaller

smaller steam shipowners, and by the owners of sailing ships.

3612. Have you at all considered the power at present vested in the Board of Trade with regard to pilotage and pilotage authorities?—It appears to me that the Board of Trade can, at present, practically, do anything they please towards removing anomalies or preventing tyrannies on the part of local pilotage authorities. The present Acts of Parliament give them full power over those things.

3613. Will you read the particular section of the Act which warrants you in making that statement?—The Merchant Shipping Amendment Act of 1862, in clause 39, after reciting that it is expedient that increased facilities should be giving for effecting the objects contemplated by the said recited enactments, and for further amending the law concerning pilotage, and that in so doing means should be afforded for paying due regard to existing interests, and to the circumstances of particular cases, enacts, among other things, that the Board of Trade may do, by provisional order, or that it shall have power "to exempt the masters and owners of all ships, or of any classes of ships, from being obliged to employ pilots in any pilotage district, or in any part of any pilotage district, as from being obliged to pay for pilots when not employing them in any district, or in any part of any pilotage district, and to annex any terms and conditions to such exemptions."

3614. So that the Board of Trade appear to have all the power they seek for under this Bill, so far as pilotage is concerned?—Yes; it appears that the Board of Trade can do what they please. I do not exactly know the effect of the words "provisional order."

3615. *Chairman.*] It must be brought before Parliament in the shape of a Bill?—Afterwards.

3616. And it therefore becomes a sort of a local Bill instead of a general Bill?—Yes.

3617. Mr. *Graves.*] Subject to that provisional order, the Board of Trade now possesses the power of obliging any pilotage district to abolish the compulsory pilotage system?—Yes, by provisional order.

3618. *Chairman.*] That is, they may bring in a local Bill for the purpose before Parliament; that is the meaning of the provisional order, is it not?—That is for you to say; I do not know the meaning of "provisional order."

3619. Mr. *Graves.*] Have you at all considered any general principle that may be laid down for the management of the pilotage system of the country generally, apart from one stern line, either in favour of abolition or in favour of compulsion?—My own impression is very strong against attempting anything like a doctrinaire uniformity in this matter. I would leave every port to manage its own affairs according to the particular requirements of the port.

3620. So that wherever there may be a properly constituted pilotage authority representing the commerce of the port, you would leave to that body the freedom of electing what principle was best adapted for the navigation of each particular port?—I would leave the election of the principle to the local pilotage authority, but I would make the details subject to the supervision of the Board of Trade.

3621. By an Order in Council, or would you leave it freely in the hands of the Board of Trade?—If we could be quite sure that the Board of Trade would remain exactly as it is now, we might be content with it; but in former times there have been so many squabbles between the Board of Trade and the different bodies in Liverpool that we should prefer, on the whole, the necessity for an Order in Council.

3622. I believe you were one of the very early advocates of freedom of commerce, and especially freedom with regard to maritime commerce?—I advocated free trade in shipping before the navigation laws were repealed, so that I think that is a sufficient answer to your question.

3623. Do you look upon the Bill now before this Committee as being at all a fair illustration of your idea of freedom?—Speaking as a free-trader, I should say that the promoters of this present Bill are false to the principles of free trade.

3624. In what respect?—By free trade in pilotage, I understand that we should be allowed to have the choice of our own pilots, to pay them what we agree, to bargain with them as to what we are to pay them, and to be under the control of no central or local authority whatever; that is what I understand by free trade. Mr. Farrer, in his memorandum on Compulsory Pilotage, which memorandum has made the Liverpool shipowners so alive to the fact of their being ill-used people, which they did not know before, admits that free trade cannot be carried out in respect of pilotage; that you must license pilots, and that you must not only license them, but you must dictate the maximum charge that they are allowed to exact for their services. The Bill itself goes further still. It says, "If you have too many pilots you must reduce their number." Now, I do not think that any of those points are consistent with the principles of free trade. I do not say that they may not be expedient. Mr. Farrer may be right in saying that free trade is not applicable to this subject, but at the same time if you ask me whether the proposed system is a system of free trade, I must very respectfully demur to the statement.

3625. Do you consider free bargains essential to free trade in pilotage?—To free trade, but they would be most inconvenient and dangerous.

3626. Then you would also be unable to restrict the pilots from salvage, under the system of free trade?—Under free trade, not only must the shipowner be at liberty to employ any pilot or have none at all, but the pilot must be at liberty to make his own charge for the service.

3627. And you would probably find it hard to prevent him holding a share in the tug-boat, as is the case at Liverpool now?—I hope they do not do it, but there are reports of that kind even at present. At present they are not allowed to do it, but under the free trade system you could not prevent it.

3628. You have not been a shipowner so long, I suppose, without finding out by this time that there are a great many obligations placed upon the shipowners by the Legislature, and a great many compulsions?—When I first began to understand the meaning of the Bill for abolishing compulsory pilotage, the feeling in my mind was just this: The Board of Trade heap upon us mountains of compulsion, with the 800 clauses in this Consolidated Act of Parliament; and it is a little too much for them to imagine that they are relieving us by taking away this little mole hill of compulsory payment of pilotage.

Mr. *W. J. Lamport.*

3 May 1870.

3629. You do not regard it as any great concession made to the ship-owning interest in Liverpool?—Some of us are opposed to a change in the law.

3630. Most of the obligations present to your mind are rather in the direction of producing safeguards and security to life and property, looking at it from the light of the Board of Trade?—That is the good intention of Parliament. I believe, as a rule, the effect is just the opposite of what is intended.

3631. Are you of opinion that more freedom and more responsibility upon the part of shipowners would conduce to a better state of things?—I think the effect of the legislation which began in 1854 has been exceedingly mischievous.

3632. Is it not a little inconsistent with your desire to be free from those obligations that you still wish that this obligation of pilotage should be placed upon you?—If I wished to be free from every obligation whatever, except my own will, it would be inconsistent; that is not the position that I take up.

3633. Do you think, in the interest of life and property, the obligation of shipowners to take pilots in dangerous navigations, is a fair and reasonable obligation for the legislation to place upon shipowners?—Yes, to contribute to the funds out of which the pilotage system is supported.

3634. *Chairman.*] But not necessarily to employ the pilots?—No.

3635. Mr. *Stevenson.*] Would you apply that obligation equally to all vessels, whatever their size or destination?—I should be glad to have the present system left as it is. At present vessels, under 100 tons, frequenting Liverpool, are not under the obligation to take pilots. Masters may be examined with a view to their being allowed to pilot their own ships and the ships of the same owners. The present system, in all its essential features, seems to me to work very well, and I should like it, if it is altered at all, to be altered with a very tender hand.

3636. Upon what principle would you defend any exemption whatever, consistently with the principle you have laid down, that there should be a pilot on board every ship for the benefit of those who did take pilots?—No doubt; I admit at once that there is a little inconsistency there, if you are to have a rough and ready principle. If you are to have a principle which is to apply to every case whatever, then there would be an inconsistency in allowing the smallest yacht to escape, and if I were in a position to lay down a principle, I should myself make every vessel contribute to some small extent; every vessel to which, under any circumstances whatever, a pilot might be useful, I should make contribute to some small extent; but, at the same time, although it is my own opinion, that every vessel frequenting the port of Liverpool ought to contribute something towards the pilotage fund, yet I have no desire to take away exemptions that at present exist, for I do not think that, practically, they are of much importance.

3637. I presume you do not approve of what you have described as free trade in pilotage?—No, I do not; I prefer the present system to perfect free trade. All I say is, that the arguments that may be used in favour of perfect free trade in pilotage are not applicable to the provisions of the proposed Bill.

3638. The proposed Bill contemplates the continuance of the pilotage system under all the regulations which at present exist?—Yes.

3639. With the difference in one single point as to pilotage being voluntary or compulsory?—Yes; perhaps you will allow me to remind you of the answer that I made to the honourable Chairman, I do not think that the system proposed by the present Bill, if enacted, will be permanent. I do not think it could be carried on, as proposed, without the compulsory payment of pilotage.

3640. Into what system would it resolve itself, do you think?—I think we should gravitate towards free trade with all its disadvantages; in fact, I should prefer free trade with all its disadvantages, to the system proposed by the present Bill.

3641. Has your attention been directed to any of the pilotage districts in the country, where there has always been voluntary pilotage, and where they have still been able to maintain a regulated system with apprentices, and examination, and the many safeguards which exist at Liverpool?—I do not know any other port very well.

3642. Do you consider that the continuance of the compulsory principle is the key-stone of the whole system which you have at Liverpool, of a well regulated and efficient service?—The compulsory tax, I consider, is absolutely essential to the continuance of the present system.

3643. And you think that if it is left optional to employ pilots, the system itself will crumble to pieces?—If it is left optional to contribute to the fund, out of which the pilotage system is supported, then I think the Liverpool system will gradually decay, and that we shall gravitate to perfect free trade with its many advantages and all its disadvantages.

3644. Would you give that opinion still, if you knew that in other districts where it has always been voluntary, that result has not been reached?—If the districts were like Liverpool, with 12 miles of sand banks, and with the necessity that we conceive ourselves to be under of having boats lying out 40 or 50 miles from the port; and not only that, but with the sand banks shifting even within a few months, so that a master who has been absent from the port six months finds the circumstances of the port different when he returns, with the buoys altered, the lightships altered, and in point of fact, all the marks by means of which he could enter the port changed; then I should say experience was better than theory, and that I had been wrong; but the whole gist of my argument is that Liverpool stands by itself, and ought to be taken out of the provisions of any removal or abolition of compulsory payment of pilotage.

3645. You consider that Liverpool stands by itself on account of its greater difficulty and danger?—And its peculiar danger.

3646. Will these exceptional features of the Liverpool case not tend to compel the employment of pilots independently of the law on the subject?—I am sorry I did not make myself understood before. They will tend to the employment of pilots when pilots offer themselves to be employed; but the fear that I have in my mind is, that the pilots will not be out on the stations in bad weather, when they ought to be out, and when under the present system they are out.

I gave my reasons for that at the very outset of my evidence.

3647. The worse the weather is, will not the certainty of employment be greater?—No; if all vessels take pilots when they can get them, there will be no more demand for pilots in bad weather than in good weather; and in point of fact, as I stated at the outset of my evidence, I think that few pilots would risk their lives when the mere question was the earning of a fee; they may be willing to risk their lives, as the life-boat men are, when there is an element of duty as a motive in addition to any other consideration.

3648. Then you think the moral tone of the pilots, making them zealous in the service, depends upon the compulsion on the shipowner?—I think there are two points; one is that at present the pilot looks upon himself as a public officer, which he would not be if it were a mere question of piloting a ship, and earning a fee; and in the second place, he feels himself bound by an *esprit de corps* to be on the spot to fulfil the implied contract already entered into between the pilot and the master of an inward-bound ship.

3649. Do you think that this high tone of moral obligation is the exclusive possession of the pilots in compulsory districts?—I say nothing about others; I should be very sorry to say so; I know nothing of pilots elsewhere.

3650. If your ideas of the moral constitution of pilots are correct, would you expect that in the free districts, there would be any such zealous discharge of their duties?—I know little of any other port but my own, and am therefore very unwilling to answer questions about other ports; but my own belief, subject to correction, is that Liverpool is a peculiar port, and that there is no port in the United Kingdom presenting the difficulties that Liverpool does, and exposing the pilots to the dangers that Liverpool does; of course I may be quite wrong as to that, but if so, my mistake arises from ignorance.

3651. Of course you have heard of the courageous behaviour of the sea pilots of the River Tyne in manning the lifeboat at the most dangerous times?—Yes.

3652. And they show that courage and devotion, notwithstanding that they are not under the compulsory system?—Our Mersey lifeboat men are as brave and fearless as any that are under the compulsory system.

3653. You speak of pilots being under the moral obligation of an implied contract at present, would not you give the captain any credit for feeling a similar moral obligation to take a pilot in good weather, in consideration of a pilot being there in bad weather also?—No; if you change the law, I think both will be equally free; the pilot will be under no moral obligation whatever, if the captain of the ship is not bound to pay him, and the captain is under no contract whatever; a contract requires two parties to it.

3654. Are you afraid that the moral responsibility of the pilots will deteriorate if the law is altered?—It will disappear; I do not consider that the pilots will be under any moral responsibility to be out in all weathers to meet the ships, if it is a mere question of earning a fee, which he may or may not earn; when I say moral responsibility, perhaps I should say moral obligation.

3655. At present the pilot's moral obligation suffers in the case of every exempted vessel?—I have already said that if you leave it to me, I should not exempt any vessel entirely, so far as Liverpool goes, but I have no desire whatever to interfere with the present exemptions.

3656. In the case of the pilotage board of Liverpool, adopting your suggestion of sanctioning the pilot boats going out as far as Tuskar, you could not, of course, extend the compulsory system there?—No.

3657. And there would be a line drawn in the pilotage district, on one side of which the pilotage was voluntary and on the other side compulsory?—Exactly; it would be so.

3658. Would not that lead to anomalies?—I think not.

3659. One of the objections to the present system in the Bristol Channel is, that they there get into difficulties on the question on which side of the boundary line between the two systems a vessel was?—I think the boundary line is well defined at present, and would remain so. My own notion is, that the pilots who wish to go down the Channel should be allowed to volunteer to do so, and that they should be allowed to charge a higher rate than the pilots who merely pilot the vessels from Point Lynas, or inside it, to the Mersey.

3660. But if so their consciences would be operated upon by the low motive of pecuniary gain in going long distances?—The distance is not the question; the master of a ship is competent as a rule to bring his ship up Channel, but the master of a ship is not competent as a rule to bring his ship into the port of Liverpool.

3661. What encouragement would a pilot have to go down to Tuskar?—His chance of higher pay, and the power of making a bargain with the master; and it would to that extent be a free system.

3662. Your theory of an implied contract as stimulating the pilot's conscientiousness would not apply between your present limit and Tuskar, would it?—No.

3663. Mr. *Brassey.*] Do you think that the fees at present paid to pilots in the Mersey are in any way excessive for the services rendered?—I was rather surprised to find the other day that the average remuneration of pilots is less than 200*l.* a year. Now, I think the services performed by our Liverpool pilots, considering that they are a very respectable class of men, are not extravagantly remunerated at 190*l.* a year, or something like it, which is their average remuneration.

3664. At the same time, is it not the case that the pilots sometimes pay for a share in the pilot vessels in excess of the value of the ship herself, and which they pay for the goodwill, as it were?—I would rather that question were put to some member of the dock board; I am not familiar with the management of it.

3665. Are you aware that Mr. Farrer in his evidence argued invariably for the abolition of compulsory pilotage, on the ground of the anomalous state of the law in respect to the liability of the shipowners?—I am sorry to say that I did not read Mr. Farrer's evidence. I have not read any evidence given before this Committee. I have read Mr. Farrer's Memorandum, which was ordered by the House of Commons to be published in February last, and there, I think, Mr. Farrer does argue (and if we admit his premiss we must admit his conclusion) that the immunity is the consequence of the com-

Mr. *W. J. Lamport.*

3 May 1870.

pulsory payment of pilotage, and that we should therefore do away with the compulsory payment of pilotage; but I do not see that; I think the immunity may be done away with and the compulsory tax remain.

3666. Do you think that the law should simply be that in the case of casualty the ship in fault ought to pay?—The clause in the Merchant Shipping Code expresses it with great clearness, and I humbly agree with it; if you will allow me to read it, it is the 479th Clause: "Nothing in this Act shall be deemed to oblige the owner or master of any ship to employ or to give his ship into the charge of a pilot, either on the ground of his being compelled to pay pilotage dues to any other person or otherwise, or to exempt any owner or master of any ship from liability for any loss or damage occasioned by his ship to any person or property on the ground either of such ship being in the charge of a licensed pilot, or of such loss or damage being occasioned by the act or default of a licensed pilot, or on any other ground." That agrees with my opinion.

3667. Is not that the state of the law in America now?—The state of the law in America is that compulsory payment is required; whether compulsory employment is required or not I am not able to say; compulsory payment is required, and there is no immunity in consequence of it. In the cases of Holland and Belgium the law is as this clause would make it in England; the payment of pilotage is compulsory, but the owner of the ship is not freed from liability in consequence of it. In the case of the Scheldt pilots, the very same system prevails which I have expressed an opinion in favour of for Liverpool, that is to say, the Scheldt pilots do not limit themselves to being exactly outside the immediate neighbourhood of their own river, but if one of our ships has called at Southampton to land her mails and passengers from South America as is very commonly the case with the ships of my own firm, and is then bound to Antwerp to deliver her cargo, our ship finds a Scheldt a Dutch, or Belgian pilot between the Isle of Wight and Beachy Head, and that pilot assists the captain. If the captain is not familiar with the Downs and Goodwin Sands, that pilot is on board to assist him before he approaches the entrance of the Scheldt, as well as to assist him to enter the Scheldt. It is my knowledge of that system which induces me to argue in favour of extending the system to Liverpool, and yet the compulsory payment of pilotage is maintained in those cases.

3668. Would not the pilot be of great service to the master in assisting him to identify the landmarks, and to tell him the state of the tide, without interfering with the handling of the ship?—Decidedly.

3669. From your evidence I gather that you do not consider the abolition of compulsory pilotage would be of any advantage to you as a shipowner?—No; certainly we shall employ pilots, if we can get them; my fear is, that we shall not always be able to get them as we do now.

3670. If you could get them you would wish to employ them?—Yes.

3671. And that would be the case with the owners of all large shipping property?—I do not like to answer for my neighbours; some of my neighbours think that they can avoid the payment of pilotage. I will not express any opinion or denounce any course upon the part of anybody else, but I should fear if I did it, that I should be guilty of careless conduct. If, having the opportunity of employing a pilot to enter or depart from the port of Liverpool, I did not so employ him, I should feel, as a shipowner, that I was guilty of careless conduct.

3672. And the persons who would be likely to take advantage of the abolition of compulsory pilotage would be the owners of the inferior shipping?—I am not prepared to say that. Some of our best shipowners are now flattering themselves that they may be able to save their pilotage dues. I think the system will not last; I think they will soon find out that the result will be disastrous and they will give it up.

3673. I think from your answer to previous questions, you intimated an opinion that you would consider it a wise policy to leave each particular port to deal with its own system of pilotage?—Yes.

3674. And you think it a technical question, and one which the local authority is best qualified to determine?—It is a municipal question; I think the local pilotage authorities are far better able, provided they be sufficiently under the influence of the public opinion of the shipping interest, to judge of this matter, than the Board of Trade can possibly be. But what I do protest against, speaking as a Liverpool shipowner, is an attempt at establishing in this way a system of doctrinaire uniformity. What is right and good for one port may not be right and good for another port, and I object to your applying to a port like Liverpool, the principles that you can apply to a port like Sunderland, where the circumstances are wholly different.

3675. Would you think it wise, whatever the decision of Parliament might be, to take any special precautions in the case of passenger steamers; to secure that they should be safely navigated in pilotage waters, by not admitting the abolition of compulsory pilotage in reference to that particular class of ships?—My own feeling is so much against interference on the part of the Board of Trade, and we are so hampered with the present restrictions on passenger ships, that I should be very unwilling to express an opinion as to the desirableness of any increased restriction; but I think at present a passenger ship is bound to take a pilot; I am speaking quite hastily now, without any knowledge upon the subject.

3676–7. Mr. *Gourley.*] You said that under the compulsory system, you thought a pilot would be morally bound to attend to his duty; do you think there is anything in the compulsory system more morally binding upon a pilot than there would be under a voluntary system; would not a man exercising the calling of a pilot under the voluntary system, care equally as much for looking after vessels as under the compulsory system?—I look at the pilot himself and place myself in the position of the pilot. I do feel that the circumstances would be very different. Under the present system I should feel that I had virtually made a contract with the owner and the master of an inward-bound ship to be on the spot, and to pilot that ship in, and that on the other hand in fulfilment of their part of the contract the owner and master have agreed to pay me a sum for doing so. I should, therefore, feel bound to be on the spot if I possibly could. Under the proposed system it would be for me to weigh my own comfort and my

my own safety against the chance of earning a fee from a ship coming in, which might employ me, or might not employ me, just as the master might choose.

3678. If you had obtained a license under the voluntary system, would not it place upon you some obligation to look after the interest of the port, and the interest of your own calling?—If it were made the condition of the license, it would technically, but not morally; by attempting to force it in that way it would only be another instance of what everybody's experience must teach him, that there is no use in trying to force the will beyond the conscience.

3679. That would apply in all systems, whether voluntarily or compulsory. You said that vessels in charge of steam tugs were not exempt from danger; is it not usual for vessels with tugs, notwithstanding that they have pilots on board, to follow the course indicated by the tug rather than the course indicated by the pilot on board the ship?—I am not practically acquainted with that matter; I never was on board a vessel coming into the port of Liverpool in tow of a steam tug, and I would much rather you put the question to some nautical man. My impression would be that the master of a steam tug is entirely under the command of the pilot. I know that is the law that has been laid down in the Admiralty Court over and over again.

3680. Is the distance between the tug and the vessel not so great as to make it almost impossible for a pilot on board a sailing ship to give directions to the master of the tug?—In many cases I apprehend it must be so.

3681. You said as another reason why a pilot should be on board a ship in charge of the tug, that the vessels very often break their tow ropes; would a vessel be in a more dangerous position without a pilot, than with a pilot, in the event of her breaking her tow rope?—Yes, she would have lost the use of the tug, and she would not have the use of the pilot. If you remember, that was in answer to a question put to me as to whether I thought many vessels would avail themselves of the provisions of the proposed Bill by not employing pilots when entering the port; and I said that my impression was (without being able to prophecy anything positive about it), that many of the smaller class of sailing vessels would be content with employing a tug, because the captains of the tugs do get, from their constant experience of towing out and towing in, a certain amount of knowledge of the entrances to the port. I went on to say that I thought it would be a dangerous state of things; that it would only be resorted to in smooth water, and if a squall came on, the captain of the tug, for his own protection, would throw the ship off, and the ship would be then amongst the banks, and the captain of the ship knowing nothing whatever about the banks, in all probability there would be some damage or loss.

3682. And you would place the ship in charge of the pilot, and free the owner from all responsibility in the event of an accident?—No; I would not free the owner of the ship from responsibility.

3683. In whose charge would you leave the ship in the event of an accident?—I would leave the ship in the charge of the captain, with the pilot there to give the captain any information as to the localities of the port.

3684. Then you would consider the captain equally competent with the pilot to take charge of the ship under such circumstances?—I should always retain the captain in command of the ship, but I should give the captain the use of a pilot, just as I should give him the use of a chart.

Mr. *W. J. Lamport.*

3 May 1870.

3685. You said that you were an advocate for pilots going further out to sea than what they are in the habit of going now in Liverpool; do you think that under a voluntary system pilots would be inclined to go further out to sea than what they do now under the compulsory system?—I think, under a voluntary free-trade system, in all probability pilots would be found to go down Channel; and as that going down Channel is in no way inconsistent with our present system, I am desirous that our dock board should give the shipping interest the advantage of it, in the way of allowing certain pilots to go down the Channel; and I have given a practical illustration, that as the thing is already done, in the case of Antwerp, under the compulsory payment system, I can see no difficulty in doing it in the case of Liverpool, also under the compulsory payment system.

3686. You would advocate the free-trade system in pilotage, but you would compel the owners to pay for the pilots who might follow that calling, although they might not use them?—I draw a distinction between two things: one is getting into the port of Liverpool, another is coming up the Channel. I have already said that, in the first case, the use of a pilot is, to my mind, essential; in the other case it would be, in many cases, useful; and the compulsory payment I would restrict entirely to that part which I humbly conceive to be essential.

3687. I suppose you consider that all your captains are as capable of taking charge of their ships without pilots as they would be with pilots?—Not the bringing of ships into Liverpool, but of having the command of the ship. I have already said that I would never take the command of the ship out of the hands of the captain, but I would give the captain every instrument he requires to enable him to navigate his ship in safety; and the instrument that I consider he requires, in order to navigate his ship in safety into the port of Liverpool, is the assistance of a pilot.

3688. If you have a pilot on board, you say that he is simply to give advice; how can he give advice unless he exercises some control over the navigation of the ship; for instance, if he points out to the master that there is a certain sand bank lying in a certain direction, the master would naturally follow the course indicated by the pilot; therefore, in such a case, the pilot would be the actual commander of the ship, and the captain would be the navigator of the ship?—I demur to the statement that the pilot would in that case be the actual commander of the ship; he would be so no more than the second mate is when the captain himself is on the deck and the first mate is below. What I maintain is, that the captain is to be responsible for everything that is done on board his ship, but that he should make use of the pilot for certain circumstances, just as he makes use of his first or second mate, or any of the other officers, for certain purposes, though for different purposes.

3689. The officers are all under the direction of the captain, they do not direct the captain;

Mr. W. J. Lamport.

3 May 1870.

but I apprehend that a pilot in local waters would be there simply for the purpose of directing the captain in reference to the sand banks and the channels in the way of navigation, and that under such direction the captain would be under the command of the pilot, and the pilot would not be under the command of the captain?—I am not a captain of a ship, and I do not know practically what would be done upon the deck of a ship; but I cannot conceive there being any difficulty whatever in the captains being able to avail themselves of the services and advice of a pilot, and if a captain in pursuance of that course thought fit to authorise the pilot to give direct orders to the helmsman, for instance, I can see no objection to that; the responsibility remaining still with the captain, and the captain not being deceived as he is now, by supposing that if he interferes with a pilot it will make his owners responsible for damage that may be done by the fault of the pilot.

3690. Placing the captain in that responsible position, would it not be, in your opinion, much better to leave the masters with a certain amount of discretion, or with full discretion as to whether they would employ pilots or not?—I have already stated in my evidence that I am not in favour of forcing a pilot upon any master whatever unwillingly.

3691. You would leave it to the master's discretion?—Speaking now as to what I should like to see made law, I should like to leave it to the master's own discretion. As a shipowner, I would not leave it to my master's discretion; but I should dismiss any master of mine who, when he had an opportunity of employing a pilot, failed to do so.

3692. Notwithstanding he might know the water as well as the pilot?—If any one of my masters told me that he knew Liverpool water as well as a Liverpool pilot, then I should say that he was a conceited fellow.

3693. And therefore you would place a ship in the command of a pilot rather than of a captain?—No; I consider that a master without the assistance of a pilot is not as a rule competent to take a ship into the port of Liverpool; with the assistance of a pilot he is so.

3694. You stated that you would make the payment of pilotage compulsory, whether pilots were employed or not, in the same way that you would make a shipowner pay for lights along the coast, though he may not use them; are you in favour of a compulsory payment for lights which are not used, as a just and equitable charge to the shipowner?—Speaking personally, I am not in favour of throwing the expense of the light-house system upon the Consolidated Fund. I should like very much to be excused from my own contributions towards the expense of the lighthouses; and if the Legislature and the country are so good as to take the maintenance of lighthouses upon themselves, I shall be very much obliged to them; but as you put the question to me distinctly personally, I am bound to say that I have never been satisfied with the arguments in favour of the transfer.

3695. I believe that the lighthouses and buoys are intended to act as beacons to masters of ships in difficult waters; and all the local waters of this country are so well indicated at night-time by lights, and in the day-time by buoys, that any master, with the assistance of a chart, can find his way into the most difficult of our harbours; is not that so?—No; not into Liverpool, certainly.

3696. Do you think it impossible to find your way into Liverpool without a pilot?—I do not say that it is impossible, but it would be running very great danger to attempt it as a rule.

3697. Are there many vessels navigating the Mersey without pilots?—A great many vessels under 100 tons, and some coasting steamers. I think a very strong argument in favour of the question that I am advocating lies in this, that though masters have been licensed to pilot their own ships, and other ships belonging to the same owners, very few have availed themselves of it; and that appears to me a conclusive argument in favour of the usefulness of employing a pilot.

3698. Do you find more damage arising with vessels navigating the Mersey without pilots than from those navigating with pilots?—As a matter of fact a very large proportion of the wrecks which take place among our sand banks are small vessels; and they, being small vessels, I suppose the majority of them have no pilots on board. Our local Act exempts vessels of 100 tons or under from the necessity to take pilots.

3699. You said, in answer to the honourable Member for Liverpool, that, under a voluntary system, pilots would be apt to make excessive charges for salvage services; what reason have you for giving that opinion. Is it not your opinion that the authorities would be able to check excessive charges for salvage services, just as well under a voluntary system as under a compulsory system?—I did not give that opinion; I said under a system of perfectly free trade, where the shipowner and the pilot were left at liberty to make their own bargains with each other, that we should have the same system introduced on the part of the pilots that we are at present suffering from on the part of the steam-tugs. A steam-tug in fine weather goes out, and the captain takes off his hat to the master of an inward-bound ship, and begs for a job and is very willing to tow the ship in for 5 *l.* or 10 *l.*; but, in bad weather, where he sees that a sailing ship is in danger on a lee shore, with one of our sand-banks under her lee, the steam-tug either exacts an enormous sum, or refuses to make any bargain and claims salvage; that system is the opprobrium of the port of Liverpool, and I should be very sorry to see it extended to pilots.

3700. That is not my experience of Liverpool; my experience is quite the contrary; in a salvage case of my own, in very bad weather the owner of a steam-tug sent a steam-tug to a very long distance, as far as Wicklow Bank, and brought the ship from there to Liverpool for a very small sum indeed, smaller in comparison than anything I ever had experience of, but still all those charges are under the control either of the local magistrates or of the Admiralty Court, and we know that they never assess too much?—Do not the circumstances you have just described show that you had the power of making a special bargain with the steam-tug before she left Liverpool, and that is very different from the circumstances I describe, where the ship is outside on a lee shore, and the tug is there, and the tug may tow the ship or not as the tug pleases. If you were

so unfortunate as to have a ship on the Wicklow Bank, you have 100 steam-tugs in Liverpool with whom you may make a bargain, and if one wanted too much money then you could go to another, but the circumstances are very different from those I have been describing.

3701. Do you mean to state that, under the present compulsory pilotage system, the pilots are not in the habit of making excessive charges for salvage services?—The Liverpool pilots cannot make salvage claims.

3702. Then the same system would appertain under the voluntary system; the pilotage board would have the same control over the pilots under the voluntary system as they have now under the compulsory system?—Under the licensing and restricting system it would be so; my statement had reference to a perfectly free trade system, that being one of the reasons why I do not advocate a perfectly free trade system of pilotage.

3703. Would you grant to all men who could pass an efficient examination a license to act as a pilot?—The Bill does not propose to do that. The Bill proposes to limit the number of pilots, and to withdraw a certain number if they are found to be too many.

3704. *Chairman.*] I think you should understand that the Bill does not propose that. That is a limitation with reference to compensation; but after that period for compensation is passed, it leaves it to the local authorities to use their discretion whether to license a limited number or an unlimited number?—I was not aware of that.

3705. Mr. *Gourley.*] Would you advocate the licensing of an unlimited number of pilots, supposing they had passed an apprenticeship, and could pass an examination proving their being able to act as pilots through waters for which they offered their services?—The question on which I am endeavouring to express my opinion lies between our present system in Liverpool and the system proposed by this Bill. I respectfully demur to this being treated as a question between our present system and a free trade system. The Bill does not propose to give a free trade system. If this Bill should be withdrawn, and a Bill were introduced for a perfectly free trade system all I can say is, that I should give it my most respectful consideration.

3706. *Chairman.*] You are aware that nobody has propounded this measure as a free trade measure?—No.

3707. Neither have its promoters advocated a perfectly free system, I think?—I do not accuse anybody of doing so.

3708. I think you are one of the members of the Steamship Association of Liverpool?—Yes.

3709. Were you present at a meeting when they considered this Bill?—I was not.

3710. Are you aware that the great majority of the persons present were in favour of the Bill?—I have no doubt that the great majority of the committee of the Steamship Association are in favour of the Bill, to the extent that they have described in the report they have made upon it. I do not know myself whether any meeting of the association has been called together to consider the Bill. I asked a member of the committee whether the Bill had been considered generally by the committee, or whether it had been considered by a general meeting of the association, as I never received any notice to attend a meeting of the association, and he could not tell me.

3711. Was not your partner, Mr. Holt, present at the meeting of the Committee, at which they agreed to the principle of the Bill?—Yes.

3712. I need hardly ask you whether the steam-shipping trade of Liverpool is vastly increasing from year to year?—It is.

3713. By all appearances the interest of the steam capital exceeds that of the sailing vessels?—I have not the statistics in my mind.

3714. Should you be surprised to hear that, taking into consideration coasting vessels as well as foreign-going vessels, that is the case?—I should not be at all surprised.

3715. Are not the steam-vessels, as a rule, in the hands of comparatively few men as compared with sailing vessels?—Steam-vessels are tending to be aggregated in large companies.

3716. Therefore they are hardly sufficiently represented on the Mersey Docks Board?—I do not think there is ever any difficulty in getting on the Mersey Docks Board on the part of any large steam-ship owner. My belief is that there is scarcely a large steam-ship owner in Liverpool who has not been urged and pressed and begged over and over again, to go on the board.

3717. And in proportion to the number of vessels the number of steam-ship owners on the board are hardly equal to the owners of sailing vessels?—I think the number of steam-ship owners on the board is small. Several of them have been on the board, and have refused to remain on the board. Mr. Inman was a member, and he ceased to be so. Mr. MacIver was a member, and he ceased to be so. I myself have had the honour of being pressed over and over again to be on the board, but the same thing has prevented me that may have prevented others also, that the management of steamships is so exceedingly engrossing, and requires so much time and attention.

3718. Would you say that the steamship owners are adequately represented on the Mersey Docks Board, in proportion to their interest?—My belief is that there are more sailing ship-owners on the board than steamship owners, but that is not from any desire to keep the steamship owners out.

3719. But, as a matter of fact, it is so?—Yes.

3720. I understood you to agree with all that has been said against the present law, which relieves the owner from liability where he has taken a pilot on board, under compulsion?—Yes.

3721. You have yourself suffered from that law, have you not?—Yes.

3722. And you have known very many cases of injury to vessels arising from it and damage done by it?—Yes.

3723. And you think it very desirable that that law should be altered?—Yes.

3724. I understood you however to say, that you do not think it should be altered, in the event of compulsion to take a pilot remaining?—Then we get to the question as to the justice of the thing, and certainly if you force a pilot on board a ship, and compel the master to give up the control of his ship to that pilot, and by the fault of that pilot his ship suffers or does injury, it does

Mr. W. J. Lamport.

3 May 1870.

appear very hard, and would be unjust to make the owner responsible for that injury.

3725. I want your opinion strongly upon that point, that in the event of compelling a master to take a pilot on board, you do not think it would be just to throw the liability upon the owner?—I do not think it would be just.

3726. And therefore you have adopted the plan which was suggested in the Bill of last year, namely, making payment compulsory, instead of making employment compulsory?—Yes.

3727. Leaving it at the option of the owner or master to take a pilot as he thinks fit?—Yes.

3728. Supposing that principle was adopted, do you think it would be as easy to carry out the present discipline as regards the pilots?—Yes.

3729. Do you think it would be possible to compel them to keep their stations in the same way as now, or do you think that the effect would be that vessels would have to pay whether the pilot offered his services or no?—Personally, I should not object to exempting a vessel from the payment of pilotage, where no pilot had offered his services, or where it was impossible to procure the services of a pilot; but that is a very small point, because if we keep a sufficient supply of pilots out, there will be no difficulty whatever in any vessels obtaining a pilot; at present, in the first instance, every ship frequenting the port of Liverpool must pay dock dues; but if that ship does not make use of the docks, and discharges in the river, she is afterwards entitled to a return; she only pays part of the dues; and in the same way I really think if a master has no opportunity of employing a pilot, it would be rather hard to make him pay for it.

3730. Supposing he does not want a pilot, then you would make him pay?—Of course the docks are there; they cannot be moved; but we come to the old question with which I started, about the difficulty of making the pilots go out to meet the ships, if the ships are not compelled to pay the pilots.

3731. You see no hardship in making a man pay for a thing even though he does not want it?—I think not, under those circumstances; I have drawn a very marked distinction between these circumstances and the other circumstances; and I have also illustrated my opinion by other cases, like lighthouses and police, and many other cases.

3732. The main object that you have in view is to keep up a sufficient supply of pilots?—Yes, and to have them always on the spot.

3733. And for that purpose you would impose what in fact would be a tax upon shipping?—Yes.

3734. And in the same way, you think, it would not be desirable to make any exemptions?—As I have already said, I cannot see that exemptions depend upon any principle; at the same time I should not wish to be misunderstood as desiring to interfere with the present exemptions.

3735. You would keep the present exemptions, because they exist, but you would not carry them any further?—No.

3736. Your fears as to the change arise entirely from the improbability of keeping up a sufficient supply of pilots under the proposed system?—Yes.

3737. But you have had no experience at any other port than Liverpool?—None that would be of any use to the Committee.

3738. You have not any experience of the ports where pilotage is now voluntary?—My experience is so slight that I should be sorry to answer a question upon it.

3739. You have not heard any evidence given here in reference to that subject?—No.

3740. Nor have you read the evidence given?—No.

3741. Are you not aware that in many ports of this country there is a voluntary system carried on precisely the same as the scheme proposed by this Bill?—Yes, I know that is so at Cork, for example.

3742. Are you aware that it is so in the Bristol Channel?—Yes, at Cardiff and Newport.

3743. And Gloucester?—I do not know Gloucester.

3744. Are you aware that in those places it is found possible to keep the men to their business, even under the voluntary system?—I have already said that I know very little about other ports, and I would rather not be asked the question. I should like just to repeat the answer I made to the honourable Member on your left, that I should not admit of any analogy between those ports and Liverpool, unless I was told that the natural dangers of the ports, and the dangers to the pilots themselves in being obliged to remain outside, in order to meet the inward-bound ships, are equal to those of Liverpool.

3745. I presume you would allow that the more difficult the navigation is, the more probability there is that a pilot would be employed under a voluntary system?—Yes.

3746. Therefore, supposing that in a port where the navigation is easy you find a voluntary system established, under which pilots are found equal to the demand, and are in fact amply employed, would not that carry great weight with you, as to the probable effect of this Bill upon Liverpool?—I am of opinion that a pilot is so useful to an inward-bound ship, that the number of inward-bound ships that would take advantage of the exemption would be comparatively small; but when the question was put by Mr. Graves, I declined to give any estimate of the amount, because I had not the means of doing so.

3747. Then is it your opinion that the great bulk of the vessels would continue to take pilots as at present?—Yes.

3748. Then the employment would not fall off?—The point I started from was the moral effect on the pilot's own mind in inducing him to run risks that he would not run under another system.

3749. That is an hypothesis that is not founded upon any experience, but it is derived from a presumed knowledge of human nature?—I will not say anything about that, but it is derived from my experience of the present system. I do see that under the present system the pilots do expose themselves to these risks and dangers, and of course you cannot completely analyze the motives which induce the man to take any particular course, or to avoid any particular course, but we may give a very shrewd guess at them.

3750. Supposing it were proved to you that in places where pilotage is voluntary there is no difficulty in persuading a man to remain out in bad weather and look after vessels, and that the pilotage

pilotage authorities, in fact, exercise the same discipline and control over the men as they do in places where it is compulsory, would not that, to a great extent, remove the difficulty you have urged against the Bill?—Those are circumstances that I should take into serious consideration, no doubt.

3751. Then the experience would be more valuable than the theories which you found upon it?—If the circumstances were the same.

3752. But *a fortiori*, if the experience is derived from places where navigation is easy?—It is a question as to the obligation that the pilot feels to be out in bad weather. It does not depend much upon the easiness or the difficulty of navigation, but it is the exposure and the necessity for being 40 or 50 miles away from a port, as in the case of Liverpool.

3753. I presume, in your opinion, the employment of pilots is more likely to fall off in fine weather than in bad weather?—Yes.

3754. If there is any falling off after the passing of this Bill, you think it would rather be in fine weather than in bad weather?—Yes.

3755. Therefore, there will be this inducement for the pilots to go out in bad weather, that they are more certain to find employment?—They would have a greater probability of being paid a fee in bad weather than in fine weather, and so far, therefore, as that peculiar motive operates you would be right.

3756. Judging generally from human nature, should you not think that is a very great inducement?—It is a very great inducement, but it is not always a sufficient inducement when standing alone.

3757. I think you drew some analogy from the employment of cabmen in your evidence?—Yes.

3758. And you stated your opinion that cab drivers do not go out in bad weather?—Yes.

3759. Is it not the rule that cab drivers do go out more in bad weather than in fine weather?—My experience is the reverse..

3760. Is it not the case that, as a general rule, they are more certain of employment in bad weather?—I am much less likely to find a cab on the stand in bad weather than I am in fine weather; it may be that they are all employed, or it may be that they are not out; but I can give you a parallel in my own experience. I happen to reside the opposite side of the river, 2½ miles from the ferry, and on fine evenings I always find plenty of cabs, but on a wet evening I often find no cab. Now, the inference I draw is, that if the cabmen knew that I was sure to employ them they would come, but if they are not sure of a job they stay at home.

3761. It has been suggested by way of increasing the inducement to pilots to be out in bad weather, that there should be some little higher charge for pilotage during the winter months than during the summer months; do not you think that that would act as an inducement to the pilots to keep their stations during the bad weather?—To a certain extent it would, as far as the earning of a fee goes.

3762. I do not understand why you are of opinion that, under a voluntary system, there should be a greater difficulty on the part of the pilotage authorities in exercising control over the men, than under the compulsory system?—I can only repeat what I said before, that under the present system, a man feels that he is personally under a contract.

3763. As I understand you, you have no experience of those places where pilotage is voluntarily, and where that control is now exercised?—No.

3764. Should you be surprised to hear that no difficulty is found by the pilotage authorities in exercising that control?—I should have to ask a great many questions as to the number of the pilots compared with the number of ships frequenting the port, and so on; and as to the rate of pilotage, and as to the distance from the port to where the pilot was expected to go, and as to the dangers of the particular locality apart from the mere entrance to the port.

3765. Should you be surprised to hear that in places where pilotage is voluntary, the pilotoge authorities find less difficulty in keeping the men at their stations than they do in places where it is compulsory?—Are you speaking now of the free trade system?

3766. No, I am speaking of the system proposed by this Bill?—I should be rather surprised.

3767. You are aware that the system proposed under the Bill is precisely that which is now in force in all the places where pilotage is voluntary round our coasts?—I was not aware of that.

3768. It is the same where there are any pilotage authorities, or where there are any licensed pilots at all, is it not?—I am not aware of that.

3769. Would the consideration of those facts bear with you strongly as regards the effect of this Bill upon Liverpool?—I should consider any new evidence; my mind is open to receive it.

3770. At present you have not considered that part of the question at all, have you?—I have not considered any matter connected with the experience of other ports.

3771. In fact, your experience is all derived from Liverpool?—Yes.

3772. And from the system of compulsory pilotage there?—Yes.

3773. And not from any districts where pilotage is voluntary?—No, I have had no experience of the voluntary system.

3774. Did the Steam Shipowners Association consider the Bill proposed by the Board of Trade last year?—I think you mentioned the name of my partner. I will tell you frankly all that has passed between me and my partner on the matter. My partner is a member of the committee; a notice came to him to attend a meeting of the committee to consider this Bill, and he said something about being very busy; I said, "Go, by all means." My partner came back and told me that it took no very long time to consider; it was all cut and dried, and it had been gone through by the secretary, who is an attorney, very rapidly, and the report I have read since does certainly bear the marks of great haste.

3775. I do not mean generally with reference to the Bill, but specially with reference to the changes proposed about pilotage?—I think the inference drawn from the question you put to me, and the answer I made, would have led to the conclusion that my firm was a house divided against itself upon this subject. I do not believe it is so.

3776. I only want to ascertain what the general opinion of the steam shipowners is upon the subject, to ascertain whether you were an exception?—I

Mr. *W. J. Lamport.*

3 May 1870.

—I think you will find the steam shipowners divided upon this subject, and I think you will find the majority in favour of the proposed change.

3777. That is to say, with regard to the Bill now before the Committee?—I think the majority of the steam shipowners would advocate the doing away with the compulsory payment of pilotage. I am not sure that some of them may not go a great deal further than that, and advocate perfectly free trade.

3778. Some may be in favour of it, but the majority of them are in favour of relieving the shipowners from the compulsory payment of pilots or the compulsory employment of pilots, are they not?—Yes, and it is borne out by the fact that this report in favour of the abolition of compulsory payment of pilots was carried in a committee of the Steamship Owners' Association.

3779. Do you know whether they considered the Bill of last year which proposed to leave the payment compulsory, though it relieved them from the compulsory employment of pilots?—Yes.

3780. Were they in favour of that, or not?—In the report they are in favour of doing away with both the compulsory payment and the compulsory employment, but they say that if the compulsory payment is continued, then the owner should still be free from liability for the pilot's default. There are two parts in that report in which the question is stated. One is, I think, on the second page of the steam shipowners' report, in which they speak of the Pilotage Bill. Then later on in considering the code they come upon the question of pilotage; they say, what is there stated in the code appears to be an alternative to this Bill, and they consider that it would not be just if the compulsory payment is continued to make the owners still liable.

3781. Then they go a step further than you; you think it would be unjust to the owner if he was compelled to employ a pilot, and they think it would be unjust to the owner if he was compelled to pay for the pilot?—Yes.

3782. And you think it would be just to the owner to throw the liability on him if he was only compelled to pay, though if he was compelled to employ you think it would be unjust?—Yes.

3783. The steamship owners think that it would be unjust to throw the liability upon him if he was compelled to pay?—I think the majority of the Steamship Owners' Association think as you have just stated it.

3784. Should you think that it would be the opinion of the sailing vessel owners as well?—I really do not know. I think if it were well argued that the sailing-ship owners would think as I do.

3785. You are aware that in this matter one must look at the expediency as well as the justice of the measure?—Yes; I think the sailing-ship owners, and the minority of the steamship owners, would be perfectly content with the provisions as they stand in the code; that is to say, withdraw this Bill, and there would be very little objection made to the clauses relating to pilotage remuneration in the Merchant Shipping Code.

3786. I thought you said that the majority of the steamship owners were of opinion that it would be unjust to throw the liability upon the owner if he was compelled to pay?—In my last answer I said the majority of the sailing-ship owners and the minority of the steamship owners.

3787. Supposing that proposal was carried into law, and it turned out after a time that a certain number of owners did not employ pilots, do you think that the compulsory payment would long subsist?—I cannot look into the future. My own notion is that it would be perfectly fair to exact it as a tax for the maintenance of the pilotage service of the port. If it could be proved, either by such experience as you have indicated, or by other reasoning, that the pilotage service could be as efficiently maintained without a tax, I think the tax would have to go.

3788. Do not you think that the passing of such a Bill would be immediately succeeded by an agitation to get rid of the tax?—No; there is no tax which we pay more willingly.

3789. Supposing, in the case of the lines of steamers running from Liverpool to France and the Mediterranean, which would be constantly coming in and out of the port of Liverpool, and which would therefore not find a necessity for pilots; supposing they are compelled to pay notwithstanding, do you think they would after a time commence an agitation to be relieved from such a payment?—I think it is very likely; but I think it would be much the same as an illustration I gave about the police; that if I do not get any advantage from the police it is hard that I should have to pay the police rates; if I would protect myself; but it would be a question of expediency.

3790. In this case they have shown the inutility of the service by not employing them; under your proposal they might employ the pilots for nothing, because they have already paid, and notwithstanding that they probably would not employ a pilot; would not that make any difference in the analogy you have drawn?—As far as Liverpool goes, the whole number of vessels employed in the Continental trade is comparatively so small that I think the agitation would not assume very formidable dimensions; but I can easily see, with reference to London, or some ports on the east coast, it may be a very important thing to consider.

3791. Then I may take it that you feel strongly the injustice and grievance that arises from the present system from the immunity of the owner when he employs a compulsory pilot, and you think some change is necessary?—Yes.

3792. But you are not prepared to go as far as this Bill proposes?—I am prepared to go as far as the code proposes, not as far as the Bill proposes to go.

3793. And you think that there is even a step beyond that, that possibly some people might go?—I think many people would be in favour of a perfect free trade.

Mr. William Miles Moss, called in; and Examined.

3794. Mr. *Graves.*] I believe you are a member of the Mersey Docks and Harbour Board?—Yes.

3795. And you are also chairman of the Pilot Committee?—Yes.

3796. And you are a member of the Marine Committee?—Yes.

3797. That committee is charged with the superintending of the lighting, buoying, and surveying of the port?—Yes; I have been a member of those committees for the last 12 or 13 years.

3798. Are you also a large steam-ship owner?—Pretty well.

3799. And you are largely interested in steam?—Yes.

3800. Are the vessels under your own management?—Many of them; others are under the management of Messss. Bibby's.

3801. How long have you been connected with the shipping in Liverpool?—Man and boy, 47 years.

3802. Are you a member of the Steam Shipowners Association?—I am nominally so.

3803. What do you mean by nominally so?—I never attend the meetings; I subscribe to the Association.

3804. Are enrolled as a member?—Yes.

3805. Did you hear the opinion expressed by Mr. Lamport with reference to the constitution of the Mersey Docks and Harbour Board, that he thought there were more sailing-shipowners on the Board than steam-shipowners?—It is a mistake.

3806. Will you state of what number does the Mersey Docks and Harbour Board consist?—Twenty-eight members in all; four appointed by the Government; of the remainder there are nine gentlemen largely interested in steam, and only five or six shipowners; the others are generally merchants connected with the trade.

3807. So that it is an erroneous impression of Mr. Lamport?—Yes, it is a mistake on Mr. Lamport's part; I have got the names of them here.

3808. I believe you have heard Captain Judkins' and Captain Hill's evidence as to the peculiar dangers of the Mersey?—Yes.

3809. Do you concur in that evidence?—Yes.

3810. Is there any danger that has not been alluded to by them?—Yes; they have not alluded sufficiently to the enormous strength of the tides in those channels; the Liverpool tide tables show from 10 to 22 feet, but to those tides you must add 10 feet more, inasmuch as the datum of the old dock sill is 10 feet above the lowest water in the river; the tides actually rise 22 to 33 feet.

3811. Is it not also the fact that, during certain periods of certain months in the year, vessels go in and out entirely at night?—Yes; and I had the curiosity to look over the almanac, and I find that in the winter months half the time all the work of the port of Liverpool must be done in the dark; that is to say, there are no day tides; they are so early in the morning, and so late at night, that they have not light enough for ordinary operations.

3812. Is that another reason for an efficient pilot service?—Yes. Just imagine 100 or 200 vessels coming in in one night.

3813. During your experience as a shipowner, has the increase in the number of vessels been very large?—The increase has been very large in proportion to the tonnage. When I first knew Liverpool the tonnage paying dock dues was 10,000 vessels a year, and the tonnage was about a million, or rather less; but now the number of vessels is only doubled, while the tonnage has increased 5½ fold.

Mr. *W. M. Moss.*
3 May 1870.

3814. In how many years?—In 35 to 40 years, representing the tonnage of 11¼ million tons in and out of the port of Liverpool of those vessels that pay dock dues alone, besides many thousands that do not pay dock dues.

3815. How many of that number pay dues?—Last year there were 11,850 vessels that paid pilotage rates in and out.

3816. What was the total number of vessels paying dock dues in and out?—Nearly 20,000 in, and as many out. Last year, 1868, there were rather more than 20,000; this year, 1869, there were rather less, but the tonnage still increases.

3817. What is the average per day of vessels in and out?—Over 150 a day; all vessels included; tugs, and others.

3818. That is, as counted from the light-ship?—From the light-ship, in addition to those which are known of at the dock office.

3819. Is that opinion given upon reliable data?—It is under the mark entirely.

3820. And that traffic, to a large extent, is carried on, I suppose, within two or three hours of the top of high water?—Yes, it is so; some vessels pass in and out on the ebb, but that is more dangerous.

3821. With reference to the amount of earnings of a pilot, what was it when you were first connected with the pilotage establishment?—From 240 *l.* to 250 *l.* a-year for first-class pilots.

3822. What is it now?—Now a first-class pilot gets from 215 *l.* to 218 *l.*; a second class, 180 *l.*; and a third and fourth, 165 *l.*; and my impression is, that in 1872 it will be reduced about 20 per cent., owing to the cessation of the money contributed to the pilotage service nine or ten years ago, for the abolition of differential rates.

3823. What will that reduce the average earnings of a pilot to?—A man who now makes 210 *l.* or 220 *l.* a-year will make 190 *l.* a-year, assuming that the present traffic continues, and this Bill does not pass; then the next class will get 25 *l.* less, and the next still less.

3824. What is the total amount of your pilotage earnings in a year?—It was about 53,000 *l.* last year for pilotage.

3825. What is the number of pilots at the present moment?—I have only got the return to the 1st of January; the number is 284 holding licenses, that is including apprentices; but there are 34 apprentices not licensed.

3826. Altogether, what is the number?—318.

3827. *Chairman.*] That includes the 34 apprentices not licensed?—Yes.

3828. Mr. *Graves.*] What is the difference between a licensed and unlicensed apprentice?—A licensed apprentice is a man who, having served a certain number of years, gets a certificate entitling him to bring in vessels of a small class and depth of water; they range up to 500 tons.

Mr. *W. M. Moss.*
3 May 1870.

3829. What is an unlicensed apprentice?—An unlicensed apprentice can only work the boats.

3830. They have no license to bring in any vessel?—No.

3831. Of the 318, what number is constantly at sea?—Nearly half of them are at sea at a time; half the boats are constantly on service.

3832. It appears that you have been reducing the number of apprentices for the last few years; what is your motive for that?—In anticipation of the earnings being much reduced by the increased size of vessels; fewer vessels come into port, consequently a man will not gain nearly so much money.

3833. Does not it arise also from the number of vessels not keeping pace with the tonnage of vessels?—It does.

3834. What was your previous number of apprentices in a boat?—Ten was the extreme; now we have reduced them to six; no boat shall have more than six.

3835. Can you state how you regulate the number of pilots to the requirements of the port?—We have had no rule to regulate the number; we give an ample supply for the benefit of the shipowners.

3836. Do you keep a sufficient number to meet the largest requirements?—Yes, it is absolutely necessary.

3837. If you acted in the interests of the pilots themselves the tendency would be to decrease the number?—We do not think of the interests of the pilots; we think of the necessities of the port.

3838. Do you find that the general complaint is that you have got too many, or too few pilots?—I do not think we can have too many in a port like Liverpool; we do have some consideration for the earnings of the men, so that they shall not be too low; that is the only limit to the number of pilots.

3839. You have to provide for large arrivals upon any one day, have you not?—Yes, I have known 50 or 60 foreign vessels arriving in a day, (*i. e.* vessels from foreign ports) and sometimes only three or four. I have some strange statistics about that point; sometimes I have noticed only two or three vessels coming in in a day.

3839*. Does it chiefly depend upon the change of wind?—Entirely so.

3840. *Chairman.*] I suppose steam is producing a great change in that respect?—Yes.

3841. So that the arrivals are much more regular than they were?—Yes, of steam vessels, but not of sailing ships.

3842. And every day they are taking tugs much further off, are they not?—Some of the sailing vessels are.

3843. Mr. *Graves.*] How many boats are there employed in the pilot service of Liverpool?—Twelve.

3844. What is the character of those boats?—They are more like yachts built in the most expensive manner possible; they are fit to go to any part of the world.

3845. They are most expensive vessels?—Yes; in proportion to most ordinary vessels they cost nearly double.

3846. Is it a fact they are built by the best yacht builders in England? — Yes; they are fitted out for yachts, and they must be so for the accommodation of 20 or 30 men, who are out for weeks together in such a boisterous Channel.

3847. What regulates the divisions of the earnings of these boats?—The divisions of the earnings remain as they were when the powers were given to the Mersey Docks Board in 1858. It is regulated by the men themselves in a great degree.

3848. Have the Dock Board any interest whatever in the earnings of the pilots?—No interest whatever.

3849. Has there been any change in the pilotage rates within your memory?—No; they have remained the same for the last 30 or 40 years.

3850. While the cost of living has increased, the pilotage rate has remained the same, is that so?—Yes; unfortunately for the men.

3851. Do you find many complaints with regard to the rates being excessive?—No.

3852. As a shipowner, do you consider that the present system of pilotage works well for the port of Liverpool?—Decidedly so, and I consider it is absolutely necessary.

3853. Do you desire to have it maintained as it is?—Yes; I wish for no change.

3854. Do you agree with Mr. Lamport in his opinion that there would be great difficulty in enforcing an efficient pilot service if it was voluntary to pay or not?—Certainly.

3855. Do you think that it would be impossible to maintain an efficient pilot service?—I should not think it possible to get an efficient pilot for 100 *l.* a year, if it is necessary to pay 200 *l.* now.

3856. Supposing the Bill now under discussion were passed, what do you believe would be the effect upon the earnings of the pilots?—I am afraid to say; I think it would be very large indeed.

3857. Can you form an estimate of it?—No; I know it would be very large.

3858. I suppose in fine weather there would be a tendency to go out without pilots?—Yes; there is a tendency for many small vessels to evade the pilotage dues, and many do. They are not brought forward before the board, because they are difficult to get at when they are once out of the port. The trouble is too great to look after them.

3859. But in bad weather they would expect a pilot, would they not?—Yes; in bad weather they would.

3860. Do you think that they would amount to one-third or more?—No; I do not think it would be one-third, because many large vessels, especially steamers, will take pilots under any circumstances. It would vary. I should not be surprised to see 25 per cent. at least. I may mention that of the large number of vessels frequenting the port, every one of them, even if she is a 10-ton boat, can at any moment claim the services of any of these pilots, either coming in or going out.

3861. Even vessels now exempt can do so?—Every vessel coming to the port may claim the services of a pilot in any weather, winter or summer. They are there for the protection of the port.

3862. Is it your opinion that if this Bill passes, higher rates will be required to be charged at Liverpool?—Certainly, I think so.

3863. Then you will be taxing, probably, the prudent shipowners for the deficiencies of the imprudent; is that your view?—Exactly so. I think the present system is a boon to the shipowners.

3864. I suppose you occasionally find that you have

have obstructions on the bar?—Yes, but the port is under the special protection of the Mersey Conservancy Board, who keep a very sharp look out after us in those respects.

3865. Can you state what it costs the board to remove wrecks from the bar?—The board pays merely the balance of expenses that cannot be repaid by the owner, owing to poverty or other causes. In 1868 the board paid 5,832 *l.* as the balance of payment that they could not recover for the removal of the wrecks. Up to the present time we have already spent nearly 5,000 *l.*, but that source of danger will be vastly increased if you do away with compulsory pilotage. It will almost be the ruin of the port.

3866. Do you find generally that the shipping interest of Liverpool is satisfied with your pilotage service?—We have very few complaints. The system is approved of; the complaints are merely of detail.

3867. Have you heard the opinion of Mr. Lamport as regards the exemption from liability of a shipowner when the ship is in charge of a pilot?—Yes, I have.

3868. Do you concur in his opinion, that the liability should rest upon the owner?—Yes, I do, that the pilot is not to be the master of that ship. It is preposterous to make him sole captain of a ship which he does not understand. I speak more with reference to steamships which are very difficult of management indeed, and the captain and mates alone can understand what momentum is required to make certain evolutions.

3869. Do you think it is the duty of the pilot to advise the captain, as an assistant?—Yes, he is the assistant to the captain, exactly, and that only.

3870. Do you consider that doing away with the present immunity would be any injustice to the shipowners?—I think the contrary. In my case I think it is a great injustice to me, *i. e.* the present immunity.

3871. *Chairman.*] Even if they are compelled to employ a pilot?—Yes, if they are compelled to employ a pilot under the idea that the pilot takes command of the ship; I would never have that.

3872. Mr. *Graves.*] You would leave the ship in the hands of those best accustomed to command her?—Yes.

3873. Would the captain have any idea that he was infringing the immunity which at present exists by interfering with the pilot?—At present there is a divided authority; the captain hardly knows what to do. I have had many cases where that is the fact; the pilot has brought a ship into danger by not allowing the captain to manage her.

3874. Have you been consulted as a pilotage authority as to the principle of this Bill of abolishing compulsory pilotage?—No, the honourable Chairman called at the pilotage office, but I did not see him, and I was advised that until the Board had duly considered this question I ought not to commit them to any action at all.

3875. Had you any official communication from the Board of Trade with regard to this Bill before it was introduced into the House?—No.

3876. Is there any other point upon which you wish to express an opinion to the Committee?—Yes, I wish the Committee would take the invitation from me to come down in the winter, and I will give them a cruise in a steam yacht which shall be at their service; they will judge then what is the fact.

3877. You wish to show them the banks in a gale of wind?—Yes; I think you would not be deceived in your opinion then.

3878. Mr. *Norwood.*] I understand that you do not like immunity, but you rather prefer liability?—I do like as many immunities as I can get.

3879. I understood you to say that you did not like immunities?—Immunity does not pay in the case alluded to; that is the case of compulsory pilotage.

3880. How is it that in Liverpool you license so few masters and mates?—We are not asked; they do not apply to us.

3881. Do not you as a shipowner wish your own masters and mates to be licensed?—Yes, I do very much.

3882. Have you applied for them to be so?—I have not applied, because I do not think in bad weather they can dispense with the services of a pilot. I have asked them the question, and said I would increase their wages if they would do so, but they are unwilling.

3883. Why are they unfit in bad weather to pilot the ship?—They have not the experience in bad weather that is absolutely necessary with the buoys and channels, which are always shifting, and they do not know any other course than by the buoys, and if they get on a bank, not seeing the buoys, they are lost.

3884. Do you think that the examination they would have to go through, is not sufficiently searching to qualify them to assume the position of pilots in bad weather?—It is not so strict as the examination of a pilot who is learning from a boy upwards; almost any master can pass an examination to pilot a vessel in fine weather, but I defy any master to take a ship into Liverpool with perfect safety without an intimate knowledge of the channels.

3885. And I suppose that knowledge must be kept up by weekly acquaintance?—By daily acquaintance.

3886. Do you consider Liverpool an entire exception to the rest of the coast of England?—I do most decidedly.

3887. Do you think that if Liverpool is excepted there is not the same ground for Hull being excepted?—I would rather not speak upon that question; if Hull can give as good a case as we can, they can do so.

3888. Do not you think that Hull is a difficult port to make in bad weather?—I know nothing about it in bad weather.

3889. You have had vessels built there, have you not?—Yes; and they have always gone out in fine weather.

3890. Do you mean to say that you cannot say anything about Hull?—No, I cannot.

3891. At any rate you have not told me that you consider that Hull is no exception to the rule?—No; I do not know anything of Hull.

3892. Do not you think that it would materially assist the pilotage established under this Bill if there were two different rates for summer and winter?—No. How can you define it? There is bad weather in summer as well as in winter in our ports.

3893. You have longer days in summer?—Yes, but we have thick weather in summer.

3894. Do not you think that you will find a sufficient number of men willing to risk the bad

Mr. *W. M. Moss.*

3 May 1870.

weather in winter, if they got 50 per cent. more in winter than in summer?—I should not like it.

3895. The fact is, you strongly approve of the present system?—Yes.

3896. Mr. *Grieve.*] You say that you consider that the apprentices should be reduced from ten to six in each boat?—Yes.

3897. Mr. *Gourley.*] You stated that you had several classes of pilots?—Yes.

3898. Do you mean by that that some have passed a more efficient examination as pilots of ships than others?—No, they all pass the same examination; but they must take their class after a probation of a certain number of years. No young man can get first-class services to perform until he has served a preliminary term of two years over his 10 or 11 years.

3899. Do you make any distinction between the classes of men, with regard to the description of vessel that they shall have charge of?—Yes; a young man gets a certificate, first for a vessel of 250 tons, after three years' servitude and two exemptions; that is the fourth class. The third class consists of men who are allowed to bring in vessels of 500 tons, drawing 15 feet of water; and what I call the second class, which has recently been instituted, consists of men who are qualified to bring in vessels of 1,000 tons, not drawing more than 18 feet of water.

3900. Do you consider that there is more risk in passing in and out of the Mersey with vessels of a large draught of water than with vessels of a smaller draught of water?—In low water we have only 10 feet on the bar, increasing from 32 to 42.

3901. You would not find large vessels running for the bar before there was sufficient water, I suppose?—No, we make these classes for prudential reasons; some men, from their character, are not fit to have the charge of a vessel of 1,000 tons.

3902. Do you think it more difficult to navigate a vessel of 1,000 tons than it would be to work up a small brig of 250 tons?—There is no difficulty in bringing up a steamer of 1,000 tons; the difficulty is in the sailing vessels principally.

3903. Is not the classification merely a matter of arrangement?—It is on the score of prudence. The committee that I have had the honour of managing includes four practical men, who are old retired ship masters.

3904. Does the same rule apply to vessels inward bound, as applies to vessels outward bound?—Yes.

3905. By that rule it would appear that all the pilots are not equally efficient?—No; that is the beauty of the system.

3906. Would it not be a much better system if all were compelled to pass the same examination?—They do so, but they cannot go into a higher class of examination. That is the result of the system; it keeps "an inferior" man down to a lower classification.

3907. Have you any rule by which the pilots are compelled to go to sea in rotation in fine or bad weather?—Yes; I have known a pilot boat go to sea when the mail packet boat did not go out, and the regular channel boats did not go out.

3908. Are they compelled by regulation to go out?—Yes, by a regulation of the pilotage board.

3909. Do they go to sea in all weathers?—Yes; I remember the case of a boat going out in a gale of wind, when the mail boats did not attempt to go out.

3910. What is the cost of one of those boats?—I can hardly say; I understand the cost is from 2,500 *l.* to 3,000 *l.*; I know nothing of it from my own knowledge.

3911. Do the pilots receive monies in addition to their pilotage fees, or are these boats supported by contributions from all the pilots?—Each boats' earnings are thrown into a common fund, and the men divide the amount in certain proportions, which they themselves regulate, under the approval of the committee. I have had no complaints made on that point whatever; the earnings are divided among each boat in certain proportions. Everything they do must have the approval of our committee.

3912. You said that if the present system were abolished, you did not think there would be an ample supply of pilots?—I do not think I made use of those words.

3913. I understood you to say that if the present system were abolished, and we had the voluntary system, you would not have an equal supply of pilots?—I said that if the present system were abolished, I did not think in the course of a few years we should have the same efficient system of pilots as we have now. I dare not contemplate the taking away of the present system. I speak now in the interest of the port of Liverpool, which would be dangerously imperilled by vessels coming in and getting upon those banks; we have had very close touches of it now.

3914. Do you think that under the voluntary system the number of pilots would be less than it is now?—Yes; under the present system they are compelled to give their services, and it would be, under the proposed Bill (using a vulgarism), "Heads I win, tails you lose."

3915. Do you not think that the fact of Liverpool being so dangerous would always create a supply in accordance with the demand?—Not if the pay is limited. If there were a free trade on both sides, you must let the men charge what they like; but that I would not give. I consider that we should then pay three or four, or perhaps 10 times the amount of pilotage. Now the men are confined to certain rates, which are the same, winter and summer.

3916. Do you not always find an abundant supply of masters and officers for your ships under the voluntary system?—There is no comparison between the cases in my opinion.

3917. Is it not as necessary to have competent masters to navigate the ships as it is to have pilots to pilot them?—They are not comparable; the one is compulsory, and the other is quite voluntary.

3918. Do you change the buoys very often by which the channels are marked?—Yes.

3919. How often do you do so?—It depends upon the weather both inside and outside; and also from the freshets from the river.

3920. Do you do so once in 12 months?—Captain Hills speaks upon that.

3921. How do you notify the change in the charts?—The chart is published by the Marine Surveyor. We cannot publish a chart for every change of the buoys; but every 12 months we publish a chart, and in the meantime public notice is given of a change detrimental to the navigation.

3922. So that all captains become acquainted with any material changes in the marks?—All captains

captains in the port will know of it; but captains coming from other places cannot be supposed to take notice of every little placard published in Lloyd's List.

3923. Is it not possible to find your way into the Mersey by the chart without the assistance of a pilot?—No, not in thick weather.

3924. You advocate that all vessels taking the Mersey should be in charge of pilots?—Yes; I think the exemptions are far too numerous now.

3925. Whom would you hold responsible in the event of a pilot putting a ship aground upon one of the banks?—I should make the pilot responsible.

3926. Mr. *Cave.*] Do the pilots divide their earnings according to the work done by each pilot during the year?—Each boat does; it is not thrown into one common fund.

3927. If one boat has been at sea more than another, it gets more, I suppose?—No; a ship can only employ the pilot that she takes out with her. Supposing a boat goes out with 30 on board, then she can only board 30 men; she then comes back and takes her turn again.

3928. The principle of payment simply depends upon the number of men each boat has on board?—Yes; if one boat has more men on board than another, the system remains the same, because more men have to be paid out of her earnings.

3229. Each pilot gets the same amount of money at the end of the year, does he not?—Each pilot of his class.

3930. Is that without reference to the size of the boats?—They must do their work before they get paid at all.

3931. What I mean is this: that it is a sort of salary; it is not the actual payment for the amount of work done, because each pilot is supposed to do the same amount of work according to his class; is it not so?—Yes; but the payments vary a little.

3932. What is the principle upon which they vary?—A boat may be unlucky and have only small vessels; but another boat may get very large vessels, according to her cruise.

3933. That is put in the common fund, is it not?—No; it is put in the common fund of each boat.

3934. Are not the earnings of each boat divided among the men in the boat?—Yes.

3935. Does it not depend upon the work the boat does?—Yes; it may happen that the boat may go out upon one day and ship all her hands in vessels of a large class, and another boat may take the next turn and get only small vessels, and earn half the amount.

3936. *Chairman.*] I suppose the men earn much about the same?—Yes.

3937. Is there much difference between the highest and lowest amount earned?—There is not much difference.

3938. How is the outward pilotage managed?—The outward pilotage is managed thus: it is the law that the pilot bringing a vessel in has the preference of taking her out again.

3939. Does he wait to take her out again?—Either he or some one out of the same boat.

3940. Is there not a considerable waste of labour in that system?—I do not think so.

3941. Do not they spend a good deal of their time ashore?—Some do, and spend it badly. I punish them when I get hold of them.

3942. Is it not the case that a good deal of time is wasted in that way?—No. I do not agree with that.

3943. It has been alleged so, has it not?—Yes; it is the general idea, but it is not the fact.

3944. You do not agree with it?—No.

3945. Do you estimate the falling off of employment, if this Bill is passed, at 25 per cent.?—I am afraid to represent it at all. I only say the consequence will be very serious.

3946. You stated that you did not think it would be half, but you thought it might be 25 per cent.?—Yes, I should not be surprised if it was one-third.

3947. Then if this Bill were to pass into law, one-fourth fewer pilots would be required; is that your opinion?—No; I think they would all be required.

3948. Why?—Because in very bad weather every vessel would claim a pilot outside, and then the number would only be adequate.

3949. Do you think it necessary to keep up the number to such a point as to supply vessels in all kinds of weather?—Yes.

3950. What is the class of vessels that you think would cease to employ pilots in any weather?—Many vessels in fine weather, such as the small class of steamers going foreign, would cease to take pilots.

3951. From Liverpool the coasting steamers are compelled to carry pilots, are they not?—No.

3952. Under the Act they are, are they not?—No, there is an arrangement made by which certain of the coasting steamers have compounded for the pilotage rate by paying 1*s.* a foot.

3953. They pay 1*s.* a foot to be relieved from the necessity of employing pilots, is that so?—Yes.

3954. I presume they would cease to pay it if the system were voluntary?—I cannot answer that.

3955. Do those vessels employ pilots in bad weather?—Yes, I have known them to employ pilots in bad weather.

3956. Do the steamers plying between Liverpool and Belfast ever employ pilots?—I cannot speak to any particular case; I know that vessels that are exempt employ pilots in very bad weather.

3957. Is it not a very rare thing for vessels coming from Dublin or Belfast, to employ pilots?—Yes.

3958. What is the annual sum that they pay now to be relieved from the necessity of taking pilots?—£.1,717.

3959. Is that paid by the coasting steamers?—Yes.

3960. They pay 1,700*l.* a year to be relieved from the necessity of carrying pilots?—Yes.

3961. That is the tax upon them now?—It is hardly worth while to call it a tax.

3962. They do not employ pilots, do they?—No, except when they want them.

3963. They never do want them, do they?—It is very rare that they do so, but the service is there ready prepared for them day and night.

3964. I presume those vessels would give up making a payment to the pilotage board, if compulsory payment were abolished?—Yes.

3965. Are there not a considerable number of vessels almost in the same category going to

Mr. *W. M. Moss.*

3 May 1870.

Mr. *W. M. Moss.*

3 May 1870.

France, Havre, and the Mediterranean?—Many of them would be; I have vessels going to France, but I should not cease to employ pilots.

3966. You think that even in short voyages it is necessary?—Yes, 14 or 16 days.

3967. In your opinion, what is the class of vessels that would cease employing pilots?—Many of the same class of vessels as my own.

3968. Some owners are not as prudent as you, are they?—I will not say that; some would like to save their money.

3969. I presume you do not pay money unless you think it necessary?—I think it would be penny wise and pound foolish not to employ the pilotage system.

3970. You pay for the pleasure of maintaining the pilotage system, do you not?—I would not, if I did not think it necessary; I do not pay it for pleasure; I think that it is necessary to maintain the service as it is.

3971. I am assuming that the service is a voluntary one instead of a compulsory one; should you then continue to employ pilots to keep up the pilotage system, or because you would think it necessary?—If all my neighbours ceased taking pilots, I might follow suit, but I do not think it desirable or prudent to do so.

3972. You heard what Mr. Lamport said, did you not, that it would be unjust upon the owners to throw upon them the liability for the acts of the pilots whom they are compelled to employ; do you agree with him?—Yes, I think so; if the pilot is to usurp the privilege and the power of the captain of the ship.

3973. Would you retain the power, but not relieve the owner from liability?—Certainly not, this rule has lost me many thousands of pounds. I mean the captain to retain power, and owner to be liable; the present system has cost me thousands of pounds.

3974. In cases of collision, do you mean?—In one case of collision, and in many cases of a vessel not answering her helm, where the captain was afraid to speak to the pilot.

3975. Do you agree with all that has been said as to the difficulties that occur, and the hardship which arises, from the present state of the law?—Yes; with the understanding that the pilot must not have the control of the ship; the captain must retain his authority, and the pilot merely serve as the adviser of the captain.

3976. Even though you compel the owner to take a pilot, you think the liability should be thrown upon the owner?—Yes; I do, decidedly.

3977. Even where the pilot is in fault himself?—The pilot cannot be in fault, except with the captain's sanction.

3978. Supposing it is a matter upon which the captain is not informed; for instance, as to the navigation of the port?—That is a very nice question; I cannot answer it.

3979. Would you throw the responsibility upon the owner in that case or no?—I cannot clearly understand the result.

3980. I suppose a collision may occur through the negligence of the pilot, or through his not properly informing the captain as to the navigation?—I think the captain ought to be the best judge of that. I had a striking case myself with regard to a collision while the vessel was in charge of a pilot.

3981. The collision may have occurred in consequence of the captain not being properly informed as to the navigation of the river, may it not?—I would still throw it upon the owner, leaving the captain the control of the ship in the nice points of navigation on the management of the ship.

3982. Do you mean to make the captain answerable for the acts and negligence of the pilot, even upon points of which the captain knows nothing?—That is a very nice question. I assume that the captain understands sufficient of navigation to avoid a collision, according to the rules of the road.

3983. I assume that a captain knows nothing of the navigation of the port, and the danger of the shoals, and so forth; and I assume that an accident has occurred through the pilot not having informed the captain as to the state of the navigation, would you then throw the liability upon the owner?—It is a very serious question; I should not like to give an opinion upon it without further consideration.

3984. It is a very material point when you give an opinion with regard to this portion of the Bill?—I cannot conceive a case exactly as you describe it.

3985. I presume that an owner of a ship may be made liable to the owner of the cargo for the negligence of the pilot?—No.

3986. Would you hold him responsible in such a case?—That is the same question in another form.

3987. Surely that is a case which you can understand?—I cannot understand the case.

3988. I presume that vessel, with the cargo, is lost through the negligence of the pilot, and the question arises between the owner of the cargo and the owner of the vessel; would you make the owner of the vessel liable, even though he has taken a pilot under compulsion?—I still think that the owner should be responsible if the captain has had power to interfere with the action of the pilot, and if he understands his business.

3989. Even though he knows nothing about the navigation himself, and has been compelled to take that pilot, would you still hold him responsible?—It is a very difficult question for me to answer.

3990. I want to know how far you carry your rule?—Supposing a pilot puts a vessel upon a bank, could it be considered the fault of the owner, or an accident?

3991. I will presume that it is through the negligence of the pilot; would you then make the owner of the ship responsible to the owner of the cargo?—No; it would be a maritime accident, and an accident which the owner would not be responsible for any more than for an accident of the seas when the vessel was under the charge of the master or mate. It is simply an accident of the sea.

3992. Mr. *Norwood.*] You are aware that, at present, the decisions in law have made the shipowner responsible for bad navigation on the part of his master and mate, in respect of the goods on board his ship?—Yes, I think that that has been constantly the case.

3993. In event of your opinion as to the liability of the shipowner in compulsory waters becoming law, do not you think that you would be responsible for injury to the goods on board your ship, even through the fault of the pilot?—No, I do not think I should; you must clearly prove wilful negligence before you can make the master responsible.

3994. This is rather an important question. I presume you ground your argument for the necessity of the pilotage system upon the exceptional and difficult navigation which an ordinary master is not qualified to cope with?—Yes.

3995. And yet you maintain that your captain, whom you state to be unqualified to navigate your ship, should have responsibility over the pilot who is qualified?—Yes, certainly I do; because a pilot coming on board a vessel knows nothing whatever of the ship, and is not capable of taking command of the ship from the peculiarities of her steering qualities. A good deal depends upon whether she has a right or a left hand screw, whether the vessel is by the head or the stern, and the captain and mate alone understand that ship thoroughly.

3996. Is it not the case that, under the present state of things, a master of a ship is bound to navigate his ship. Take one of your steamers, she enters into the compulsory pilotage waters, the pilot takes charge of the vessel, that is, he cons the vessel, but the crew navigate the vessel, either your master or mate must be upon the bridge by the side of the man to give the orders to the engine-room and direct the movements of the man at the wheel?—Yes.

3997. Is not the present system one that meets your views as to the responsibility of the shipowner in navigating his ship?—No; I think that the pilot has far too much power; he is not qualified to take the command of the ship.

3998. I take it from you that, though the master of one of your ships is not qualified to navigate his ship up the Mersey to Liverpool, yet he is bound to know more than a qualified man, and he is bound to take the supreme command out of the hands of a qualified man?—No, you misunderstand my replies; I say that the pilot is the adviser of the captain as to danger; he is not put on board to navigate the ship. I assume that the captain and officers of the ship are the only men capable of navigating the ship from its peculiarities.

3999. Your ship is coming up the Mersey and the pilot tells the captain to starboard his helm, and result is the ship runs upon a sand bank, and the pilot has taken her wrong altogether; according to your argument your captain is bound to know better than the pilot, and he ought to resist the pilot's advice?—The captain is bound to follow his advice on points not within the captain's knowledge.

4000. Then in every case he is not to supersede the pilot?—The pilot is not to supersede the captain in the working of the ship. The pilot is to give instructions what course to take and how far he may go on that tack, and how far he may reach on the other tack.

4001. Is not that the case at present?—No, the pilot interferes too much.

4002. Has the pilot supreme command on board the vessel?—Yes, in the present anomalous state of the law the captain is afraid to utter a word. At a critical moment, supposing the captain says, Pilot, you ought not to do that, and the pilot, under the supposed influence of the captain's authority, hesitates for one instant, the safety of the ship is dependent sometimes upon the immediate action of the party in command, and the ship may be lost.

4003. Such as in a case of collision?—Yes, and in other cases too.

4004. Mr. *Brassey.*] Those mistakes may occur in the handling of a ship?—Yes.

4005. Do you think that the captain should maintain the handling of the ship in his own hands?—Yes, following strictly the pilot's instructions as far as avoiding certain danger is concerned.

4006. You mean as far as the danger of navigation is concerned, apart from the danger of seamanship?—Yes.

4007. Mr. *Gourley.*] Supposing a vessel belonging to yourself should, by the negligence of the pilot, or by erroneous instructions given by the pilot or the master of your ship, be put upon the bar of the Mersey and wrecked, whom would you make responsible for the negligence of the pilot; the owner or the pilot?—It is an accident of the sea.

4008. The pilot is supposed, in the navigation of the Mersey, or any other waters, to have a sufficient local knowledge so as to take a ship safely through those waters; but supposing that by an act of negligence or carelessness he puts the vessel upon the bar, and the vessel is wrecked, would you for such negligence make the owner responsible?—The owner would not be responsible.

4009. Would you make him responsible in the eyes of the law for the bad navigation of the ship?—No, the owner has fulfilled all the obligations of the law by employing a pilot; it is clearly a case of accident.

4010. You would make the pilot the person responsible for the accident?—Yes, the pilot would lose his berth.

4011. Mr. *Graves.*] I suppose you never want the shipmaster to lose his command?—No.

4012. And if the pilot did erroneously direct him in the Channel up the Mersey, if the captain is an experienced man, the captain must take upon himself to say, "You are going too much starboard;" and he would still retain the authority in his own hands?—Yes; even under the present law the master dare not interfere, because a valuable half minute might be lost, and his ship would get into danger, and the pilot would say in defence, "The captain said so-and-so; and I hesitated."

4013. *Chairman.*] You told us that you are reducing the number of apprentices with the view of reducing the number of pilots?—Yes; the earnings of pilots are now being so much reduced that we shall not have sufficient to pay for them all.

4014. What is the number to which you are reducing them?—We are not reducing many; we let them die off.

4015. Have you fixed any limits to which you would reduce the number of pilots?—No; I think the port of Liverpool ought to have from 230 to 250 men.

4016. And you have how many now?—Two hundred and eighty-four.

4017. That includes the licensed apprentices, does it not; but you are gradually reducing the number by reducing the number of apprentices?—Yes.

4018. And you are doing that with reference to the incomes of the men, not with reference to the necessity for a less number of pilots?—I should take care that we always have a sufficient number of pilots; I think it is for the benefit of the shipowners that we should have an ample supply of men.

Mr. *W. M. Moss.*

3 May 1870.

4019. You are reducing the number with reference to the income of the pilots, are you not?—If the law passes abolishing compulsory pilotage and the immunity, many more vessels will have their masters qualified.

4020. I gather that, according to your present arrangement, you are gradually reducing the number of pilots?—Yes.

4021-2. And that is because you find that the incomes are likely to fall off?—Yes; but I must repeat my answer, that we shall maintain a full and efficient service of pilots.

4023. In the interests of the pilots, you thought there were too many?—Yes; because of the earnings being so considerably reduced at the end of next year.

4024. Therefore, the reduction in the number of pilots is mainly owing to the contemplated diminution of their earnings?—Yes; I do not want to increase the number.

4025. Is that reduction carried out with reference to the reduction in income which is likely to take place from the cessation of that sum which is paid for the foreign pilotage?—That was the first reason; and then the agitation caused by this proposed Bill, and the possibility of the men and masters and mates of ships taking certificates for pilotage.

4026. And you have already begun to make provision against this Bill coming into effect?—We have been waiting your decision, partly.

4027. You have been reducing the number of apprentices in the event of this Bill becoming law, have you not?—Though the tonnage is increasing, the number of vessels that contribute to the pilot fund is reducing, or rather not increasing.

4028. I suppose the change that has taken place from sailing to steam, and the more regular arrival of vessels also produces an effect upon the number of pilots required?—Yes, but there may be days when 100 vessels may come up, and then the services of every man in port are necessary.

4029. But that is much less the case now, when steam is so much more used than when sailing was more used?—Yes.

4030. Do you propose to reduce the number of pilots in reference to the cessation of the amount of money paid by the State?—We shall not decrease the number.

4031. Has there been any increase in the number of boats?—No, not since I have been connected with the pilot service.

4032. You have always maintained the number at 12?—Yes.

4033. It is not proposed now to reduce the number of boats, is it?—No; I think that the system of boats outside is one of the safeguards of the port.

4034. Then you only intend to reduce the number of pilots?—No, we are not going to reduce the number.

4035. You intend to reduce the number by reducing the number of apprentices?—That will be for after years.

4036. Mr. *Grieve.*] Have you any statistics of the pilotage receipts for the last 10 years?—Yes, you will have that from the superintendent of pilots.

4037. Have they been gradually reducing the amount received by each pilot?—Yes; they have been gradually reducing the amount; they used to receive 240 *l.* or 250 *l.* a-year, now they receive 200 *l.*; next year they will be reduced 30 *l.* or 40 *l.* a man.

4038. Mr. *Graves.*] In ports where pilotage is voluntary, the pilot is practically the servant and the free choice of the shipowner; is not that so?—Yes.

4039. I presume that many steam vessels belonging to Liverpool go to ports where the pilotage is purely voluntary?—There are many ports where the pilotage is voluntary.

4040. But some of them go to where it is voluntary?—Yes.

4041. Is it not the practice on the part of the steamship owners of Liverpool to protect themselves from liability arising from the default of the pilot, by a special clause in their bill of lading?—Yes.

4042. They are not liable for the default of the pilot?—So they allege. The bill of lading supersedes the law upon that point.

4043. Does not that special contract between the shipper and the shipowner render altogether harmless the responsibility which the Honourable Member for Hull was speaking of?—I do not think that we have any responsibility at all.

4044. Do you consider yourself, under that special clause in the bill of lading, exempt from all responsibility arising from the default of the pilot?—Yes.

4045. Mr. *Cave.*] In the case of voluntary, and in the case of compulsory, pilotage, supposing a mishap arises from the misconduct of the pilot, does the ordinary policy of insurance cover it in both cases?—Yes; that is my belief.

4046. Mr. *Norwood.*] With reference to the question just put to you by the Honourable Member for Liverpool, as to clauses in the bill of lading, I have no doubt the bills of lading contain a great many clauses; you are perfectly well aware that in law those clauses are not worth a great deal?—I am not a lawyer.

4047-8. Do you consider that those clauses which are put in your bills of lading are perfectly operative in law?—We operate upon them as far as we can; it is a contract between parties. We have had legal advice from three justices on the subject. We introduced a clause for our own protection, under very high legal advice.

4049. Are not even those clauses a very frail shield occasionally?—I have not heard of such cases.

4050. Mr. *Gourley.*] I suppose that shipowners and merchants cannot make contracts in their bills of lading to overrule the law of the land; do you know of any cases that have come under your notice where such contracts between shipowners and merchants have been held to be illegal?—It is my belief that it is a contract between the shipper and the shipowner, and that it ought to be as good as any other contract; what the law may say upon that point I would rather not discuss. So far I am quite satisfied to get free from liability under the clauses I have got. I am not going to say that it is illegal.

Mr. ROBERT GALLOWAY, called in; and Examined.

4051. Mr. *Graves.*] I BELIEVE you are a shipowner at Liverpool?—Yes.

4052. You are a member of the Mersey Docks and Harbour Board?—Yes.

4053. You are one of the four nominee members of that board, are you not?—Yes.

4054. You are nominated, I think, by the Conservancy Commissioners?—Yes.

4055. What does the Conservancy Commission consist of?—The First Lord of the Admiralty, the Chief Commissioner of Woods and Forests, and the Chancellor of the Duchy of Lancaster for the time being.

4056. So that the nominee members of the board would consider themselves entirely independent of public opinion as regards their election to that board in Liverpool?—Perfectly so.

4057. In the administration of the affairs of the trust that nomination exists; in the actual daily executive, so far as the port is concerned, is there any Government interference or control?—Yes; the principal officer of conservancy is what is called the Acting Conservator. Admiral Evans, for the last 28 or 30 years, has been Active Conservator of the River Mersey.

4058. He is also appointed by the four Commissioners you have named, is not he?—Yes.

4059. And without the interference at all of the Mersey Docks and Harbour Board?—He is not an officer of the board; he is the Acting Conservator, which title best describes his functions.

4060. Representing, in fact, the government of the Mersey?—Yes.

4061. Is this a mere form of surveillance in addition to the surveying staff of the Mersey Board, or is it a reality?—The superintendence of Admiral Evans is as perfect and complete as anything could well be; no change of any importance is made without his authority; he is in constant communication with Captain Hills the marine surveyor, and he makes frequent visits to the port and finds that all is going right himself.

4062. So that in any change of buoy, or change of any landmark of any kind, or changes of the banks, he is invariably consulted and informed?—No change is made without his authority and express sanction.

4063. And his veto at any time would prevent any action on the part of the executive?—Certainly.

4064. Does he publish any official report?—He publishes annually a report to the Commissioners of the Admiralty: I have one or two of them here.

4065. Does the conservator express any opinion with reference to the pilotage of the Mersey?—He has on various occasions expressed his opinion; I have here his opinion expressed in 1853, and I have his opinion expressed last year. If the Committee desire it, I will read it. It is very short. Admiral Evans says, "I consider it highly dangerous to allow any other than the small coasters daily running in and out of the sea channels of the port of Liverpool to navigate those channels without a pilot, and for the following reasons: First, the only marks for those channels (owing to their distance from the land) are the buoys by day and the lightships by night, both of which are daily liable to be driven from their moorings by accident or collision, with the prodigious number of vessels passing them. Secondly. The constant change of the banks renders it necessary to make corresponding alterations in the position of the buoys, due notice of which can only be immediately communicated to the pilots, and which is done by means of the coast telegraph, and by the pilot boats themselves to each other. Thirdly. The collisions which take place are frequently attended by one or more vessels sunk in the channels; and although the wrecks are removed as speedily as the state of the weather permits, yet a vessel without a pilot may be lost on one of them, and thus entail a deplorable loss of human life. It has been my most gratifying duty to bear testimony, in my annual report, as acting conservator of the River Mersey for the last 10 years, to the efficient and highly meritorious conduct of the Liverpool pilots; and I should deeply deplore any change which might tend to derange or break up an establishment which has been so satisfactorily and efficiently conducted by men who, having served a seven years apprenticeship, are kept continually on their stations under the supervision of a superintendent, and under the control of a committee of the merchants and shipowners of the port."

4066. Will you read the last report?—The last report simply bears Admiral Evans's testimony to the fact, that the pilot service of the port is maintained in a creditable state of efficiency. In this he points out that 68 casualties occurred in the year 1869. Only one of these vessels was a vessel of any size with a pilot on board; all the rest were small vessels without pilots.

4067. Are you a member of the Pilotage Committee?—I am.

4068. Is the committee in favour of maintaining the existing system?—The committee consists of 12 members, and 11 of the 12 are strongly in favour of maintaining the present system.

4069. Is it generally considered to have worked well in Liverpool?—It has given pretty general satisfaction; almost universal.

4070. Are the complaints you receive generally directed against individual pilots or against the system?—They are generally directed against individual pilots; very rarely against the system; we have occasional complaints, but they are not of a serious nature.

4071. Are all the complaints that are made inquired into?—Yes; they are inquired into by the Pilotage Committee sitting weekly in Liverpool; and some punishment is awarded according to the flagrancy of the offence.

4072. What does the punishment generally consist of?—A fine, suspension of license, total withdrawal of license, and dismissal of service in grave cases, which are very infrequent.

4073. Do you consider that the knowledge which the pilots have, that they are liable to be called before the committee sitting weekly, has any strong influence upon the men?—Yes; they do not like to be called before the committee.

4074. You must have given some consideration to the pilot system; do you believe that in any port the voluntary system might be maintained with advantage?—Yes; I think in certain ports, which might be named, where the navigation is simple

Mr. *R. Galloway.*

3 May 1870.

Mr. *R. Galloway.* 3 May 1870.

simple and easy, the voluntary system might not only answer well, but it ought to be adopted, especially if there is any port of refuge near, where a vessel might run to in the event of sudden gales coming on.

4075. I suppose you prefer a voluntary system as a principle, so far as you, as a shipowner, are concerned, if it could be done without danger?—Wherever an efficient service can be maintained by a voluntary system, there I would be in favour of that voluntary system.

4076. Do you believe that the voluntary system could be applied to Liverpool?—I do not.

4077. Why do you think that?—I think it would be impossible to keep up a sufficient supply of pilots for inward-bound vessels. I do not think the men could be kept upon their stations, unless they were certain of employment.

4078. Do you consider it of importance to maintain these stations?—Of the highest importance; and I consider the system is a very beautiful and complete one. The pilot boats cruise on four stations, as indicated on that chart. The outer vessel, after having boarded all her pilots, telegraphs to the superintendent that she has boarded all her pilots, and she forthwith proceeds into Liverpool. The moment the superintendent hears that, he sends out another boat, not to take the place of the one inward bound, but the one nearest to Liverpool, and they shift out station by station; and so the service is maintained in that way.

4079. Do you consider it a fair principle which would lead all to contribute towards the expense of maintaining the present system?—Yes, I think it is a fair principle that a general rate should be levied for that which is for the general good.

4080. Do you want an uniform charge; do you think an uniform charge is of an advantage to the shipowners?—Yes, I think it is a great advantage; it enables the shipowners to know what the charges are, and it prevents the possibility of collusion between the shipmasters and the pilots.

4081. At present the shipowner has the right to demand a pilot at any time?—Yes, at any time. Even the small vessels that are exempt are entitled at any time, if they require the services of a pilot, to demand his services, and the pilot is bound to render his services.

4082. You heard what Mr. Lamport said about the double moral obligation existing at present upon a pilot to be at his post?—Yes, but I heard him imperfectly upon that point.

4083. He said he considered that there was a double obligation; an obligation under the regulation of the Mersey Docks and Harbour Board, and also an obligation implied by the knowledge on the part of the shipmaster that he would find a pilot at a certain station; do you believe that has a wholesome influence over the men?—Yes, I agree in that.

4084. And if the system were a free and voluntary one, that moral obligation would be to a certain extent diminished?—Yes, with many men.

4085. And they would fall back upon the simple question of regulations?—Yes.

4086. It is proposed by the Bill to leave the pilots under the control of the local authorities as at present; one of your regulations being that those boats should be on their stations, supposing this Bill passes, and it is entirely optional for a captain to take a pilot or not, do you consider that that simple obligation will be sufficient to induce the men to remain at all times upon their stations?—I do not.

4087. Have you considered at all whether there is any middle course between perfect freedom and an obligation upon all to pay?—I do not think that a middle course can be adopted in Liverpool.

4088. Have you formed any opinion as to a perfectly free system?—I have not; I do not think it would work in Liverpool, in consequence of the exceedingly dangerous and difficult nature of the entrances. The difficulty is not so great with outward-bound vessels; the difficulty is to get a pilot when inward bound, at the moment of your sorest need, which is just the time when he would be absent most likely under the voluntary system.

4089. If the system is altered, it would be more to the pilot's advantage to have a perfectly free system under the voluntary system?—Yes, and it only would be bare justice to them.

4090. You have heard the opinions expressed as to the immunity of owners from liability; have you, as a sailing ship owner, formed any opinion upon that subject?—I hardly know why the law was ever made as it is; it is so anomalous, and it, in my opinion, would not be detrimental to the interest of the sailing ship owners to have the immunity clause altogether withdrawn. I think there would be a rough average justice in the events as they occurred; I might fall in for a loss to-day, but I might escape to-morrow. For example, one of our vessels, the "Ocean Wave," was coming up the river in charge of a pilot; she ran into a vessel at anchor, and the court held, that because the master had a pilot on board, and that all his orders were obeyed, the shipowner was not liable; the owner has escaped the penalty in that case, but the next accident that may occur with the vessel, may be with our vessel at anchor under similar circumstances, in which case the decision would be of an opposite tendency, and I would be the loser.

4091. If the immunity were done away with, you do not think it would be any additional burden to the shipping interest?—No; I think it might be justly done away with, and I do not think it would be greatly complained against.

4092. Do you consider that it would tend to greater freedom from casualty if it was done away with?—I think, if the law were altered, it would tend to lessen the casualties, for this reason: in that event the energies of both the pilot and master would be combined to prevent accident, whereas now the action of the master is, to some extent, paralysed the moment a pilot steps on board. He is afraid to interfere, because, by interfering at a critical moment with the pilot, an accident might be caused, the responsibility of the pilot would cease, and it would fall upon his owner; and the fear of the captain bringing his owner in for damages paralyses his action.

4093. Do you see any difficulty in defining the duties of the pilot, so as to reconcile his duties on board the ship with that liability you speak of?—I agree with the preceding witnesses, that the pilot should be put on board a ship for one simple duty, namely, the supply of local knowledge, of which the master is deficient.

4094. Do you consider that a compulsory payment is necessary to the maintenance of an efficient

cient pilotage system in such waters as the Mersey?—Yes, I am strongly of that opinion; and I am in favour not only of compulsory payment, but the compulsory employment of a pilot; also, because it seems to me that compulsory payment is necessary to maintain the service in a state of efficiency, and compulsory employment is necessary to keep the channels free, as far as possible, from obstructions, and thereby save life and property, which, after all, is the primary object of the service.

4095. The one you would enforce in the interest of the pilot service, and the other you would enforce in the interest of life and property?—Yes.

4096. Mr. *Stevenson.*] You would draw a distinction between compulsory payment and compulsory employment?—Yes.

4097. You would have both? Yes. First I would have compulsory payment, in order to procure a necessary supply of pilots; but I would not be satisfied that vessels should navigate these dangerous waters themselves, because a want of the knowledge which our pilots can supply might tend to obstruct the passages in consequence of wrecks.

4098. How would you enforce compulsory employment?—There would be some difficulty in enforcing it; it might be left to the pilotage authority of the port to fine a vessel that ran in without a pilot, when a pilot offered his services and could have got on board.

4099. You would fine him either in penalty or double pilotage?—Something of that sort.

4100. Of course you are very unwilling that anything should be done to derange or break up the system of pilotage at Liverpool?—Yes.

4101. Do you consider that the simple change from a compulsory to a voluntary system would produce that effect if everything else was left untouched?—Yes, I think it would produce that effect.

4102. Would you expect that the authority of the Pilotage Board would be diminished by it?—Yes, I think it would be impossible for us to force men to keep their stations outside these banks in all weathers on the mere chance of being employed at some fixed rate.

4103. If the pilotage service is worth following, it could only be followed upon the condition of complying with those regulations, or else the men's licenses would be withdrawn?—Yes.

4104. Would not there be found a sufficient number of competent men willing to undertake all the responsibilities of that service for the sake of the employment it afforded, even under the voluntary system?—No; the security of the employment that would be afforded is very slight in some cases. In very fine weather the employment would be altogether dispensed with, but in bad weather every ship would very likely wish to have a pilot; I think, under the proposed system, that would be the very time when pilots could not be obtained for inward-bound vessels. There is less difficulty with outward-bound ships, because an outward-bound ship does not go to sea in bad weather. The thing is to have a pilot at a certain distance from the port waiting for inward-bound vessels, at all times and in all weathers.

4105. The pilot cutter remains at sea until all her men are boarded; then she comes in and makes room for another one to go to the same station. What is to hinder that system remaining in force after the change from a compulsory to a voluntary system?—Men could not, then, be got to maintain the pilotage service with its difficulties and dangers and hardships; under the system proposed by the Bill, you make it optional for ships to take or reject the pilots, and yet you fix the rate at which the pilots shall be paid; it seems to me a very onesided obligation, and I do not think you could get the best class of pilots to keep the sea on those terms.

4106. Do not you think the experience of other ports might make you change your opinion?—It might, but I know nothing of other ports; I only know that there is no port in Great Britain so difficult, and where the access is so dangerous in its navigation, as Liverpool.

4107. A onesided system already applies in Liverpool to exempted vessels?—Yes; my own personal opinion is, that there should be no exemptions, except in those cases where the masters or mates are duly licensed as pilots.

4108. So far even as that exemption extends, it diminishes the encouragement to regular pilots to pursue their calling?—Yes, but no one can object to anything so reasonable as that, if the man is a qualified pilot. The great object is to keep the navigation clear, and if the master of a vessel is qualified it would be quite unnecessary to have another pilot on board.

4109. Mr. *Brassey.*] It is very difficult, is it not, to draw a hard and fast line between the duties of a pilot, and the duties of a shipmaster?—I do not think it is very difficult; I think the pilot should simply supply the local knowledge of which the master is deficient.

4110. Whatever rules you lay down you would have to leave the captain to his discretion as to the occasion which would compel his interference with the pilot?—I do not put it in that way. I say that the captain should always have the responsibility upon his own shoulders; he should always handle and control his vessel himself, and he should apply to the pilot simply for local knowledge in passing through dangerous navigations. At present the pilot gives orders to starboard or port the helm of the vessel as the case may be. He should not do that, he should say, "I want you to put the vessel there," and the captain should give the necessary orders. There is a wide distinction between a pilot taking the handling of a vessel which he does not understand, and simply asking her to be put in a certain position.

4111. Are you acquainted with the Admiralty regulations as to the responsibility of the captain or the pilot?—No.

4112. With regard to the pilotage fees in the port of Liverpool at the present time, do you think they are moderate in amount for the service rendered?—Yes, very moderate.

4113. And under the voluntary system, if you have proper regulations for administering the service after the change has taken place, and you compel the vessels to keep their present stations while the employment of pilots is only voluntary, would you anticipate that larger fees might be obtained from vessels which did employ pilots?—Yes; if we are to keep up the present staff of pilots on the stations, with their present boats, the vessels which take pilots must pay more, because the present income is not in excess of the requirements, and it must be raised in some way if the system is to be maintained.

Mr. *R. Galloway.*
3 May 1870.

4114. And you think it is doubtful if a service as efficient as you now have could be maintained, without imposing the same burden upon the shipowners as a body?—My opinion is, that it could not be maintained in its present state of efficiency.

4115. Mr. *Norwood.*] I understand your argument, and that of the previous witnesses from Liverpool, to be this; that compulsory pilotage is necessary in the Mersey for the public good, and that there is a certain expensive establishment necessary, to which every vessel should contribute?—Yes.

4116. And you also go further, and say that the owner should be responsible for any accident that occurs to his vessel, even with that pilot on board?—Yes; I think the law ought not to be altered by the mere fact of a pilot stepping on board the ship.

4117. If it is necessary for the good of the trade of Liverpool that there should be compulsory pilotage, and that every vessel should take pilots, and every vessel should contribute to the expenses of the establishment, and you deprive the shipowner of his immunity, would it not be reasonable that the shipowner, or any other person who is damnified by the wrong act of the pilot, should be indemnified out of the common funds of the Pilotage Board?—No; I think there might be a certain amount of responsibility attaching to the pilot. He might be compelled to give a bond for a moderate amount. So long as you have an efficient pilotage authority, and they do their best, I think, in the event of an accident occurring, it should be treated as an unavoidable accident.

4118. And yet my ship going to Liverpool is forced to take a pilot, though I do no want him; and if that pilot makes a gross blunder, and gets me into trouble, which costs me 1,000*l.*, I am to have no remedy against the pilot or anybody else?—So long as an efficient pilotage authority does its best, I am afraid you must accept that as one of the contingencies of shipowning.

4119. You do not like immunity; you like liabilities?—I am very fond of immunities; I should like the immunity if I could have it with the efficient system of pilotage which I consider necessary.

4120. Mr. *Cave.*] You think the immunity at one time may be a liability at another time?—Yes, I escape to-day and am caught to-morrow.

4121. Mr. *Hardy.*] What proportion of the ships which are exempt from pilotage take pilots in bad weather?—I have no statistics by which I can tell you that.

4122. Has any record been kept?—Not that I am aware of.

4123. Have you any sort of idea as to the extent?—No; I think they very seldom take them.

4124. They are a very small class of vessels, are they not?—Yes; the men go out almost daily, regularly, and they get an amount of knowledge which enables them to do without a pilot.

4125. *Chairman.*] I gather from your evidence that you have had no experience of any port where pilotage is voluntary?—I have no experience of any port where pilotage is voluntary.

4126. And therefore you do not know whether in those places the pilotage authorities succeed in maintaining control over their men, and keeping them at their stations?—I am not aware of my own knowledge.

4127. Have you heard the evidence which has been given here?—Yes, to-day and the last day on which the Committee sat.

4128. You have not heard the evidence as to the possibility of maintaining a strict control over the pilots, even though their employment is not compulsory?—I have not heard that evidence, but I believe it quite possible unless it is an exceptionally dangerous navigation, as we think ours to be. The pilots have to remain out at sea in all weathers with a lee shore constantly, because the prevailing winds are blowing right in upon Liverpool Bay, which causes these banks to shift, and it is because our navigation is so difficult that we think it would be nearly impossible to keep the men at their posts under any other system than the present one.

4129. Does not the difficulty of the coast make it more certain that vessels would employ pilots?—The more difficult the navigation, the greater necessity there is for pilots.

4130. And the greater their employment?—Yes.

4131. And the greater is the inducement for the men to go in search of employment?—Yes, if they were certain of finding it.

4132. They are certain of finding it if the navigation is very dangerous, are they not?—Not in fine clear weather.

4133. But they are in bad weather?—In bad weather they would all take pilots if they could get them.

4134. And there would be always an inducement for a pilot to go out in search of a vessel because he would be certain of employment?—Yes, he would be pretty sure of finding employment in bad weather.

4135. Therefore, the greater the difficulties of the navigation the greater the certainty of employment for pilots?—That seems to follow.

4136. Have you any doubt in your own mind as to the employment of pilots in Liverpool after the Bill passes?—If the Bill passes I believe in fine weather, in the summer season, for instance, a great many vessels would not take pilots.

4137. Have you formed any opinion as to the proportion of vessels that would not take pilots?—It is mere guess work; but in these days of close competition, the saving of a few pounds is of great importance to the shipowner, and vessels of a certain class would run in without pilots.

4138. But do not you think a great number would still take pilots in fine weather?—Yes; I think all the best class of shipowners would do so.

4139. In fact, all but the small ones?—There are plenty of indifferent shipowners who own very large vessels.

4140. In bad weather everybody would want pilots; but you think that it is only in fine weather there would be any falling off?—I think so.

4141. Do you concur in all that has been said as to the difficulties and danger to the navigation in consequence of the immunity of owners?—Yes.

4142. Have you had frequent cases of that kind?—Yes; that state of the law leads to a vast amount of litigation.

4143. Therefore you think a great number of accidents occur from this rule?—Yes; I think the present state of the law has a tendency to increase the number of accidents.

4144. Should

4144. Should you say that the very considerable number of accidents occurring in the Mersey arise from that state of the law?—A considerable number, because the captain and the pilot do not act together; the captain is superseded and afraid to interfere.

4145. Do you keep any record of the number of accidents that occur when vessels are in the charge of pilots?—Yes; the pilotage committee have a record; I have not it with me.

4146. Could we see that record?—Yes.

4147. Do you say that a large proportion arise from the very state of the law which relieves you now from immunity? — A considerable number. That is my opinion.

4148. And that gives rise to a large amount of litigation?—Yes.

4149. We have been told that half the cases of the Admiralty Court come from Liverpool; do you think that is the case?—That I am not aware of.

4150. Would you be surprised to hear it?—No.

4151. You are of opinion that the present state of pilotage in Liverpool does not result in anything satisfactory as far as collisions are concerned, does it?—Regard ought to be had to the prodigious amount of traffic over these waters.

4152. Do you think that a large number of accidents would be prevented by a change in the law?—Yes.

4153. Do you consider that they occur in consequence of the vague relationship between the pilot and the captain?—From the captain being superseded by the pilot in commanding his vessel.

4154. In many of these cases would it not be better for the owners that there should be no pilots at all?—No, you may run upon a sand bank in that case.

4155. But you would not come into collision?—No.

4156. The captain is compelled to take a pilot, and the pilot brings him into difficulty?—In some cases.

4157. In those cases would not the owners be better without pilots at all?—I would not like to say that, because the buoys are constantly shifting. In Admiral Evans' reports I find, in one year, no less than 99 buoys were shifted; some were driven from their anchors in hurricanes, and others sank.

4158. I now talk of collisions, not accidents from running upon sand banks. We are told that there are numerous collisions occurring from the captain having given up his command?—Yes.

4159. And in those cases the owner would be better off without a pilot, would not he?—So far as the collision was concerned, it possibly might be so.

4160. And all those accidents might be prevented?—Not all.

4161. A great number of them might be prevented?—Some might.

Friday, 6th May 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. Pemberton.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. Robert Poulton John Simpson, r.n., called in; and Examined.

Mr. *R. P. J. Simpson*, R.N. 6 May 1870.

4162. Mr. *Graves.*] I believe you hold the office of Superintendent of Pilots at Liverpool?—I am Superintendent of Pilotage at the port of Liverpool, and am an Examiner of Pilots and Masters and Mates for pilotage certificates.

4163. What was your previous occupation?—I served 19 years in Her Majesty's service as a master of the Royal Navy.

4164. You are professionally familiar with the whole question of the system of pilotage round the coast?—Yes, I am.

4165. Do you hold a Trinity House pilotage certificate as well?—Yes, I do, from the Downs to the Lands End.

4166. Do you consider that the navigation of Liverpool, and the approaches to the port, are more dangerous than any other port in this kingdom?—I think so, without any exception.

4167. Will you shortly state what is the qualification of a pilot in Liverpool?—A Liverpool pilot after serving a long apprenticeship, is examined as to his qualifications as a pilot in seamanship and the use of charts; the variation and deviation of the compass; the pilotage of Liverpool Bay; and the pilotage of the neighbouring ports, from the Skerries to Whitehaven, including the Isle of Man.

4168. Can you give the number of miles of coast that his knowledge ranges over?—I should say about 150 miles.

4169. Besides being pilots for the approaches to the Mersey, they are also sea pilots for all these other anchorages and harbour, are they not?—They are practically the only sea pilot's for these other harbours.

4170. When are your licenses granted?—They are granted between the 25th of March and the 25th of September only.

4171. Why are they confined to those limits?—The object is to give the apprentices or the younger pilots the benefit of the whole summer for gaining experience. It is not thought advisable to grant them licenses during the winter months.

4172. I believe that the gross earnings of the pilots are divided between the boats and the pilots in prescribed shares?—They are.

4173. Will you give the Committee some information as to the shares and the earnings?—The only way to do that is to take a boat and see how she divides her pilotage on a certain day. Taking No. 1 boat on the 1st of January, I find by the bye-law which prescribes the mode of division, that the earnings will be divided as follows: for the owners of the boat $2\frac{1}{2}$, shares; for four licensed apprentices at $\frac{3}{8}$rd of a share each, $2\frac{3}{8}$rd shares; for all the unlicensed apprentices, $1\frac{1}{2}$ shares; making for the pilot boat, a total of $6\frac{3}{8}$rd shares. Then there are the three masters, the first, the second, and the third master.

4174. Are there three masters to each boat?—There are three masters to each boat, each having one full share the same as a first class pilot, that makes three shares more; 16 pilots of the first class, one share each, that makes 16 shares more; one journeyman pilot of the second class, at $\frac{5}{6}$ths of a share, and one of the third class, at $\frac{2}{3}$rds of a share; these added up make $27\frac{1}{6}$th shares; so that all the pilotage earned on that day, the first day of January, would be divided by the $27\frac{1}{6}$th shares, to get the value of a first class pilot's share. Then the other divisions will follow as a matter of course; $6\frac{3}{8}$rds times that single share will be the proportion due to the boat owners.

4175. How many boats are there?—There are 12 boats.

4176. Are they all owned by pilots?—They are all owned by pilots, reckoning a superannuated pilot still as a pilot, for the purpose of holding shares.

4177. What is the number of superannuated pilots that hold shares?—There are 20 superannuated or retired pilots holding shares in pilot boats. There is a distinction between a superannuated and retired pilot. One or two have no superannuation; they have not asked for it.

4178. How many shares have the 20 superannuated pilots?—They hold 238 shares. Then there are 34 master pilots holding 330 shares, and 40 pilots 200 shares, making 768 shares. I have taken this on the 1st of January.

4179. What do you consider to be the value of a share in a pilot boat?—The Chairman has had some returns furnished him, and upon analysing them I find that the average, over a period of five years prior to the 1st of January last is, as near as possible, 118*l.*

4180. Is that the value at which they appear to

to have been bought and sold?—That is the value at which the shares have been bought and sold. I arrive at that average by taking every sale for the last five years in each boat, adding them together and dividing by the number of sales, that gives me the price; 118 *l.* and a few shillings.

4181. That multiplied by 768 shares, gives you the total value?—It does.

4182. How much does that come to?—It comes as near as possible to 90,700 *l.*

4183. With reference to the earnings of the boatowner, can you give any information upon that point?—Taking the same figures that we have been working upon, I find that the average profits for the last five years will be 12½ per cent.

4184. Is that 12½ per cent. upon the market value of the shares?—Yes; 12½ per cent. upon the market value of the shares.

4185. Is that without any deduction for assurance or depreciation?—Without any deductions; it is the net profit, without deductions for insurance or depreciation.

4186. In fact, the whole earnings have been divided amongst the proprietors?—Yes.

4187. What do you consider would be a fair rate for each proprietor to set by for depreciation and insurance?—From inquiry amongst the shipowners, I am told that the depreciation of wooden ships is about 10 per cent., and the depreciation in iron ships is about 5 per cent.

4188. *Chairman.*] With regard to that 12½ per cent. profit, is that after the payment of the current working expenses of the vessels?—Yes, after paying the working expenses of the vessels.

4189. But not after deduction of depreciation?—Without deduction for depreciation or insurance.

4190. Mr. *Martin.*] Does this 12½ per cent. include the interest on their capital, and wages of their labour?—No, it is net, the wages are deducted.

4191. Mr. *Brassey.*] There is no interest on capital allowed, but the wages are deducted?—Yes.

4192. Mr. *Martin.*] On the purchase of the boat?—On the purchase of the shares; in point of fact, the share represents so much stock, and the boat is merely the representative of that stock.

4193. Mr. *Graves.*] What do you consider to be the per-centage for the depreciation?—As the pilot boats are built in a superior manner, and well kept up, I would estimate the depreciation at 7½ per cent., and the insurance at not less than 5 per cent. per annum.

4194. These deductions would of course be upon the actual value of the boats; what may that be estimated at in round numbers?—At about 28,000 *l.* or 30,000 *l.*

4195. What return will that leave to the shareholders for their investment?—About 8 or 9 per cent.; the figures will show that quite plainly.

4196. Do you generally consider, looking at the hazardous nature of the employment, that that is too large an investment?—I do not think it too large for so hazardous an employment.

4197. I believe that the pilots and apprentices manning these boats are divided into crews, and that they are appointed by the board?—They are.

4198. With regard to the condition of the boats, what guarantee is there that they are kept in a very highly efficient state?—First of all, there is the fact of their being uninsured, which makes the owners keep them in first-rate condition. Then annually, or periodically, as occasion may require, I inspect the boats; and if I were to report against the boats, their license would be suspended. Then they have some supervision of their own; they have surveyors of their own, who are not interested in one boat, and who will go and inspect the condition of that boat; they say when she should have new sails, and so on.

4199. Is it your opinion that the earnings going into a common fund gives to all a common interest in keeping up the highest state of efficiency?—I understand it so.

4200. Supposing a boat is worn out, and unfit for service, do you command that a new boat shall be built?—The dock board would unhesitatingly command that a new boat should be built.

4201. Are the pilots bound to act upon that order?—They are bound to act upon that order; their license would be withdrawn if they did not, and they cannot work in unlicensed boats.

4202. Will you describe how the boats go out to their stations, and the order with reference to taking the stations?—There are six boats on the stations.

4203. Do these maps represent the stations?—The maps represent the stations. As soon as the telegraph clerk at Point Linas reports to me that a pilot boat has discharged all her pilots, and is inward bound, I order another boat out; and the first tide afterwards she goes out of dock, and takes her station at the inner station; she relieves the inner boat, which then takes the next outer station, and so they follow each other out to sea. We require several spare boats for that purpose, because sometimes as many as three boats have to go out in one tide.

4204. The outer boats are within a visible distance of your lighthouse at Point Linas, are they not?—Yes.

4205. And your inner boats are within a visible distance of the light-ship keepers of the north-west lightship, are they not?—Yes.

4206. Will you tell the Committee what steps you take besides the telegraph to insure a constant observation on the movements of these pilot boats?—There used to be a rumour afloat that the pilot boats were off their stations, and I myself personally am quite satisfied that it was not true; but to make it quite clear, with the approval of the pilotage committee, orders were given to the telegraph keeper at Point Linas, and the captain of the north-west lightship, to log several times during the day the actual position of the pilot boats, and to send that information to me as early as possible; and the telegraph keeper at Point Linas sends it to me immediately, so that I get it five times during the day, and any other information which it is necessary to give about the pilot boats.

4207. Have you got with you any of the logs which you speak of?—Yes.

4208. Take, for instance, Point Linas, and show the Committee the mode in which the observations are kept?—I will take two of the briefest. This is from the north-west lightship: "Monday, January 10th, 8.20 a.m." I presume that is the time they first see the boats. "No. 10, north, two miles; No. 12, north-east, two miles."

4209. Are those the numbers of the pilot boats?—Yes.

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

—Yes. "Nine o'clock, No. 10, N.N.E., two miles; No. 12, E.N.E., two miles. 12 o'clock, Nos. 12 and 10, N.N.E., three miles; 3 p.m. the same; 4 p.m., Nos. 10 and 12, N.E., three miles."

4210. Will you now take the one from Point Linas?—I presume you only want extracts referring to the pilot boats.

4211. Take a single day?—"April 30th, 6.30 a.m., No. 7 pilot boat inward; No. 12 pilot boat on duty; No. 10 inward. 9 a.m., No. 10 pilot boat on duty. five miles E.N.E. 9.15, No. 12 pilot boat made signal, 19 hands on board." I may say that they are compelled to signal to me two or three times a day as to the number of hands on board as a guide to us. "At noon, No. 12 pilot boat on duty, and No. 10 pilot boat on duty. 3 p.m., No. 12 pilot boat on duty, two miles N.E. by N." Then again at "six o'clock, No. 12, No. 10, and No. 5 on duty."

4212. So that the whole power of the light-house and surveying staff of the Mersey is dove-tailed in with the pilot service, so as to make the whole complete and efficient; is not that so?—It is.

4213. Are there many complaints with reference to pilot boats not being on their stations?—Complaints of that kind are very rare indeed.

4214. Are there many complaints against individual pilots for neglecting their duty?—There are several in the course of the year.

4215. Can you hand in to the Committee a list of the complaints made in the last year, or the last two years; take, first of all, the complaints made to the pilotage committee?—This is a list of the complaints against pilots during last year, 1869. (*The same was handed in,* vide *Appendix.*)

4216. How many complaints are there altogether?—I think there are 46 complaints.

4217. Are all these reported to the Mersey Board every week?—Every week, when any action is taken upon them.

4218. The pilotage committee, of course, inquire into them?—Yes.

4219. Do they report the whole of them to the Mersey Docks and Harbour Board, or only the most serious ones?—If they find there is nothing in the complaint, or that it is only necessary to give a caution, they do not report it; but if they reprimand, a report goes to the dock board.

4220. I suppose every week's proceedings as to the pilots are brought before the public notice, being public in consequence of the proceedings of the dock board?—It is brought before the public notice.

4221. Do you consider that a good check?—It is as complete as we can make it.

4222. Have you many instances of the weather being so bad when vessels, having passed all the outer stations, the pilots have been unable to be put on board?—Yes.

4223. What is the general practice then?—The pilot boat has to speak the vessel or vessels or to signalise to them, and at the proper time the vessel will follow the pilot boat, and the pilot boat is compelled by law to abandon her station if the vessel is in danger, so that she may be conducted in safety to Liverpool.

4224-5. Can you give any striking instance of this being done?—Yes, there was a striking instance in January 1866. Boat No. 3 fell in with a vessel disabled; she had no yards on her foremast, and it was blowing a furious gale; she had the foretopmast-staysail set and her main-topsail, and the canvass she had on her prevented her stopping. The pilot boat signalised to her to follow, and she preceded her, and they brought her in safety into the river. In consequence of No. 3 leaving her station, No. 8, the boat on the minor station, whose duty it more properly was to receive pilots from outward-bound ships, had to perform the double duty of looking after outward-bound ships and such inward-bound ships as had passed through the western stations. A crowd of vessels came up, and she had to stop them, because it was not the proper time to run for the bar; when she had got them all together she told them what to do; and when all were prepared, she made her signal and preceded them, and they followed her, and she brought the whole 12 of them into port in safety.

4226. What was the estimated value of property brought in upon that occasion?—Half a million.

4227. What was the amount which the pilots received?—£. 68.

4228. Was each vessel compelled to pay?—Yes.

4229. Under this Bill, where it would be optional for an owner to pay, would all those vessels be liable to pilotage in your opinion; do you consider that they would be compelled to pay?—I am afraid that, unless there is special provision made, I think the whole of them, except one, might say they were not piloted.

4230. If they so wished you think they could do so?—Yes.

4231. *Chairman.*] Would not it be a question of fact, whether they were piloted or not; supposing the pilot boat preceded, and brought in a string of other vessels, would not it be a question whether the pilot vessel was not acting as a pilot?—It would be a question depending entirely on the honour of the captain in each case. In this respect there would be no difference between foul weather and fine weather. Vessels might follow each other into port and say they were not piloted.

4232. Mr. *Brassey.*] The pilotage dues for the whole fleet, I understand, was 68 *l.*?—Yes. There is one other point in connection with that case which I should like to mention. A tug-boat fell in with one of these vessels and offered to tow her up for 500 *l.*; but the captain said he could see the pilot boat, and in consequence of that, he declined the tug's services; then 100 *l.* was demanded, and, finally the captain, finding he could follow the pilot boat, declined the services of the tug, and was brought up in safety.

4233. Mr. *Charles Turner.*] If there had been no pilot boat in view, might she not have had to give 500 *l.* or 100 *l.*?—Clearly so.

4234. That would be for one ship?—For one ship.

4235. Mr. *Gourley.*] Could the ship have come in without a pilot or a tug?—No; she would not have ventured to do so.

4236. Mr. *Grieve.*] Could she have gone back?—No she was on a lee shore.

4237. Mr. *Charles Turner.*] Then she would have gone ashore, would not she?—Yes.

4238. Mr. *Graves.*] Do you consider that the best system of pilotage, on the whole, for Liverpool is the compulsory system as at present?—I do, unquestionably.

4239. Do you consider that it is conducted at the least expense that it is possible to conduct it at, looking at the efficiency of the service?—I think so.

4240. Do

4240. Do you consider that it is important for vessels navigating the approaches to the Mersey that they should have pilots on board?—Yes.

4241. Would you have any exemptions?—I would have no exemptions whatever.

4242. Would you interfere with the vessels which are at present exempt?—The vessels or rather the masters that are at present exempt might be protected in some way; but with regard to the future, I think no one should be exempt from taking a pilot or contributing to the pilotage service.

4243. Would you make any distinction between the rate of contribution, or would you lay down a uniform rule for all?—I think that is a matter which I am not prepared to go into. If I knew the system that was to be adopted I could give an opinion.

4244. Then, in point of fact, do you consider that the system at Liverpool on the whole is perfect, and well adapted for the navigation of the Mersey, that you would like to bring up all the pilotage systems in the kingdom in similar waters to the same standard as your own?—Yes, I would like to do so.

4245. Would you rather do that than bring yours down to the standard of theirs?—Certainly.

4246. Is there any selection at all with regard to pilots for outward-bound ships; what is the general custom with regard to that?—The custom is, if a pilot gives satisfaction, inward-bound, for him to take the same vessel out; the law compels the ship to take the first pilot that offers, outward-bound as well as inward-bound; but this is an arrangement which is made for the convenience of the ship, unless there is any special objection to the man, and then we gladly, if possible, give them another pilot.

4247. Have you not made special arrangements with the owners of large steamship lines to allow them to have their own pilots?—We have.

4248. Is that in the case of vessels calling at Queenstown or Londonderry?—Whenever a service is so regular as to admit of a pilot being employed without disturbing the service, the committee gladly allow it to be done.

4249. Do you allow that privilege to vessels calling at Lisbon or Bordeaux?—There would be no difficulty whatever if the pilot could be paid.

4250. Do you, as a matter of fact, grant that privilege to vessels going to Lisbon or Bordeaux?—We do to vessels going to Bordeaux.

4251. Supposing the owner of a large number of steamvessels desired to choose his own pilot for bringing his vessels in and out of the Mersey, would it be possible to make a similar arrangement with him for allowing the pilot to land at the extreme limits of the pilotage waters?—I do not know that there would be any difficulty about it with vessels outward bound, but it would be very difficult with vessels inward bound.

4252. Have you had any applications of that character?—No.

4253. Have you granted all the applications which you have received for special pilots?—Invariably.

4254. It has been stated that licenses have not been granted to captains and masters of coasting steamers as freely as they might be done; is that so?—It is not the fact. Since 1859, when the dock board consented to undertake the examinations of masters and mates, every man that has come up has received fair play.

4255. Will you tell the Committee how many have applied?—Thirty-six altogether.

4256. And how many have passed?—Twenty-two have passed.

4257. What became of the remainder?—Six were transferred without re-examination; three, although they applied, did not come up at all; four did not appear again after one failure; and one failed three times and then did not come up; that makes in the whole 36. I may say there is no limit to the number of times that they can come up for examination.

4258. What steps do the dock board take to give publicity to their willingness to grant these licenses?—Directly the dock board consented to examine them they advertised in the local newspapers.

4259. Have you taken any pains to ascertain the comparative rates of pilotage in Liverpool as compared with other ports?—I have taken a vessel of 20 feet, and a thousand tons, and I have compared the Liverpool rates with those at London, Cardiff, and New York.

4260. Will you state what the rate is in and out of Liverpool?—In and out, altogether, it is 13 *l.*

4261. Now take London?—Taking from the Downs to the Nore, which is the shortest distance for which rates are provided, and the lowest rate for sea pilotage, I find that in and out, it will give 23 *l.* 12 *s.*; but if towed, there will be 5 *l.* 18 *s.* to come off, leaving the lowest rate of pilotage for that ship of 20 feet, 17 *l.* 4 *s.* But besides this, there is the charge for putting a pilot on board from the cutters or from the shore, namely, 3 *l.* 3 *s.*; and if that sum be charged each way, the net pilotage, after full deductions for towage, is 23 *l.* 7 *s.*

4262. *Chairman.*] Is that not from the Downs to Gravesend, and not from the Downs to the Nore?—It is to the Nore only. To Gravesend it would be, I should think, 7 *l.* more.

4263. Mr. *Graves.*] What is it from Cardiff to Lundy?—Between Lundy Island and the Penarth Roads, in and out, it is 14 *l.*; at New York it is 40 *l.*; but you must add one-fourth if piloted out of sight of Sandy Hook, and four dollars extra between the 1st of November and the 1st of April, as a winter rate. In each case that would make eight dollars more.

4264. Considering the efficiency of the service, do you think it is conducted at a less cost to the shipping of the port than any other similar service that you know of?—Yes, that is my view; I have heard it stated so by shipmasters.

4265. Can you tell the average number of vessels piloted in and out by each pilot in a year?—The average number actually piloted in a year is about 48 or 50 for each licensed man.

4266. *Chairman.*] Is that each way?—No; that is the whole work in and out.

4267. You mean 48 times in and out?—Forty-eight times in and out combined; 48 voyages.

4268. Twenty-four in and 24 out?—Yes; or it may be 25 in and 25 out.

4269. Mr. *Stevenson.*] That comes to about one pilotage job a week?—Yes; but there is other work in connection with the pilotage service.

4270. Mr. *Graves.*] You have got an annuity fund connected with the pilotage service, have you not?—Yes.

4271. How is it supported?—The annuity fund

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

fund is supported by the contributions of the pilots, and is considered a mutual insurance fund.

4272. Is it regulated by Act of Parliament?—Yes.

4273. How is it expended?—Solely in superannuations and sick allowances, and in casual relief to pilots and pilots' widows and their children.

4274. What is the amount of the fund at present?—£ 10,000 is funded in dock bonds, and on the 1st of January there was about 700 *l.* in hand.

4275. What is the amount of current expenses which are deducted from the annuity fund?—The annuities are the only current expenses; the dock board manages this fund free of all charge for working expenses.

4276. What were the actual receipts in 1869 from the various sources contributing towards the annuity fund?—£2,306 8 *s.*, as follows: 2½ per cent. contribution of pilots, 1573 *l.* 6 *s.* 2 *d.*; balance of license fund, 191 *l.* 6 *s.* 8 *d.*; balance of fines and penalties fund, 104 *l.* 15 *s.* 7 *d.*; interest on monies invested in dock bonds, 436 *l.* 19 *s.* 7 *d.*, making a total of 2,306 *l.* 8 *s.*

4277. What was the number of annuitants on the list on the 1st of January 1870?—Thirty-nine sick or superannuated pilots, receiving at the rate of 1,065 *l.*; pilots widows, 47 annuities, 750 *l.*; orphans, 46 annuities, 259 *l.*; total, 2,074 *l.*

4278. Is the annuity fund an increasing one, or a decreasing one?—It is rather decreasing. I am speaking of the current receipts.

4279. As regards the future, do you think you will lose any large sum next year?—Yes; the contribution to the annuity fund on the compensation for differential pilotage, amounting to about 235 *l.* a year, which will about absorb all our present surplus.

4280. Do you consider that the annuity fund will be only sufficient for the existing annuities in a short time?—It will be barely sufficient for it.

4281. What do you consider would be the consequences to the pilotage service if the present system of compulsory pilotage were abolished?—I think the consequences would be very serious indeed. It would disorganise the service altogether, because there would be a considerable falling off in the gross earnings. Then, I suppose, as a matter of course, there will be a reduction in the number of pilots, which I do not think is desirable. The system of boat owning I think will be disorganised. And as the annuity fund, from the falling off of the receipts, will be considerably impoverished, we shall not be able to pay our existing annuities.

4282. It has been stated here that there is some hardship in requiring that coasters should be six months in the coasting trade to constitute them as coasters, is that so?—That has been constantly a source of irritation; the reading of the Act of Parliament may or may not bear that interpretation; but the practice of the board is, that if a ship can make up six months during her career in the coasting trade to allow it to count. The dock board in 1864 wished to do away with this question about coasters, and was willing to accept as a coaster every vessel the Custom House determined was a coaster.

4283. What steps did they take to carry out that design?—They brought it into the Bill of 1864, which contemplated other changes in pilotage, and they were thrown out at the instance of the steam trade.

4284. It has also been stated by persons from Runcorn, that the compulsory pilotage acts prejudicially to the shipping visiting that port; have you calculations to show the number of vessels entering that port with and without pilots; first take the inward vessels entering the Port of Runcorn?—These figures I have received from the chief accountant of the dock board. Between the 7th April 1869, and the 18th of March 1870, nearly 12 months, which was all we could get at the time, the number of coasters inwards was 3,652.

4285. How many of them came under the compulsory obligation to take a pilot?—One hundred and forty-two.

4286. Now, take clearances outward from Runcorn?—Outward from Runcorn in the same period the number of coasters was 3,399.

4287. How many of them came under the compulsory obligation?—One hundred and seventy four.

4288. What is the total number in and out?—The total number in and out is 6,961, of which 316 only were liable to pilotage.

4289. So that it cannot be considered any great hardship when so many thousands go free and so few hundreds came under the obligation?—It is a very small matter to complain of.

4290. Mr. *Martin.*] You seem to say that this Bill would very much injure the funds of the pilots; I suppose you are aware that the intention is that the people who are deprived of employment under this Bill shall be compensated?—I speak of the effect upon our funds and the earnings; of course I am not speaking of compensation at all; these will be subjects for compensation afterwards.

4291. But they would be compensated under the Bill, would they not?—I am not aware to what extent the compensation is contemplated; I understand the question of superannuation, as shadowed forth in the Bill, will not touch our case.

4292. Will it not be easy to modify the Bill so as to secure that?—I should think so.

4293. Mr. *Stevenson.*] From those figures regarding the trade of Runcorn, it would appear that not more than 4 per cent. of the vessels are liable to compulsory pilotage; is that so?—I believe that is so.

4294. Although they are not liable to compulsory pilotage, may they not take pilots voluntarily?—They may all do so. A pilot dare not refuse his services to any ship.

4295. Can you tell us, in point of fact, how many of those who are not compelled to take them, nevertheless do take them voluntarily?—I cannot say.

4296. Those vessels which you have mentioned are Runcorn vessels trading to Runcorn only, are they not?—They are coasters from all parts trading to Runcorn.

4297. They are probably of a smaller class than those vessels trading to other ports?—Yes; the ordinary sailing coasters would average about 200 tons and downwards.

4298. What is the largest size of vessel that goes up to Runcorn?—I think I have known a foreign ship of 600 or 700 tons going up there.

4299. The pilotage which you speak of now, regarding the Runcorn vessels, is the sea pilotage?—Yes, it is the sea pilotage, and has nothing to do with the river.

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

4300. So that, in point of fact, with regard to those vessels, the exemptions amount to about 96 per cent. ?—About that; vessels under 100 tons or in ballast are exempt.

4301. You have described the arrangement by which masters of vessels are allowed to select their outward pilots, instead of taking the one whose turn it is; how many masters of ships do avail themselves of that power of selection?—Very few indeed. As a rule, the masters are satisfied with their pilots, and are only too glad to get the same man out again, giving as a reason that the man must be somewhat accustomed to their ship.

4302. You and other witnesses have described the arrangement which you make with the owners of the large steamers for giving them a constant pilot?—Yes.

4303. How many of your whole pilot staff are detached from their ordinary service to do that special service?—I may explain that we do not consider them detached at all. We call them permanent pilots, but their earnings come into the gross amount the same as those of any other pilot. There are 14 of those pilots.

4304. Then are those 14 men never in the pilot boats?—Those 14 men are never in the pilot boats so long as they are attached to that particular company.

4305. Does not that operate as an injustice to those who go through the hard work of the pilot boat service?—Those that have to do the work no doubt will feel it. It is a matter of competition among the men to get such a position. They feel that it is a more comfortable berth, I dare say; but on the other hand, there is a regular and steady responsibility in piloting those large vessels. We consider it as a sort of reward to good men.

4306. Are the earnings of these constant men who are employed in the large steamers greater or less than the average of the other men?—Of course they are greater than the average; they bring in the larger class of vessels, but they get a *quid pro quo* in the shape of increased comfort and regularity. They have only about one day or so at sea a week, and all the rest of the men have to go through considerable hardships.

4307. We have been told that in order to keep up the local knowledge of the pilots it is necessary that they should be constantly in the pilot boats; in the case of those men who are never in the pilot boats, how is their local knowledge maintained?—They have gone through the process; they are first-class men, and they pilot a ship out one week and another in the next week. That is considered in their case, I presume, a sufficient amount of practice to retain their efficiency. At any rate, that is the opinion of the shipowners who employ them.

4308. We have been told by other witnessess that it is essential, in order to maintain the pilot's efficiency, that he should be constantly on the pilotage ground, and that those who pass through the pilotage waters on board steamers, however frequently they do so, cannot obtain the necessary amount of local knowledge; what is your opinion upon that point?—I can hardly think that it would be said that men going through, however frequently, could not obtain the necessary amount of knowledge. There are many men in Liverpool that have a certain degree of necessary knowledge, and it is proved by their coming in and out. But it cannot be expected that any master of a steamer steering a mid-channel course, can be so well acquainted with the dangers of a port as its local pilots.

4309. Notwithstanding the shifting of the buoys and sandbanks that has been described to us?—They are daily cognisant of the change, or they ought to be. They are not cognisant of it, of course, to the same degree that the pilot is. It is not possible to give the captain of a coasting steamer the same information, or keep him so well posted up, as you would a pilot.

4310. My point is, that those selected pilots are now in no better position than the captains of coasting steamers would be, with regard to maintaining their local knowledge?—They are in this respect: that pilotage being a profession with them, they take care to acquaint themselves with all this information, and whenever they are at leisure they go out to judge for themselves. I have known them to go out, when the "Alert" has been surveying, to pick up a little information about the banks. It being their duty, they lay themselves out for the purpose of getting the information. They are constantly in communication with my office, and consequently hear of the slightest variation, and they have to see the master of their boat every time they come in.

4311. Are the privileges of those selected pilots a matter of complaint with the main body of pilots?—I dare say those that cannot get it do not like it. They would all like to have it, and as I told you just now, there is a competition for it; but pilots, of course, are glad in these days to get any solid permanent situation, because they fear their business is becoming precarious.

4312. Is the system of selected pilots to large vessels extending?—I believe that every shipowner who can avail himself of that privilege, is doing so.

4313. If it extends very much, will not there be a difficulty in keeping the pilot boats manned in the ordinary way?—The dock board at present have perfect control over the number of pilots. The number of apprentices which the boats are allowed to have, is ample; but if it was not enough the dock board could at any time flood the service with pilots, if they could get competent men. The dock board has perfect control over them, and it can raise or decrease the number of pilots.

4314. But if the best of the earnings have to go to those who have the privilege of piloting the large steamers, how are they to remunerate those who go to sea for ordinary vessels?—They have guarded against that; they get no more than the average earnings of the pilots.

4315. Do their additional earnings go to keep up the average of all the others?—That is the case of every ship. If a pilot boards at Point Linas, and brings in a ship drawing 26 feet of water, that goes to make up the average. Many of our first-class pilots have to bring in vessels drawing 12, 13, 14, or 16 feet. I dare say the average draught of water is not so much as 16 feet.

4316. Does each boat divide its own earnings?—Yes.

4317. So that the average of one boat may be different from the average of another boat?—They constantly vary; but taking it over a few years, the earnings of a pilot in one boat will average with the earnings in another boat.

4318. *Chairman.*] Does that include the outward

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

ward pilotage?—Yes, it includes the outward pilotage. Everything in the shape of pilotage goes into the common fund.

4319. Mr. *Stevenson.*] Does each boat's crew form a sort of partnership?—They do not call it a partnership, because it varies so. A man may get his share to-day, and he may not get his share to-morrow; he may be absent on leave, or through sickness.

4320. But so long as he is doing any pilotage service he gets the average of his boat for that period?—Yes.

4321. To which boats do you attach the selected pilots that go in large vessels?—We have been most careful to insure fair play in that respect. The pilotage committee allowed only one pilot in any one boat to be so employed till we got to 12. A pilot might be selected from any boat by a shipowner; but after being so selected, it was my duty to see that he was transferred (as regards his share of earnings) to another boat if necessary. Now we have 13. I said 14 just now. One boat has two of these steam pilots. The fourteenth pilot is on detached service in command of a coasting steamer.

4322. The only advantage to the selected pilots is that they earn the same amount of money in an easier way?— That is a very considerable advantage.

4323. But there is no pecuniary advantage, is there?—I rather think there is a small pecuniary advantage. I think the owners allow them something for their board when they are staying at Londonderry and Cork, and I fancy that that gives them some pecuniary advantage.

4324. Mr. *Brassey.*] Did I understand you to say that every master of a vessel which could claim exemption under the present regulations availed himself of that exemption as a general rule?—No; any ship has the power to claim exemption; or rather, every master or mate of a ship has the power to claim exemption, no matter what the size or the trade of the ship may be, if he submits himself to examination.

4325. I think you said that about 96 per cent. of the vessels trading with Runcorn have come in and out without pilots?—I said that they were not liable to pilotage; they need not take a pilot.

4326. You do not know what proportion of those who can claim exemption avail themselves of it?—No, I do not; but practically the coasters that are exempt never take a pilot, unless it is very thick or dangerous weather. We had a case in point the other day, of a small vessel of 25 tons, drawing six feet of water, requiring a pilot.

4327. As a general rule do these coasters who come in without a pilot manage the navigation in safety?—It is a common occurrence for them to be going on the banks. The greater amount of losses are with coasters.

4328. I think you gave it as your opinion that no vessel should be exempt; but how with reference to vessels in the short-voyage trade, that go in once, or twice, or thrice a week; in such a case the master ought to be acquainted with the navigation, ought he not?—He ought to pass an examination, and get a certificate; it would protect him at the same time. But it is not possible for any captain of a steamer to have a thorough knowledge of pilotage; he goes from light to light, and mark to mark, and steers a mid-channel course; but in hazy weather he cannot see his marks, and it requires local knowledge to tack from one side to the other of the Channel, and navigate his ship properly.

4329. I presume the examination which you would propose for masters of such vessels would be a modified examination; you would not require them to pass through the same elaborate examination that you require of a professional pilot?—No, simply in pilotage; they must know the pilotage of the port.

4330. I think you said that 46 complaints had been received in the course of last year?—Yes; that is the number of complaints of every kind.

4331. And these complaints affected only individuals; were there several complaints relating to the same men?—It is possible. I see here that there are two following relating to one person; of course there may be several against one man.

4332. How many of these complaints were held, on full inquiry, to be well grounded?—I have analysed the decisions, and, so far as I can find, the number of pilots punished by fine or loss of earnings was 30, and the number reprimanded or cautioned was nine.

4333. So that if a man cannot maintain his character for steadiness and efficiency, you do not hesitate to remove him from the service?—Not in the slightest degree. I see that there were six suspended, one reduced, and one dismissed the service; making a total of 46.

4334. Have the pilots of Liverpool, as a body, considered the provisions of the Bill with reference to compensation?—I have no doubt they have.

4335. Have you heard them express any opinion as to the adequacy of the proposed compensation?—They are under the impression that the promoters of the Bill are not acquainted with the amount of loss the pilots will suffer.

4336. Then, with reference to the value of the boats, I think you said you would set aside the sum of 7½ per cent. to meet depreciation?—If the boats were mine I should do so.

4337. You mean if you wish to keep them in a state of efficiency?—Yes.

4338. With reference to replacing the worn-out boats, that is done on the requisition of the Mersey Docks and Harbour Board, I believe?—If necessary, the dock board would take the initiative, but when the boat's character is going, there are plenty of complaints; the pilots themselves speak out when a boat is not seaworthy; a man that had no interest in the boat would say there ought to be a new boat. But I am glad to say, in my experience, the initiative has come from the boat owners generally; in fact, I think in every case.

4339. When a new boat is built, is she paid for out of a general fund, or by the crew who sail in her?—Neither; the boat owners, whoever they may be, have to put their hands in their pockets and build a new boat.

4340. Mr. *Norwood.*] Do not you think it is a bad system that the boats should be in the hands of private owners?—I have looked well into this question of ownership, and I have really no fault to find with the way the boat owners manage their property, and the way they conduct the service; but, if you ask my opinion, I candidly think that either the boats should belong to the whole of the pilots, or to none of the pilots.

4341. Is it not the case that when a boat is accepted, and enters into the service, that the value of

of that boat is enormously increased?—No, it makes no difference to the boat.

4342. Does it make any difference to the owners of the boat?—No, because the share is a permanent thing; a share is so much stock; the boat is merely the exponent or the representative of the share.

4343. Supposing a new boat costs 500 *l.*, the moment that boat becomes incorporated in your system as a pilot boat, the value of it is more than 500 *l.*, is it not?—The share must come under consideration before the boat; the share is so much marketable value before the new boat is built. The man that holds a share in the old boat must help to build another when she is worn out; he must put his hand in his pocket and build a new boat to the full extent of the liability of his share. There are 64 shares in each boat. Supposing a man who has paid 118 *l.* for his share has to build a new boat, he will have to pay from 35 *l.* to 40 *l.* for his share of the cost of the new boat; that is so much loss to him by getting a a new boat.

4344. Supposing two boats are built at the same moment, of the same value, and one boat is in the pilotage service, and has to seek her living, would not a new boat in such service be worth twice as much as the boat out of it?—I do not see any analogy whatever between the two cases.

4345. Then your system is different at Liverpool to what it is in the Humber, because I am informed that when the pilot boats in the Humber are private property, their value is increased three or fourfold; it is an immense boon for a boat to become a pilot boat?—In Liverpool we have it in shares, rather than in a boat. In 1824, when the boat ownery was first brought under this system, certain persons held certain shares in the existing boats, and those certain shares had a marketable value which has not materially changed. Whoever bought those shares would have to renew the boats a good many times over in the course of a century.

4346. Mr. *Brassey.*] That market value represented something more than the money spent in purchasing the boat, did it not?—It represented the value both of the goodwill and the privilege of the pilot service, besides the money spent in purchasing the boats prior to 1824.

4347. Mr. *Norwood.*] Then the ownership of these boats bears a very good premium?—Yes; but it is a matter of arrangement among the pilots themselves and the governing body.

4348. Supposing by any process the Mersey Board, who are the Pilotage Commissioners of Liverpool, were gradually to introduce their own boats, and to treat the question as a mere ownership question, to debit your fund with the cost of the boats, to repair the boats, and to work them at first cost, would not there be a very great saving?—Of course the pilot boats are getting more profit than would be required by a public board.

4349. Supposing you gradually placed your own boats in the position of the pilot boats, could not you keep up your boats cheaper than the private individuals could?—You could not do it without gross injustice to the men holding the shares in the existing pilot boats.

4349.* Supposing their fair interests were considered, and they were indemnified, would not it be a far better system for you to have your boats than the present system?—Yes, far better.

4350. If your system of pilotage in the Mersey is to be continued, do not you think that it would be very desirable for the dock board to take the matter into their immediate consideration?—I think that it would be very desirable to take the matter under immediate consideration; but whether it should be by the dock board or the Board of Trade, or both, it is not for me to say.

4351. Is it not right and just that your pilotage expenses upon the shipowners should be rendered as light as possible by economical management?—Of course it should, but then this matter of boat ownery is a deduction from the pilotage earned.

4352. You might charge less for pilotage?—I do not think you could get the work done at Liverpool for less pilotage than is now paid.

4353. Do not you think yourself that that system is an extravagant one as far as the shipowner is concerned?—I do not think the shipowner has anything to do with it.

4354. Would not you save a considerable sum of money if the boats were the property of a board instead of the property of individuals?—No, I do not think we should save money; I think, if the dock board worked the boats, they would do it on a different scale.

4355. About licensing masters and mates; how is it that other ports license very freely and Liverpool does not?—I cannot give you any reason why masters and mates should not come up for examination if so disposed. I can only answer you in this way, that when a man comes before me, as an examiner, I put myself in his place, and do him justice. I try to do as I would be done by.

4356. Then the masters out of Liverpool are rather an ignorant set of men, are they?—Not at all; but they have a respect for the dangers of Liverpool, I suppose. And again, that question of liability comes in; they do not like the responsibility involved. I believe, if you were to leave it to shipmasters, all over the kingdom there would not be one man that would come forward for examination for a pilotage certificate. It is a shipowner's question; not a shipmaster's.

4357. The shipmasters do not care taking upon themselves the serious responsibility?—I believe they do not.

4358. Unless a pilot is on board the ship, her owners, of course, are responsible, even under the present system?—Yes, if a pilot is not on board, her master or owner is responsible.

4359. And that deters them from taking licenses?—It may be that. I know that every master and mate has the privilege, and, as a rule, they do not care for it; they do not consider it a privilege.

4360. I think I understood you to say that you consider exemptions wrong altogether?—I do, altogether.

4361. And that you would make every vessel pay?—I would make every vessel pay for the maintenance of the pilot service, because every vessel has the privilege of employing a pilot when she pleases, and may require one when it will be exceedingly inconvenient to supply a pilot.

4362. Would you be able to reduce the charges in that case?—That would depend upon the kind of charge that is made.

4363. I say, would you be able to reduce your present charge?—I have not gone into that question at all; the coasting steamers now do pay a small sum, but it is very small.

4364. Supposing they had to pay the full sum, what then?—The full sum would be six times as much as those pay who do not take pilots.

Mr. *R. P. J. Simpson*, R.N.
6 May 1870.

4365. That would not reduce your standing charges?—Of course, if we had more money and the same number of men, it would be quite competent to the dock board to consider any application for the reduction of the rates.

4366. You are really of opinion that Liverpool is an exception to every other port of the kingdom?—It is altogether different to any other port of the kingdom; I do not want to say anything with reference to the pilotage of other ports one way or the other, but Liverpool is exceptionally difficult.

4367. You have given your opinion that this Bill might be applied to every other port in England, except Liverpool?—I am not aware that I have. I think, wherever the local authorities do not want the Bill applied to them, their views should be respected. Different places require different treatment; one is difficult of access like our seaport, and another is more like a harbour or dock, and easy of access.

4368. Sir *Selwin-Ibbetson*.] I believe the same facilities are offered in Liverpool for examining these masters that are offered in other ports, are there not?—Exactly the same; they are conducted on the model of the Trinity House.

4369. You said, in the early part of your evidence, that you considered it impossible that a master should know the navigation, and that they steered from buoy to buoy, and, consequently, in hazy weather they could not see the marks; but there are a good number of vessels that do navigate in and out without pilots?—Yes.

4370. The Beaumaris steamers and the steamers to the Isle of Man do so?—Yes.

4371. And they must go into the Mersey hazy weather as well as fine weather?—Yes; but we have no return of their accidents; we know that they do sometimes get on the banks; a coasting steamer ran on the bar the other day at dead low water.

4372. Do you know, as a fact, that those boats do take pilots?—They are not bound to take pilots, but I know some of them do take pilots.

4373. Probably they have on board a sailor who has local knowledge?—Many of them have men on board with pilotage certificates granted by the Board of Trade.

4374. Mr. *Hardy*.] With regard to the habit of taking pilots at fixed ports away from Liverpool, I suppose it is only large companies in regular voyages that can adopt that system?—It can only apply to the mail steamers.

4375. And it is only done by them with the view of saving time?—Yes.

4376. And with the view of saving the stopping when they come to the stations?—Yes.

4377. It is not done because they have any distrust of the other pilots, but they find it more convenient to do so?—It has nothing whatever to do with the qualification of the pilots.

4378. They do not distrust the pilots?—They do not.

4379. It is merely a question of convenience?—That is all.

4380. Mr. *Charles Turner*.] You have been asked several questions by the honourable Member for Hull, with respect to the ownery of the boats; are the owners of those boats acting pilots or retired pilots?—There are no boatowners but acting or superannuated pilots.

4381. Then, if there is any benefit derived from the ownership of that boat, it goes to remunerate either acting or retired pilots?—It does.

4382. Are there any requirements under the Act of Parliament with respect to the size of the pilot boats?—They must not be less than 40 tons.

4383. In point of fact, what size are they usually?—The average is about 60 tons register. They perhaps run up to 100 tons.

4384. Then, in point of fact, the boats are larger than required by Act of Parliament by one-half?—They are larger than required by the Act of Parliament, but they are not too large for the service.

4385. What is the reason of the boats being so much larger; is it to increase the safety and comfort of the men?—That is not really the practical reason. It is to make them more efficient, and to enable them to keep their stations better.

4386. The increased size is to increase the efficiency of the pilot service?—Nothing else.

4387. And that increase of size involves additional expense to the owners of the pilot boats?—Yes, it does.

4388. And that is paid voluntarily by the owners?—It is paid voluntarily by the owners.

4389. There is nothing to compel the owners of the boats to have the boats any larger than required by the Act of Parliament?—No.

4390. Therefore the whole of the increase is a charge upon the pilotage service, which they voluntarily incur in order to render that service more efficient?—That is so.

4391. Are you aware of any ports where there is any compulsory pilotage, in which that voluntary expenditure of having their boats larger and more efficient than the regulations require has been incurred by the pilots?—I am not aware of any such places.

4392. Is it not your opinion that that is a great evidence of the *esprit de corps* of the pilots, that they should make their boats as efficient and as good as possible for the service required by them?—There is no question of it. I think the pilot boat owners are as proud of their boats as they are of their own families.

4393. The owners of any particular boat feel a great pride in having their boat in a more efficient state than that of their neighbours?—Yes.

4394. I believe there is considerable emulation among them that they shall have the best boat in the service, is there not?—There is all that feeling.

4395. I need not ask you whether there is considerable danger in the men boarding vessels out at sea in bad weather?—Very great danger; and that danger would be incurred rather than leave the station to lead the ship up. If they could possibly put a pilot on board the ship, they would never think of running off the station.

4396. Are any changes that occur in the channel from time to time communicated by one pilot to another, if one sees anything which has not been advertised?—Yes; and they acquaint me and I acquaint my brother officer, the marine surveyor, and we work with one another upon one system of mutual assistance through the whole service of the dock board.

4397. The proceedings of the pilotage committee are read over weekly at the meeting of the Mersey Dock Board, are they not?—Yes.

4398. And that board is held in the presence of reporters?—Yes.

4399. And those reporters communicate the proceedings of the Mersey Dock Board to the public?—Yes, they do.

4400. And

4400. And in that way anything that is worthy of remark in the proceedings of the pilotage committee is communicated to the public?—It is so.

4401. And if any pilot has been censured or found fault with during the week by the pilotage committee, that is noted in their proceedings and is reported to the board?—Yes.

4402. And through the board it is communicated by the reporters to the public?—Whenever there is anything of special interest to require them to do so.

4403. If you had to supersede a pilot, or severely censure a pilot, in consequence of irregularity of conduct, that would be communicated to the Mersey Dock Board, and through them to the public by the means of the reporters?—Yes, it would.

4404. Do you consider that a considerable check upon the conduct of the pilots?—It is the most thorough public check possible.

4405. And therefore every shipmaster and every person in the port of Liverpool who reads the dock proceedings would know the names of any pilots who had been guilty of any conduct which was considered worthy of the censure of the pilotage committee?—Yes, if the reporters considered it of sufficient importance to report it.

4406. With respect to the ownership of the boats, the boats are required to be perfectly efficient?—Yes, they are.

4407. If the owners of an old boat are required to replace the old boat by a new one, that is done at a considerable loss to the owners, is it not?—Yes, it is done at a considerable loss to the owners.

4408. But you never find any obstacle on their part to meet the requirements of the dock board, or of the pilotage committee, with reference to that matter?—There may be a little grumbling at first among the few, but after a short discussion they always carry out the instructions of the board in the matter.

4409. The instructions of the board are always complied with, are they not?—Yes, they are final.

4410. And they have no ground of complaint with reference to the efficiency of the pilot boats in any particular?—None whatever.

4411. And those boats are more efficient, according to the extent of speed and their size, and in different other matters, than the regulations of the Act of Parliament require?—They are, and I do not think they can be beaten by any pilot boats in the world.

4412. Colonel *Bourne.*] The boats are held in shares?—Yes.

4413. Does the value of those shares vary?—They vary, but not so much as might be imagined.

4414. If the pilot boat is in a bad state of repair, or a new one is about to be required, the value of the shares would be materially decreased, would it not?—Yes; it would take, say 38 *l.* a share to buy a new boat; immediately before the boat would be built, the shares would only be worth 80 *l.*, but directly the boat was renewed the shares would be worth 120 *l.*, or more.

4415. Mr. *Grieve.*] I did not quite understand what you said about the masters of steamers trading in the Channel from the Clyde, or from Ireland; are the masters of those steamers obliged to take pilots?—According to an Order in Council, dated 30th January 1854, they are not compelled to take pilots if they are in the coasting trade.

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

4416. Mr. *Gourley.*] You have stated that the approaches to Liverpool are more difficult than the navigation of the approaches to any other port of the United Kingdom?—That is my opinion.

4417. Would you state from your own knowledge, in what way the difficulties of the navigation, and the approach to the Mersey, differ from the difficulties of the approaches through the Goodwin Sands. In bad weather the ships approaching Liverpool have a good sea way; they can keep out at sea, whereas if they are caught in a gale of wind in passing through the Goodwin Sands, they must anchor, and run all the risks of getting upon the Goodwin Sands; in what way is the difficulty and the danger greater as between the bar of the Mersey than in passing through the Goodwin Sands?—You have named the difference; in passing through the Goodwin Sands you can anchor, but there is no anchorage in the Bay of Liverpool.

4418. Have you not better security in approaching the Mersey by keeping out at sea, than you have in passing the Goodwin Sands by anchoring?—No, because you can choose whichever side you like of the South Foreland, and either one or the other must afford you shelter; but if you look at the Bay of Liverpool, there is no anchorage whatever; supposing a ship comes from Point Linas, with a strong wind from west to north-west, and cannot get a pilot, she must stand away to the northward or southward, and she will have a lee shore constantly to be dreaded, and may get right down on the banks, from which there may be no escape, unless the master knows the entrance of the harbour.

4419. You do not hear of a prudent captain running so near a shore in bad weather as to place the ship in jeopardy; he keeps out at sea?—Yes, if he can; but I have known a captain unavoidably blown down near the banks until he was exceedingly anxious; it is often impossible to keep out in a sailing vessel.

4420. In such water, what advantage would a pilot be to him, would not he be as safe without a pilot as with a pilot?—Certainly not; the advantage is not to be calculated.

4421. Cannot you take as good care of your ship in a gale of wind approaching Liverpool, when you are bound to keep out at sea without a pilot, as well as with a pilot?—No; many ships that are kept out at sea now could not possibly be kept out at sea if a pilot were not on board; because it is not a question of seamanship merely, it is a question of local knowledge. A pilot would know how to take advantage of the set of the tide, and how long to stand off on one tack or another, and when it would be safe to run for one port or another; furthermore, at the last extremity, he would know where to run a ship to save the lives of the people.

4422. Would you leave the ship in the hands of the pilot, or in the hands of the captain?—There is a great deal of confusion of ideas on that question, but there is, in point of fact, no analogy between the responsibility of the pilot and the responsibility of the captain; they are as distinct as possible.

4423. Approaching Liverpool in foggy weather when there are no lights or land marks to be seen, in whose hands would you leave the charge of the ship; in the hands of the pilot, or in the

Mr. *R. P. J. Simpson*, R.N.
6 May 1870.

hands of the captain?—The command of the ship must entirely remain in the hands of the captain; the pilot is his local guide.

4424. You say that your grounds are so difficult in point of navigation; if they are so difficult as you describe, how is it that something like 33,000 ships pass in and out of the Mersey without pilots as safely as those with pilots?—We have not always bad weather to begin with, and many of them are very small vessels.

4425. The 33,000 ships pass in and out in bad and good weather, I suppose?—The 33,000 includes boats, fishing smacks, and the smallest class of vessels that you can conceive; the number is taken by our light ships, or by the light-houses. By far the greater number, in my opinion, pass in and out in fine weather only, and we have no record of the number that get on shore or are lost.

4426. I suppose it includes a large number of large ships also?—I do not think it would include any large ships.

4427. Does not it include several passenger steamers?—It does include several passenger steamers in the home trade.

4428. What is the value of stock in connection with your pilot boats?—The value of the pilot boats is 90,700 *l.*, that is taking the prices of the shares for five years.

4429. The value of pilot boats is 90,000 *l.* in Liverpool?—Yes.

4430. What is the cost of a boat when new?—From 2,400 *l.* to 2,600 *l.*

4431. You have 12 boats, I believe?—We have 12 boats.

4432. Then the actual cost of the 12 boats is 30,000 *l.*?—Yes, about that sum.

4433. Then the owners of those boats, by the monopoly which exists in their favour in Liverpool, reap an advantage of something like 60,000 *l.*—It cannot be said that they reap that advantage if they have actually paid the full amount for their property.

4434. But the pilotage fund is 90,000 *l.*?—The boat owners have paid 90,000 *l.* for the shares.

4435. Have they not got during that time 12½ per cent. interest for the money?—They have the 12½ per cent.; but supposing that 30,000 *l.* has to be expended in new boats, they have to pay for it.

4436. Are the boats insured?—I believe they have some small insurance fund of their own; they have a small club to assist them in the case of a total loss.

4437. Really it amounts to this, that the pilot owners reap an advantage of 60,000 *l.* from the public, over and above the actual cost of their ships?—They do not reap any interest from the public; whatever they reap is from the pilots' earnings; it is a deduction from the pilotage paid.

4438. Paid in the first instance by an extra charge for the pilotage made upon the shipowners?—No; there is no extra charge on the shipowner. It is deducted from the pilotage; it is simply a matter of arrangement amongst the pilots themselves.

4439. Who has the controlling power for placing the buoys in the approaches to the Mersey?—The Mersey Docks and Harbour Board.

4440. How often are those buoys changed?—Generally once a year; every buoy is changed, as a matter of prudence. Then, wherever the banks grow out or change, they are shifted according to circumstances; the Queen's Channel bar buoy has been shifted while this inquiry has been going on.

4441. Is there any need for pilotage beyond the bell buoy?—I have always thought so.

4442. Do the outward bound ships take pilots?—They must do so. But up to a very short period, if the ships took pilots beyond the bell buoy they were liable to 20 *l.* fine, and to pay compensation to the pilot and his expenses.

4443. Is there less danger to outward-bound ships than to inward-bound ships?—I think there is more danger to ships outward bound than to ships inward bound.

4444. How does it happen that ships outward bound do not take pilots a further distance?—It was a defect of our law, and the dock board has done everything they can to ameliorate it by allowing the shipmaster and the pilot to make a voluntary arrangement. At present if the ships choose to take their pilots to Port Linas, the fine is suspended, and they make up the difference in the pilotage.

4445. Supposing that this present Bill should pass into law, and instead of the present compulsory system we had a voluntary system, would you have as good a supply of pilots as you have now?—We should not have as good a supply of pilots either in number or quality.

4446. If the danger was such as you have stated, would not it always be found necessary to keep a proper supply of pilots?—Certainly. But the uncertainty of employment would affect the standard and the numbers of the pilots.

4447. *Chairman.*] I believe you told us that the pilotage receipts for last year amounted to 67,500 *l.*?—Yes.

4448. Out of that, 48,000 *l.* was paid to pilots, 1,600 *l.* to apprentices, and a sum of 16,000 *l.* went to the boats?—That is so.

4449. Out of which 5,000 *l.* was the working expense of the boats, leaving to the owners of the boats 11,000 *l.*?—Yes.

4450. The market value of those boats is 90,000 *l.*?—That is the price the present owners paid for them.

4451. The true value is about 28,000 *l.*?—Yes.

4452. Ninety thousand pounds is the market value of the shares?—Yes.

4453. Twenty-eight thousand pounds is the true value of the boats?—Yes.

4454. Then in respect of that 90,000 *l.* they received 11,000 *l.* last year?—They did.

4455. After deducting the proper amount for the value of the boats, the depreciation and the insurance, which I think you said would be about 12½ per cent., it would leave about 8,000 *l.* as their receipts last year, in respect of this fictitious value of the boats?—It would leave eight or nine per cent. upon the investment.

4456. The sum of 8,000 *l.* last year would represent the difference between a fair return for the true value of the boats and the fictitious market value?—No; 8,000 *l.* would perhaps represent the net amount, not the difference; that 8,000 *l.* is the difference between their actual receipts and the allowance for depreciation and insurance.

4457. At all events, you must consider that a very large sum of the annual receipts represents a fictitious value of the boats?—The proportion which the boat owners receive as net profit

is

is about one-eighth part of the whole amount of the pilotage for the year.

4458. The one-eighth part represents the fictitious value of the boats?—It represents the net profit on the purchased value of the boats.

4459. The difference between the purchased value and the real value of the boats?—Yes, if no profit at all is allowed for the real value of the boats.

4460. That sum is either a deduction from the proper earnings of the pilots, or it is a charge upon the shipping of the town?—Yes; and those who are boat owners only have a claim upon it.

4461. Therefore it is a charge either upon the pilot's earnings, or it is a charge upon the shipping of the town?—Yes.

4462. Do you think that arrangement is a good one?—I do not think it is a good one.

4463. Do you think that it should be put an end to, if possible?—Yes; it would be put an end to by either of the plans I have already shadowed forth.

4464. It could not be put an end to without compensation?—No.

4465. You stated that you were not in favour of any exemptions yourself?—I would test every man before I would allow any exemption. It would be very difficult to deal with otherwise.

4466. Under the Liverpool Pilotage Act only coasting vessels under 100 tons are exempt?—No; coasting vessels in ballast are also exempt, no matter what their tonnage.

4467. In point of fact, the Liverpool pilotage authorities have been in the habit of exempting other vessels, as I understand you?—No; the Mersey Docks and Harbour Board has not exempted any others.

4468. Have not they freed all coasting vessels from a compulsory pilotage payment if they pay half the pilotage?—You probably allude to coasting steamers, which are exempted from compulsory pilotage on paying a reduced rate to the pilots; but that was an old regulation before the dock board had anything to do with it.

4469. But they carry it on?—They took things as they found them.

4470. Is it not the fact that, under the Merchant Shipping Act, 1854, home-trade passenger vessels are bound to carry pilots?—They are.

4471. Notwithstanding that the pilotage authorities have never compelled them to do so?—I am afraid the Liverpool pilotage authority was not the most to blame, if at all.

4472. In point of fact, the Liverpool pilotage authority have never required the home-trade passenger vessels to carry pilots?—It was not their duty to do so.

4473. Whose duty was it to interfere?—I should think, as the public guardians, it was the duty of the Board of Trade.

4474. Do they compel the Liverpool vessels to carry pilots?—It is a question of life, it is not a question of pilotage.

4475. Are you aware whether the Mersey Docks and Harbour Board, or any pilotage authorities, have asked the Board of Trade to interfere and compel the vessels to carry pilots?—It was not their place to do so. It certainly was not the duty of the Mersey Docks and Harbour Board to make any such request.

4476. Have they passed any resolutions upon the subject?—They have not.

4477. They have never attempted to carry it out, have they?—The dock board became the pilotage authority more than four years after the Act of 1854, and they had to take the pilotage laws, bye-laws, and customs, just as they found them.

4478. In point of fact, they have never interested themselves in the matter, and they have been content to take something less than the pilotage rate from these vessels, but they have never tried to compel them to carry pilots, is not that so?—The dock board have not. The pilots have been content to take a shilling a foot, and the dock board had not the slightest interest in the matter.

4479. What does the shilling a foot represent?—One-sixth of the pilotage dues. It is a shilling per foot per voyage.

4480. The pilots have been content to take that without enforcing the obligation at law upon the vessels, and no one else at Liverpool has interfered to compel the home-trade passenger vessels to carry pilots, is that so?—I do not think the pilots are content to take it, but they cannot well change the law. In my opinion those who made the law to protect the lives of passengers, should have seen that the law was respected.

4481. They have not felt that public opinion would sustain them in compelling these vessels to employ them, I suppose?—I do not know what the pilots have felt upon that subject.

4482. They have never done so, have they?—No. I would like to point out to the Committee an exceedingly strange anomaly on this very question.

4483. What is that?—These vessels when carrying passengers, but without any cargo, pay nothing to the pilots, because they claim to come in as coasting vessels in ballast; but if they have no passengers whatever, and only a single barrel of beef on board, they are liable to pilotage; then they claim the exemption under the Order in Council of January 1854, and pay 1*s.* a foot for the voyage.

4484. Is it not the fact that the Liverpool pilot has a right, if he thinks fit, to hail all vessels and compel them to employ him?—That is a question of law that I cannot answer in the case of coasting steamers. I should be very glad to have it answered. It was one of the greatest puzzles that I found when I got to Liverpool.

4485. It has always puzzled you since?—Yes, it has been a great puzzle to me, and I am still at a loss to understand why so stringent a law for the preservation of the lives of passengers has been allowed to lie dormant.

4486. I see in the return which has been laid before Parliament, that besides these coasting passenger steamers which are let off for 1 *s.* a foot, there are other coasters who pay one-half pilotage; what is the meaning of that?—It means that a coasting vessel taking a pilot pays 4 *s.* 6 *d.* a foot instead of 9 *s.*, which she would pay if she were a foreign vessel.

4487. It does not mean that coasters are exempt if they pay one half?—No.

4488. Are all coasters above 100 tons compelled to take pilots?—Yes, unless they are in ballast.

4489. Is that rule carried out?—It is carried out so far as I know.

4490. So far as you know, the only vessels exempted by voluntary arrangement, are the home-trade passenger vessels?—No, it does not apply to home trade passenger ships, but coasting steamers; they may be passenger steamers or

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

they may not. The arrangement was made before the law relating to home trade passenger ships came into operation.

4491. What is the total amount received by the Pilotage Board in respect of those vessels?—It is not received by the Pilotage Board; it is received by the pilots themselves; it is 1,400 *l.* or 1,500 *l.* a year. I never heard any complaint about paying that money.

4492. Mr *Gourley.*] Do you charge any less pilotage rate when vessels are in charge of steam tugs?—We do not; we think there is not much to chose between them; a handy sailing vessel, with a leading wind, is as safe as if brought up in tow of a steam tug; there is so much difficulty in turning in the river because of the limited span for anchorage; the number of accidents happening is so large, and the pilotage rates are so low, that we think it is not worth considering. It is of advantage to the shipowner to have a tug, but it is no special advantage to the pilot; he has two vessels to take charge of instead of one.

4493. *Chairman.*] By this return I find the number of pilots has been increasing in the last 10 years, and is now 25 in excess of what it was 10 years ago?—I believe that is the case.

4494. Have their earnings remained the same?—About the same.

4495. Has the number of boats remained the same also?—Yes.

4496. Is it not the case, that for a considerable number of years, the number of boats have been the same?—I think it has been the same for something like 28 years. I could give the date when the last boat was put on if required.

4497. During that time the number of pilots have considerably increased, has it not?—The number of pilots has been increasing with the number of ships and the tonnage of the port; of late years the number of ships has fallen off.

4498. But the tonnage has greatly increased, has not it?—Yes.

4499. I presume you would consider that the tonnage entrances to Liverpool will continue to increase?—I see no reason whatever to doubt it; the port is as prosperous as it ever was.

4500. At the present moment are you rather reducing the number of pilots in consequence of the loss of the 10,000 *l.* a year?—We are reducing the number of men in the first instance, because there is something like 2,000 less vessels paying dock dues than there were five years ago.

4501. You say each man makes about 48 voyages, on an average, in the year?—That is the actual number of ships piloted in and out; there are other services performed by them.

4502. That makes something less than one voyage for each pilot per week?—Yes.

4503. What is the time occupied generally in coming from Point Linas to Liverpool?—It may occupy in the case of steamers six hours; it depends upon the state of the tide; or it might be, in the case of sailing ships, three or four days.

4504. On the average, perhaps, it is a day?—Yes.

4505. Can you say the average time occupied in the outward pilotage?—From the time of a ship leaving the dock till she gets out to the Bell Buoy, it would be about three hours.

4506. Then, in point of fact, all the employment of pilots at present is, on the average, something less than one day a week of actual pilotage, is it not?—Yes; but you are reducing the work to the minimum; a pilot has to attend upon a ship to-day, and she may not be going out; or the tide may be lost, and he has to wait for the next tide with the vessel.

4507. The average occupation of every pilot in actual pilotage is one day a week, is it not?—No; that is the average of pilotage, not of occupation; because a large portion of a pilot's time is taken up in the charge of vessels lying at anchor in the river; many captains would not think their ships safe at anchor in the Mersey unless there was a pilot on board to take charge of them in cases of emergency; besides which there is other occupation.

4508. What is the number of men kept on board each pilot boat?—Twenty-five or 26 upon each boat.

4509. Is that number always kept up, or what is the averagen umber at any given time on board the pilot boat?—The number is kept up by the apprentice system.

4510. I do not mean the number attached to a boat but what is the number of men kept at the station?—When a boat is going out on to the inner station, seeing that she is not going on active pilot service, perhaps 10, 12, or 14 will go out in her, besides the apprentices.

4511. As they are taken off, do you supply their places, or does the vessel remain out till all the pilots are taken off?—Directly she has done with the inner duty, which is taking the pilots from the outward bound ships, she will go further off to the next station. Then the whole of her staff of pilots will go on board.

4512. What is the average number of men on board the boat when it is cruising?—The full number is 25 or 26.

4513. What is the average number?—I cannot tell the average number; it fluctuates.

4514. I understand, when a pilot pilots a vessel inward, he remains at home to pilot a vessel outward; is that so?—No; I never intended to give such an impression. Directly he has had his rest, he comes down to the pier head, and he is at my order, and at the orders of the master of the boat, to go wherever he may be sent; he may have to take charge of a vessel in the river, or to go to a distant port to bring a vessel to Liverpool.

4515. I understood you that the same man who pilots a vessel inward pilots her outward again?—As a rule, the pilot who brings a ship in, takes her out again, unless objected to; but the rule cannot be rigidly enforced; for instance, the ship may not be ready to sail, and the pilot boat has to go on her station; then another pilot boat takes charge of that vessel with other vessels belonging to the boat that brought her in.

4516. I understood you to say that you thought that the employment of pilots would fall off if this Bill passed into law; have you formed any opinion as to the extent to which it would fall off?—Yes; but it must be a mere conjecture.

4517. I presume you would be of the same opinion as other witnesses from Liverpool, that if this Bill passes into law, in bad weather there would be as much employment for pilots as there is now?—No; because anyone who could slip in might do so.

4518. What vessels would then decline to take pilots?—I do not know that any would decline, but some would say, "Now I am so near the bar I do not want a pilot." At present they are compelled to pay for the pilot.

4519. Do you think that in bad weather the greater

greater proportion of vessels would take pilots?—I think the bulk of foreign-going vessels would take pilots in bad weather, when it would be exceedingly difficult to get pilots. In fine weather I believe the pilot would have a poor chance of employment.

4520. I presume you believe that foreign vessels would always take pilots, in coming in at least?—It would depend upon the weather, and the temperament of the man in command.

4521. In fine weather, do not you think that foreign-going vesssels would take pilots?—In fine weather a prudent man would do it, but a vessel behind a string of vessels might say, "We have only to keep close up to the other vessels to get in safely."

4522. I presume you think that the large vessels coming from America would take pilots?—I think that no difference would be made by the large mail steamers; they would take excessive caution rather than otherwise.

4523. Then large sailing vessels would not, for the most part, take pilots, would they?—I think large sailing vessels would feel their dependence upon the pilots more than steamers.

4524. Would they be compelled more than steamers to take pilots?—Yes; if commanded by prudent men.

4525. Would they be compelled to take pilots even if they had tugs?—I cannot say. I am afraid that the tugs will be a great stumbling block in the way of the voluntary system of pilotage.

4526. Have you considered the evidence which has been given here, as to the employment of pilots on board vessels that are brought by tugs into the Thames?—The navigation of the Thames is peculiar. Its length may perhaps be the cause of that. I am afraid that, in the Thames, pilotage would considerably fall off.

4527. I speak of that portion of the service which is now voluntary, namely, vessels going to the north of Europe; I ask you whether you have considered the evidence which has been given here as to the employment of pilots by vessels when towed by a tug through the North Channel into the Thames, those vessels not being bound to carry pilots?—I have not considered that point.

4528. Then you have not formed any adequate opinion as to what the falling off of the employment of pilots would be?—No, it is impossible to get at it; but I should say it would vary, sometimes one-fourth and sometimes one-half.

4529. Have you any experience of the employment of pilots in places where the pilotage is voluntary?—No, I have not.

4530. Have you any experience to lead you to see any analogy between those cases and Liverpool?—I do not think there would be any analogy, because in most places where pilotage is voluntary the access is easy.

4531. But supposing, in places where the navigation is easy, the employment is very frequent, would not it be more frequent at Liverpool where the pilotage is so difficult?—I cannot say; it might be so.

4532. You were just now comparing places, and you said that the pilotage was so very easy in some places?—I gave it as an opinion, but I would rather not compare Liverpool with places I do not know.

4533. Supposing it was shown to you that at these places where the pilotage is so easy, the employment of pilots is very frequent, is it not possible that in Liverpool, where the pilotage is so difficult, the employment of pilots would be more frequent and more certain?—If it were shown to me I might form such an opinion, but nothing has been put forward as yet to make me change my opinion upon the point that there will be a considerable reduction in the pilotage of Liverpool

4534. What is the age at which the pilots get superannuated?—We do not confine the superannuation to age, but it depends upon whether the pilot is sick or infirm; the dock board are guided in this matter almost entirely by the report of a committee of pilots called visitors. If the visitors report that a pilot is fit for superannuation (and the visitors will not report to that effect unless they are quite sure), the board grants the superannuation to which the man is entitled.

4535. I see the number of superannuated in Liverpool is only 35?—It is a very small number; it is a little more than 10 per cent. of the whole service.

4536. Then I perceive that a considerable number of pilots go off in other directions?—Yes; they have left the service to improve their position.

4537. Is it only those who become incapacitated from infirmity and ill-health who are superannuated?—Several have gone off who were not worn out, but could claim the superannuation as a right; and it was considered at the time just as well to let them go, because it enabled the men who were serving to gain a little more income.

4538. What is the pension which they generally receive?—Our present scale is at the rate of 1 *l.* for every year of active service.

4539. So that if a man has been 25 years in the service he gets 25 *l.* a year, is that so?—It might be 26 *l.*, because it depends upon certain calculations for broken time.

4540. That is a very small pension, in fact?—It is very small, but it is better than at most other places. I think we are a long way ahead of London in that respect.

4541. But it is a small superannuation?—It is a small superannuation, there is no question about that.

4542. Could you tell the Committee the average age of the pilots in Liverpool?—Yes, I will look for it.

4543. Sir *Henry Selwin-Ibbetson.*] Is there any record of the accidents that happen in the Mersey in the year?—There are various records; the water bailiff keeps the record of such accidents as come under his own observation.

4544. Is there any general record so that you could distinguish between accidents happening while pilots are on board and accidents happening without pilots?—No. But when a pilot is on board a ship where any accident happens, he is compelled by law to report the circumstance.

4545. Is it possible to get a record of the accidents happening to coasting steamers without pilots, and the accidents happening to vessels that are under the guidance of pilots?—There is no such record with reference to coasting steamers. Speaking from recollection, I believe there were something like 133 reports from pilots for last year; that is about one per cent. of the vessels piloted, and that number includes accidents of the smallest kind, just touching the ground or pricking the bow with the anchor in docking, and

Mr. *R. P. J. Simpson*, R.N.

6 May 1870.

and losses and collisions where the pilots had absolutely no blame attached to them.

4546. Mr. *Graves.*] Are the pilots much employed within the port of Liverpool in shifting vessels from dock to dock?—Yes, they are.

4547. Is it not the almost invariable practice when a vessel shifts from dock to dock to have a pilot on board?—It is a common practice; it is voluntary; some do and some do not.

4548. I suppose it is not unusual in the winter to have vessels lying windbound a fortnight with pilots on board?—No; it often happens.

4549. You said you thought that the tug-boats would be the great stumbling block; what did you mean by that?—I said they would be the great stumbling block in the way of a good pilotage service upon the voluntary principle.

4550. Have you any apprehension that if it was purely voluntary many of our best pilots might leave the pilot service and become masters of tug-boats?—I do think so. If you have the voluntary system, I should say that tugs and pilots would naturally gravitate towards each other.

4551. The captain of a tug-boat would tow a vessel up, claiming salvage?—Yes; he might do so.

4552. There would be nothing to prevent them doing that under a purely voluntary system?—No.

4553. *Chairman.*] Do you think they would naturally gravitate together?—Yes.

4554. Do you see any reason why they should not gravitate together?—No, if pilotage is to be optional. Under the present system, in the case I mentioned of a tug asking such a large sum, in consequence of the pilot boat coming in sight and the pilotage being compulsory, the tug lowered her prices.

4555. It does not follow that they should give a large sum, if asked?—No, not necessarily.

4556. Do you see any reason why they should not gravitate together?—Not if you have the voluntary system. We have now a pilot service and a steam tug service. Under a voluntary system they would probably unite and become a salvage service.

4557. Mr. *John Stewart Hardy.*] But you have the greatest objection to steam-tugs being able to come and drive a bargain when a ship is in distress?—Yes, where it can be avoided.

4558. Do you think that most objectionable?—Yes, I do.

4559. *Chairman.*] But the court exercise some jurisdiction now over bargains of that kind if a vessel is in distress; do not they review that kind of contract?—Yes, where a bargain is disputed; but I have frequently known cases where a steam-tug would not make a bargain.

4560. He left it for the determination of the court afterwards?—Yes, or to the shipowner and steam-tug owner; so that when a steam-tug offers to make a bargain, she thinks that she is asking less than would be granted to her by the court.

4561. Mr. *Charles Turner.*] But pilots are not allowed to claim salvage, are they?—No, not without the consent of the dock board given in writing.

4562. Do you think that if a pilot were on board a steam-tug, it would leave it open to him to make an extortionate charge?—Yes, under the voluntary system.

4563. And that there would be no alternative in many cases but to submit to that extortion?—I think there would be no alternative in many cases.

4564. Mr. *Pemberton.*] Are you aware of any case in which any demand of that kind has been made and completed, which has been set aside afterwards by the court?—No; I believe bargains are constantly made between the tugs and ships.

4565. Have you ever heard of them being set aside as extortionate?—No, I think they are considered binding.

4566. Colonel *Bourne.*] You said, did you not, that the pilots had other duties of a very important character to perform, besides taking ships in and out?—Yes, they have.

4567. What are those duties?—I have described that they are frequently left in charge of ships at anchor in the river; captains and owners of ships are more content if they have a pilot on board; they do not care, so long as they have a pilot on board, if the officers are on shore. The ship may be fouled, or the tide may sweep her from her anchors, and if a pilot is on board he will know how to take charge of the ship, and do the best for her safety. Then there are launchings, docking, and transporting, and trial trips. Occasionally piloting to and from neighbouring ports, at the request of the captain remaining in charge, after passing the limits of compulsory pilotage; and other matters.

4568. Mr. *Gourley.*] In all such cases would you leave the ship in charge of a pilot rather than in the hands of the master or officers?—I would leave the captain or shipowner free to do as he pleased in that matter; it is a voluntary arrangement.

4569. Mr. *Cave.*] Is there any regulation charge for steam tugs in Liverpool?—They have a nominal scale of charges which they put forth, but they frequently make special agreements. There is no obligation to have a scale of charges.

Admiral GEORGE EVANS, called in; and Examined.

Admiral *G. Evans.*

4570. Mr. *Charles Turner.*] I BELIEVE you are acting conservator of the River Mersey?—Yes.

4571. I need not ask you whether you are a very old and experienced officer in the navy?—Yes, I have had a good deal of experience.

4572. In 1827, I believe, you were appointed commander of the first steamer appointed to be commissioned by the Admiralty for the use of his Royal Highness the Duke of Clarence, Lord High Admiral?—I was, and I took the first steamer across the Atlantic in 1833.

4573. In 1835-6, before you obtained the post of rear admiral, you were employed in investigating the maritime department of the Post Office, and in preparing the Sixth Report of the Post Office Inquiry Commission?—An application was made to the Admiralty for one of their Board to join the Post Office Inquiry Commission, and I was appointed, I being the officer most conversant at that time with steam.

4574. I believe you were appointed acting conservator of the River Mersey in April 1843?—Yes, in 1843.

4575. I dare say in that capacity it was your duty to make yourself fully acquainted with all the

the channels, and all the circumstances affecting the navigation into and out of the River Mersey?—Yes.

4576. And in discharge of that duty, I suppose you have made yourself very familiar with the approaches to the Mersey?—Yes.

4577. Have you surveyed the channels from time to time?—Yes, very frequently; I go to test the surveys of the marine surveyor.

4578. Is it your duty, as acting conservator, to test the surveys of the marine surveyor?—Yes, before publishing them.

4579. Is it your experience that great changes constantly take place in the channel of the Mersey?—Yes, very great changes; more than in any other harbour of the world that I have ever known; I have been nearly all over the world.

4580. Have you heard much of the evidence that has been already taken in reference to this matter?—No; I saw a little of it in some of the Liverpool papers.

4581. Is it your opinion that it requires very great vigilance to detect all the minute changes that are constantly taking place in the river?—Yes, it requires constant attendance, I may almost say day and night, to watch the changes that may take place in the banks, and also in the light ships and buoys, from collisions.

4582. In the course of your experience in the navy, have you visited many parts of the world?—I have, and surveyed harbours in the East and West Indies, and South America.

4583. Do you know of any other place with peculiarities and dangers which can be compared with the danger of the estuary of the bay of Liverpool?—I know of nothing like it.

4584. In consequence of those peculiarities, vessels, both inwards and outwards, especially in bad weather, require more than ordinary care, do not they, in the navigation?—Yes.

4585. Are you acquainted with the pilotage system of the port of Liverpool?—Yes, a little.

4586. Do you think that, as a body, the Liverpool pilotage service is conducted efficiently?—I do; and I have had the pleasure of stating so in most of my reports for the last 26 or 27 years.

4587. Do you publish annual reports with reference to the shifting of the banks in the river Mersey?—Yes.

4588. Do you consider that it is very desirable that the present constant supervision should be continued over the channels of the Mersey?—Certainly.

4589. Do you think that men, unless they go into and out of the port of Liverpool constantly, and make it their business to become acquainted with the variations in the channels, would be fit to conduct vessels in and out of the port of Liverpool?—Certainly not.

4590. Have you ever considered the question of compulsory and voluntary pilotage, as regards the dangers of the port?—Yes.

4591. What is your opinion of the proposed change of the law?—My opinion is founded upon a little experience. I was an amateur pilot from 1808 till 1811, when I entered the navy, and in going in and out of the Shannon we always let the small ships remain till they obtained a pilot. We generally ran out for the large ships, that is my notion of pilotage; no ship is safe without a pilot in the Mersey.

4592. Do not you think that voluntary pilotage is really inapplicable to the port of Liverpool?—I do think it is; if I were a pilot in Liverpool, and pilotage was made voluntary, I would go and take the command of a small coasting vessel, and I should get paid as captain of the ship, and having been a pilot, and having my certificate, I would get both captain's pay and pilot's pay.

4593. Speaking as a gentleman, like yourself, of great naval experience, and great experience for the last 27 years in the port of Liverpool particularly, and founding your opinion upon your experience first of all as a naval officer, and then as the gentleman who has the superintendance of the buoys, the channels, and the navigation of the port of Liverpool, is it your opinion that the system of voluntary pilotage is wholly unsuitable for the port of Liverpool?—I consider it is wholly unsuitable, and I should hope and trust that it will never be allowed as long as I live.

4594. Do you consider that an alteration from the present system would involve great danger both to life and property?—No doubt it would involve great danger to life.

4595. What do you say as regards property?—Property they take very good care of; sometimes you see that shipowners like to lose their ships. I have gone down to the underwriters' rooms and told them how to prevent the vessels being wrecked in the river; they received me very politely; but what did they tell me? They said, "Sir, if we do not lose a ship occasionally, we may shut up shop;" and they shut me up, and I walked out. I think they are not the proper persons to trust with the lives of other people.

4596. Are there any general observations which you would like to make upon this subject?—Yes; I should like to say this, that the state of Liverpool is such that in the Transfer Act to the Board of Trade of all the harbours of the kingdom, Liverpool was not included. Liverpool is such an exceptional case altogether, that the Conservancy Board and the commissioners under the advice of the Board of Admiralty, and all their staff, excepted the Mersey and the port of Liverpool, and that is the only port that is excepted. All the rest, except the royal harbours, are under the control of the Board of Trade, and they have very good reason for that. I should say that the very same circumstances might occur here, that the Liverpool pilotage might also be made an exception, and if it is not, I would not answer for the safety of the trade of the port.

4597. Mr. *Pemberton.*] Your opinion is very decided about the relative merits of the compulsory and voluntary systems. You made that statement principally with reference to Liverpool, but I conclude your opinion is the same with reference to any other port where the difficulties of access are as great?—I do not know any port at all to be compared to Liverpool.

4598. There may be some, may there not?—I do not know any port that can be compared to Liverpool.

4599. If there was any harbour presenting the same difficulties of navigation, would your objection to the voluntary system be the same as it is with regard to Liverpool?—Yes, if it be equal to Liverpool.

4600. I suppose you are more or less acquainted with the navigation of the Channel?—Yes; I believe I am one of the oldest junior brothers of the Trinity House.

4601. What is your opinion of compulsory pilotage so far as that district is concerned?—It

Admiral *G. Evans.*

6 May 1870.

is a different thing there; I have taken a frigate up there; you have the land in sight; you have anchorage, and you have everything in your favour. There is no difficulty in taking a ship up the Thames; but where you are out of sight of land, and have no anchorage, and nothing but the buoys which are fluctuating every day, to guide you, the thing is as different as daylight and dark. I would not hesitate to take a ship up the Thames to-morrow; and every shipmaster, with a good chart, ought to know how to take his ship up. You can anchor from the Downs up, but in running into Liverpool, how can you anchor in a gale of wind?

4602. Mr. *Charles Turner.*] There is no anchorage outside the bar, is there?—No, not with a north-west gale.

4603. Are not the tides very strong at Liverpool?—Yes, they are very strong.

4604. That adds to the risk, does it not?—Yes; those very strong tides when they come in and meet the river waters, dam up the river, the consequence is that when the ebb tide makes, you have not only a discharge of the quantity of salt water, but an additional discharge of pure river water. The ebb-tide runs out for half an hour, and sometimes in the freshes nearly an hour, while the flood tide is making for the bar, they both meet, and down goes the sediment, forming the bar. It forms the bar just in the same way as you would make a railway embankment.

4605. Have you read Sir Frederick Arrow's evidence?—No.

4606. He stated that the navigation from the Downs to London was as difficult as in any other port?—It is very likely he said so, because he did not know Liverpool.

4607. Mr. *Cave.*] Do you know the Bristol Channel at all?—I did know it at one time, when I was on the Post Office Inquiry Commission, and I have been down to Cardiff since.

4608. What is your opinion with regard to the difficulties of navigation there?—It is not to be compared to the Mersey in any way; it is not required to be surveyed every year.

4609. Are there not a good many shifting banks?—Yes, there are some up the river.

4610. The tide rises very rapidly, does it not?—Yes, and very high; but you have the advantage of having plenty of water for the ship. You will see in the Sixth Report of the Post Office Inquiry Commission, that if a railway were made down to a particular place, Weston-super-Mare, you might make a good harbour there.

4611. Do you think an ordinary shipmaster, with a chart, could navigate up the Bristol Channel?—I think an ordinary shipmaster might, with a good chart, go up the Bristol Channel to a certain extent, as far as Weston-super-Mare.

4612. Do you think the voluntary system would answer there?—I am not able to speak to that; I do not know it sufficiently well. I have no doubt there are many places where the voluntary system would be very good.

4613. Sir *Charles Wingfield.*] You stated that you had taken a ship up to the Downs yourself?—Yes.

4614. Up to London?—No; a frigate never goes beyond Woolwich.

4615. Fifty years ago a vessel might have gone, might she not?—It is 51 years ago since I took the frigate up; it was in 1819. I took her up by backing and filling her; we had no steam. That is a system that even our pilots could not do; backing and filling a ship up the river is a thing which has now nearly exploded.

4616. The use of steam has facilitated and supplemented pilotage in the Thames immensely?—Yes; and destroyed the Nursery for sailors.

4617. *Chairman.*] Do you look upon Liverpool as a very exceptional case?—It is not only very exceptional, but it is a most extraordinary exceptional case; it is such a case that you will never hear of again.

4618. Do you think there are not the same reasons elsewhere for maintaining compulsory pilotage as there are at Liverpool?—I would advise the gentlemen of this Committee to drop Liverpool, and let well enough alone. I have never heard a complaint since I have been there.

4619. Would you object to this Bill going on with respect to other places?—I have nothing to do with any other places; but if I am sent to report upon other places, I will report upon them. I did so upon nearly every port in the United Kingdom when I was on the Post Office Inquiry Commission in 1835 and 1836.

Mr. Henry Bremner, called in; and Examined.

Mr. *H. Bremner.*

4620. Mr. *Graves.*] I believe you are Solicitor to the Pilots of Liverpool?—Yes.

4621. How long have you acted in that capacity?—Nearly 20 years.

4622. You are acquainted, no doubt, with their legal position under the several Acts of Parliament?—Yes.

4623. Do you wish to give evidence before this Committee as to the claims of the pilots for compensation?—Yes.

4624. Will you state their legal position?—I do not think I need go over that ground again; it has been fully stated by Mr. Squarey as to their position when the Mersey Board obtained the pilotage authority.

4625. Is there any other legislation connected with it that you would desire to put before the Committee?—The Mersey Board promoted a Bill in Parliament in 1864, for further dock accommodation on the Liverpool side, in which Bill they proposed to alter the mode of levying the rates of pilotage from depth of water to tonnage.

4626. That Bill came to nothing?—The pilotage clauses were withdrawn.

4627. Did the Board of Trade in their Report upon Docks and Navigation Bills in the years 1857, 1858, and 1864, make any reference to any suggested alteration as regards compulsory pilotage?—In the Board of Trade Reports on the Bills of 1857 and 1858, there were no references to the question in any way, but only to the question of differential dues, and they reported strongly against the continuance of them, and they have been since abolished. In the report of 1864, they refer to the Report of the Select Committee of 1860, in these terms, "'Shipowners engaged in the long voyage trades generally express themselves satisfied with the existing system, that this class of shipowners in the confidence that when a pilot is on board their ships

ships they are practically exempt from liability in the event of collision, cheerfully submit to bear the charge of compulsory pilotage;' and that 'the witnesses from Liverpool were in favour of maintaining the existing system of compulsory pilotage, and that the establishment of pilots at that port is evidently conducted in a satisfactory manner.' Whether there are any circumstances peculiar to the port of Liverpool which call for an exception from the ordinary principles of recent legislation, which the Committee of 1860 have reported to be no less applicable to pilotage than to other matters, is no doubt a question; but the Board of Trade cannot help observing that the present Bill, so far from being a step in the direction recommended by the Committee, is precisely the reverse. It apparently increases the rates of pilotage; it confirms the system of compulsory pilotage; it enforces compulsory pilotage by a series of cumulative penalties perfectly uncertain and unlimited in amount; and it withdraws the power of enforcing these penalties from the judicial tribunals of the country, and places them in the hands of an executive and irresponsible body, by whom these pilots are appointed. That the Mersey pilotage is, on the whole, admirably managed, there seems to be no doubt; but whether its management is such as to justify and demand powers so inconsistent with the usual course of legislation and government in this country may well be doubted."

4628. What has been the imperial legislation upon the subject of compulsory pilotage?—The present Bill is the first which has ever been introduced into Parliament to abolish compulsory pilotage. The Merchant Shipping Act of 1854 expressly confirmed compulsory pilotage by the 353rd section; and the 354th section inflicts a penalty of 100 *l.* upon home trade passenger ships if they do not take pilots, unless they have a certificated master or mate on board. The Amendment Act of 1862 gave increased facilities for exemptions from compulsory pilotage, but I am not aware that they have ever been put in operation, certainly not in Liverpool.

4629. Can you give any information as to why they have not been put into operation in Liverpool?—Because, I presume, the Mersey Board did not think itself justified in extending exemptions. There are two powers given under the Amendment Act of 1862. Either the pilotage authority itself has the power to extend the exemptions, or the Board of Trade may, by a provisional order, exempt any district from compulsory pilotage; but the provisional order, of course, would subsequently have to obtain the sanction of Parliament if opposed.

4630. Notwithstanding the Report of the Select Committee in 1860, Parliament has not heretofore legislated respecting compulsory pilotage?—Not in any way. In 1861 it recommended the abolition of differential dues; they abolished them, and in 1862 they passed the Amended Shipping Act that I referred to. I may say, that in that Bill of 1862, whilst it was passing through Parliament, Mr. Lindsay, the then Member for Sunderland, moved to insert the following clause: "That the masters and owners of all ships, or of any classes of ships, shall not be obliged to employ pilots in any pilotage district, or shall not be obliged to pay for pilots when not employing them in any district, or in any part of any pilotage district."

That clause was opposed by Mr. Milner Gibson then President of the Board of Trade, and it was not inserted in the Bill.

Mr. *H. Bremner.*

6 May 1870.

4631. Have you any opinion to offer upon the subject of compulsory pilotage?—Irrespective of any professional opinion which I might be supposed to have, I have a very strong opinion upon the subject, and I totally disagree with Mr. Farrer when he says, "It is no part of the business of the Government to take a ship out of the hands of those most interested in her safety; hence shipowners and insurers are much better judges of what they need than the Government can be." I totally dissent from that. I conceive it to be not only the place of the Government, but the duty of the Government, to do so, and it has done so in many ways. For instance, there are all the burdens which have been placed upon shipowners under the Passenger Acts. There was salvage for life, established by the Act of 1854, for the first time. Then there is the liability of shipowners of 15 *l.* and 8 *l.* per ton imposed by the Act of 1862. The inspection of railways, before opening the inspection of mines, the employment of children and women under the Factories Act and the Bakehouse Act, even to limiting the hours of working in milliners' shops, an interference not only with the conduct of his business, but what is called the liberty of the subject.

4632. Have you formed any opinion as to how the subject could be dealt with by laying down some general principle?—I conceive if the subject is required to be dealt with at all, that the only reasonable mode of dealing with it is to leave it in the hands of the pilotage authority, to do such acts which it may think most conducive to the interests of the port; if the pilotage authority thought that abolition would be beneficial, it would promote the same, as the authorities of the Tyne, Newport, Cardiff, and Leith have done; they thought that for the purpose of fostering their trade, and increasing it, they might do it with safety, and they did it; the Thames, the Mersey, the Humber, and the Clyde have always thought otherwise; they have never taken any steps in that direction; I consider that the legislation heretofore has always been in that direction, for in the Merchant Shipping Bill of 1854, it gave power to the pilotage authorities to increase exemptions; and in the Act of 1862, as I said before, it gave increased facilities for exemptions; and that very system and the very principle which was authorised in the Acts of 1854 and 1862, was brought forward in the Bill of last year, and again in the code of this year; the 467th clause.

4633. Probably you would think that such a body as the Mersey Docks and Harbour Board would be better qualified to decide upon the principle of pilotage best adapted to your port than even the Legislature itself?—I cannot conceive a body better qualified to legislate upon such a subject; when I consider that 24 of them are merchants of the highest character and standing, elected by the dock ratepayers, and four are gentlemen nominated by the Mersey Conservancy Commissioners, who have a peculiar knowledge upon such a subject, I can hardly conceive a higher or a better authority.

4634. Can you state the objections which the pilots of Liverpool have to the present Bill?—They are twofold; in the first place, there is no provision whatever in the Bill for compensating

Mr. *H. Bremner.* 6 May 1870.

the owners of the boats in any way, and the proposed compensation on behalf of the men, I think, as it at present stands in the Bill, is totally inadequate for the purpose.

4635. In what respect do you consider it inadequate?—As it stands at present there is no certainty about it; and, assuming that there would be a loss under the operation of the Bill, first, they cannot be compensated, nor can the matter be inquired into for the space of from two to three years. Secondly, superannuation is not compensation, unless it be definite, fixed, and compulsory; but it is none of these. Thirdly, it depends upon opinion whether a diminution of employment has been caused by the operation of the Act. Fourthly, the Board of Trade is to be the sole judge. Fifthly, the Board of Trade is to determine and fix how many pilots are to be withdrawn and may make a report. Sixth, Her Majesty's Treasury may, if they think fit, grant a sum of money. I consider that you ought to make the fact of the diminution in receipts conclusive evidence of the operation of the Act; then define the mode and the number to be superannuated according to such diminution, and fix the amount of compensation and make it compulsory on the Treasury to pay retrospectively from the time when the diminution began, and not to commence at the end of two or three years.

4636. Then, in what mode do you think the pilot should be compensated?—The pilot has at present an income of about 200 *l.* per annum net, guaranteed to him by Act of Parliament in return for the apprenticeship he has gone through, the years he has been in the service, and the services which he has rendered to shipping. I think, therefore, that he ought to be compensated, either by having his present remuneration guaranteed to him for a term of 10 years, which is the Parliamentary term, as was established with respect to the differential dues, or that his superannuation should be fixed at two-thirds of his present earnings, which also appears to be the Parliamentary mode of remunerating.

4637. Mr. Simpson has stated the amount of the Liverpool Annuities Fund, and the amount the pilots receive therefrom; do you confirm these items?—Yes; the fund is 10,691 *l.* and the interest upon that sum of 2½ per cent. upon the gross earnings forms the sum out of which the annuities are paid. A previous witness stated that it was at the option of the Board to grant the annuity, but the annuity is fixed by the 148th clause absolutely.

4638. Will you read the section?—"Such fund shall be applied by the Board as follows (that is to say); in the first place, in the payment of such pensions, allowances and annuities as may have at any time been granted under the authority of the Liverpool Pilotage Act, and may be still subsisting at the commencement of this Act, so long as the Board may think proper to continue the payment thereof; and, in the second place, in the payment of annuities, or weekly or other allowances to the persons hereinafter specified, and to them only (that is to say); first, to such pilots as, having attained the age of 50 years, and having served as pilots under the provisions of the Liverpool Pilotage Act, or of this Act, not less than 20 years, shall retire from the service; secondly, to such pilots as, by reason of infirmity, sickness, or accident, may, in the judgment of the Board, be rendered incapable of following their trade, although they may not have attained the age of 50 years, or may not have served as pilots for 20 years, provided that no person shall be entitled to any annuity or weekly or other allowance, who shall be proved, to the satisfaction of the Board, to have brought on such infirmity, sickness, or disability, by drunkenness, lewdness, or any other vice; and, thirdly, to the widows and children of deceased pilots." Therefore, presuming the pilot has conducted himself properly, and has not brought on his inability by vices, it is compulsory upon the Board to grant a pension upon the scale laid down.

4639. *Chairman.*] I do not see that there is any scale set down for actual payment?—The scale is prescribed by the bye-law, No. 4.

4640. Does not the annuity depend upon the funds they have in hand; there is no prescribed rule with reference to it, is there?—Yes; the sum is fixed as to what they are to have, according to the number of years they have been in service.

4641. That is fixed in the bye-law?—Yes.

4642. It is not a matter of law?—No.

4643. Mr. *Wykeham Martin.*] Are those bye-laws ratified by the Act?—They are made under the authority of the Act, and ratified by the Board of Trade.

4644. And they have the force of an Act of Parliament?—Yes, when confirmed.

4645. Mr. *Graves.*] What would be the effect of the second clause of the Bill upon superannuation?—If a considerable number of pilots were superannuated, then the per-centage would be less from the reduced earnings, and the fund could not pay the annuities now due and payable, therefore it ought to be compulsory upon the Treasury to make up the deficiency.

4646. Do the pilots of Liverpool think any further powers should be granted to the pilotage authorities with regard to rates?—I think that the pilotage authorities might have powers granted to them to raise the rate now fixed by the Act of Parliament, to enable them to make different rates for summer and winter, if it were advisable. That power was given in the first Liverpool Pilotage Act, which, in the subsequent Act, was dispensed with.

4647. *Chairman.*] Is it not now the law that they have the power to make a difference between winter and summer?—It was in the Act of 1766, but it is not in any subsequent Acts. By the 134th section the Board may determine the different reasons, but they cannot raise the present rates, therefore the section is nugatory.

4648. Mr. *Wykeham Martin.*] Is that Act wholly repealed?—Entirely.

4649. Mr. *Graves.*] We will now come to the question of boat-ownery; the Committee is anxious to get some information about that; what is the estimated value of the shares in the boats?—As far as I can gather, the average which each of the present owners has actually paid for his share is 120 *l.*; that would bring up the sum, which the present pilots have paid, to 92,160 *l.*

4650. *Chairman.*] Is that taken from the actual payment made by the owners?—The actual payment made; every pilot can prove to a fraction the sum that he has paid, by the production of his bills of sale.

4651. It is not taken from the last average payment?—No; it is taken from all the pilots who have purchased shares.

4652. Mr. *Graves.*] How are these shares held and

and disposed of?—I will endeavour to explain that to the Committee, because I think there is some little misapprehension with respect to it; the pilots always provided the boats from the commencement of the first Act of Parliament; but the subject of the boats and the ownery was not recognised by any Act of Parliament till 1824, when the licensing of the boats first came under the authority of the Commissioners; at that time the pilots put 11 boats upon the stations, and although we cannot find any record of what they cost, it is calculated that those 11 boats cost about 1,000*l.* each, that would be 11,000*l.*; they have provided 10 new boats intermediately between 1824 and the present time, and the average cost of those was about 1,600*l.*, that would be 16,000*l.* The sum paid for the 12 boats now in the service was 28,960*l.* 14*s.* 4*d.*, that would make a total cost of 55,960*l.* 14*s.* 4*d.*, which the pilots have expended in building boats for the pilotage service since 1824. Now, by reason of the increased expenditure in building new boats, the price of the shares has increased. Whenever a pilot dies, or retires from the service, his representatives can only hold the shares for 12 months, and the committee fix the price of the shares. By the 158 Sec., "Previous to the day of such sale, the Board shall cause a communication in writing to be made to the person so ceasing to be a pilot, or in the case of death, to his personal representatives, or his or their agent or attorney, stating the sum of money which shall, in the opinion of the board, be equal to the intrinsic worth of such pilot boat, or of such share or interest therein as aforesaid, having regard to the then state of such pilot boat, and adding thereto such a sum for the privileges of such boat, as in the opinion of the board shall be a reasonable compensation for such privilege." The consequence has been, that the value of that privilege which is here spoken of, "such a sum for the privileges of such boat" as they in their judgment shall think fit, has raised the actual sum paid by the pilots for the boats, which is 55,960*l.* to 92,160*l.*, which is the actual sum that the present owners have paid for their shares.

4653. *Chairman.*] Have you taken the values out for the intermediate period?—Yes, 11 boats in 1824, at 1,000*l.* each, 11,000*l.*; in the intermediate period, 10 boats at 1,600*l.* each, 16,000*l.*, and the present boats have cost 28,960*l.*

4654. I want the artificial value, not the real value?—The market value has decreased; as much as 145*l.* has been paid for a share.

4655. How long ago was that?—1852; 125*l.*, 130*l.*, and I believe as much as 145*l.* has been paid for a share.

4656. But the highest prize was in 1852?—Yes.

4657. Mr. *Wykeham Martin.*] What is the present price?—Mr. Simpson said about 118*l.*

4658. Mr. *Graves.*] Have you any idea what governs the committee in fixing the price of a share?—I presume the price which the deceased man gave for it, and the earnings of that particular boat, because each boat's earnings are different; one may be a successful boat, and earning more money than another.

4659. And the value of the shares will differ accordingly?—The value of the shares in each boat differs. For instance, No. 7 last year earned 233*l.* 8*s.* 3*d.* each man, whereas No. 1 only earned 203*l.* 7*s.* 9*d.*

4660. Why is it that there is such competition among the pilots to hold shares in these boats?—I presume it arises from two causes; competition and investment. For instance, they are not allowed to be licensed victuallers, and there are many other things that they are not allowed to embark in; and the natural mode in which a pilot invests his money is in a pilot boat. They are very anxious to get enough money to buy a share in a boat.

Mr. *H. Bremner.* 6 May 1870.

4661. Do you think it acts as an incentive to industry and frugality?—I think it is the highest incentive that can be offered to them. I should like to correct an observation made by Mr. Farrar. He spoke of "Those boatowners who were not pilots." That is not so. Nobody by law can hold a share in a Liverpool pilot boat but a pilot.

4662. *Chairman.*] He may be a superannuated pilot?—He must still be a pilot; he must still pay his three guineas annually for his pilot license.

4663. Though he does not go to sea?—Yes; he is exempted from going to sea, but he is still a pilot.

4664. Mr. *Graves.*] You think, on the whole, that the tendency of this principle of boat-owning among the pilots is a salutary one?—Yes, I do; I think it is a very great incentive to a pilot to save his money and buy a share.

4665. They look upon it with great pride if they are interested in a fine boat?—I believe they do, generally. I have heard some pilots, however, say that they would not invest their earnings in a pilot boat, because it is too hazardous.

4666. They do not think they get sufficient return for the hazardous nature of the investment?—Yes; but generally speaking they are desirous of holding shares.

4667. Do you consider that the owners ought to be compensated according to the sum which they have paid for these shares, if compensation becomes necessary?—Certainly; I think it would be very unjust indeed to abolish a system whereby the practice of boat-ownery has grown up, so as to have induced these men to have expended a large sum of money in actual payment. It is not a fictitious value to them, it is an actual payment. I think it would be very unjust, and I think the Legislature will not do it. I do not believe that it is the practice of the Legislature to do so. Whenever rights have been cancelled by Acts of Parliament, and especially where services have been rendered, Parliament has always compensated the parties. Take the case of the Government buying the telegraphs; they not only paid the shareholders in the telegraph companies the amount of their shares, but they paid them a sum for the compulsory sale besides; "Damages for disturbance" is the present Parliamentary phraseology.

4668. Is the per-centage for compulsory sale fixed by the Legislature?—No, I cannot state that, but, from my professional experience, when a compulsory sale takes place, there is generally 10 per cent, added for that compulsory sale.

4669. Twenty per cent., is it not?—Not in land and shares.

4670. What do you suggest should be the mode of compensating the owners of the pilot boats?—There are two modes, either that the Government should buy the boats at the exact prices at which each individual pilot has given for his share (and the price that each has given can be accurately ascertained), or that the boats should be valued

Mr. *H. Bremner.* 6 May 1870.

at their present value. That the pilots should buy them at their intrinsic value, and that the Government should pay them the difference between the intrinsic value of the boats and the sum they have actually paid for them.

4671. Do you include in that the per-centage for compulsory sale?—That would require to be added.

4672. What is the other alternative?—Either that the Government should buy them out entirely, or that they should be valued, and that the pilots should take them at their intrinsic value, and the Government pay the price between that value and the value the pilots paid for them.

4673. How could this be carried out?—There are no means at all, and there are no clauses in any way touching boat-ownery in the Bill; of necessity there would have to be a clause inserted in the Bill giving the pilotage authority and the Board of Trade the power to make an arrangement to ascertain the value, and to carry out such arrangement exactly in the same way as that of Mr. Cardwell's Act of 1853, when the Cinque Ports pilots were transferred from the jurisdiction of the Lord Warden of the Cinque Ports to the Trinity House.

4674. How was that done?—There was a power given by the 10th and 11th sections, whereby the Board of Trade, with the Trinity House, might propound a scheme for the purpose of ascertaining the value of the property which then belonged to the Cinque Ports, the emoluments which they were entitled to, and the pensions they were entitled to. They gave the Board of Trade and the Trinity House power to make regulations and to carry them out. But it would require some specific authority to be put in the Bill, to enable the Board of Trade and the Mersey Board to carry out any proposal Parliament might think fit to make with respect to the boats.

4675. What in your opinion is the effect of the sixth paragraph of the second clause of the Bill?—I conceive it to be an entire misconception of the draughtsman. I am satisfied that the Board of Trade did not intend it to have the operation which the words at present convey, because, as it at present stands, no pilotage authority would be entitled to any compensation at all if they should have licensed any pilots after the 15th of February last. Therefore that section would have to be altered, making it, that no pilot or apprentice who entered the service after the 15th of February, should be entitled to any compensation for any loss he might sustain under the operation of this Act; that the limitation should be to the person and not to the authority.

4676. What is the legal position of an apprentice coming out of his time at present?—Our Liverpool apprentices are bound under the authority of the Act of Parliament. The bye-laws 128, 129, 130, prescribe the requisites, the form, and the duties. Section 121 of the Act gives him the right to be licensed if qualified, and therefore an apprentice who is duly bound under the authority of the Act, and has duly served his time, and is qualified to pass all the examinations which the law requires him to pass, is by law entitled to be licensed, and no authority could prevent him. Supposing he applied to the authority and they refused to license him, he could go to the Court of Queen's Bench and get a mandamus to compel them to license him; of course, I mean, if he is duly qualified.

4677. In the event of this Bill becoming law, I suppose it is your opinion that the apprentices would have a claim for compensation, the same as the licensed pilots would?—When their time arrived for superannuation they would; they would have no claim to present compensation.

4678. Have not they precisely the same claim as a licensed pilot would have to compensation under this Act?—As apprentices, they would have no claim to compensation, but when they are out of their time and have passed their examination, they would be entitled to be licensed, and then they would be in precisely the same position as any other pilots.

4679. *Chairman.*] With regard to the principle which you would lay down in superannuating a certain number in consequence of the provisions of this Bill, I suppose you would not put it higher than this, that in superannuating a certain number of men, the number should have relation not only to the number of the pilots, but the number of the apprentices who would be coming on as pilots?—Yes; but the apprentice is not in a position to be thought of with respect to compensation, because he has not come into the service.

4680. Mr. *Graves.*] Supposing this Bill becomes law, and the revenue of pilots falls off considerably under the voluntary system, and there is a claim for compensation to the pilots, would not an apprentice who was within a month of completing his servitude when this Bill becomes law, be equally entitled to consideration, having entered the service under the compulsory system?—I hardly see what compensation he would require, because he naturally would not be superannuated.

4681. Would not his income fall off proportionately with the others when he became a pilot; I talk of his becoming a pilot, not of superannuation?—I take the principle of the Bill to be this, that if, by the operation of the Bill, should it become an Act, there should be a diminution of employment, then the proposal is that such a number should be superannuated as will leave to those remaining in the service the same average net income which they are getting at present, and that therefore an apprentice would not come into the same category at all, because the apprentice, when he was licensed, would not be the man to be superannuated; he would be filling up the vacuum of the old members. Hereafter, when he came to be superannuated, he would have the same right to be superannuated as if he had been a licensed pilot at the time the Act came into existence.

4682. Mr. *Cave.*] He could not lose it at first under the Act, because it is provided that there should be so few left that their income will be kept up?—That is so.

4683. Mr. *Wykeham Martin.*] But the damage to him would be that he never could get on?—Yes; that is under the operation of the 6th subsection. Of course if the sub-section remains in its present *totidem verbis*, it would exclude the apprentice from any claim hereafter.

4684. Mr. *Graves.*] Now as to the liability of the pilot in Liverpool; it has been generally supposed that it is a very nominal liability; is that so in practice?—No; it is an absolute liability; it is an unlimited liability. The Thames pilots are only liable in a bond of 100 *l.*, whereas the Liverpool pilots have an unlimited liability, and actions are brought against them, and sometimes

times they have had to pay. They are liable to the whole amount of their fortune.

4685. Are there instances of pilots being imprisoned who were unable to pay the amount?—Yes, and when I find that there are 20 men whose average property is 1,400*l.* each, and 40 men with 600*l.* each, it shows that they are men of substance who could be sued, and who would be compelled to pay.

4686. Would the pilots consider it a relief if their liability was limited to 100*l.*, like the pilots in the Thames?—No doubt.

4687. Mr. *Wykeham Martin.*] In the case of the Thames, I have before me a memorial which states, and the other witnesses of whom I have asked the question have stated in this room, that practically it is not once in a hundred times that any shipowner does recover anything from a pilot; do you mean to say that they generally do recover in the Mersey?—Yes, there are frequent instances where actions are brought against pilots. Under the Mersey Docks Act the magistrates have a summary jurisdiction.

4688. Your case is entirely different from the Thames?—Yes, it is a question of unlimited liability, and by the 95th section the justices have a summary jurisdiction up to the extent of 50*l.*

4689. Mr. *Cave.*] Do the Liverpool pilots give security as well?—No.

4690. *Chairman.*] I want to understand what your view is with regard to the compensation which ought to be given in the event of this Bill becoming law; as far as I understand, you do not disapprove of the first principle laid down in the Bill, that we are to wait and see what falling off there is in the employment of the pilots?—That is assuming the Bill to pass.

4691. You do not disagree with that?—No, I rather think that is an advantage, provided if it should eventually turn out that there is a diminution of employment, the compensation should be retrospective.

4692. You do not disapprove of the first principle laid down, that you are to wait and see whether there is a falling off of employment?—I approve of it.

4693. You do not think it right to take any steps at once to reduce the number?—No, I think it would be prejudicial to themselves, and the service.

4694. Having ascertained whether there is a falling off in the employment, you do not think it an unfair thing that the principle should be laid down that a certain number should be withdrawn from the service?—I do not think that I can answer that question except from the evidence which other gentlemen have given. It depends upon whether the pilotage authority thinks that a smaller number of pilots is sufficient for the services of the port.

4695. I will assume that they think that a smaller number is sufficient for the service of the port, and they say that one fifth or one fourth fewer pilots would be sufficient; I presume then, you would not think it unfair to withdraw by superannuation from the existing number of men to that amount?—I do not think that superannuation is compensation.

4696. Whatever you call it; whether you call it superannuation or compensation, that method of dealing with the thing is not an improper one; is that your view?—A man may not wish to be superannuated; he says, "Why should I be compelled to leave an employment where I am getting three-thirds, for a superannuation of two-thirds."

4697. Out of 240 pilots, I presume it would not be difficult to find a certain number of men on the verge of their own superannuation, whom you might tempt out of the service by giving something more than the superannuation they would be entitled to after a few years?—My knowledge does not enable me to say that. Mr. Simpson could answer that question better than I can.

4698. Arguing from general principles, I should say it would not be difficult to find a certain number of men on the verge of superannuation, who might be tempted out of the service by giving them something more than the superannuation they would be entitled to after a few years?—Probably that is so.

4699. You think that is not an unfair principle to proceed upon?—I do not think it an unfair principle to proceed upon if you give a man a sufficient compensation, but your Bill does not prescribe any amount; it is neither fixed nor compulsory.

4700. You think there should be a prescribed superannuation?—Either that they should have their present income for the term of ten years longer, or that they should retire on the two-thirds, which should be fixed and compulsory.

4701. But you must recollect this, that the men are receiving 200*l.* a year now, and the superannuation they are entitled to at law is only from 25*l.* to 40*l.* a year?—It depends upon the number of years' service. I think one of the present annuitants is getting 48*l.* a year.

4702. So that a man who is just on the verge of his superannuation, if he receives his whole present income for 10 years, or if he should be superannuated at two-thirds of his present income, would be, under this Bill, receiving a great deal more, and making a very good thing of it, compared with what he would receive if the service continued?—Quite so. If he was on the verge of his superannuation, but there are very few on the verge of superannuation, because the numbers superannuated annually is very small.

4703. I see four or five are superannuated every year, but there must be also a certain number going off from other causes every year?—Some few leave the service, seeking for other employment, and they do not get any superannuation.

4704. Two or three a year would be a sensible diminution in the number of pilots if you did not add to the number by bringing in fresh apprentices?—It is filled up for the service every year, because we have 72 apprentices; now, therefore, the 72 apprentices must come into the service and they must be licensed.

4705. You say the apprentices ought to be taken into consideration in estimating what number of pilots should be superannuated, but if you stop the flow of apprentices you will very soon produce a sensible effect upon the number of pilots?—We are anticipated for the next seven years by the present number of apprentices. Supposing we commenced now not to take a single additional apprentice, we are provided for seven years by the 72 apprentices now on.

4706. Have you introduced any clauses yourself to be inserted in the Bill?—I propose to put certain clauses into the hands of the honourable Member for Liverpool.

Mr. *H. Bremner.*

6 May 1870.

4707. Have you got them now?—No; it would depend upon the result of the examinations.

4708. I want to know what your actual view is with regard to superannuation?—My view is, that if they are to be superannuated upon two-thirds, the diminution of employment should be conclusive evidence, even in the opinion of the Board of Trade, that the diminution of employment had arisen from the operation of the Act.

4709. Even upon your principle, it must determine how many persons are to be promoted?—Yes; I think the pilotage authorities are the best parties to decide that.

4710. Must not it be with the approval of the Board of Trade?—I think it must rest with the pilotage authorities, in the first instance, for this reason: they must regulate what number they require for the services of the port; it really must come to that; they are the better judges what number they require to carry on the service of the port.

4711. You would take into account, not only the incomes the men are making at the time of the passing of the Act, but also what number the pilotage authorities think necessary for the services of the port?—Yes.

4712. Now we will go on to the question of compensation to the boat owners. Your proposition is that the Government should take this opportunity of buying up all the dead weight which now hangs over the pilotage funds, namely, the difference between the actual value of the vessels and the market value for which they sell?—I have tried to find out any other mode of doing it than one of those two, and I cannot conceive any other, to do justice to the men who have paid the money.

4713. Supposing there was one-fourth less employment for pilots after the passing of the Bill than there is now, and that one-fourth of the pilots would have to be superannuated, and it turned out that one-fourth fewer vessels would be required, it would not be necessary for the Government to compensate the owners of all the other vessels, but only those struck off the list?—Then would come the question, which are to be struck off.

4714. That would not be any matter of difficulty in determining; what you have to do is to reduce the number of vessels?—Yes, it would be a matter of very great difficulty. Supposing this Bill become an Act, its passing diminishes the value of the shares of all the boats at once.

4715. After the men have been superannuated, and supposing the number of vessels is reduced in proportion to the number of pilots who are to go on, then the value of the vessels would be restored to the value at which they originally stood; the good-will of the vessels would still subsist?—I do not follow that argument, for this reason: it is assuming that the gross revenue will diminish; if the pilots are diminished by say one-third, the revenue, as a matter of course, will be so much diminished.

4716. The revenue would only diminish in proportion to the reduction of the number of pilots; as I understand it, out of every boat the receipts must go to the owners of the vessels?—No, a specific sum; so many shares of the earnings go to the owners of the vessels.

4717. So that if, after this Bill comes into law, and after the reduction has taken place in the number of men in accordance with the compensation clauses, the incomes of those remaining are at the same rate as their present incomes, the shares of those particular boats that are left would remain the same, would they not?—Yes.

4718. Then it would be necessary, according to that view, to reduce in the same ratio the number of boats as well as the number of pilots?—I have not calculated what effect that would have.

4719. It seems to me that your proposition involves the purchase by the Government of the whole of the goodwill now existing; you are taking this opportunity of asking the Government to sweep away the dead weight which now exists upon the pilots and the trade of Liverpool; is that the effect of your proposition?—That is the effect of the proposition if the system is to be disturbed at all.

4720. Do you think that system of paying a goodwill for the boats is a good one?—I do not call it a goodwill. I think it is the natural operation which occurs in the case of every description of property, that the price rises according to the interest paid upon it.

4721. Does not that excessive price depend upon the Liverpool Pilotage Act, which defines the proportions which shall go to the boat; is not it the reason for the increased value of the boat?—I do not think the increase is so extravagant when it comes to be understood, as appears on the face of it; when you consider that they have paid 56,000 *l.* for the boats; what you are pleased to call good will, but what the Act calls "such a sum for the privileges of the boat, as in the opinion of the board they shall think advisable;" I do not think it is so very extravagant.

4722. We have heard in evidence that the actual value of the boats is 28,000 *l.*, and that their market value is 90,000 *l.*; what is the difference; is it goodwill, or privilege, or what?—It is 55,000 *l.* that the boats cost.

4723. £. 90,000 *l.* you told us?—The actual sum paid on the boats is 55,900 *l.*

4724. We are told that the actual present value of the boats is only 28,000 *l.*?—The present 12 boats cost 28,960 *l.*; that is the actual cost; but the pilots have paid since 1824, 55,960 *l.* for the boats.

4725. How have they paid it?—They built 11 boats in 1824, 10 boats intermediately, and 12 boats since.

4726. If you take the present boats according to their market value, they would not fetch more than 28,000 *l.* intrinsically?—Not so much.

4727. The difference between that and 90,000 *l.* is a fictitious value, is it not?—No, I must beg leave to differ with you; it is not a fictitious value if it has actually been paid for it.

4728. It does not represent any existing property; it represents goodwill?—It represents the property which has been built up since the Act of 1824.

4729. But which no longer exists. You have got the actual value of the vessels, which is 28,000 *l.*, and you have the market value of the shares, which is 90,000 *l.*, and the difference between those two prices seems to me to be the fictitious value; the goodwill, or privilege, or whatever you may call it?—I can admit the full extent of your argument, if the present owners of shares had only given 28,960 *l.* for their shares, then it is quite true that the goodwill would raise it from 28,000 *l.* to 92,000 *l.*

4730. It does not alter the argument, because they paid that value for somebody else's goodwill?

will?—For instance, a public company in our own town bought exchange buildings where the original shares were 100 *l.* each, and they were, I think, sold for 480 *l.* each.

4731. But that represents existing property? —It rather represents an increased rate of interest, differing from the old rate of 5 per cent.; when they were paying 10, 11, and 12 per cent., the price of shares naturally rose.

4732. You told us that the price of the shares of the vessels varies from time to time; sometimes it is higher and sometimes lower?—It varies according to the age of the boat; if the boat has run 10, or 12, or 14 years, she will not sell for so much by 10 *l.* or 15 *l.* a share, because the man who buys knows that he will have to subscribe 20 *l.* or 30 *l.* in a few years to build a new boat.

4733. There is another element surely; the increase through the rise or fall of goodwill depends upon the employment of the pilots; is not that so?—I think that has very little operation upon it.

4734. I think you told us that a few years ago the shares were worth 148 *l.*?—In 1852 a share was sold for 145 *l.*; not generally; in No. 7 a share sold for that sum.

4735. What is the last price that has been given for shares in these boats?—£.118.

4736. Is that the last sale?—I believe so.

4737. At all events you will not dispute this, that the effect of your proposition would be to throw upon the Government the expense of compensating the full difference between 28,000 *l.* and 92,000 *l.*?—Yes.

4738. And, therefore, sweeping away what I may call the incubus, or privilege, or goodwill, which now hangs over the boats?—That I conceive to be the only just mode of recouping the sums of money they have paid.

4739. And immediately after the operation, the goodwill would return again, because it depends upon the proportion of the earnings which goes to the boats; as soon as the operation is complete, the boats would at once have another value of the same kind; would not that be so?—No; because the whole system of boat-ownery would then be open. At present, under the Act of Parliament, the building of a boat, or the putting of a boat on the station, is confined to the pilotage authorities. There used to be 11 boats; in the year 1832 they put on the twelfth. They have not increased the number of boats since, but probably if the system were thrown open, other boats would be put upon our river, as they do upon other rivers.

4740. You would take that opportunity of throwing it open, and allowing anybody to put on a boat?—That would be the natural effect of it.

4741. I want to get to what you contemplate should be done; if this Bill becomes law, you think the Government should take the opportunity of buying up all the difference between the actual value of the vessels and their market value?—I did not say "that I think the Government should take the opportunity of doing so;" I say, if the Government think it of imperial necessity to alter the system of compulsory pilotage, they must place the pilots who have expended their money upon the faith of the Act of Parliament, in the same position they were in before by recouping the sums of money they have expended.

4742. And to the full extent of the difference between 28,000 *l.*, the value of the vessels, and the 90,000 *l.*, the market value of the vessels?—Or by buying them out entirely.

4743. Mr. *Cave.*] Should you call that increased value a purchase of the income to be made by the boats?—That increased value is the actual sum now paid; of course that sum has increased, as I said before, from 56,000 *l.* to 92,000 *l.*, by reason of the dividing of the 11 and 12½ per cent.; they have divided all their earnings, and not set aside anything for depreciation.

4744. It is a purchase of the income, just as much as the value of shares in a gas company is a purchase of the dividends paid?—Yes.

4745. So that it does not depend only upon the boats, but all the increased value depends upon the means of making that income?—Just so.

4746. *Chairman.*] Supposing, after a year or two years from the passing of the Bill it turned out that the incomes of the pilots were not really reduced, would there then be any necessity in your view for purchasing this goodwill?—If there was no diminution nobody would be damnified.

4747. Mr. *Cave.*] And the shares would remain at the same price?—The shares would remain at the same price because the same income would be derived.

4748. But if the reduction was very general, your reduction would involve the purchase by the Government of the whole of the 60,000 *l.*?—It would involve the payment of the difference between the intrinsic value and the sums they had paid for them.

4749. Not the then value of the shares in the market?—No; the value of the shares in the market at the time of the "disturbance" by the passing of the Act, because the operation of the Act must of necessity diminish the value of the shares.

4750. Mr. *Gourley.*] In coming to the actual value of the ships, should not you take into account the actual sum which you have paid, and which ought to have gone to the depreciation fund?—Whenever a new boat was required they always built it out of their own pocket; whenever the Board think that a boat is insufficient for the service the Board orders the owners of the boat to build a new boat, and they would withdraw the license from the old boat if they did not build another in its place.

4751. They would build a new boat and pay a sum of money in addition?—Each shareholder, according to the number of shares he holds, must contribute an aliquot proportion to the new boat; it does not increase the value of the shares a shilling; assume a share to be worth 120 *l.* in the old boat, it would not be increased in value according to the amount paid for the new boat.

4752. Mr. *Cave.*] It would increase the value, to some extent, would it not?—When the boat is an old one, the value of the shares is diminished, because they must have a new one in a short time, and they will have to put their hands in their own pockets to build a new one; but when the new boat is placed upon the station it does not add to the value of the shares.

4753. Would not it add to the selling price, because they would know it would be a long time before they would have to build another?—It would not add so much as the old boat diminishes it.

4754. *Chairman.*] Are you aware that the

Mr. *H. Brenner.*

6 May 1870.

Merchant Shipping Act of 1854 throws upon coasting passenger steamers the obligation to carry pilots?—Yes.

4755. That has never been enforced by the pilotage authorities of Liverpool, has it?—It has not; I should like to correct a mistake Mr. Simpson made this morning. He said that 1,800*l.* was the sum paid. I have got the actual sum that the coasting steamers paid last year, which is 1,492*l.* 15*s.* 6*d.*

4756. Can you state how many steamers have paid that?—No; I can only give the names of the firms who have paid it.

4757. Can you say in respect of how many steamers it has been paid?—No.

4758. I suppose it relates to all the steamers running from Liverpool to Ireland and Scotland, and other parts in England?—It is all confined to 12 months.

4759. And in consideration of that payment the pilotage authorities have never compelled these steamers to carry pilots?—The Order in Council was made under the authority of Mr. Cardwell's Act of 1853; that was before the present pilotage authority came into operation, which was in 1859, and they have never sought to disturb the Order in Council.

4760. That Order in Council was made in 1853, before the Merchant Shipping Act was passed?—Before the Merchant Shipping Act was passed in 1854.

4761. And section 354 of the Merchant Shipping Act imposed upon those vessels the liability to carry pilots, but it has never been carried out, and they have not been compelled to carry pilots by the pilotage authorities?—No.

4762. And they carry out the old arrangement of 1*s.* per foot?—One shilling per foot if they do not take a pilot, and 4*s.* inwards and 2*s.* outwards if they do take a pilot, which they sometimes do.

4763. But as a rule, they do not take pilots?—No; they do not as a rule.

4764. I presume I may take it that the pilotage authorities of Liverpool do not think it necessary, in the interests and safety of life, to compel these vessels to carry pilots?—I am not their adviser.

4765. Is it your opinion that these vessels ought to carry pilots?—I think they ought.

4766. Have you heard of any losses occurring from not carrying pilots?—I have only Admiral Evans's report, showing the large number of casualties to vessels which had not pilots coming into the port last year. He says that they are principally small craft; there was only one casualty with a vessel that had a pilot.

4767. Are you aware that there have been very few casualties in the case of coasting steamers, which are exempt under this bye-law?—I believe there are very few.

4768. Notwithstanding that, you would compel them to carry pilots?—Yes, I would; more especially as that 354th section is still in operation.

4769. You think they ought to be compelled to carry pilots?—Passenger steamers ought.

4770. It has not been the habit of the Liverpool people to compel these vessels to do so, though the law is there, and they could be compelled to do so?—My opinion is that the primary object of pilotage is to save life.

4771. The obligation to carry pilots has never been enforced upon these passenger steamers?—Not since January 1854.

4772. Nobody in Liverpool has forced these vessels to carry pilots?—Nobody; I must say that the obligation in 1854 was forced upon the pilots.

4773. By whom?—By the steam shipping trade.

4774. Mr. *Graves.*] In answer to the Chairman you gave some qualified approval of the possibility of doing with three boats less, in the event of the trade falling off; have you consulted any of the nautical authorities, or the pilots themselves, with reference to the possibility of maintaining the station system with less boats than you have at present?—I have not; and as I said, in answer to the question put by the honourable Chairman, it was a point which the pilotage authorities would have to determine, whether they could do with fewer boats or fewer pilots.

Tuesday, 10th May 1870.

MEMBERS PRESENT:

Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. J. S. Hardy.
Sir. John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. William Philip Price.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. Angus Turner, called in; and Examined.

Mr. *A. Turner.*
10 May 1870.

4775. Mr. *Malcolm.*] You are the Town Clerk of Glasgow?—I am.

4776. And one of Her Majesty's Justices of the Peace for Lanark?—Yes, and Perthshire; I am magistrate of both counties.

4777. I believe you are also Parliamentary Secretary to the Trustees of the Clyde Navigation and other Municipal Boards?—Yes.

4778. Including the Pilot Board?—Yes.

4779. How long have you held that office?—I have held that office from 30 to 40 years altogether; I have been through the different grades of the office; I have been principal town clerk for the last 10 or 11 years.

4780. I believe you are well acquainted with the Acts under which the Pilot Board was established?—Yes.

4781. And you had something to do with them?—They were almost all passed under my official charge; there were 10 Clyde Navigation Acts, and I had the charge of the passing of the whole of those Acts through Parliament.

4782. I believe in the first instance the pilotage of the River Clyde was not compulsory; what was the reason that it was made compulsory?—There was no pilotage on the River Clyde prior to 1825; many accidents occurred both to person and property before 1825, a great number of which came under my cognizance as legal assessor to the Admiralty Court; they were very numerous indeed in the River Clyde before a system of pilotage existed there at all. In 1825, being secretary to the Clyde Navigation Trustees, I suggested to the trustees that, in order to remedy that state of things, a system of pilotage should be established by Act of Parliament. After fully considering the question, the trustees thought it expedient, and we brought a Bill into Parliament, by which the pilotage was for the first time established in the Clyde. I will, if you allow me, read the clause in the Act establishing the first board of pilotage; the 57th section of the Act of 1825 is to the following effect: "Be it further enacted, that the Lord Provost, and the eldest merchant, baillie of the City of Glasgow, the dean of guild of the said City, the deacon convenor of the trades of the said City, the baillie of the River and Frith of Clyde the two baillies of Greenock, and the two baillies of Port Glasgow and Newark, with five merchants interested in the shipping and in the navigation of the said river and frith, whom the said trustees are hereby authorised and required annually to nominate, and appoint, during the month of October (any three of the said persons to be a quorum), shall have full power and authority, from and after the passing of this Act, and from time to time as occasion may require, to license pilots employed in the navigation of vessels on the River and Frith of Clyde, trading to and from the harbour of the Broomielaw, after due inquiry into the experience, skill, and general qualifications of the said persons, and to make rules and bye-laws for ascertaining and regulating the fares, and wages, conduct, and behaviour of the said pilots, and to enforce observance of the said rules and bye-laws by such pecuniary penalties as may be necessary for that purpose, besides deprivation, temporary or permanent, as the case may require, of the said persons, respectively, of their licenses, and the said magistrates, or any one of them, are hereby authorised and empowered to inflict such deprivation of office by recalling the said licenses, and publishing the names of the persons so deprived, and to award the said pecuniary penalties with an alternative judgment, in case the said penalties, or any of them, should not be sooner paid, of imprisonment within the gaol or bridewell of Glasgow, for any space not exceeding 60 days; the said penalties to be applied as the said magistrates shall direct; provided always, that the said rules and bye-laws shall not be repugnant to, or inconsistent with, the laws of Scotland and the provisions of this Act; and printed copies of the said rules and bye-laws shall be furnished to the said pilots along with their licenses, and shall be put up in conspicuous places in the chambers of the baillie of the River and Frith of Clyde, and of the harbour-master of the Broomielaw, and also in the offices of the collectors of the said river and harbour duties; and shall, when effaced and obliterated, be constantly reprinted or renewed, and that none of the said pecuniary penalties shall exceed the sum of 5*l.* sterling for each offence." That is a very long section.

4783. Was any regulation passed by the Pilotage Board in consequence of that power?—Yes.

4784. Have

Mr. *A. Turner.*

10 May 1870.

4784. Have you got it there?—Yes, I have it here; it is a very short regulation; it is dated the 22nd of December 1826; it was after the passing of the Act of 1825. The regulation is to this effect: "That no person shall presume to act as a pilot on board of any vessel navigating the River and Frith of Clyde, and trading to the harbour of the Broomielaw without being regularly licensed by the board established under the aforesaid Act of Parliament; nor shall the pilots, licensed by the said board, be entitled to exact any higher rate of pilotage than is authorised by the annexed table; and every person contravening or offending any part of this regulation shall be liable in a penalty not exceeding 5*l.*, besides all damages and expenses."

4785. In consequence of that regulation, I believe you found that the state of the river was very much improved, and that there were fewer accidents?—Yes, it was incomparably improved.

4786. I believe, in 1858, the trustees had to come for further powers?—They had to consolidate the Clyde Navigation Acts, and, amongst other things, was the question of the pilotage authorities.

4787. Under that Act, if I recollect rightly, the two pilot boards which now exist were consolidated?—Yes. Before the passing of that Act there were two boards existing, one having its domicile at Greenock and the other at Glasgow. The Board at Greenock licensed pilots for what are called deep-sea pilots, pilots not coming up the narrow estuary of the Clyde, but proceeding seaward; there was another board, established at Glasgow, confined to the compulsory waters of the Clyde, the narrow and tortuous and difficult navigation of the river; and this Board licensed all pilots within these compulsory waters respectively; but as the two classes of pilots frequently got into conflict, it was found desirable to consider whether the two boards could not be united, in order to give better harmony of action in the licensing and in the conduct of the pilots. The Bill was much opposed in Parliament by a variety of interests, by the people of Greenock, and by the traders upon the river, the steamboat traders, and by a class of small shipowners who were desirous of getting an exemption in favour of vessels under 60 tons burden. We proposed that there should be no distinction in reference to the class of vessels; that they should all be required to have pilots on board; but I daresay it is familiar to every Member of this Committee that sometimes the desire of parties is not carried out, and it often becomes a question of compromise and arrangement. The Bill went before a Committee of Parliament; and the opponents of that measure united together and they each aided one another; the people of Greenock aided the small shipowners, and the shipowners aided the people of Greenock; we were obliged to make the most of the matter; and after a very lengthened discussion before a Committee, of which Sir John Bulwer was Chairman, and on which Mr. Arthur Mills and Mr. Garnett, all three experienced Members of Parliament, sat; after a long discussion, and examination of witnesses before the Committee, they established a code of regulations, which are embodied in the Act of 1858. If the Committee wish to refer to them I have the Act here; it is now the existing law with reference to pilotage, having been established in that deliberate manner I have been describing.

4788. I believe after that, the united boards passed bye-laws and regulations?—Yes; would it not be desirable to place upon the minutes the sections of the Acts containing this code of regulations, because it may be important afterwards by way of reference. The sections of the Act commence with the 128th section, and they finish with the 134th section of the Act of 1858: "And whereas it is expedient that only one authority should exist for licensing pilots for the safe conduct and navigation of vessels in the River and Firth of Clyde: Be it enacted, that from and after the 1st day of January 1859, the board (herein called the Pilot Board) for licensing pilots for navigating vessels plying in the River and Firth of Clyde within a straight line due east and west from the southernmost point of the island of Little Cumbrae, shall consist of 16 members, videlicit, eight members to be chosen by the trustees acting under this Act in the month of November next, and in the month of November in each succeeding year, of whom the Lord Provost of Glasgow for the time being shall be one; five members to be chosen by the trustees of the Harbour of Greenock, in the month of November next, and in the month of November in each succeeding year, of whom the Lord Provost of Greenock for the time being shall be one; and the provosts of Port Glasgow, Dumbarton, and Rothesay respectively for the time being; and the said Pilot Board shall be a pilotage authority within the meaning of the 'Merchant Shipping Act, 1854,' and all the powers by that Act conferred on pilotage authorities shall be vested in the Board for the purposes of this Act. The first annual general meeting of the pilot board shall be held at Glasgow, in the month of January 1859, and the next annual general meeting of the board shall be held at Greenock, in the month of January 1860; and the annual general meetings of the board shall be held thereafter in the month of January, at Glasgow and Greenock, in alternate years. Special meetings of the Pilot Board may be called by the chairman of the board for the time being, at such times and places as he may think fit, or on a requisition in writing, addressed to the chairman of the board for the time being, signed by any three members of the board, and stating the object of the meeting, and on the receipt of such requisition the chairman shall convene such special meeting by a circular, addressed to each member of the board, stating the time and place of such meeting, and containing a copy of such requisition, which circular shall be delivered or transmitted by post to each member, at least seven days previous to each special meeting. The members of the Pilot Board shall be called to attend all general meetings, and all special meetings called by the chairman of the board, for the time being, by printed or written notices, stating the time and place of meeting which shall be delivered or transmitted by post to each member, at least seven days' previous to such meetings. The Lord Provost of Glasgow, for the time being, shall be chairman of the Pilot Board for the years in which the annual general meetings are held at Glasgow; and the Provost of Greenock, for the time being, shall be a chairman of the board for the years in which the annual general meetings are held at Greenock; and the chairman, if present, shall preside at all meetings

meetings of the board, or in his absence, a member of the board to be chosen at any such meeting, shall act as chairman. At all meetings of the Pilot Board five members shall form a quorum; and the chairman of every meeting shall, in the event of an equality of votes, have a casting vote in addition to his deliberate vote. The Pilot Board shall have the exclusive right and privilege of licensing pilots for the navigation of vessels in the river and Firth of Clyde, within the said limits; and it shall be lawful for the board from time to time to make such bye-laws and regulations as they shall think fit, for fixing and regulating the wages and allowances for pilotage to be received or exacted by the pilots already licensed for the said river and firth, or by the pilots to be licensed by the board, and also for regulating the behaviour and conduct of such pilots, and providing a suitable superannuation fund for the support of aged or disabled pilots, their wives and families; and to enforce the observance of such bye-laws and regulations by the imposition of pecuniary penalties, not exceeding 5 *l.* for each offence, or by suspension or deprivation of license or otherwise, as to the board may appear expedient." Any Member who chooses to look at the provisions of the Act, will see how carefully the Committee considered the whole question.

4789. In consequence of that, the board of the Clyde Trustees and the Pilotage Board together made bye-laws?—Yes, which are now the present bye-laws. Here are some clauses, which the Committee may wish to see, the 18th and following clauses of the bye-laws. They are rather important clauses with reference to this inquiry. The 18th clause is with reference to the two classes of licenses; the class of license applicable to deep-sea pilots, and the class of license applicable to the compulsory waters' pilots. That is really a matter which the Committee may wish to have. They are as follows: "The pilots licensed by the board shall consist of two classes, namely, river pilots licensed to pilot vessels between Glasgow and Greenock; and deep-sea pilots licensed to pilot vessels between Greenock and the Island of Little Cumbrae, including vessels proceeding outwards from Port Glasgow, or inwards to Port Glasgow; and these classes shall not be altered, except by the authority of two-thirds of the members of the board present; provided that, in the case of steamers making trial trips to adjust their compasses, or for other such casual purposes, the owners or persons in charge of such steamers shall be entitled to take either river pilots or, when going from Port Glasgow or Greenock, deep-sea pilots in their option. No person shall presume to navigate or to act in piloting any ship or vessel whatever, exceeding 60 tons register, on any part of the River Clyde, other than the river pilots duly licensed by the board, under a penalty not exceeding 5 *l.* for each offence, besides all damages and expenses. The masters or mates of stated or regular traders and steamers regularly frequenting the Harbour of Glasgow, shall respectively, upon application to the board, receive a pilotage certificate under the Merchant Shipping Act, if found qualified to conduct such regular or stated vessels and steamers; but it shall not be lawful for such mates or master to take charge of any other vessel whatever; the sum of one guinea being always payable for such certificate towards the pilot fund, after mentioned, besides the clerk's fee of 5 *s.* No person shall hereafter be licensed as a pilot for the first time who is above 40 years of age, or who has not previously acted as such under the board, or who has not been, for the period of at least seven years, actively employed as a seafaring man, and who has not for three years of that period, sailed in a square-rigged vessel. Any license or certificate granted or renewed by the board, may be either temporarily or permanently withdrawn, and all licenses and certificates issued by the board, shall be granted up to and including the 31st day of January next ensuing after the date of license, unless the board shall otherwise see cause to withdraw or suspend such license. Every pilot licensed by the board shall find sufficient caution to the extent of 20 *l.* for his proper conduct and behaviour, and his strict compliance with the present and any other regulations enacted or to be enacted by the board, which sum shall be applicable to payment of loss or damage occasioned by the misconduct of the pilot; and he shall further be held personally responsible for all damages and expenses that may be incurred, and he shall not be entitled to act as pilot until he has found such caution. The pilotage exigible by the respective river pilots shall, in the case of inward-bound vessels, be payable to the collector of tonnage duties at Glasgow, along with the river and harbour rates and duties, by the master or person in charge of the vessel, on arriving at the harbour of Glasgow, upon the production by the pilot who may have had charge of the vessel, of a certificate, signed by the master of the ship, stating the draught of water, and that the pilot had conducted the vessel to the harbour; and in the case of outward-bound vessels, the pilotage shall be paid in advance to the collector of the said duties, along with the harbour and river rates and duties outwards, upon a certificate by the master stating the draught of water; and the treasurer of the board shall, upon proof in each case that the pilot had properly and satisfactorily performed his duties, pay over to him all such sum or sums of money as shall have been paid to or received by him as aforesaid, under deduction of the poundage after mentioned."

Mr. *A. Turner.*
10 May 1870.

4790. How do the boards now grant licenses to the compulsory pilots?—The united boards meet, and they appoint a committee of examiners. The examiners are chiefly retired shipmasters or owners of vessels; they are all men of practical experience, with reference to the qualifications necessary for pilots; they are selected with that view from amongst the board, and they are men who are cognisant of all these questions.

4791. *Chairman.*] In fact, you appoint the Examiners?—Yes; but they are qualified Examiners; they appoint the two committees of examiners, the one committee sits in Greenock, and the other in Glasgow. The Glasgow committee license all the compulsory pilots in compulsory waters, and the Greenock committee license all the deep-sea pilots.

4792. Mr. *Gourley.*] Deep-sea pilots are non-compulsory pilots, are they not?—Yes.

4793. Still they are licensed?—Yes; still they are licensed.

4794. Mr. *Malcolm.*] Do you think that that system could be improved as far as regards the narrow waters of the Clyde?—I think if the board are left alone it can be improved, and the best

Mr. *A. Turner.*
10 May 1870.

best proof of that is their past conduct; they have improved the system enormously; they have a peculiar knowledge as they are all engaged in shipping themselves, and if the shoe pinches at all it pinches the members of that board; and they being on the spot, and knowing the necessities of the case, they certainly, I think, are a very proper tribunal to make such improvements as may be desired; it has been suggested more than once since the passing of the Act of 1858, that the trade of the Clyde has so increased—probably there is no part of the kingdom where the increase has been so great from the enormous number of steam and other ships building in the Clyde, and the immense increase in the traffic. As a proof of that, I myself, in this Session of Parliament, have the charge of a Bill which is passing through the other House of Parliament to expend the sum of a million and a half sterling in docks for Glasgow because the ships are now lying in the harbour, in some instances from three to five deep, and consequently the mere loss in demurrage to the country is more than the whole rates leviable by the Clyde Trustees. Therefore the increase of the traffic is so great that it becomes now a question of how far those pilot regulations should not be amended, with the view of placing every description of vessel, in so crowded and narrow a river, and so tortuous in its character, under compulsory pilotage.

4795. In 1863, I think, the trustees obtained a Provisional Order from the Board of Trade exempting vessels between 60 and 100 tons from compulsory pilotage?—Yes; they did that in a very peculiar way. The manager of the Clyde reported that there was a competition existing with reference to minerals between the railway company and the River Clyde, and with the view of aiding the Clyde portion of the competition, he wished to make the pilotage as light as possible; and as that class of minerals were carried in vessels under 100 tons burden, he proposed that there should be a Provisional Order obtained from the Board of Trade to exempt vessels under 100 tons burden from pilotage, provided the tug vessel in charge of them took a compulsory pilotage license; that Order was passed, and it has proved a dead letter; it has never been acted upon; probably that may have arisen from the competition having ceased between the two parties, but in point of fact it is a dead letter. However, it proves one thing, that when pilotage is left to itself persons who have the power of taking a license, or not taking it, do not avail themselves of it. The owners of these tug steamers could have navigated their vessels free from compulsory pilotage, or they might take compulsory pilots if they chose; they have not availed themselves of the relaxation of the law, and they have taken no pilots, being under 60 tons burden.

4796. *Chairman.*] Who complains of their not taking pilots; I thought you said complaints were made of their not taking pilots?—Complaints are made of their not taking pilots.

4797. Who made the complaints?—Really I cannot give the names of the parties.

4798. What class of persons made the complaints?—The persons interested in the trade; I know nothing of it beyond that; it comes from parties engaged in the trade.

4799. Mr. *Gourley.*] I suppose the masters of tugs are better pilots than the ordinary pilots?—No; the tugs are now conducted practically by the pilots on board the large ships that are tugged; the latter have compulsory pilots on board.

4800. Mr. *Malcolm.*] And the tugs are practically under their direction?—Yes.

4801. I suppose you have the means of ascertaining in Glasgow by common reports and by conversation the general feeling of the shipowners and others with regard to this proposition?—Yes; I have heard it very frequently discussed.

4802. And it is not in favour of this Bill, is it?—They are very hostile to it indeed; almost every man largely engaged in shipping says that it will totally disorganise the pilot system which has prevailed in the Clyde for the last 30 years; in fact, that it will throw open the river, and force us back to the position of things in 1825, when they picked up persons from the quays; persons totally disqualified to be pilots; they took the assistance of these persons instead of taking a duly qualified pilot, to whom they would be obliged to pay a proper pilotage rate; they say that if this Bill passes we shall be retrograding, and going back to the state of things which existed in 1825.

4803. It was in consequence of doing that, that compulsory pilotage was originally introduced?—Yes.

4804. Mr. *Norwood.*] You said just now that your pilotage regulations could be very much improved?—I think they could be in that respect; I think they ought to extend the system of pilotage to every description of vessel above 30 tons burden.

4805. It is not so much an improvement as a destruction of the exemptions?—Yes; a destruction of the exemptions, because it has now become necessary from the immense increase in the trade, and the traffic being so enormous, that without you make it applicable to the smaller class of vessels between 30 and 60 tons, you really disorganise the police and good government of the river.

4806. You do not propose to interfere with the pilotage below Greenock?—No.

4807. You think it is right that it should be non-compulsory?—Yes; in the open sea it is not necessary, it is only in a contracted channel like the Clyde, where there is an immense number of vessels passing up and down; it is just as necessary as the police of a town in coming and going with safety through a town; the pilots form a staff of police or pilotage officers to conduct safely the navigation of all descriptions of ships, and that is not left at the discretion of individual shipowners more than the peace of a town is left at the discretion of offenders against the peace of the town; the object is to get a good system of pilotage police in the river.

4808. Is there any complaint made by the small shipowners as to the charge?—I never heard any complaint; it has never reached me; I understand that the pilotage in the Clyde is less than in any river in the kingdom.

4809. Are there any complaints as to the manner in which the pilotage service is performed in the compulsory waters?—I never heard of it; I have heard a complaint of this kind, that the persons who hold masters' and mates' certificates as contrasted with those who use compulsory pilots, complain that they are not placed on an equality; they think that a man who has a compulsory pilot

pilot on board should not receive an immunity from all risk and damage.

4810. That is a question of a shipowner's liability?—Yes; that is the only complaint I have ever heard.

4811. Do very large vessels go up to Glasgow sometimes?—Yes; vessels of 3,000 tons burthen.

4812. And that is increasing?—Yes; there is not a portion of the kingdom that has increased so rapidly.

4813. Greenock and the port of Glasgow are not increasing in proportion to Glasgow?—No; Glasgow is increasing a hundredfold beyond any other place in Scotland.

4814. Are you quite satisfied that the feeling of Glasgow is in favour of the present state of things?—I am satisfied it is, and I think the authorities of Glasgow will be actually shocked if the present state of things is altered.

4815. Do you think it is a rather difficult navigation up to Glasgow; is it not a broad ditch, and if you keep in the centre of the stream you will be all right?—You will find from the pilots and the nautical men, who will be examined, that it is not a ditch in the sense you have put it; it is a most tortuous and difficult navigation, depending upon wind, weather, land-floods, and tide, the knowledge of which can only be obtained by men who have been properly brought up and schooled into the system.

4816. You mean that a knowledge of the winds can only be known by men brought up to it?—These affect the state of the time when the vessel has to start.

4817. That depends upon the state of the tide?—Yes.

4818. That can be ascertained by a non-pilot?—I do not know that it can.

4819. Are there not publications which show the state of the tide in the Clyde waters every day throughout the year?—I do not see that an Irishman coming over from Belfast, or any other part of Ireland, can form any idea of the tide in such a river, nor is he capable of considering the effect of the winds in different portions of the river; that is a thing of education; they must get practised to it.

4820. Is it not the case that from Glasgow, one-half the way down to Port Glasgow, there is a channel of from 100 feet to 150 feet in width?—Yes.

4821. With 12 feet at low-water?—Yes.

4822. If a vessel comes in the centre of the channel she is safe enough, is she not?—You will find by the examination of some of the practical men who are to follow me, that the navigable channel does not exceed 80 feet; that is, for a certain description of ships.

4823. That is the narrowest portion of the channel, is it not?—I do not know the portion of the channel, but this is the deep channel of the Clyde, and portions of it do not exceed 80 feet in width; any man who knows the size of the large vessels that navigate the Clyde, some of them drawing 21 feet of water, and of 3,000 tons burden, must be aware that supposing two ships of that tonnage to meet in this narrow channel, they can scarcely pass; then, supposing three or four of these passenger steamers (there are 32 of them sailing every day from the Broomielaw) come about the same period, when the large ships are passing in this narrow estuary; in that case the channel would be completely blocked up.

4824. You are going to bring some nautical evidence, are you not?—Yes.

4825. Mr. *Price.*] I understand that the navigation of the Clyde is under the jurisdiction of a body of trustees or commissioners?—Yes, they are chiefly the persons who pay rates upon the river.

4826. It is a public commission?—Yes, there is no private interest in it.

4827. And no dividend whatever?—No.

4828. The trustees are the commissioners to protect the public interest?—Yes.

4829. The navigation of the Clyde is pretty much the canal navigation of a river, is it not?—No, I do not think so; it is so much influenced by the tidal flow and great land-floods that it requires a great deal of knowledge of the effect of floods upon the particular sinuosities of the river, and the effects of the tide upon the bends and sinuosities of the embankments are such that you cannot compare it to a canal or ditch or anything of that description; it is a very peculiarly flowing river to persons not acquainted with it.

4830. But still it is an artificial navigation, is it not?—To some extent; it has been more improved than probably any river in the world.

4831. Trustees have exercised their power to make considerable alterations and improvements in it, have they not?—Yes, they have from time to time.

4832. They may, in point of fact, make a new channel, and alter the course of the existing channel, may they not?—They cannot do that beyond their Parliamentary powers.

4833. I understand that they have very large powers?—They have very large powers within their plans of improvement.

4834. Therefore the navigation, at all events, must be considered to be essentially an artificial navigation?—Yes.

4835. Under the control of public trustees, having power to alter and vary the works from time to time?—Yes.

4836. I understand you to say that, in your case, they are policemen, in point of fact, who guard the river and the harbour?—They very much partake of that character.

4837. I believe they are appointed as much for the protection of your works as they are for the protection of the shipping, or the lives of passengers and the safety of the goods carried by vessels?—It is for those combined purposes that they are appointed. They are a body of men who are never licensed above 40 years of age, and they are generally men selected for very high nautical qualifications. They really form the most useful advisers and police that can possibly be imagined for the shipping of so crowded a river as the Clyde; they are watching every interest connected with the navigation, and they protect every interest. If a foreign ship comes they are there at hand to direct and advise the master; if it is a home ship which they know is not well managed, they are watchful and apprehensive for the interests of the navigation. I think it is one of the most valuable institutions connected with Glasgow. I should say, from my long experience in public office, that I do not know a single institution connected with the trade of the country more important than the pilotage of Glasgow.

4838. Assuming that the system is as perfect as you imagine it to be, and satisfactory to the people of Glasgow and Greenock, do you think it

Mr. *A. Turner.*

10 May 1870.

is at all analogous to the ocean pilotage?—No, I do not think it at all analogous; I think there is no necessity for compulsory pilotage in the open ocean; it is the physical peculiarities of this river that make compulsory pilotage necessary.

4839. The Clyde, you think, is one of the exceptions which prove the case of the Bill. You say that you believe there is no occasion for compulsory pilotage in the open ocean, but you think it is necessary in the Clyde, because the Clyde is a purely exceptional case?—Yes, it is purely an exceptional case.

4840. Do you imagine that if pilotage were voluntary and free, that is, non-compulsory upon the Clyde, many ships would attempt the passage of the river without a pilot?—I think the cupidity of shipowners is so great that they would not care a farthing for their neighbours; they would look at the saving of a few pounds, and they would throw the navigation of the river back to what it was in 1825, when there was a crying necessity for compulsory pilotage.

4841. I suppose there is no mode by which a shipowner can know what changes may have taken place in the navigation of the River Clyde between one voyage and another; you may have effected great alterations in the river in that time, and the shipowner would have no knowledge of those changes?—That is a remarkably practical view of the case.

4842. That does not take place to the same extent in the open sea?—No; there is machinery for deepening the Clyde, diving-bells and dredging-machines. I do not think there is anything in the world, to the same extent, that there is upon the Clyde; therefore, the navigable channel is from day to day altering, and it requires these pilot police to be constantly upon the spot to watch and observe the alterations that are from time to time taking place in the navigable channel.

4843. Mr. *Gourley.*] It is always altered for the better and not for the worse? — Yes, if the channel is altered.

4844. Mr. *Grieve.*] Was there a meeting of the Pilot Board of Glasgow in March last?—I cannot recollect the date. I do not generally attend at the meetings.

4845. Was there not a petition to the House of Commons against this Bill, dated March?—Yes. I attended at that meeting.

4846. There was a meeting in March, was there not?—I cannot give the month.

4847. Are you not secretary to the board?—Yes, but I do not always attend at the meetings.

4848. Was there a petition adopted at that meeting?—Yes, and I was present.

4849. Does the board sit alternately in Glasgow and Greenock?—Yes.

4850. Where does it sit this year?—In Greenock.

4851. Does not it appear very extraordinary to you that a meeting of the Pilot Board should have been held in Glasgow, when the board sat from the 1st of January in Greenock?—If you remember that there are two executive committees, one applicable to Greenock and the other applicable to Glasgow, that will explain it. The Pilot Board confers upon the respective executive committees full power to do everything in the interests of the respective ports, and the executive committee of Glasgow improvised the petition.

4852. I am quite aware that there are two distinct committees; but at that meeting, was not the petition signed by the Lord Provost as chairman of the board?—Yes.

4853. Was the Lord Provost the chairman of the executive committee?—I think he is.

4854. Is not Mr. James Allen the chairman?—I do not remember that he is.

4855. After 30 years' experience as town clerk of Glasgow, you should surely be quite up in these matters?—I am quite up in them, but I do not attend all the meetings, nor am I acquainted with some of these details.

4856. Would not it have been more regular to have called a meeting in Greenock of the entire board?—It would not have been more regular; but if you think there was a want of courtesy to the people of Greenock, I can answer you that it was far from that; there was no want of courtesy to any party.

4857. Are you aware that Mr. Allen is chairman of the committee?—No.

4858. Mr. *Gourley.*] You have said that the navigation of the Clyde is very trying; in what way is it trying, and what are the difficulties of navigation in compulsory pilotage waters?—I am not qualified to give a nautical opinion upon that, but there are gentlemen who will be examined who can give practical cases, arising in their own experience.

4859. You simply speak from theory?—Not altogether from theory, but from hearing people talk of it who are cognisant with these questions, and I am not; I am not cognisant with navigation questions.

4860. You do not speak from practical knowledge?—No; I have no nautical knowledge whatever.

4861. *Chairman.*] Did I understand you to say that there are no exemptions in the pilotage of the Clyde itself?—Yes, there is, for all vessels under 60 tons.

4862. Not above that?—No, except that special case of the provisional order, which would extend to 100 tons.

4863. Are the steam tugs compelled to carry pilots?—They do not usually take pilots.

4864. Are they compelled to do so or not?—No, they are not compelled, except they carry passengers; if they carry passengers they are compelled to carry pilots; but if they do not carry passengers, they are not. These tugs are, in point of fact, navigated by pilots on board the vessels that they tug; the latter have all compulsory pilotage certificates.

4865. A vessel that is being tugged is bound to carry a pilot, but the tug itself is not bound to carry a pilot; is that so?—That is so.

4866. When a tug comes up, or goes down alone, it is not compulsory to take a pilot?—No, because they are not 60 tons burthen.

4867. I presume all vessels are now towed up the river, are they not?—No.

4868. All vessels of any size?—No; a great number of ships come up without being tugged.

4869. Do a great many sailing vessels, of any size, come out without being tugged?—I know that I have seen them myself coming up, but I have no statistical information upon that point.

4870. Is the great bulk of large vessels towed up?—I should think they are, but I really cannot say.

4871. Below Greenock is not the pilotage voluntary?—Yes, it is.

Mr. *A. Turner.*
10 May 1870.

4872. Do you know what proportion of vessels take pilots below Greenock?—I do not know.

4873. Is there not any desire expressed to extend compulsory pilotage below Greenock?—No, it is not thought necessary; it is open sea.

4874. It is a very easy pilotage, is it not?—Yes.

4875. What proportion of pilots are employed in the compulsory pilotage district?—The total number of pilots is 32, and they divide themselves in some proportion; I do not know exactly how; the pilots will state that.

4876. There is considerable employment of pilots below Greenock, is there not?—Yes.

4877. Do a very large number of vessels take pilots?—I really do not know how many; the pilots will be able to state that.

4878. Mr. *Malcolm.*] You said, in answer to an honourable Member just now, that what you stated was merely from hearsay; is it not the fact that your first experience of the difficulties of the Clyde arose from being assessor to the Water Bailiffs' Court?—Yes.

4879. And the cases arising out of collisions were brought before you?—Yes; that was before compulsory pilotage was in operation.

4880. Mr. *Gourley.*] That is before 1825?—Yes.

4881. Since then, have not circumstances much altered in consequence of the introduction of steam?—It has now become a hundredfold more necessary, because the trade is 20 times greater than it was then.

4882. Since 1825 the channel has been wonderfully improved, and it is quite a different thing?—Yes.

4883. Before that it was a very dangerous navigation for large vessels, was it not?—I am not qualified to discuss the dangers of navigation.

4884. But the river has very much altered since 1825, has it not?—Yes; but I think it is just as dangerous from the immense increase in the shipping, as what it was then, because while the river has been improved, the shipping has increased a hundredfold.

4885. The depth is made the same almost the whole length of the river now, is it not?—No; it is a very sinuous river, and with a great number of embankments and turns and twists in it.

4886. Is not the channel very much the same depth the whole length of the river?—There is a very navigable channel about 80 feet wide; that applies merely to the strictly central navigable channel, that is not more than sufficient room for ships of 3,000 tons burthen.

4887. Is it not very accurately buoyed out?—Yes it is.

4888. Mr. *Graves.*] Are there many members upon the pilot committee practically conversant with nautical matters?—I think they are almost all conversant with nautical matters.

4889. Can you speak of the issuing of licenses to masters and mates of steamers, or will you call witnesses to speak to it. Will any member of the board give us information as to that matter?—Yes; I think they can do so.

Mr. Thomas Henderson, called in; and Examined.

Mr. *T. Henderson.*

4890. Mr. *Malcolm.*] I believe you are the senior partner in the firm of Handiside and Henderson, the well-known shipowners?—Yes.

4891. And you pay a considerable amount of the dues and rates levied for the port of Glasgow?—Yes.

4892. What is the amount of those rates?—We pay about one-eighth of the whole rates that are levied in Glasgow.

4893. Do you mean the pilotage rates?—One-eighth of the whole, pilotage included.

4894. I believe you were formerly a shipmaster, and held a master's certificate in the Clyde?—Yes.

4895. And you are now a member of the Pilot Board?—I am.

4896. The pilotage of the Clyde is only compulsory above Newark Castle and the Broomielaw?—Yes.

4897. Although they generally take vessels from Greenock to Glasgow?—From the tail of the bank to Glasgow, and Glasgow to the tail of the bank, is what we call pilotage ground; but it is only compulsory from Newark Castle.

4898. It is much more convenient to take a vessel from the tail of the bank right away, is it not?—Yes; that has always been the practice in the Clyde.

4899. Do you think that this proposal to abolish compulsory pilotage would interfere greatly with the regulations which are made both by the Pilotage Board and by the Clyde Trust?—Yes; I am strongly of opinion that it would make the Clyde an impracticable navigation; we could not work it. As a shipowner, I am very anxious to get quit of rates; but I find that it would not work. I would rather pay rates and have a clear navigation.

4900. Can you, as a member of the Pilot Board, give me any idea of the requirements of a pilot before he is licensed?—Yes, in a general way. We consider that he must have at least seven years' experience at sea; that he must have been three years as an officer in a square-rigged vessel, and that he should be thoroughly acquainted with the navigation.

4901. And then, I believe, you have peculiar regulations as to the employment of the pilots when they are first licensed; I believe you put them in small-class vessels first of all?—Yes; we educate them for six months in vessels under 12 feet of water and 300 tons of register. We do not allow them to go in a larger class of ships than that, and thereby they gain experience of the intricate navigation of the river; and having satisfied ourselves that they are qualified, we ship them to a larger class of ships.

4902. You also compel them to go up and down the river on board the larger steamers a certain number of times before they are allowed to act as pilots?—Yes, to get a knowledge of the management of the larger class of ships in these narrow waters, a thing of very great importance.

4903. Of course it requires the greatest possible care and experience of a pilot, however well he knows the river, to take a large vessel either up or down?—Yes; we find it very difficult to get a man educated up to the mark to do his work properly; it requires a long experience and a good deal of judgment.

4904. I believe you know the channel of the river?—Yes, I know it very well.

Mr. *T. Henderson.*

10 May 1870.

4905. Mr. Turner has told us that it is only 80 feet in width in some places?—At the narrowest part.

4906. But some of those very narrowest parts happen to be in the most particularly objectionable places, are they not?—Yes; a man of the greatest management is required in order to prevent accidents.

4907. And with these long steamers it is exceedingly difficult, with all proper care and precaution, to prevent their meeting with accidents?—Yes, we find it very difficult indeed; the ships are growing much larger and faster than the river.

4908. I think there has been a ship lately launched in the Clyde which is, in fact, one of the largest vessels that has ever been built?—Yes; the "Italy," 4,000 tons register.

4909. Mr. *Norwood.*] How long is she?—Four hundred feet.

4910. Mr. *Malcolm.*] And she has to be taken down the Clyde?—We must get her down the river somehow.

4911. The narrow part of the river when you pass Bowling is not marked in any way, is it?—It is marked by a dyke upon the one side to some extent.

4912. I mean the deep track which wanders about between those dykes is not buoyed?—It is not buoyed in any way; it is only known by the local pilots; no one else can know the proper channel of the river without being educated to it.

4913. Then again there are regulations made by the Clyde Trustees for the protection of life, are there not?—Yes.

4914. I mean the lives of those men who are employed on the dredgers and deepening machines?—Yes.

4915. And so that it would be impossible for any but a regular pilot, or one who was constantly going in and out of the river, to know what the signals they put up mean?—It would be very difficult, and nearly impossible.

4916. Because they are liable to be shifted every day, are they not?—Yes; and it requires one who has a knowledge of the operations intended, and what the machines are about, to be able to know how to avoid them.

4917. Then again the Clyde is subject to fog, is it not?—Yes; very much so sometimes.

4918. And it is so long from the Broomielaw to the tail of the bank, that it is very seldom a heavy vessel can get down in one day in the winter time?—Yes, in winter time; in summer we generally manage it in one or two tides; but in winter it is very difficult to get down in a night, especially with heavy ships, and that arises from the difficulty of finding the channel.

4919. Then the river is very much crowded, especially in the summer time, with small steamers, is it not?—Yes; we have a large passenger traffic in summer.

4920. Do you know what the number of steamers is?—I think we have about 30 per day of small steamers running to the coast; 30 downwards and 30 upwards.

4921. And do they always run at fixed hours, irrespective of tides?—Yes.

4922. Consequently they may happen to be coming up or getting down just on the top of high water, and it would be very difficult to avoid them when you are coming down in heavy ships, would it not?—Yes; they run great risks, and it requires great caution to avoid them; and there is a great number of lives involved, for each of them carry from 500 to 600 passengers.

4923. *Chairman.*] Do they carry pilots?—No; they have licensed masters of their own.

4924. Mr. *Malcolm.*] I daresay you know the "Iona"?—Yes; I have sailed in her often.

4925. She is not a pleasant thing to meet?—No; she is very awkward.

4926. And you would not be surprised if I told you that I have seen 2,000 people on board that boat?—Yes; it is quite common, although I am not sure that she ought to have so many.

4927. Mr. *Norwood.*] Do you ever fine her for carrying too many people?—No, we have no public informers in Glasgow.

4928. It is the duty of the Board of Trade, is it not?—Yes, I think so.

4929. Mr. *Malcolm.*] Can you give me at all the average sailings of the trading vessels out of Glasgow?—We have something like 50 per day, including the river steamers, 50 down, and 50 up.

4930. Do you consider it possible, supposing this Bill were to pass, and compulsory pilotage was done away with, that any foreigner could bring his vessel up to the Broomielaw safely?—If she was of any considerable draft, it would be impossible.

4931. And if he did, what then?—If he attempted to do it, he might do very considerable damage, either to other ships, or by impeding the navigation.

4932. This place is so small in many parts, that one vessel getting across would block the whole navigable channel; is that your idea?—Yes, at times that occurs with the best management; within the last three weeks we had one of our own ships that blocked the channel with a pilot on board, and she also had two steam tugs, and yet with that management we got athwart the channel, and blocked the navigation for 12 hours.

4933. Do you think that if compulsory pilotage in the Clyde is done away with, it would materially injure the trade of Glasgow?—I think it would have a very prejudicial effect, and that it would deter many owners from sending their ships there.

4934. You think the risk would be greatly increased?—Yes.

4935. Mr. *Gourley.*] But you would still have pilots?—We would not have the efficient pilots that we have now, because unless you pay them more, and unless you have a sufficient number of vessels to take pilots, the better class of men would find employment elsewhere.

4936. Mr. *Malcolm.*] Do not you think it is much easier to navigate a ship in a crowded navigation of this sort, where you know that every ship has an able and experienced pilot on board?—Yes, and comparatively safe.

4937. You can depend upon a pilot going exactly as close to danger as is right?—Yes, the pilots understand one another, whereas if they were strangers, they would not understand what is meant.

4938. Do you think that the abolition of compulsory pilotage would derange all the plans that the Clyde Trustees have adopted for the safe passage of the river and the maintenance of their improvements?—Yes, I think it would seriously injure our river in every way, and it would upset all our present arrangements.

4939. In

4939. In the conversation you have had with the shipowners and shipbuilders of Glasgow, and from what you have gathered of their view, is that their opinion?—That is the general opinion of those interested in the larger class of vessels.

4940. Mr. *Stevenson.*] Who are the pilots of the river passenger steamers in the Clyde?—The masters.

4941. Are they licensed by the Pilot Board?—They are licensed by the Pilot Board annually.

4942. And if they show any incompetency or any negligence, are their licenses suspended or withdrawn?—They are brought up before the board and examined, and if there is found to be any defect in their management they are suspended or dismissed.

4943. *Chairman.*] I think there were 133 licensed last year?—One hundred and thirty two.

4944. Mr. *Stevenson.*] Are we to understand that in parts of the navigable channel to Glasgow the channel is only 80 feet wide, containing only 12 feet of water at low water?—Yes.

4945. Is the trade of the port content to remain such a narrow channel?—No; we are continually working out the channel; we spend a great deal of money annually in trying to improve it, but we are slow of progress, and the ships are growing in size all the time, faster than we can dredge the river.

4946. Eighty feet seems a very narrow width?—Yes; we have some places in the river where a number of the largest ships that trade to the Clyde cannot safely pass; the channel is only 80 feet wide; we have vessels of 40 feet beam going up and down, so that they actually cannot pass.

4947. Has that state of things remained a very considerable time?—Since the increase in the size of vessels, the vessels are growing so rapidly in size, and the tendency is all in that direction.

4948. On what has the dredging power of the Clyde been expended, if not in widening the channels?—We have a large deposit brought down by the freshets from the upper reaches of the river, and it requires a great deal of dredging to keep it down.

4949. That deposit is in the Glasgow Harbour, is it not?—Yes; and in the lower reaches of the river brought down from the upper part.

4950. Mr. *Brassey.*] Under whom do the Glasgow pilots work?—Under the Pilot Board.

4951. Mr. *Norwood.*] What is the rise of the tide in the river?—Nine feet.

4952. Then you have not more than 21 feet of water?—Twenty-one feet is our maximum, unless there is a freshet in the river, and on those occasions we can take a heavier class of ships down.

4953. I take it from you that the navigation between Newark Castle and Glasgow is very peculiar indeed?—Yes.

4954. It scarcely has a parallel?—It has no parallel in this country.

4955. You do not want compulsory pilotage below Newark?—No.

4956. And as a shipowner you would not desire it?—My own opinion is, that it should extend to the tail of the bank, but I am content that it should remain as it is now.

4957. *Chairman.*] Where is the tail of the bank?—It is the anchorage below Greenock.

4958. Mr. *Norwood.*] Admitting for a moment that the navigation from Newark to Glasgow is very peculiar and exceptional, and admitting for a moment that we put it out of the Bill altogether, I should like to have your opinion, as a practical man, as an old master and a large shipowner, as to compulsory pilotage generally round the coast; do you approve of it, or do you not?—I am quite content that it should be relieved generally.

4959. You would be content to leave it optional; is that what you mean?—Yes; in most harbours I think it is quite practicable, but I think Liverpool, Glasgow, Bristol, and Hull, and some other places are exceptions.

4960. You think that they are all exceptions?—I think so.

4961. You know all those ports?—I know all those ports intimately.

4962. And you think that the same line of argument which would establish the exemption to one of those ports, would establish an exemption to the others?—Yes, I think it applies to Glasgow more particularly, from the intricacy of the navigation, but I think it also applies to the other ports.

4963. Do you license your masters and mates?—We have done so; we do not do it now.

4964. Why not?—I found it was very difficult to get men capable of navigating our ships in the river; I tried the experiment, and found it failed.

4965. The question of the shipowners' liability did not weigh with you very much?—No; it was the difficulty of getting men properly qualified; we might have very excellent masters, but they were very poor pilots.

4966. Would you doubt the abilities of your masters to pilot up the Mersey, or up the Humber?—I would; I do not think there is one master in a hundred fit to navigate a large ship into Liverpool.

4967. You do not propose to alter the law with regard to shipowners' responsibility for damage done when in charge of a compulsory pilot?—I think it hard that shipowners should be liable for men that they know nothing about.

4968. That is not the state of the law merely arising out of shipowning, but it is the general state of the common law, which says that a man should be responsible for the act of another whom he has not employed?—Yes. We do not shirk the responsibility of our masters and mates over whom we have any control, but we do object to the pilots over whom we have no control.

4969. I suppose even the best-regulated pilotage service contains pilots who are careless?—Yes; I have said that we have them frequently brought before us for their carelessness.

4970. And you think it a very hard case, especially in the more easy ports, to be compelled to take a pilot and yet be responsible for his misdoing?—Yes; I think it presses very hard upon the shipowning community.

4971. In fact, the shipowners as a body have a good deal of liability?—Yes, quite enough.

4972. Do not you think it would be very desirable to have a uniform system round our coast, as far as pilotage is concerned?—Yes.

4973. With regard to compulsion or non-compulsion, and the question of pilotage boards and so on, is it not the case that one district varies from another?—Yes.

4974. And that is a source of great confusion, is it not?—Yes.

4975. How can a foreign captain, ignorant of your language and coast, be able to know the pilotage?—

Mr. *T. Henderson.*

10 May 1870.

pilotage?—They do not know it, and do not understand a bit about it.

4976. They are very much puzzled, I believe?—Yes.

4977. Do you think that if the law relating to our pilotage system is to undergo a revision, it should undergo a revision upon a broad and comprehensive basis?—I think so.

4978. And if possible, it would be better to render our system uniform, and if that cannot be done, if there are certain exceptions which must be granted, let the exceptions be as few as possible and well-defined; is that your opinion?—Yes.

4979. So that a shipmaster, whether an Englishman or a foreigner, with the Act of Parliament in his hand, will know exactly what he has to do, and what he has to expect at any point round the coast?—I think that would be very judicious.

4980. Are you aware that the Trinity House of London has very great pilotage jurisdiction?—Yes.

4981. I believe that it has pilotage jurisdiction over more than half our coast?—Yes.

4982. It has jurisdiction over every part of the coast where there is not a local authority?—Yes.

4983. The Trinity House is not only a licensing body, but an administrating body for pilotage?—I am intimately acquainted with it.

4984. Do not you think it is very desirable to separate the licensing and the administrative?—Yes.

4985. And that there should be one body to examine pilots?—Yes.

4986. And that there should be a representative body to control them?—Yes.

4987. And upon that representative body, merchants and shipowners should have a very considerable voice?—Yes.

4988. And, in point of fact, the pilotage system is properly for the benefit of the shipowner, though, of course, the public at large have a very considerable interest in it?—We think so.

4989. That is your system?—That is our system, and we have carried it on for many years with great advantage to the public.

4990. Mr. *Price.*] It seems to follow, from the answer you gave to a question put to you by the honourable Member for Hull, that you object to this Bill, not because it establishes non-compulsory ocean pilotage, but because it establishes non-compulsory pilotage for the Clyde?—And other rivers, but particularly on the Clyde.

4991. You draw a distinction between the River Clyde and some other exceptional cases, and the ordinary ocean pilotage?—Yes.

4992. But with respect to ordinary ocean pilotage, you do not object to the non-compulsory system?—I do not object to that.

4993. Are you not expending a great deal of money from time to time in improving the navigation of the Clyde?—Yes.

4994. What are the particular works upon which that outlay is incurred, exceeding and beyond the outlay upon the dredging?—We have had a great deal of blasting rock from the bottom of the river to do in the Clyde, and this is only partially done; we have a great deal to do in removing the bed of rock from the bottom of the river at the very narrow part of it. We have also spent a great deal of money on the quays and harbour accommodation.

4995. Have not you also a good deal of embankment?—Yes, all down the river; what we call dykes.

4996. Has the effect of this dredging and blasting continued to alter the existing channel, so as to vary it from time to time?—Yes.

4997. Are the works of such a character that they might be injured by the shipping fouling them?—Yes, any of the deepening plant can be damaged by that very easily; and, in fact, it requires great caution and care to avoid it.

4998. Therefore the shipping may cause as much danger to the navigation as the navigation to the shipping?—Yes; and when the men are down in the diving-bell it requires great care to navigate past them, in order not to endanger their lives.

4999. So that you agree with the witness who preceded you, that the pilots upon the Clyde are a sort of river police?—Yes.

5000. And, therefore, they are not to be considered upon the same footing as ordinary ocean pilots?—No.

5001. Do you know anything of the navigation of the Caledonian Canal?—Yes, I have passed through it.

5002. Are the ships that pass through the Caledonian Canal compelled to take pilots?—Yes, by Government.

5003. Is that to enable them to navigate with greater safety, or to avoid injury to the works?—For both purposes; to avoid injury to the works, and to act as a sort of police; to know the difficulties and dangers of the canal.

5004. Is that also the case with the Crinan Canal?—Yes.

5005. Do you put the navigation of the Clyde in the same category as that of the Caledonian Canal and the Crinan Canal?—Yes, but we consider the difficulties of our navigation much greater.

5006. Though the difficulties may be greater, do you consider them as standing in one category by themselves, rather than as forming any part of the great question of ocean pilotage?—Yes.

5007. Of course, you do not say that the Clyde has any reference at all to ocean pilotage?—No.

5008. You alluded just now to the Mersey as a river that ought to be exempted, and you also said the Humber and the Port of Bristol should be exempted?—Yes.

5009. And you said you were familiar with the Port of Bristol; do you think there are difficulties in the navigation of the Bristol Channel which would also tend to make it an exception?—I think it is much like the Clyde.

5010. Are you aware of the fact that all vessels that go to Gloucester are exempt from compulsory pilotage?—I was not aware of it.

5011. But do you know that all vessels going to Gloucester pass over the same water as those going to Bristol, as far as King Road?—Yes, and I should only require a pilot there, the same as we do in Glasgow now.

5012. If your opinion be a sound opinion, that compulsory pilotage is necessary for the safety of the navigation to Bristol, it would also be necessary for the safety of the navigation to Gloucester?—Yes.

5013. Would your opinion be modified if you knew that there has been for several years perfect non-compulsory pilotage to Gloucester?—No; I think it has been badly managed there; they ought to have had a system of police there by this time.

5014. The

5014. The fact that there has been a remarkable immunity from accident would not at all modify your opinion?—No.

5015. You would admit the facts, but say it was all the worse for the facts?—They must have had a peculiar immunity, but Gloucester has a very small trade in comparison with the Clyde.

5016. *Chairman.*] As compared with Bristol, is that a very small traffic?—Yes, I should think so.

5017. Mr. *Price.*] I was not drawing any comparison between the trade of the Bristol Channel, and the trade of the Clyde, but I was drawing your attention to this fact, that the navigation to Gloucester is the navigation to Bristol, and something more, and the navigation between Bristol and Gloucester is by far the most dangerous part of the navigation of the Bristol Channel; is it not so?—Yes, but I think that to both Gloucester and Bristol a system of compulsory pilotage would be of great advantage.

5018. What possible advantage can it be if they have always piloted without accident; I do not want a mere abstract opinion, but I want a reasonable opinion upon it; if I understand the advantage of having the compulsory system, it is to secure you competent pilots?—Yes.

5019. Supposing you secure competent pilots in adequate numbers without it, what is the advantage of the compulsory system?—None whatever, but I have a strong opinion upon that subject.

5020. Then I will only ask you this: if you were told that it could be proved to you that there was an adequate number of free competent pilots to be had at all times, under the voluntary system, then there would no longer remain any reason in your mind why the system should be compulsory?—No; I believe in free trade.

5021. Therefore if it is so, and to whatever extent it may be, so that there are always in the Bristol Channel, under a perfect non-compulsory system, an adequate supply of competent pilots, there is no necessity there for a system of compulsory pilotage?—No.

5022. Nor in any other places similarly situated?—No, so long as you have properly qualified men.

5023. Your fear is a fear which a great many others have expressed before you, that if there were no system of compulsory pilotage in the Clyde, there would be no pilots at Greenock?—I think so clearly.

5024. We were also told that at Liverpool the reason was that the men were exposed to a great deal of hardship and danger in keeping the sea, and that is one ground upon which the Liverpool witnesses founded their fear, that under the voluntary system there might be an insufficient supply of pilots; is that true of Greenock also?—Not to the same extent; but the men would still require to be at Greenock waiting and watching for the ships arriving, and they would not do so if it was optional on the part of the masters to take them or leave them.

5025. Why should not they be there just as well as below Lundy Island; there is no great hardship in living at Greenock, is there?—No, but we have a good example of the two systems in Greenock and Glasgow. In Greenock pilotage is not compulsory; they have only half the number of pilots that we have in Glasgow; but we find that these men are not at all like the same class that we have.

5026. Do you mean the Clyde pilots?—They are Clyde pilots; they are beyond Greenock to the Cumbrae Heads. We have the voluntary system there, and we have the compulsory system above, and we have only to contrast the two to find the difference, and it is very great in favour of the Glasgow pilots; anyone who knows the two systems will agree with me.

5027. Do you think you get better pilots in Glasgow under your system?—We have first-class pilots under our system, and they are most contemptible under the other.

5028. In all these cases where you advocate the compulsory system, it is where the circumstances of the navigation are peculiar, is it not?—There must be some peculiarity in the navigation to warrant the compulsory system.

5029. There must be some peculiarity in the navigation to warrant the compulsory system?—Yes, that is my idea.

5030. Mr. *C. Turner.*] You spoke in respect of the hardship of masters of vessels being liable to loss occasioned by pilots; is it the practice of masters of vessels entering and leaving Glasgow to give up the entire command of their vessels to pilots when the pilots come on board?—That is the case with the great majority of the masters of vessels.

5031. But it is not universally the case, is it?—It is not universal, because I myself practice differently; in our larger class of ships we keep the master on the bridge as well as the pilot.

5032. The master stands on the bridge next the pilot?—Yes.

5033. Then I apprehend that when the pilot wishes to give any orders to the helmsman in respect of the course of the ship, or to the engineer, with respect to the speed of the vessel, in the case of a steamship, he gives orders through the captain, and not direct?—That is our system.

5034. Supposing the captain, knowing his vessel, thought the pilot was giving orders which involved great danger to his vessel, would he caution the pilot, if he did interfere with him?—He would caution him, but not more; he would say, "You are not giving the vessel sufficient time to get round the turn," or "You are giving her too much helm;" bringing his knowledge of the ship to bear.

5035. And also his knowledge of the variation of the compass?—Yes, and also his knowledge of the variation of the compass; he would give the pilot the benefit of his experience.

5036. You would think that that was part of his duty, I suppose?—Yes.

5037. Has it occurred to you whether there is any mode by which the pilot might be made of assistance to the captain, and by which the captain might retain the command of his vessel, and have the assistance of the pilot in local waters?—I do not think it would, especially in intricate navigations; I think the management of the ship must be in the hands of the pilot; local knowledge is everything, the other is subordinate.

5038. But is it the master's duty with respect to local knowledge, in which he would be imperfectly informed, to take the pilot's opinion?—There is not time for consultation; the difficulties arise so suddenly that there must be instantaneous action, and the man that has the local knowledge should act; that is the impression which I have always had, and it has been gathered from my own experience as a shipmaster.

Mr. *T. Henderson.*

10 May 1870.

5039. But you would think it desirable, if you could, to leave some responsibility with the captain as well as with the pilot?—I never like two heads to do anything; I always like a responsible man; I would rather have the pilot.

5040. You would only have one responsible man?—Yes.

5041. Whatever the danger was, in the opinion of the captain, do you think the captain ought not to interfere any further?—By cautioning the pilot and putting the responsibility upon the pilot, and letting him know the danger he was incurring; any greater interference would be prejudicial to the general interest.

5042. Mr. *W. Martin.*] Would the cautioning of the pilot have the effect of putting the responsibility upon the owner?—The owner has to suffer if the pilot does anything wrong notwithstanding.

5043. Is there any peculiarity in the Scotch law to that effect?—No, it is the English law; if a pilot runs my ship ashore I have to suffer.

5044. Have you many complaints that the larger ships in the Clyde run down the smaller ones?—No; it is generally large ships that run down large ones; the large ships are the difficulty in their navigation; two large ships are more likely to get into collision.

5045. In the petition of the Thames, of owners of 400 tons of small shipping, the complaint is that in the Thames the large steamers, such as you, run them down, and that whether the steamer is in fault or not, they have no redress, is that the case with you?—No; and I do not think it is the case in the Thames.

5046. It certainly is so?—I think the large ships are more carefully navigated than the small ones in all waters.

5047. You say that you have got a very superior class of licensed pilots, is their number 16?—No; 32.

5048. What are their average earnings?—The average of their earnings is over 200 *l.* and under 300 *l.*

5049. Over 200 *l.* per man?—Yes; per annum.

5050. You said, in answer to the honourable Member for Hull, that if this compulsory pilotage were abolished, you thought you could not retain the service of your present staff of pilots?—I think not.

5051. I want to understand it; I suppose it would be impossible for one of these large ships to come up the Clyde without a pilot after the description we have heard of it?—We think it impossible.

5052. Whether there is compulsion or not, you must take a pilot?—We would, as far as our vessels are concerned; the large class of vessels, drawing 20 feet of water, must have a pilot on board

5053. Do you pay over 15,000 *l.* a year?—Nearly 15,000 *l.* a year.

5054. How much of that goes to the pilots?—I do not know, but it is said that we pay one-eighth of the whole pilotage; I think it is something like 800 *l.*, that is what we pay ourselves.

5055. There must be several other owners with large steamers like yours?—Yes.

5056. Would they be bound to take pilots also?—Yes.

5057. As these men have not any danger in keeping the sea, or any hard work, they can stand in Greenock till the master makes the signal, can they not?—If compulsory pilotage were abolished, I should keep a pilot of our own; I would make sure that our vessels should always have a pilot.

5058. You would want more than one, would you not?—One could do a great deal in our river; we might have two.

5059. Do you think that all the other great owners would do the same?—I think all the other great owners would do the same.

5060. So that in that case the number of pilots would be reduced, would it not?—Yes; and it would be only those employed by the larger owners, who would have sufficient emolument to keep them in the service.

5061. How are the small owners' vessels to get up?—That is the difficulty I find upon the point.

5062. Do not you think that there would be public pilots also in addition to these private pilots?—They would make a miserable livelihood, and you would have a miserable class of men to do the work.

5063. Mr. *Grieve.*] Are you a member of the Pilot Board?—Yes.

5064. I should like you to modify your opinion a little about the deep-sea pilots; I believe you said they were a contemptible lot of men?—Yes.

5065. Do you mean to say that you sit upon the Pilot Board, and license this contemptible lot?—They are the best that offer.

5066. It seems an extraordinary thing for a member of the board to license the contemptible lot at Greenock?—You have a very few respectable men offer themselves for the post.

5067. Do you admit that there is a great deal more hardship in the case of the deep-sea pilots than in the case of the river pilots?—They perhaps have more hardship, but a good deal of that is brought on by their own misconduct.

5068. Do you know one breakdown in the river from misconduct of the pilots there?—Very rarely; they are generally well-conducted men.

5069. You reiterate your opinion that they are a contemptible lot at Greenock?—Yes.

5070. And you are a party to licensing these men, are you not?—Yes; we cannot do anything else; there are no other men who offer, but they are not compulsory pilots, and therefore the hardship is very small; there are exceptions, however, in these pilots.

5071. Mr. *Gourley.*] Are your channels buoyed and lighted?—Yes, they are for the information of pilots; not for the information of strangers.

5072. Are the buoys and lights not marked upon the charts?—Yes.

5073. Would it not be possible for you, as a nautical man, to find your way up and down the Clyde by the use of the chart?—I could by local knowledge.

5074. I suppose all nautical men could do so?—Not one in 100; they must have local knowledge.

5075. A man procures local knowledge immediately he comes into the water, so long as he possesses the chart, does he not?—No, he must have the local knowledge to be able to distinguish objects.

5076. By your mode of reasoning, a man going across the Atlantic for the first time could not find his way round?—A man may find his way by chart.

5077. Do

5077. Do not you think that he could find his way by the use of the chart?—Not in the Clyde.

5078. Are there many ships passing in and out of the Clyde without pilots?—Very few; only vessels under 60 tons register.

5079. What vessels are they which impede the navigation?—Any vessel improperly managed will impede the navigation.

5080. Do not you find the small vessels generally impede the navigation?—Yes.

5081. Do the small vessels hamper the navigation?—They do.

5082. Who regulates the navigation of the river; are there not harbour-masters who regulate the navigation of the river?—Their jurisdiction only extends the length of the harbour proper, not on the river.

5083. In what way do the pilots act as police in the river; in the navigation of the river?—By carrying out the regulations of the Pilot Board and the Clyde trustees.

5084. I suppose captains of ships could do the same thing?—They would require to study the regulations.

5085. They would simply require to read them, I suppose?—Reading them once would not put them into their head; they would require to study the whole subject; we think it requires a man six months to learn them.

5086. Do you know anything of the Tyne and the Wear?—Yes.

5087. Have you been there in command of a ship?—Yes.

5088. Do you find any want of a proper supply of pilots in those rivers?—Yes; during the winter months they have a very poor supply of pilots.

5089. Have you been there during the winter months?—Yes.

5090. Do you ever find any accident occurring from the negligence of pilots?—I have heard of accidents occurring from that cause.

5091. Have you experienced it yourself?—No.

5092. Has not the introduction of steam simplified the navigation of all the rivers very much?—It has, to a certain extent; but it requires considerably more knowledge to navigate a steamer than it does to navigate a sailing ship; a steamer goes so fast.

5093. Even in narrow waters?—Yes; a man must have all his wits about him.

5094. Are any of the masters of your steam tugs licensed pilots?—No; they are men who have been bred upon the river, and they are good pilots.

5095. When your ship is in charge of a steam tug could you dispense with a pilot altogether?—No.

5096. Why could not you do without a pilot?—Our river is so narrow that if a vessel got too much helm she would get ashore, independently of the tug; the tug may be turning a corner long before we get up to it.

5097. Sir *C. Wingfield.*] Do you know the port of London and the River Thames?—Yes, somewhat.

5098. Is not the navigation of the Clyde above Greenock something resembling the navigation of the Thames above Gravesend?—Yes; only the Thames is very much larger, consequently the navigation is less dangerous.

5099. But is not the Thames much more frequented?—Yes; and I think you have much need of a system of police there also.

5100. Are you aware that above Gravesend more than half the vessels are exempt from compulsory pilotage, and yet all take pilots?—I am not aware of that fact.

5101. Do not you think that the difficulty of the navigation of the Clyde will in itself compel the employment of pilots?—Yes, I am clearly of that opinion.

5102. You think it will of itself compel the employment of pilots?—Yes, to those who know the dangers of the river; but my difficulty is, that people who do not know the dangers will think they are quite capable of navigating the river; they get into trouble and stop our navigation.

5103. Is that in the case of foreign vessels?—In the case of foreign vessels it particularly applies. I cannot see how they can possibly navigate the ships up our river; therefore they would be a nuisance.

5104. A captain who approaches the port, for the first time, can inform himself beforehand what sort of port it is; he does not come there without thinking beforehand how he is to get in; therefore, if he sees that it is difficult he will take a pilot, will he not?—He may if he is a man of proper judgment; but I would not like to leave it to the judgment of the ship-masters in general, because a great many of them think they know a great deal more than they do.

5105. *Chairman.*] Have you any doubt, yourself, that all foreign vessels coming to the Clyde, or any other port, would carry pilots?—I do not think they would take pilots, as a rule, because they are very economical.

5106. Are you aware that all foreign vessels coming up the Thames for the north of Europe, though not bound by law to carry pilots, do carry pilots?—I am not aware of that.

5107. Are you aware that under their policies of insurance in the north of Europe they are found to carry pilots?—I am not aware of that; besides, they may not all be insured.

5108. You have no means of knowing whether all foreign vessels do take pilots or no?—No, I am not; I am only assuming that they would not.

5109. You are assuming that they would not, as a rule?—Yes, especially the smaller class of vessels.

5110. Did I understand you that the pilotage below Greenock is an entirely separate pilotage; that it is a different system altogether from the Clyde?—It is a totally different system; it is regulated by the same board; but there are two distinct staffs of pilots.

5111. Therefore, the river pilots do not go lower down than Greenock?—No.

5112. What is the number of licensed pilots for the district below Greenock?—Sixteen, I think.

5113. What is the number of licensed pilots for the Clyde?—Thirty-two.

5114. What is the distance of the pilotage district below Greenock from Greenock to Cumbrae?—Twenty miles.

5115. Do your masters take pilots in going through that district?—Never.

5116. Then I presume that your vessels are towed?—All our masters are qualified to navigate the vessels in their possession. My vessels are all steamers.

5117. Can you tell us what the number of vessels towed up the river is, compared with those

Mr. *T. Henderson.*
10 May 1870.

those that are not towed?—There is a very small number now not towed.

5118. Can you state what the number is?—I do not know the number; I should say it is a very small proportion of the whole.

5119. I believe almost all the sailing vessels are towed up the river?—Yes, sailing vessels are exceptional.

5120. You think whether a vessel is towed or not, it is necessary that she should take a pilot?—Yes.

5121. That is in all dangerous navigation?—Yes.

5122. The presence of a tug does not exempt a vessel from the necessity of carrying a pilot?—No; I think she still requires a pilot.

5123. When you mentioned the exceptional cases which you thought ought not to be included in the Bill before the Committee, you mentioned the Clyde, the Mersey, Bristol, and the Humber?—I mentioned these places because I happen to know them myself.

5124. You did not mention the Thames?—No.

5125. Is that because you do not know anything about the Thames?—I think the same rule applies to the Thames.

5126. Do your vessels go to the Thames?—Yes, we have a good deal of trade to the Thames, and my ships always carry pilots.

5127. Are they bound to carry pilots?—Yes, they are bound to carry pilots, they being foreign steamers.

5128. They carry cargoes to the Thames, and come in ballast to the Clyde?—Yes.

5129. But in going from the Thames to the Clyde in ballast you are not bound to take a pilot?—No, but we all take pilots.

5130. Mr. *Grieve.*] I think that the Pilot Board at Greenock, having regard to those who apply to them to be licensed, do not take all who apply?—No.

5131. There are about 24 pilots there, are there not?—I think the number is 16.

5132. *Chairman.*] Do you know what the income of the pilots below Greenock is?—No, but I know that it is very inadequate. There are one or two men who get the great bulk of the pilotage; these are respectable, well-conducted men; and the other class are very seldom employed by any one acquainted with the place.

5133. By what class of vessels are they employed?—They are principally employed by the steamers, and the foreign vessels going round to Liverpool.

5134. Do the masters of the foreign vessels take pilots at Cumbrae, coming inwards?—No, the vessels come up to the tail of the bank before taking pilots.

5135. The navigation is very plain and simple up to Greenock, is it not?—Yes.

5136. I understood you to say, with the exceptions that you have named, you think there is no reason for continuing compulsory pilotage in other parts of the coast?—I do not see it myself.

5137. Mr. *Graves.*] How are you elected to the Pilotage Board?—I think it is the nomination of the Lord Provost.

5138. You are not elected, in a popular sense?—No, I think it is a nomination of the Lord Provost of the City of Glasgow.

5139. Mr. *Grieve.*] Is it not the Clyde Trustees?—I think it is the Lord Provost that nominates, and the Clyde Trustees approve of his nominations.

5140. Mr. *Graves.*] Are the selections which are generally made, made with respect to some personal knowledge of pilotage?—Yes, entirely.

5141. Is this board regarded in Glasgow as representing the commerce and shipping of the port?—Yes, I think so.

5142. *Chairman.*] The number of masters who are licensed to act as pilots in Glasgow seems to be very considerable?—Yes, 132.

5143. The board have been very liberal in their licensing of these men?—Yes; provided that they are always duly qualified by experience in the river, we put all facility in their way for licensing them.

5144. What do you generally take as a test of experience?—A considerable experience in the river and the management of the class of vessel to which his license applies; a pilot is always licensed for a particular vessel.

5145. You do not give a general license to these men?—No.

5146. I presume, therefore, that a very large number of vessels are every day going up and down the Clyde practically piloted by these men?—A good many of them.

5147. Mr. *C. Turner.*] When you say that a man is licensed for a particular vessel, you mean a particular class of vessel?—No; the particular vessel in which he sails.

5148. Mr. *Graves.*] I suppose it is considered to be a matter of great importance to bring the commerce of Glasgow as near to Glasgow as possible?—Yes; all our efforts have been in that direction for some years.

5149. Do you find that there is occasionally an unwillingness upon the part of the shipowners or masters to bring their vessels beyond Greenock?—The foreign vessels often object to come up.

5150. Is that owing to the fear of encountering the difficulties of your river?—I think it is very greatly so; I have known even British shipowners object to send their vessels to Glasgow for the same reason.

5151. Then the safer you can make the river the greater is the inducement to bring up the shipping to the port of Glasgow?—It is so.

5152. The honourable Member for Gloucester has put some questions to you with reference to the Severn; have you answered those questions from any personal knowledge, or upon general principles?—I have been there several times, and I have a personal knowledge, to some extent, of the Severn.

5153. Probably the effect of a vessel grounding in the Severn would only be to damage herself, she could do nothing to stop the navigation of the Severn?—No; there is more room there.

5154. Are you aware of the average size of the vessels visiting the Clyde and Gloucester?—I know there is a much larger class of ships in Glasgow.

5155. Are you aware that the average tonnage of vessels visiting Glasgow is 240 tons?—I am not aware of the tonnage, but I know that a very large class of ships frequent the Clyde.

5156. Are you aware that the average tonnage of the vessels visiting Gloucester, is only 80 tons?—I am not aware of that, but I should fancy that it is something like that.

5157. That would draw, in your mind, some distinction with reference to the necessities of the

the two ports?—I still think that a system of pilotage in a port like Gloucester is necessary merely for police purposes.

5158. I speak of the anchorage from the Roads to Sharpness Point, do you know anything of the tides of the Severn?—Yes; I know them generally, and I know that they are very strong tides; but my remarks on the Severn were merely general remarks; my evidence is given for the Clyde.

5159. You do not desire the Committee to suppose that because you consider the system to answer upon the Severn, it would answer upon the Clyde?—My remark is general; I think what applies to the Clyde, would suit the Severn also.

5160. But not what suited the Severn would suit the Clyde?—They do not seem to have anything there that we can learn by.

5161. You have stated that the average number of vessels daily leaving the Clyde is something like 50; at what time of tide do they generally leave?—It depends upon the size of the vessels.

5162. Take the larger class of vessels?—The larger class of vessels require to leave from an hour to an hour and a-half before high-water.

5163. Supposing the case of two or three vessels fouling each other and grounding on the ebb tide, what would be the effect of that upon the vessels leaving the port at high water?—They must all stop above the vessels; it would impede the navigation.

5164. What do you mean by stopping?—They must bring their ships up.

5165. Would they lie afloat?—No, they would lie aground.

5166. They must all take the ground above the ship blocking the channel?—Yes.

5167. Then I suppose you consider that it would be a very serious injury to the reputation of your port if that occurred?—I am sorry to say that it does sometimes happen, even under the present system.

5168. And under a free system, in which probably the exemptions from pilotage being increased, would you be afraid that the tendency would be greater?—It would be much increased, and we think it would impede our navigation; that is our principal objection in Glasgow.

5169. Have you formed any idea of what number would avail themselves of the exemptions?—No.

5170. I believe you have some exemptions at the present time?—Yes, vessels under 60 tons are exempt.

5171. As your trade increases, and the difficulty of your navigation consequently increases, do you find that these exemptions are becoming at all dangerous?—They are prejudicial. There is no doubt that if we had the application of compulsory pilotage to all vessels, it would be beneficial to our navigation.

5172. In the interest of the navigation your interest would be to do away with all exemptions?—We would rather do that than go in the other direction.

5173. When you speak of putting the vessels now exempt under a system of pilotage, you mean that they should be put under some modified system?—We would not require the grade of pilots that we have for our larger ships; we might have two or three grades of pilots and make it very cheap; a very small charge would be sufficient to exact from these small vessels.

5174. But still you would like to have the surveillance of them?—Yes.

5175. Do you find, from your knowledge of the Clyde, that you have more difficulty in avoiding vessels without pilots than in avoiding vessels with pilots?—Yes; for the reason that the man who is in charge of a small exempt vessel is not aware of our signals and mode of management, and he acts in ignorance of what we are going to do; when we have a pilot in the vessel we are meeting, we each understand the other, and they can take the precautions of the signals.

5176. I observed in going up and down the Clyde, a peculiar wash following a full steamer going up, and the level of the river alters two or three feet; has that much effect upon the rudder of a steering vessel in the proximity of the wash?—Sometimes it affects them so much as to make them come round quite in an opposite direction to what the rudder ought to send them.

5177. Therefore, besides the material difficulty, you have this artificial one?—Yes; that is caused by the displacement of water acting in opposite directions.

5178. Has the pilotage system been always voluntary at Greenock?—Yes.

5179. Have you any means of informing the Committee as to the proportion of vessels that take pilots going from Greenock?—A very small proportion of them. I do not know the figures, but a very small proportion of them carry pilots outwards, and a smaller proportion carry pilots inwards.

5180. Do you consider that the voluntary principle upon which that system is founded has anything to do with the deterioration of the pilots?—I think naturally so. I think it is because the men are inadequately paid that we cannot get a better class of men there; but I am of opinion that the navigation does not require it, and therefore we tolerate that system.

5181. Therefore, as an illustration of the voluntary system, you are of opinion that the voluntary system has tended to the deterioration of the pilots?—Yes; we have two systems. The one below Greenock is non-compulsory, and the one above Greenock is compulsory; and I say it is very clear to anyone who looks at the two systems which is the best; that the Glasgow system is decidedly the best.

5182. May not having an inferior system so close to your own door lead you to think that your own system would become so if compulsion was done away with?—We feel quite sure that it would become the same as Greenock.

5183. *Chairman.*] Is there not this great difference, that in the one case a pilot is not necessary, and in the other case a pilot is necessary?—That is because we have the local knowledge; we know the difficulties, and we know that it would be necessary for our own ships to have pilots on board of them.

5184. You, who now pay one-eighth of the whole pilotage, would still continue to employ pilots?—Yes, but we would not pay one-eighth of the pilotage; we would get it for a much less sum.

5185. I understand that the principal shipowners would continue to do as you do?—Yes, they would engage pilots for themselves, and that would spoil and ruin the system altogether; we would be obliged to do it.

Mr. *T. Henderson.*
10 May 1870.

5186. Mr. *Graves.*] Therefore you would have a direct pecuniary advantage in supporting this Bill rather than in opposing it?—Yes, pecuniarily it would be to our advantage.

5187. And probably the practical effect would be that a few of the leading shipowners like yourself would have their own pilots, thereby doing your business at a much smaller expense, while the general outside public would be left to do the best they could?—Yes, then they would have great difficulty in picking up a proper man.

5188. Speaking independently of the Pilotage Board, from your daily and constant communication with your brother shipowners in Glasgow, do you feel yourself warranted in saying that they generally sympathise with you in the opinions you have expressed here to-day?—I know that the larger shipowners do; the coasting shipowners may not be of the same opinion as me.

5189. *Chairman.*] Has the Steamship Owners' Association expressed an opinion upon the subject?—We have no Steamship Owners' Association in Glasgow.

5190. You have a Sailing Shipowners' Association?—They have expressed no opinion; they have never discussed the question.

5191. You have never had any meetings upon the subject, is that so?—Not upon the Pilotage Bill.

5192. Mr *Grieve.*] Have you read the Bill?—Yes.

5193. Are you aware that the Pilotage Board would still continue in the Clyde the same as now?—Yes, I am aware of that; it is proposed to do so. I do not know that we would take the trouble to attend it.

5194. Are you also aware that no pilot could be taken by the master unless he was a licensed pilot?—Yes; I am quite aware of that.

5195. And you still think that the pilots would deteriorate under that system?—Yes; I think so.

5196. Mr. *W. Martin.*] Why are the coasting masters in favour of the Bill?—I do not know that they are in favour of the Bill, but they do not object to it; because, at present, they have a sort of exemption; their masters are licensed, and therefore they have only the expense of renewing that license, which is only a guinea or a guinea and a half annually.

5197. Mr. *Price.*] Do you remember that the questions I asked you with regard to the pilotage of the Bristol Channel had reference to the probability or otherwise of the pilots maintaining their stations under the non-compulsory system?—Yes; I do.

5198. And I think you told me that if it could be shown that in the Bristol Channel the pilots were to be found in adequate numbers, and of competent skill, under the non-compulsory system, that there was no argument whatever for compulsory pilotage; now, the honourable Member for Liverpool asked you whether it was not the fact that vessels of a much larger class frequent the port of Glasgow than those that frequent the different ports of the Bristol Channel?—Yes.

5199. He asked that more especially with respect to Gloucester, but my questions are directed rather to Leith and Bristol than to Gloucester?—The larger class of vessels go to Bristol and Swansea rather than to Gloucester.

5200. And the difference in the size is not so great between Bristol and Glasgow as it is between Gloucester and Glasgow?—No; but still it is great.

5201. What I want to ask you now is this: if pilots are found upon their stations in all weathers, in a navigation where only small ships come, is it not more likely and more reasonable to suppose that they would be at their stations in a navigation where large ships come?—It would seem so, though I do not at all believe in the voluntary system there or anywhere else.

5202. I did not ask you that at all?—I do not like to express half an opinion. I want to give what I have found from practical experience.

5203. I did not ask you any question with regard to compulsory or non-compulsory pilotage then; I only ask you this: if it is found by experience that the pilots do maintain their stations under the non-compulsory system where small ships come, is it not more reasonable to infer that they would keep their stations in a navigation where very large ships come?—Yes, I grant you that as an argument, but I wish to express that I never yet in all my experience found any voluntary system of pilotage efficient.

5204. But perhaps you have not known any?—Yes; I have been all round the world mostly; I have navigated to a great many places.

5205. I was merely asking the question with reference to what the honourable Member for Liverpool put, because it seems to me that if it is true that these pilots do maintain their stations where little ships come, *à fortiori* they would do so where large ships come?—I was not aware till you told me of it that the pilotage system was so efficient in the Bristol Channel.

5206. Mr. *Cave.*] Do you know that the "Great Western" did ply between Bristol and America?—Yes.

5207. That is not a small vessel?—No; but there was care taken that she should come all right.

5208. And the "Great Britain" was built there?—Yes.

Mr. James Allan, called in; and Examined.

Mr. *J. Allan.*

5209. Mr. *Malcolm.*] I believe you are the senior partner of the firm of Allan & Company, of Glasgow, of the Allan Line of Transatlantic Steamers?—I am.

5210. You also pay a large portion of the amount levied as Clyde rates and dues?—We do.

5211. You were formerly a shipmaster yourself?—I was.

5212. And as such, have been trading about in various ports a good deal?—Yes.

5213. You are a trustee of the Clyde Navigation?—I am.

5214. And Chairman of the Committee of Management of the Glasgow Pilot Board?—Yes.

5215. The Lord Provost, I believe, is *ex-officio* chairman?—Yes.

5216. And you are practically Chairman of the Glasgow Pilot Board?—Yes.

5217. How long have you been chairman of that

that Board?—It is a long time, and I do not remember. I have been 22 years a member of it. I do not remember exactly how long I have been chairman.

5218. We may take it that you are pretty well acquainted with all the ins and outs, and the regulations?—Yes, between Greenock and Glasgow.

5219. Both as a Clyde trustee, and as a member of the Pilot Board you have taken part in laying down those regulations which are now in existence for the benefit of all the public in the navigation of the Clyde?—Yes.

5220. And you know, consequently, how very detailed they are?—Yes.

5221. Doubtless, you consider it necessary that you should have local pilots who are thoroughly acquainted with those details?—I do.

5222. You consider that they are laid down not merely for protection of property, but for the protection of life?—Yes, very much for the protection of life.

5223. As some of the members of the Committee are not so well acquainted with the works that are going on in the Clyde as I am, would you describe to us the sort of dangers which men employed by the Clyde trustees are exposed to, more particularly I mean the number of men that you see employed about the mud-floats?—The dredging machines go out pretty near the channel to deepen the water for the large ships, and they are very apt to run into them. There have been one or two instances of sinking, in spite of all the care taken: and there are the diving-bells, and the hopper barges; a great number of them; long iron vessels.

5224. I think there are twelve of what you call hopper barges employed by the Clyde trustees?—Yes, there are.

5225. And those are large vessels propelled by steam that are employed to convey the mud out to the deep water?—Quite so.

5226. In addition to that, there are long trains of barges or punts?—Punts we call them.

5227. Those when loaded have not above an inch or two of freeboard?—No, about that.

5228. And consequently, it requires great care in the management of the vessels, if there are small steamers going up and down the river, to prevent washing the men off?—I do not think there is much danger of washing them off.

5229. I have seen it done; if two steamers were passing together, the wash in coming back from the bank was very heavy?—I thought you meant on board the dredgers.

5230. I mean with punts?—Yes, it comes up to the very top of the incline.

5231. And in consequence of that, there are signals erected by the Clyde trustees, to show pilots and masters as to where these things are employed?—Yes.

5232. And where, consequently, it is necessary for them to take extra care?—Yes.

5233. You consider that it would be impossible for any person not in the habit of constantly passing up and down, to distinguish these signals and to appreciate them?—To understand their meaning.

5234. I think the Clyde trustees are now applying to Parliament for powers to expend a large sum in the making of docks?—Yes, about a million and a half, I think.

5235. That, I suppose, implies an enormous trade on the river?—I hope so.

5236. You have, I think, figures that will show that at the present time?—We have not accommodation now for the ships that frequent our harbour.

5237. Ships are very apt now, I believe, to touch the ground when they are lying at the Broomielaw?—They almost always do at low water.

5238. Can you give me the tonnage using the Clyde now, up to Glasgow, at all events?—Two hundred and two vessels were launched last year, and they measured 192,310 tons.

5239. That is the iron shipbuilding for one year?—For one year; with reference to your question, 1,916,507 tons frequented the river during the year; 132 of these were above a thousand tons.

5240. With all these large vessels going up and down, in spite of all the care you take, you sometimes have collisions?—Occasionally.

5241. And more frequently interruptions owing to their grounding?—Yes.

5242. And that in spite of the employment of steam tugs, and every precaution in fact that can be taken?—Yes.

5243. I believe it is frequently the case in the Clyde that you send the vessel down with three or four steam tugs?—The larger class of ships always take two, and sometimes more; the iron-clads, I think, have about six.

5244. The large number of small steamers add very much to the difficulty?—Very much.

5245. I think you license 132 masters and mates?—Yes.

5246. Those are mostly, I take it, the masters and mates of the river steamers?— Yes, home-trade vessels.

5247. That would include those going to Ireland and Liverpool?—Yes.

5248. Practically these men go in and out the river two or three times a week at the least?—Yes, the small vessels go up and down every day, and many of them have two pilots on board; though there are 132 pilots there are not 132 different vessels.

5249. What is the object of a small vessel of that sort having a master and a mate qualified?—The Pilot Board compel them to have a pilot on the bridge, and the captain sometimes goes down off the deck to collect his fares, and we compel him to take a licensed man to take his place; there was an accident at one time in consequence of no man being there, and ever since that those who do not carry a purser or a clerk have been obliged to carry two pilots.

5250. You think that if this non-compulsory pilotage were relaxed in regard to the Clyde, or in fact done away with, that the consequence both to life and property would be very serious?—I think so.

5251. Because there would be always some shipmasters who would think it is only a canal, and that they could get up without a pilot?—Just so; some of them think if they follow a tug boat that they are all right; they soon find their mistake out when they come to try it. At first they would often say, if it were not compulsory "we will follow the tug-boat," but that is a very bad substitute for a pilot.

5252. Owing to the narrowness of the deep channel, and the rapid turns which the river takes in some places?—Quite so.

5253. I think I am right in saying that in many places the deep channel takes a turn where

Mr. *J. Allan.*
10 May 1870.

there is nothing above water or on the bank to guide a stranger?—Yes, in most places that is the case; the beacons are on the dry land.

5254. But between the beacons there is a tortuous course in deep water?—Yes.

5255. That is to say, the water is not the same depth between the beacons right across, but there is a middle channel?—There is a middle channel for the large ships, and at the sides it is much shallower; there is nothing to indicate to a stranger whether he is in the deep water or not; it is not always in the middle channel, sometimes it is one side and sometimes on the opposite side.

5256. Is it not your opinion that inexperienced men would have great difficulty in passing these crowded river steamers?—That is my opinion.

5257. And, in fact, that it tends very much to the facility of navigation and safety that every ship of different size should have a properly qualified person on board?—No doubt of it.

5258. You consider that not only the pilot board, but the Clyde trustees would be unable to carry out those regulations which they have made for the safety of the general public, if this compulsory system was done away with?—Yes.

5259. You have, I suppose, had some talk with the other shipowners of Glasgow on this subject?—Yes.

5260. Do you confirm Mr. Henderson's views, that generally speaking they are opposed to the abolition of compulsory pilotage?—Yes.

5261. Mr. *Stevenson.*] Do you by your bye-laws compel the licensed masters of the deep-sea steamers, such as the Belfast and Liverpool steamers, to be on the bridge when navigating the channel between Glasgow and Greenock?—Either they or the mate; the mate is licensed also.

5262. You think you secure that every steamer that goes up that river has a licensed man on the bridge?—Every vessel.

5263. Do you license the skippers of the steam lighters, which are so common in the Clyde now?—No, they are all under tonnage.

5264. Under 60 tons?—All under 60 tons.

5265. Are the hopper barges that take the dredging to the deep waters under licensed masters?—Yes.

5266. Is it not the intention of the Clyde trustees to carry the deep water from side to side, instead of leaving only a narrow track?—No, they cannot do that, because when you go too close to the side you will bring down the banks, and the proprietors will not allow them to encroach.

5267. You do not intend to remain satisfied with only 80 feet of channel for large vessels in many parts of the river?—We are not satisfied with it, but I think it will be a long time before we get it much wider, owing to the undermining of the banks.

5268. This 80 feet is sometimes on the one bank, and sometimes on the other?—Yes; we are always gaining more water; but where it is only in the breadth, there is some local obstruction in the way that caused it.

5269. You hope in the future, I presume, to have a much wider length than now exists?—I hope so.

5270. Mr. *Price.*] I think I understood you that the great obstructions to the navigation of the Clyde which render it desirable to have pilots are the dredgers, the diving bells, the hopper barges, and the punts?—No; the passing and repassing of other ships; that is a greater danger still, much greater.

5271. The great loss of life that you apprehend is due to the fact that there are these dredgers and hopper barges?—Partly so, but I think the greater risk is the river steamers. A small steamer, with 500 people on deck, passes so close that they could not stand out of the way, and would be killed before they were drowned. The boat might go down afterwards, but they would be sure to be injured by the vessel; they could not get out of the way. In the summer time, during the excursion season, they are very numerous on board each boat; as close as they can stand.

5272. Are there any authentic charts published of the navigation of the Clyde?—There is an Admiralty Chart, but it is practically of no use for sailing up and down. It is all very well to look at, but the river is so narrow, and the turns so numerous, that you could not follow the chart.

5273. That is your opinion as to the navigation of a tortuous and a narrow channel, of which there is no authentic or useful chart; but that opinion would not hold good as respects the ocean navigation?—No.

5274. Therefore what you say here with respect to the Clyde has no reference to ocean pilotage?—It is to the Clyde only.

5275. Have you any opinion as to the general question involved in this Bill of ocean pilotage?—I think that wherever the navigation is simple there is no necessity for having a compulsory pilotage.

5276. As a general rule you would advocate a non-compulsory system?—Except in exceptional cases like the Clyde.

5277. I say, as a general rule?—Yes.

5278. Therefore the compulsory pilotage should be the exception?—Yes.

5279. Mr. *Grieve.*] I hope you do not concur in the opinion of Mr. Henderson, that the deep-sea pilots of Greenock are a bad lot?—Well, I would not like to say that they are a bad lot, but I should consider that, owing to the nature of their trade, you get as good a class of men as possible, with the exception of one or two, that we all know of. As a general rule they are more channel pilots than deep-sea pilots. I believe I am right in saying that there is no pilot goes outside now to bring in a ship. I do not think such a thing is known as a Greenock pilot going out for a ship; most of them live in Glasgow now.

5280. You say you have been 22 years a member of the pilot board?—Yes.

5281. Has it been your duty to weed out all those bad characters?—I do not say they are bad characters.

5282. You do not concur in that?—No, I do not say that they are bad characters.

5283. "Bad lot," was the expression?—I may explain to you, that in Glasgow we consider the Glasgow pilots more under our charge, and there is a committee at Greenock from the Pilot Board to take charge of the Greenock pilots; and we consider that the responsibility rests with them more than with us.

5284. You are always at the meeting when licenses are renewed yearly?—Generally I am.

5285. You would have an opportunity of objecting?—Well, I do not think there are any complaints

complaints against them; of course if there were I should object to them.

5286. You are the chairman of the committee of management in Glasgow?—Yes.

5287. I believe you were wrong in saying that the Lord Provost was chairman *ex officio*?—Only one year; the Greenock Provost is chairman for the following year.

5288. You are chairman, irrespective of him, of the committee of management?—Yes.

5289. Mr. *Gourley.*] How far does the compulsory pilotage extend down the Clyde?—About 18¾ miles.

5290. It ceases before you get to the sea altogether, does not it?—Yes, it ceases, and it does not cease, as it were. The pilot goes down to the tail of the bank, which I say is the sea, and it is only compulsory above Glasgow to Newark Castle. The lower portion of it is a very difficult portion to navigate; but the pilots, being stationed at Greenock, go on board there, so that we have the benefit of the compulsory pilotage all the way.

5291. Perhaps it cannot be enforced out of what is strictly the river?—No; unless the pilot or the master chooses to say, "I do not want you to take voluntary charge;" but they are all too glad to have them.

5292. Within those limits, is it not rather a harbour master's question than a pilot's question?—No, the harbour master has nothing to do with it.

5293. I mean a question which would rather concern a harbour master's business; that is, of marshalling vessels and regulating the navigation of a narrow channel?—I do not see how a harbour master could possibly do it; harbour masters have enough to do to look aftertheir port.

5294. I do not mean to say that the harbour master of Glasgow ought to do it, but is it not in the nature of a harbour master's duties; are not the dangers of a narrow river those which are rather connected with vessels running against each other than with shoals or difficult navigation?—They are very much concerned with shoals; we have some very dangerous places in the Clyde. The vessels going up and down are sheathed with copper, those going to India, and it is a very serious thing for them to take the ground, because they are very apt to strip their bottom.

5295. If there was no crowd of vessels you would say there would still be danger as to navigation?—Yes, with large vessels.

5296. Have you considered the question of the liability of shipowners in the case of compulsory pilotage being retained or altered, and shipowners being liable, though pilotage was compulsory?—Yes.

5297. What is your opinion upon that?—My opinion is, that in the Clyde we should have a compulsory pilotage, and the liability to remain as it is.

5298. We have evidence at Liverpool that they would rather retain compulsory pilotage and assume the liability than get rid of compulsory pilotage altogether?—So would I; we must have compulsory pilotage, whether it be with or without liability; I think compulsory pilotage cannot be abandoned, or else we might give up our works in the Clyde.

5299. We also have evidence that there was danger to vessels in consequence of this liability of the owner not existing; that the captain did not take sufficient care of the vessel when there was a pilot on board, and, therefore, that it would really be safer for the shipowner, without looking to the question of compulsory or voluntary pilotage at all, that he should assume the liability for all accidents to his vessel with a pilot on board?—Not in the Clyde; the pilot would do as he is doing now; I do not think it would make much difference in the Clyde; the pilot has complete charge now, and I do not see that anybody else could take it; I think, if another man were assisting him, he would do harm instead of good.

5300. You think the captain would not retain the command of his vessel while the pilot was on board?—I do not say that he should not have something to say to it. If it is a steamer, the captain is always on the bridge along with the pilot, and if he saw danger of any ship approaching, he would, no doubt, warn the captain to take care and go cautiously; but that is the extent to which he would go. In a sailing ship the captain generally stands aft in the poop, and gives a general supervision, but the pilot always tells the man at the wheel what he is to do.

5301. You do not think that that law which saddles the pilot with the liability while he is in charge of the vessel does cause the captain to be less careful than he otherwise would be?—No, I do not think it does.

5302. *Chairman.*] In your opinion would it be right or not to throw upon the owner the liability for negligence of the pilot, while he is bound to carry a pilot?—No, I do not think so.

5303. Is that the general opinion of the shipowners of Glasgow?—I think so.

5304. You do not think they would like to see the liability thrown upon the shipowners?—I do not think so, except those little vessels which do not carry a pilot at all. They might be better, and they cannot be worse.

5305. If they were to be bound to carry pilots?—I do not think the shipowners would like to have the law changed.

5306. They have made no complaint of the present system?—None, as far as I am aware.

5307. Do your vessels carry pilots below Greenock?—Never.

5308. You do not feel the necessity for it?—Not at all.

5309. I presume, even if compulsory pilotage were abolished, your vessels would carry pilots in the Clyde?—Yes.

5310. What proportion of the dues does your firm pay?—We pay upwards of 6,000 *l.*

5311. You pay a very considerable proportion?—Yes.

5312. I presume that all the firms of the same nature as yours, of which we have heard there are many, would also take pilots under the voluntary system?—Yes.

5313. In your opinion then there would still be very large employment for pilots under the voluntary system?—There would be to a certain extent, but not to the same extent as now.

5314. What class of persons, in your opinion, would not take pilots?—I think the smaller class of vessels, sailing ships, that probably do not draw above 16 or 18 feet of water; many of them might not take pilots; they might think if they were towed up and down, and followed the steamer, they were all right.

5315. You think a certain number of vessels, being

Mr. *J. Allan.* 10 May 1870.

being towed, would not take pilots?—I think some would not.

5316. From your expression I presume you think the great bulk of vessels would still continue to take pilots?—I think that they ought to do it; whether they would do it, I do not know.

5317. You yourself would do so?—Certainly.

5318. Even for vessels of a small class, if you had any?—We have not any of a very small class.

5319. What is the smallest vessel that you have got?—We have one or two, I think, 500 or 400 tons.

5320. In the case of vessels of that size, should you take pilots?—Yes, certainly.

5321. As a matter of safety?—As a matter of safety.

5322. You think that all prudent owners of vessels of all sizes would take pilots?—I think the owners of vessels belonging to the port would, but I do not think strangers would.

5323. Why not?—Because I do not think that they are aware of the danger of going without pilots.

5324. If they know nothing of the river, do not you think the absence of knowledge would induce them to take pilots?—No; there is a very general opinion amongst that class of shipmasters that if they are towed up and down, and follow the steamer, they do not need a pilot.

5325. Your opinion is this, that vessels that know the port would take pilots, and that vessels who do not know the ports would not take pilots?—They might not.

5326. You seriously think that vessels that did not know the Clyde, would venture up it without taking a pilot?—I think many of them would.

5327. Without knowing anything of the navigation, whether it is difficult or not, they would decline to take a pilot?—I think they might.

5328. Have you any experience of ports where pilotage is voluntary?—None but Greenock.

5329. The navigation of Greenock is exceptionally easy?—Yes.

5330. Have you any experience of ports where the navigation is difficult, and where pilotage is still voluntary?—No.

5331. You do not draw from your experience when you say that vessels not knowing the navigation or how difficult it was, would decline to take pilots?—No, I cannot tell from experience in the Clyde, because until it is tried no one can say with certainty.

5332. If you learnt from places where navigation is difficult and pilotage voluntary that all vessels that did not know the port, and particularly all foreign vessels, do take pilots, would not that alter your opinion very much?—It might to some extent, but the reason why I think they would not do it in the Clyde is, that it is like an inland navigation, and they know that they cannot lose a ship.

5333. Still the navigation is very difficult?—It is.

5334. And there are likely to be very serious accidents?—Such as taking the ground, and obstructing the channel for other ships.

5335. You seriously think that vessels not knowing anything of the port would not take pilots?—I think a great many would not, to save the pilotage.

5336. Mr. *Graves.*] Have you any class of boatmen on the Clyde who act as watermen in assisting vessels up and down?—No.

5337. Is your pilotage charged by foot, or by the tonnage?—Both; the small ships are less per foot than the larger ships.

5338. On what principle is that; is it more troublesome?—The pilotage on the highest class of ships is, I think, 2 *s.* 6 *d.* a ton; I know the smallest pilotage is 6 *s.* and the highest is about 3 *l.* 10 *s.*

5339. When you speak of per ton do you mean the gross tonnage?—The registered tonnage.

5340. Is it the registered tonnage with steamers, or the gross tonnage?—I think it is the registered tonnage.

5341. Is a pilot liable for any amount in case of accident through his default?—His security goes to the extent of 20 *l.*, I think.

5342. Is that the limit of his liability?—I do not know; I never asked a pilot to pay anything.

5343. Would you think it desirable that that liability should be continued?—I think so.

5344. Would you think that his liability might be extended up to 100 *l.*?—Yes, it might.

5345. It might probably tend to make him more careful?—They are very careful; we have a very good opinion of them; I do not think there are many who are much more careful, still it would be another inducement. No doubt the difficulty with some of the men would be that they would not be able to find the security.

5346. Still, as a matter of precaution, you would think it wholesome if it could be fairly carried out?—It might be.

5347. Do you allow a shipowner, desirous of having the services of a particular pilot, to have an option—Yes.

5348. Outwards only?—Outwards only.

5349. Why do you confine it to outwards?—It would not work inwards, because the men are obliged to keep watch at the tail of the bank. They never know how soon a ship is going to arrive, and in consequence they require to have a boat always ready with men in it, and of course the man in turn goes on board the ship. It would be, I think, unfair to make a set of men keep watch all night, and let another man who had been lying in his bed come down and take the ship from them; that is our reason for keeping the regulation as it is now.

5350. So that your system is now what you would call a regulated one, and you could not alter it to give perfect choice, without injuring the efficiency?—I think not.

5351. *Chairman.*] Are you allowed the choice of pilots now, or are you bound to take the particular pilot whose turn it is?—The rule is, if the agent applies for the pilot before he begins to clear the ship out, he may choose his pilot, but if he once goes to the tonnage office to pay his dues, the clerk immediately puts down the first pilot in turn for that ship.

5352. He may have choice if he likes?—He may outwards.

5353. But not inwards?—Not inwards.

5354. You expressed some opinion as to the desirability of extending your limits towards Greenock?—Practically we have it now, but legally we have not. I think the natural place would be from Glasgow to the tail of the bank; and of course, practically, that is so.

5355. Would the Greenock pilots now consider that any injustice were done them if your legal limits were extended to the tail of the bank?—I do

—I do not think it would make any difference to them.

5356. Would the trade, generally, of Glasgow desire that such extension should be made?—I think they would all approve of it.

5357. Do you pay extra for that pilotage, for that extra distance?—No; the rate is from the tail of the bank to Glasgow, and from Glasgow to the tail of the bank.

5358. It is not compulsory?—Up to Newark Castle.

5359. Mr. *Stevenson.*] Practically, it is the tail of the bank?—Yes.

5360. Practically, no use whatever is made of the Parliamentary boundary?—No, not at all.

5361. *Chairman.*] The result is, that if an accident happens between that point and Greenock, the owner is responsible?—Yes.

5362. Whereas, if it occurs in the river above that point, the owner is not responsible, but the pilot is?—Yes, quite so.

5363. That is a very important difference?—Yes.

5364. Do accidents occasionally occur at that point?—They do; not very often, but they do occasionally.

5365. Cases have occurred in which the owner is made responsible for the negligence of the pilot?—I have no doubt, although I cannot recall it to my memory; no doubt it must have occurred.

5366. Mr. *Graves.*] Do the Greenock pilots ever pilot as between the tail of the bank and the Glasgow limits?—Only vessels bound to Port Glasgow.

5367. To that extent an injustice would be done to the Greenock pilots?—No; our pilots do not take ships coming to Port Glasgow at all.

5368. You have heard what Mr. Henderson said with reference to the Mersey?—Yes.

5369. Do you share in that opinion?—I do.

5370. Your trade lies with the Mersey as well as with the Clyde?—A great deal more with the Mersey than with the Clyde, although I am not located there.

5371. You think that also was one of those ports that are best managed under a compulsory system, as at present?—I think so.

5372. I think Captain Ballantine, who came here, was one of your commanders?—Yes.

5373. Your commodore?—Yes, the oldest of the lot.

5374. You must also have had many opportunities of finding out whether there was any strong feeling in favour of this Bill in Glasgow?—I do not think there is; I think I only heard two persons express a feeling in favour of it all the time I was in Glasgow ever since it has been discussed.

5375. Was that connected with any particular trade?—The coasting trade; small vessels.

5376. Did he give you the ground; did he state why he desired to have the Bill passed?—He said it was very hard, that if we damaged his vessel, he had no claim upon us; and that if he damaged ours, we could make him pay. Mr *J. Allan.* 10 May 1870.

5377. *Chairman.*] His reason was grounded mainly on the exemption from liability?—Yes.

5378. Mr. *Graves.*] Did you suggest that that could be met by their being put upon the same footing?—Of course I did. This person will have about 150*l.* a year in saving of pilotage, which is a good fund to meet any item of the kind. I do not suppose that he ever paid 50*l.* in his life for damage.

5379. He does not employ pilots at all?—Yes, he has a certified master, and he pays 26*s.* a year.

5380. He complained of being taxed for the pilotage system of the Clyde?—They are all on the same footing; none of them pay more than that.

5381. Do they make no other contribution towards it?—They pay only 26*s.*

5382. Each time?—No; for the whole year; that is the license fee for the whole year.

5383. Do you mean that the owner of a steamboat having a licensed master only, contributes towards maintaining the pilots' service of the Clyde to the extent of 26*s.* in one year?—Yes.

5384. Is that considered reasonable?—Well, it is the law; he applies for a home-trade certificate, and we give it to him after examining him, and finding that he is qualified to pilot his particular ship.

5385. Suppose his master were ill, and he had to change?—Then he must get a new one.

5386. Suppose, from temporary illness, the master were prevented from going in that ship, and that his successor, at the moment, had not a license, he would have to take a pilot?—Yes.

5387. So that he has the opportunity of demanding a pilot whenever he wants one, but only contributes 26*s.* a year?—Certainly.

5388. Mr. *Stevenson.*] What license fee does the ordinary pilot pay?—The same, 26*s.*

5389. Mr. *Graves.*] Is there any general principle that occurred to you, which might be laid down in this Bill, short of having absolute compulsion or absolute freedom?—I think the only thing that occurred to me is, that every port should be dealt with according to its circumstances.

5390. You mean that where you have a local authority, properly constituted, representing the claims of the port, you would leave that authority the discretion of saying what system of pilotage was best suited to its own wants?—Quite so.

5391. Probably you would go further, and assume that that Board has a deeper interest even than the Legislature has in maintaining an efficient and safe navigation in that port?—Yes.

Mr. JOHN MCKELVIE, called in; and Examined.

5392. Mr. *Malcolm.*] I BELIEVE you are a licensed pilot in the River Clyde?—Yes. Mr. *J. McKelvie.*

5393. You now hold a license from the Clyde Pilot Board?—Yes.

5394. You held a license under the old Act?—Under the old Act of 1825.

5395. How long have you been a licensed pilot?—Twenty years.

5396. You are, of course, thoroughly acquainted with all the difficulties of the navigation?—Yes.

5397. In your experience, has not only the number of ships going up and down the Clyde, but the draught of water, increased very much?—The draught of water has much increased; the size of the ships has increased more than the accommodation we get for them.

5398. Although

Mr. *J. McKelvie.*

10 May 1870.

5398. Although the Clyde is supposed to be much improved now, still the increase of the size of the vessels and their draught of water has more than kept pace with that?—It has.

5399. What is the depth of water to which you can take a vessel up and down now?—At the spring tide we take about 21 feet and 21½ feet, steamers and sailing ships too.

5400. That does not leave much to spare between you and the bottom?—No, nothing to spare.

5401. If the slightest thing goes wrong you cannot get down on the tide?—If the least thing puts us out of our channel we are done, we cannot get down that tide.

5402. The ship takes the ground?—Yes.

5403. And is liable, of course, to all sorts of straining?—She may be.

5404. In addition to that, a large vessel taking the ground interferes very much with the general navigation of the other vessels?—If she happens to get anywhere across it stops the passage altogether.

5405. We have heard something of the narrowness of the deep-water channel; in some places, without her getting across, it would almost stop the navigation?—In some places it would very nearly stop it altogether. There is a place pretty near to Glasgow, and another place lower down, where it is very narrow.

5406. Did not Messrs. Handyside and Henderson take out licenses for their masters at one time?—Yes.

5407. They found after all it was better to go back to the old pilots?—They found out that masters coming in in the night time had not the local knowledge as to what state the river was in, and that not having that it was dangerous for them to proceed.

5408. They gradually allowed them all to lapse?—Yes.

5409. The pilotage charges, I believe, are considered very moderate?—Very moderate.

5410. I believe you took down one of Her Majesty's ships, the "Fox," last year?—Yes, last winter twelvemonth, in the morning, early before daylight, I went down with Her Majesty's ship "Fox," with 19 feet of water. The commander, on the way down, several times interrupted, and said, "Pilot where are you going? you are going into the land; I cannot see where we are going." I said "All right, you will see by-and-bye." When we came down to Greenock it began to get daylight. He said, "I don't know how you can manage in the Clyde with large ships; I expected to see that I was going into the land now and again." "Well," I said, "it is the local knowledge we have of the turns, and that enables us to get on as we do."

5411. In fact, it was your local knowledge of the deep-water channel which compelled you now and again to turn the vessel in such a way that he thought he was going ashore?—Yes.

5412. You find, when you are piloting, that it is much easier for you to pass a vessel in these narrow places when you are sure that she has got a pilot on board as well; you know how he will act?—We know one another's ways, and try to keep clear of one another, and allow one another the best advantage we can.

5413. Of course you go to what one may call a foot or two?—Yes; many times we are obliged to do it.

5414. I believe your licenses are renewed every year?—Every year.

5415. An honourable Member has asked some questions about the possibility of going up the Clyde by means of a chart; I suppose you would be of opinion that, considering the length of the vessel, and the length of some of the reaches, you would be aground before you could look at your chart?—He has no time to look at his chart, because by the time he has put his helm hard-a-port one way, he has to put it hard-a-starboard the other way.

5416. As a general rule do you give the orders to the captain, or direct to the man at the wheel?—I give orders direct to the man at the wheel.

5417. The captain merely assists in seeing that your orders are promptly and properly carried out?—That is so, and he stands by while I am there.

5418. Of course a captain will give you every information as to whether a vessel steers properly; whether she carries the helm more one way than the other?—Yes; we get the information which way she requires the most helm from the captain.

5419. You get that before you start?—Yes.

5420. And also whether she stops quickly?—Yes.

5421. You have heard what Mr. Allan and Mr. Henderson have said to-day?—Yes.

5422. You confirm all that you have heard them say as far as your experience goes?—As far as my experience goes regarding the Clyde.

5423. Do you think it quite impossible, as you have heard them say, that any stranger could navigate a vessel up the Clyde without causing danger to the people employed on the banks by the Clyde Commissioners?—It is quite impossible for any stranger to navigate a large ship up the Clyde, because he could not practically do it.

5424. It is not so much the danger he would get into; he would not injure himself so much as he would be likely to injure other people?—Yes.

5425. He could not sink very far where there was so little water?—No.

5426. *Chairman.*] You said that you thought it would be quite impossible for any stranger to enter the Clyde without a pilot?—Quite impossible, in the case of the River Clyde, to navigate safely.

5427. May I also ask whether, in your opinion, vessels will continue to have pilots even after the Bill has passed?—In my opinion, a good many of them would not, because I have had experience of it, where strangers come in that know nothing about the Clyde, thinking it all safe because there is a tug ahead of them.

5428. Going up the Clyde?—Yes.

5429. When was that?—Of late, and for a good many years past.

5430. Was that before they were bound to carry pilots?—When they were bound. They have told me so; I give you to understand that they told me so; that they themselves told me they were quite safe, because they had a tug ahead of them.

5431. They thought, because they had a tug ahead of them, it was unnecessary for them to carry a pilot?—Yes.

5432. Have you any experience of places where pilotage is voluntary?—No.

5433. And

5433. And where the navigation is difficult?—No.

5434. You do not know to what extent pilots are there used?—No.

5435. You are not aware, therefore, whether, in cases of vessels being towed by tugs, they still continue to take pilots or not?—I am not aware of it.

Mr. *J. McKelvie.*

10 May 1870.

Mr. ALEXANDER ALEXANDER, called in; and Examined.

Mr. *A. Alexander.*

5436. Mr. *Malcolm.*] I BELIEVE you are a Clyde Pilot?—Yes.

5437. You have been a pilot on the Clyde for 20 years?—Yes, and I have been working on the Clyde since before any improvement was made in it.

5438. You are well acquainted with it?—Yes, for two years before the deepening machines commenced.

5439. You confirm what Mr. McKelvie says, that the size of the vessels has increased faster than the improvements of the river?—Yes; when I went first it was enough for me to get down my vessel, drawing 6½ feet, and I, perhaps, would be a week about it.

5440. Now, I suppose, you take down something a good deal bigger, and are not so long about it?—I have taken the largest ships in the Clyde, for Her Majesty's service; I took one down, drawing 21½ feet, in two hours and twenty minutes, to Port Glasgow.

5441. What ship was that?—That was not for Her Majesty's service; it was for the Turkish Government, the "Aziz."

5442. You got her down to Port Glasgow in two hours and twenty minutes?—Yes, with five steamers and her own steam.

5443. I believe you took down a very large steamer last month, did you not?—Yes; the largest steamer of the kind that has been ever built upon the Clyde; she was for an American company and a London company too, I believe, for China; 70 feet beam over the paddle-boxes, and 280 feet long.

5444. How long did it take you to get her down?—I had her own steam, and two tugs, and I took her down in about 2¼ hours.

5445. Such is the difficulty of the navigation, that you consider it necessary to have two tugs, in addition to the vessel's own steam?—Yes, all large steamers have two additional tugs; as to the vessel that Mr. Henderson spoke of, that grounded across the river; it happened to be on the Sabbath Day, and it is not the practice in the north to work on the Sunday with tug steamers; it was upon that account, and being a neap tide, that she grounded across the river; for when she grounded they had no steam, to keep ahead of her, to hold her head up; and in the second place, they had no way of running an anchor out. Had it been on a weekday she would not have grounded there, and closed the river.

5446. Are not there often great difficulties in launching from the shipyards?—Yes.

5447. I think vessels sometimes create difficulties by sticking there?—Yes; I have seen vessels stuck; one of the London and Glasgow (Limited) Company's steamers almost closed the river; there was just a passage for two days, for one single vessel at a time; no large vessel could pass.

5448. Under these circumstances you consider it impossible that any man not locally acquainted with the river could carry on the trade of the river?—I consider it impossible to do so; and besides that, we being so particularly acquainted locally, carry on a great trade at night; one-third of our trade is done at night.

5449. You are obliged to take each tide, whether it is day or night?—Yes, or the trade could not be carried on.

5450. Of course, if any accident happens, you have the means of communicating very quickly to the other pilots to tell them exactly where it is?—Yes; we always communicate by telegraph if there is any danger in the river, so that they will not go up until that danger is removed. We always send a letter by post or by a steamer if a small steamer can go down.

5451. You think that, considering the number of small passenger steamers that are now running in point of fact in opposition to the railway, any person not particularly acquainted with the river, being in charge of them, would lead to great risk of life, if not to loss of life.

5452. As you are one of the most experienced pilots on the Clyde, I should like you to put in the names of some ships that you have brought down; there was the "Audacious," of 4,600 tons, and the "Invincible," of the same size?—Yes; that was last year.

5453. You also assisted in bringing down the "Black Prince"?—Yes.

5454. You told us of the Turkish rams, and you also took down the Danish rams?—Yes.

5455. Did you ever take down any vessel for Elder & Co.?—Yes; they are largely interested in that trade. I was an up-pilot for one of Her Majesty's ships with the machinery for Mr. Napier of the "Hector." The captain in command said to me, "Well, pilot, your place is well buoyed; I do not see that there is much difficulty in taking a steamer up or down." I said, "Well, I will just allow you for 10 minutes to take the management yourself, and if I see you going wrong, I will check you. I will not allow you to put the ship on shore." In about five minutes he said, "Pilot, take the charge."

5456. Mr. *Price.*] You have told us, or at least we have heard, of the men-of-war and merchant ships which you have taken safely down the Clyde; you say you do not think they could have been taken down in safety, except under the charge of a pilot?—The ship is the shipbuilder's until once she is out at the tail of the bank, and he will not have any person but that person who is most particularly acquainted locally.

5457. If this shipbuilder is so very careful, why should not the ordinary shipowner be equally careful?—They are careful in all cases, which is perhaps in regard to the smallness. These ships are very large; they say, "My captain is sailing up and down here pretty often, and he has got pretty good experience of it, and he is quite able to take down his own ship now." If he goes to the Pilot Board and passes an examination, he being a regular trader from port to port, such as Liverpool, Belfast, or any other port on the coast, not being foreign going, he gets a certificate to sail his own vessel, and he is charged

Mr. *A. Alexander.*

10 May 1870.

1 *l.* 6 *s.* a year, and he generally licenses his mate as well.

5458. Supposing a shipmaster goes with his vessel to Greenock, and desires to go to Glasgow, who has not a license, and has never seen the river before, do not you think his sense of the dangers of the navigation would induce him to take a pilot, even when not compelled to do so?—By reducing our staff to one-half, we might find work in that way, but we never could act under any other form of government.

5459. It is not a question of finding work for the pilots; that is not the object of keeping up compulsory pilotage, is it; is that your view of the case?—No; but still we being on the station, would not be able to attend to the stations if we were not getting a remuneration.

5460. I do not suppose you would, but you have not shown me yet how you would fail to get your remuneration. If the necessity of a pilot for the safe navigation of the Clyde is so obvious, why should not the shipmasters see it as well as the pilots?—I do not think it is the shipmasters at all, it is the owner's interest.

5461. Why should not the shipowner see it, the ship belongs to him, and if there is a great danger, he has to run the risk, has he not?—In a comparative view he has to run the risk to his tug, not a very great risk; it is a very rare thing that ever there is damage to the amount of 5 *l.* done in a week.

5462. Very likely; but if the shipowner thought you took a very great risk off him, do not you think he would apply to you to come to his aid?—Yes; but he would not find us, because we have all been masters in our time of sailing ships and screw steamers, and if we could not find remuneration we should then have to return back to the old system.

5463. That is perfectly natural; what I do not see is, why you would not find the remuneration, because that is what you have not yet told us?—I am aware that a few would.

5464. Why should not all?—I am perfectly sure that all would not; there would not be employment for all; there might be a dozen vessels going up in a week that would not have a pilot at all; they would have their option to choose a pilot. I have been a week on the Greenock station and never a vessel arrived, but I got my turn when it came in.

5465. Suppose the difficulty to be as great as you say it is, if shipmasters were to try to take their ships up alone and unaided, I suppose they would meet with accidents?—There is no doubt of it.

5466. These accidents would probably deter other people from running a similar risk, would they not?—They would in a great measure, no doubt.

5467. What is it you are afraid of; I do not understand what makes you so chicken-hearted?—This is an inland navigation, and you require to teach a complete set of new men into the nature of it before it could be accomplished.

5468. Before what could be accomplished?—I am quite sure that every man on the station at the present time if he were not paid to attend there, would have to leave and go to some other employment.

5469. You mean you would all of you strike?—I think we would all strike at once.

5470. Have you ever had any experience of places where pilotage was not compulsory?—Yes.

5471. Where?—On the Wear, on the Tyne, on the Humber, and in Liverpool, I have sailed vessels of under 100 tons there.

5472. Take the Tyne and the Wear, you say that pilotage is not compulsory there?—No.

5473. Are there any pilots there?—Yes; there are plenty of pilots if it is fine weather.

5474. They have not struck?—Look at the great trade there is there; and there are not so many pilots to compete. Then there is a fishing ground, and they make their money in other ways.

5475. Have not you got a good trade, too?—Not that would employ all the pilots at our station.

5476. Have you no fishing on your coast at all?—You might fish a day and not make your breakfast.

5477. How does it make their breakfast on the Tyne and the Wear?—Because they go far out to sea.

5478. At all events, there is no great dearth or scarcity of pilots on the Wear and the Tyne?—Every man, even, I think, the fisherman, is allowed to pilot ships when they see them coming with a flag up, even supposing it is a steamer.

5479. The present system is good enough for you?—I should wish to keep it as it is, because it is quite local.

5480. That is the reason why you are in favour of compulsory pilotage?—Yes. If I go through the Caledonian Canal, and I have been in the habit of going through that way before, I can take my own vessel there; but if I have not been there more than once, the Government forces a pilot upon me to take that vessel through; one of their local pilots.

5481. Is not that on account of the risk you might run of damaging the works on the canal?—I think so.

5482. It is not from any danger of the navigation, but from the danger of injuring the bridges and the walls, and so on?—Yes.

5483. If you have been there once you are allowed to go afterwards?—Yes.

5484. Do not you think if a man has been once up the Clyde he might be allowed to go again?—No; he might go 50 times up the Clyde and not be able to take a vessel of six feet of water. There is so much work done at night, you require to know the bearings of the lights and beacons; and it is by local knowledge and long practice that we do know; and it is with great difficulty that we get along.

5485. Do you think any shipmaster would venture to go up the river at night without a pilot?—He would have to wait till day, and that would stop the trade.

5486. Do not you think he would take a pilot?—Then there would be no pilots.

5487. You mean there would not be any pilots when you had struck?—No.

5488. Supposing you struck, do you think other people would not come in your place; because that often happens when men strike?—We had one the other day in Glasgow, and there was a meeting held about it, and the whole of the men were taken back again.

5489. Supposing all the Clyde pilots were to strike to-morrow, do not you think there would be plenty of men come forward the next day?—They would have to come and be taught.

5490. *Chairman.*]

5490. *Chairman.*] We have been told that there are 132 masters of river steamers or coasters licensed to act as pilots?—Yes.

5491. I presume, therefore, that all the river steamers have masters who are licensed pilots?—Yes, and their steersmen as well.

5492. They generally take two pilots in that way?—Yes, master and steersman; when the master goes to collect the fares, the steersman takes the bridge.

5493. In fact, all the river steamers are practically exempt from compulsory pilotage, through having their masters licensed?—They are only obliged to take that license out for the master and mate, which costs them 1*l.* 6*s.* each.

5494. There is no case of a river vessel being compelled to carry a pilot; they all have these licensed masters?—Supposing the master of one of these steamers goes on shore, or is unwell, and cannot go down with his own steamer, they send to our office direct, and a pilot is appointed; the first man in turn is appointed to go with that steamer.

5495. As long as the master is well they do not want a pilot?—They do not want a compulsory pilot on board.

5496. I presume that the owners of these vessels only employ men that are competent?—They are men brought up from their infancy to it.

5497. There must be a large number of men on the Clyde who are thoroughly competent, and who know the pilotage besides the pilots?—Yes.

5498. There are 32 licensed pilots, and 132 masters of vessels who are qualified to act as pilots?—Yes.

5499. So that besides the licensed pilots, there is a very large body of men who know the river?—Yes; but perhaps they know nothing at all about a large screw steamer, or a large sailing ship.

5500. They do not know how to navigate a large vessel, but they know the dangers of the navigation of the Clyde?—Quite so; and then they are not allowed to navigate any vessel but the one on board of which they sail.

5501. They know the condition of the navigation, and they know the danger of it?—Yes.

5502. They know the shoals and the buoys, and everything about it?—Yes.

5503. Do I understand you to say that the shipbuilders when they send their vessels down after being built, are not bound to take pilots?—They are all bound to take pilots; every one.

5504. Even though the vessel has not got her masts in?—Yes, every one is bound to take a pilot; every vessel, whatever she may be, if they have not got a license; every vessel above 50 tons.

5505. I mean one of those large vessels which have just been launched, which is being sent down the river in charge of a tug, but without its masts on board; is it bound to carry a pilot?—Yes; it is more with regard to any stranger coming and saying they would follow the tug. The tug-steamers commence work upon the Sunday night; they go down to their vessel, and have all ready to start by 12, and they start at 12 o'clock. Perhaps they never stop their engine going up and down the river till the next Saturday night; and instead of the masters taking charge of the vessel behind them, we have to guide them, and call to them, perhaps a dozen times on the road from Glasgow to Greenock, and wake them up; they will be quite asleep.

5506. It is a general rule with regard to tugs, that they receive orders from the vessel; from the pilot if there is a pilot, and if there is no pilot, from the master; and it is not the tug that gives the direction?—Both tugs and sailing vessels.

5507. The tug receives the direction from the vessel, and not the vessel from the tug?—That is the way.

5508. Do you agree with the preceding witnesses that the pilotage, below Greenock, is exceedingly easy?—Yes; I have laid down every buoy, and everything connected with every shoal for 12 years, when I was working with my own vessel, and there is only one shoal after passing the tail of the bank. It only extends to the top of the sandbank, and it is only 12 feet by 9 feet, by 5 feet.

5509. With that exception there is really no danger at all?—No; there is too much water, if anything.

5510. Any vessel can go up to Greenock without the slightest difficulty?—Yes.

5511. Notwithstanding that, I think we were told there were 16 pilots?—There are 14, I think; but then they are not employed.

5512. What class of vessels do employ these pilots?—Steamers and new ships going out from Greenock.

5513. And foreign vessels?—All foreign vessels take them down as far as Cork or Waterford. There is not one foreign vessel goes away, but takes them down, perhaps, as far as Cork or Waterford.

5514. In your experience, not a single foreign vessel goes away from Greenock without taking a pilot as far as Cork or Waterford?—There may be exceptions.

5515. They take pilots as far as that?—Yes.

5516. When they come inwards, where do they take their pilots?—If they call at Cork, they take a pilot from Cork to the tail of the bank.

5517. But if they do not call at Cork?—They must call at Cork or Falmouth for orders.

5518. I suppose some do not?—They must have been in the Clyde before, because there is no pilot stationed out from the Greenock District Board upon the coast anywhere.

5519. I understand that all foreign vessels that call at Cork or Falmouth for orders would take a pilot there, and come up the Clyde?—Yes.

5520. When they get to Greenock, they are then compelled to take a river pilot?—Yes.

5521. Have you any doubt as to whether these vessels would take a pilot if this Bill passed, and if pilotage were voluntary?—If they have been in the Clyde many times, as many of them have been, they might go up without, and run the risk.

5522. I understand you to say that they all now take pilots at Cork or Falmouth?—Yes, to the tail of the bank.

5523. Would not the same reasons which caused them to take pilots at Cork or Falmouth cause them also to take pilots at Greenock to go up to Glasgow?—I could not say for that.

5524. Do not you think it is probable that they all would?—No, I could not say in regard to that, because they would think it is all the same. They would say, "Now, I have got my steam up, and will follow the steamer."

Mr. *A. Alexander.*

10 May 1870.

5525. In your opinion, then, the difficulty begins at Greenock?—The difficulty begins at Greenock.

5526. Is it not more certain that they would want a pilot where the difficulties began than from Cork to Greenock, where, according to you, there are no difficulties?—Some of them that have been up before; or perhaps a stranger, would think there was plenty of breadth of river.

5527. If they have been up before, they have been from Cork to Greenock before; if they take a pilot to go that voyage, would not they also take a pilot to go from Greenock to Glasgow?—I do not say they would. They would say, "There is no danger in the river here, because we see it is broad up to Dumbarton at high-water."

5528. What are the pilots they take from Greenock as far as Cork, are they mostly Greenock pilots, or do they take the same men back as they brought up?—The men generally come back by steamer or by rail.

5529. They take Greenock pilots from Greenock to Cork outwards?—Yes.

5530. And they take Cork pilots coming inwards?—Yes.

5531. These men go back again by steamer or by land?—Yes.

5532. Mr. *Malcolm.*] These pilots of which the Chairman has been talking, are practically channel pilots, not Clyde pilots at all?—Yes. They have generally been old ship masters, and are well acquainted with the coast, and with all the harbours of the coast.

5533. There is another reason why a man might take a pilot outside and not inside, because if he did come to grief going up the Clyde, if it were a large ship in all probability none of them would lose their lives; he might do a little damage, but that would be all; it would be a very different thing to be lost off Ailsa Crag, or something of that sort?—Yes.

5534. *Chairman.*] You do not think it has regard to the vessel, but to the safety of the lives?—In going down, if they do not take steam, these pilots run them into different ports where they are like estuaries, and they are good harbours, not like in the English Channel, but good harbours, and you can run in if you have a local knowledge at all of these harbours.

5535. I understand you distinctly to say that all foreign vessels leaving the Clyde take pilots from Greenock outwards, very often as far as Cork and Falmouth?—Yes; the Greenock pilots could not live if it were not for that.

5536. In fact, they are men whose employment arises from foreign vessels?—Yes.

Wednesday, 11*th May* 1870.

MEMBERS PRESENT:

Mr. Cave.	Mr. Phillip Wykeham Martin.
Mr. Graves.	Mr. Norwood.
Mr. Grieve.	Mr. Pemberton.
Mr. John Stewart Hardy.	Mr. William Philip Price.
Mr. Shaw Lefevre.	Mr. Charles Turner.
Mr. Malcolm.	Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., IN THE CHAIR.

Mr. ANTHONY BANNISTER, called in; and Examined.

5537. Mr. *Norwood.*] YOU are an Alderman and ex-Mayor of Hull?—Yes.

5538. And I believe you are also a justice of the peace for the borough of Hull?—Yes.

5539. You have been a merchant and shipowner there for many years, have you not?—Yes.

5540. Have you been chairman of the Humber Pilotage Commissioners for about 20 years?—Yes.

5541. I believe the system of pilotage in Hull was formed by an Act passed in the beginning of the reign of William the Fourth, in 1832?—Yes.

5542. Is the Trinity House at Hull the licensing body, and do they examine the men, and make them pilots when they are satisfied as to their qualifications?—Yes.

5543. After they have done so, I believe the control of the pilotage is vested in a body called Commissioners, and that body consists of representatives from the Trinity House, the Hull Corporation, and the merchants, and shipowners?—Yes.

5544. It is completely a representative body; the mercantile interest nominate a very large proportion of that body, do they not?—Yes; very large.

5545. In point of fact, every merchant and shipowner of importance at Hull has a seat at that board, has he not?—Yes; if he chooses to accept it.

5546. How many pilots have you at Hull?—Sixty-eight or 70 is our limit. We have 68 at the present moment.

5547. How many pilots boats have you?—Seven.

5548. Have you with you a chart of the river?—Yes (*handing the same to the Committee*).

5549. The pilotage limits of the port at Hull are bounded, I believe, on the north by Dimlington, and on the south by Donna Nook, and the average distance over which a vessel would be piloted from the extreme limits, would be about 25 miles to the Port of Hull?—A little more.

5550. The Commissioners have the entire control of the pilots, and they receive and investigate all complaints made against them, do they not?—They do.

5551. And when you have a complaint properly lodged, do you investigate it?—Yes, immediately.

5552. Do you occasionally punish pilots when you find it necessary so to do?—If we find it necessary, we punish them very severely.

5553. I believe in certain cases you suspend them from their work, and you report them to the Trinity House, and the Trinity House have power to break them if they see sufficient cause?—If we see that the case is a bad one, and we think the man ought to be cashiered, we report the case to the Trinity Board, and they always act upon our report.

5554. They have representatives upon your board, and they know what passes?—Yes.

5555. The Hull pilotage system gives great satisfaction, does it not?—I believe it does.

5556. Complaints are rare?—Very rare.

5557. Is the control of the pilots vested in a commodore, who is your chief officer?—Yes.

5558. And you have an office, and a clerk always in the office, to conduct your business?—Yes.

5559. And you meet regularly, do you not?—Yes, the first Thursday in every month.

5560. Will you explain to the Committee your system with regard to the supply of pilots; you have seven boats, I believe?—Yes.

5561. And you keep three of them always outside?—Always.

5562. Have you one cruising about your north limit, one cruising off the south limit, and one cruising off the mouth of the Humber, about mid-channel?—Yes.

5563. So that vessels are always sure to fall in with a pilot; with a pilot boat?—Yes; and we have one in the dock at Grimsby with 10 men on board, always ready.

5564. So that if you have an easterly wind, you have the means of providing an extra number of pilots?—Yes.

5565. I believe each of the boats is under the command of an experienced pilot, whom you call the master?—Yes.

5566. Are there three apprentices on board each

Mr. *A. Bannister.*
11 May 1870.

Mr. *A. Bannister.*

11 May 1870.

each boat who are learning the business of a pilot?—Yes.

5567. You bind your apprentices for five or seven years, do you not?—Yes.

5568. And they are provisioned and paid for out of the pilot's earnings?—Yes.

5569. The Trinity House at Hull has a very excellent school, has it not?—I believe it is said to be the best school in the country for teaching boys to be brought up as sailors.

5570. Do they teach them navigation?—Yes.

5571. And their examination is high, as regards mathematics, is it not?—Yes.

5572. Your practice is to take your apprentices from that school?—Yes.

5573. And that ensures you a rather superior class of men, does it not?—It does; they are brought up from boys of 10 years of age to a seafaring life; they have a vessel fitted up in the yard, and they teach them all the arts and mysteries of navigation.

5574. Is not the navigation of the Humber intricate and very full of sand banks?—Yes.

5575. In point of fact, the Humber is the great outfall of the drainage of the middle of England?—Yes.

5576. The drainage of the Midland Counties falls by means of the Trent, and the Ouse and their tributaries into the Humber, and there is a vast amount of deposit held in suspense in the Humber, and that influences the navigation, and forms banks, and so on, does it not?—Yes.

5577. It is the case, is it not, that these banks vary very considerably?—They do.

5578. Does that happen after a gale of wind —Yes; or heavy freshes.

5579. The position of the banks changes, and the draught of water over the banks varies very considerably?—Yes.

5580. So that their position in one week may not be the same in the succeeding one?—That very often happens.

5581. There is a very heavy tide entering the Humber, is there not?—Yes.

5582. Your spring tides rise 25 feet, I believe? —Yes, and rather more sometimes.

5583. Have you perused the Bill which this Committee is now examining into?—Yes.

5584. What is your opinion with regard to the working of that Bill, as far as the port of Hull is concerned; do you think that the navigation is of a nature that would render it safe to allow shipmasters to navigate their vessels themselves, without assistance?—I think no man ought to navigate his ship up the river unless he is duly qualified and passed by the Trinity Board.

5585. It is anything but an easy navigation to strangers?—It is a very difficult navigation to strangers.

5586. Do you think that strangers who were unacquainted with the river would run very considerable risk and hazard in bringing up vessels without assistance?—I think so.

5587. You have rather a decided opinion, I believe, as to the effect it would have upon the efficiency of the service, if the provisions of the Bill were carried out?—Yes, I think it would be very detrimental to the service, and, in fact, it would almost annihilate it.

5588. At the present time is not your pilotage compulsory, with these exceptions: the Trinity House license every master and mate belonging to the port?—Yes; and foreigners as well, to the number of about 200.

5589. I have the number in the return here; the number of masters in 1869 appears to be 248, and mates 35?—I believe that is correct.

5590. And those certificates are very freely granted, are they not?—Yes.

5591. Have you ever heard any complaints?— I have never heard a complaint where a man has been refused, if he is competent.

5592. Mr. *W. Martin.*] Are the certificates granted for only one vessel?—He passes for an owner's ship; if he wants to leave one ship for another, belonging to the same owner, he asks the Trinity House, and it is granted at once.

5593. Mr. *Norwood.*] I believe your other exemptions are coasters and foreign vessels of a very light draught of water?—Yes; five or six feet.

5594. And if towed by steam, there is a reduction of one-third, I believe?—Yes.

5595. I presume the argument in favour of that is, that coasters are constantly in and out of the port. They have an opportunity of becoming acquainted with the river, and these very small vessels run less risk than the larger ones from the sandbanks, and they cannot well afford to pay the dues?—No.

5596. Can you give any information as to the average earnings of the pilots in the years 1865, 1866, 1867, 1868, and 1869?—The average earnings in 1865, were 154*l.* 6*s.*; in 1866, 157*l.* 5*s.* 9*d.*; in 1867, 136*l.* 5*s.* 10*d.*; in 1868, 153*l.* 8*s.* 1*d.*; and in 1869, 142*l.* 17*s.* 8*d.*; making an average of 148*l.* 16*s.* 8*d.* over five years.

5597. In your opinion, is that too much for responsible respectable men to earn?—Certainly not.

5598. Of course, in winter time, in bad weather, it is not a very pleasant occupation being outside the Humber, with a north-easterly gale for instance?—It is a very dangerous occupation, and we have had pilots constantly drowned.

5599. Are you of opinion that, if the principle of the Bill passed as respects the Humber, you would have the greatest possible difficulty in getting pilots to face that bad weather in the winter time?—I do not think it is likely, and I do not think they would face it if they were not compelled.

5600. And if they were not outside they could not render efficient assistance to the ships approaching the port?—If they were not outside, they could not get outside with the wind at north-east.

5601. Is there not a very awkward spot just outside the Spurn called the Stoney Binks?— Yes, it is here (*pointing to the map*); in fact, the light ship which was placed outside is to help the ships coming from the northwards; they just clear the light, and leave it on the right hand, before they come into port.

5602. It is a very dangerous spot, from the large banks, and when vessels get on there in bad weather they very seldom come off?—It is a case with them when they get there.

5603. Is it not the case that a considerable number of vessels, especially light colliers, get ashore, on the southern shore of the Humber? —Between Donna Nook and Spurn Point; we had a very large iron ship got across there, and she was totally lost.

5604. May I take it from you, that it is impossible to maintain an efficient service without you have

have pilot boats, properly equipped, cruising outside the Humber?—That is my opinion.

5605. Do you object to the Bill, as far as it applies to the Humber?—Yes.

5606. Do you consider that the pilotage is very well managed, that there are no complaints; and do you think that the pilotage board, as now constituted, represents all the interests, and is perfectly capable of protecting all interests?—Yes; there was a meeting of the Commissioners, held not long ago, and they unanimously agreed to oppose this Bill.

5607. Do you, in point of fact, come here as the chairman of the board, to ask the Committee to except the Humber from the operation of the Bill?—Yes; we say that nobody wants it altered, and we cannot see why it should be altered.

5608. With regard to the clauses, as to compensation; supposing the principle of the Bill is approved by the Committee, are you of opinion that they are satisfactory?—No, I think they are not satisfactory; I think it should be left to the local authorities to settle the question as to what compensation should be paid; it is impossible that strangers can tell what compensation is due to the men.

5609. Supposing the present system was altered, and the employment for pilots fell off, and you had to reduce the number of pilots, do you not think there ought to be some fixed basis upon which the men, whom you put upon one side, should be indemnified?—Yes; I think we should take the Government view of the matter, and give them 10 years, the same as the Government gave us for our double dues; we lost 12,000 *l.* in differential rates; they gave us 10 years, and I think they should take the pilotage rates over the same period.

5610. The Bill does not make provision for compensating your staff say, the commodore does it?—No.

5611. Are the commodores generally selected from the most experienced and able of the old shipmasters of the port?—Yes; by the general body of Commissioners.

5612. In point of fact, the commodore is the best master you can find suitable for the post?—No doubt that is so; the Commissioners have no interest in it, and it is their interest to get the best men.

5613. Does any one connected with your Board of Commissioners receive any salary whatever, or is it a gratuitous board?—It is a gratuitous board; we give our services without money.

5614. The expenses of the Commission, I believe, are defrayed by levying 2½ per cent. upon the gross pilotage earnings, and you also get a trifle upon the ballast furnished to the ships in the port?—Yes.

5615. Out of the total sum of 425 *l.* 12 *s.* 3 *d.*, I believe you pay for salaries 310 *l.*; for relief of superannuation pilotage, 98 *l.* 10 *s.*; for relief of pilots' widows, 127 *l.* 13 *s.*; and the balance goes for incidental expenses, coals, gas, &c.?—It is somewhere thereabouts.

5616. Mr. *C. Turner.*] You are a very old inhabitant of the town, are you not;—I was born in the town 55 years ago.

5617. Did you hear the evidence given with respect to the port of Liverpool?—Only a part of it; I was present in the room when part of it was given.

5618. Do you think that the approach to Hull is equally dangerous with that of Liverpool?—I would rather answer for my own port.

5619. As regards the port of Hull, do you think compulsory pilotage very desirable?—I think so.

5620. In case compulsory pilotage was done away with, is it your fear that you would not have as efficient a class of pilots?—It is.

5621. Do you think that under the voluntary system, you would not have a class of men whom you could put so much confidence in, as you do in the pilots, under the compulsory system?—Yes.

5622. Is that the opinion of gentlemen in Hull who have had great experience, and who know the port well?—Everybody whom I have consulted thinks the service perfectly efficient, and they are well satisfied to let it alone. I believe the Chamber of Commerce passed a resolution unanimously to that effect, not many days ago.

5623. Mr. *Grieve.*] How far north down the river from Hull does the pilotage extend?—Twenty-two miles up the river, beyond which it goes 22 miles further, that is the Goole pilotage; from Hull to Goole there are branch pilots; it is 22 miles up to Hull from Spurn.

5624. Is the rate of pilotage moderate?—It is very moderate, 5 *s.* a foot coming 12 or 13 miles from the sea up to Hull.

5625. Does the trade complain of the rate?—No.

5626. Sir *C. Wingfield.*] You say that the navigation of the Humber is very difficult?—Yes.

5627. Supposing pilotage was entirely voluntary, so that masters might employ pilots or not, would not the very circumstance of the difficulty of the navigation make them employ pilots?—It would depend upon the owner a great deal, the masters themselves would like to adopt that course, but economy is the order of the day, and it might have an effect otherwise.

5628. Do you think that owners of vessels would imperil their safety by not employing pilots?—I hope not; but at the same time I think it would not be wise that they should do so; an owner might order his captain to come up without a pilot.

5629. Are you aware that in the Thames, where pilotage is voluntary, nearly all of the vessels take pilots?—When I was a steam-boat owner, trading between London and Hull twice a week, I know we were always bound to take a pilot; and we had two pilots ourselves, and the men waited at Gravesend to pilot the boats up the Thames.

5630. That is now altered, is it not; all vessels north of Boulogne are exempt from pilotage?—Yes, but they still take watermen.

5631. Does not that show you, that whether you make pilotage compulsory or leave it voluntary, where the navigation is difficult they will take pilots?—I do not think the Thames is so difficult as the Humber; I know something of the Thames, and I could take a vessel up the Thames, and up the Humber.

5632. Is there any anchorage outside the Humber?—With a north-east wind there is no anchorage; the ships are obliged to run into the river. I have seen as many as 300 sail laying between Spurn Point and White Booth Roads.

5633. It is in that that the difference between the Humber and the Thames lies; the channel of the Thames is pronounced by some very compe-

Mr. *A. Bannister.* —— 11 May 1870.

tent people (Sir Frederick Arrow, for instance), to be as difficult as any channel that he knows; but there is anchorage in the Thames, and you say that there is not any in the Humber?—The Thames is much narrower in some parts; in some parts of the River Humber it is six miles across.

5634. Is not your objection to the present Bill, that you think, under the voluntary system, there would not be the same employment for pilots?—Yes.

5635. And, consequently, you think the pilots would fall off in efficiency?—I think so; there would be no inducement for a man to be a pilot.

5636. Do you think, if it could be established to your satisfaction that vessels would still continue to employ pilots, and that therefore pilots would be as numerous and efficient as at present, that your objection to the voluntary system would disappear?—I could not be made to believe such a thing; it is not possible in the Humber.

5637. Mr. *Cave.*] The bank shifts very much, does it not, about the Spurn?—Yes.

5638. And there is a good deal of destruction of shore there?—Yes; but the Government have now taken the matter in hand.

5639. Does it make something like a harbour of refuge inside the Spurn for small vessels?—It forms a harbour of refuge; the vessels bring up under Sunk Island. But last year a Bill came before the House of Commons to take in a portion of the shore, and the Bill was thrown out in consequence of this being a harbour of refuge for small vessels.

5640. It would make a swift tide if they took any of the land away there, would not it?—Yes; Captain Calvert, who was the surveyor of the Humber, convinced the Government upon that point; and the Board of Trade went with us to get the Bill thrown out, in order that there should be no injury done to the navigation.

5641. And the Board have the management now of the whole of the Spurn Point, have they not?—Yes.

5642. What is the difference in the traffic of the river between Hull and Goole; does a different class of vessels run between Hull and Goole?—Yes; the large ships come to Hull and the small ones to Goole.

5643. Is there much transhipment of cargo at Hull, which is again shipped for Goole?—Yes; there are boats running every day for that purpose.

5644. Is the river dangerous between Hull and Goole?—Yes.

5645. Have you a different class of pilots?—There are branch pilots in Goole.

5646. Do they come under the 68 you mentioned?—No.

5647. How many pilots are there between Hull and Goole?—I cannot say, because they are not under the surveillance of the Commission of which I am chairman. They are under the Trinity Board; and have a special commission at Goole.

5648. They are under the authority of the Trinity Board?—Yes, until they are examined; then they come under the local commission at Goole.

5649. Is that local commission appointed by the Trinity Board?—No; it is appointed by Act of Parliament; I believe they are appointed under the Act of 1832. I think the Goole people are content, and do not complain of their rates.

5650. There is no clashing between Goole and Hull, is there?—No. The Hull pilots are not licensed to take ships to Goole; they are only licensed to the Manchester, Sheffield, and Lincolnshire port, New Holland and Hull.

5651. The 68 pilots that you have mentioned are sea-going pilots, with sea-going boats?—Yes.

5652. Have the pilots above Hull any boats at all, or do they simply get on board the vessels?—The pilots above Hull simply get on board the vessels.

5653. What is the case with Grimsby; is Grimsby under the jurisdiction of Hull, with reference to pilotage?—Yes.

5654. Is there any jealousy between the two ports with regard to payment?—No. A little while ago the Grimsby people thought that there should be some pilots stationed at Grimsby; and when that request was made it was complied with, and many pilots live at Grimsby to be ready in case of emergency.

5655. Does Grimsby unite with Hull in objecting to a change from compulsory pilotage to voluntary pilotage?—I do not know that they are interfering in the matter.

5656. You cannot say whether they are acting cordially with you or no?—I think they are, or we should have heard something about it.

5657. Without the exemption of masters and mates who are licensed, I suppose 68 pilots would be too few?—No, not with the facilities we have; we can take every pilot out of the pilot boats; the boys are qualified to take charge of the pilot boats, to bring them up to Hull, and to take the Hull station men down again; and if not, we send them down in a steam tug, and in six hours the men are on their station again; we have done the work very efficiently with 70 pilots, and never had a complaint.

5658. At the same time the work is lighter, in consequence of the number of masters and mates licensed as pilots?—Yes.

5659. I presume if you had no such licensing system you would require more pilots?—I think we could work it if it remains as it is now.

5660. Supposing the exemptions were done away with, the effect would be that the earnings of the pilots would be larger, would it not?—I think they would; they would do more work and get more pay.

5661. If fewer vessels took pilots in consequence of a change from compulsory to voluntary pilotage, *pro tanto* the earnings of the pilots would be diminished, unless you had fewer pilots?—We should not make more pilots unless they were required by the trade. The Commissioners, not the shipowners or brokers, are the parties who would say that they are short of pilots, and the very next day the board would meet and ask the Trinity Board to license other men; but that has never happened in the last 20 years, to my knowledge.

5662. If your opinion is right, that there would be a great falling of in case there is a change from compulsory to voluntary pilotage, your first operation would be to reduce the number of pilots?—If they are not required, of course they must be reduced.

5663. Are the apprentices you mention included in the 68 pilots?—No; there are 21 apprentices independently of the 68 men; and there would have been 70, but in one clause of the Bill it states that if we augment the pilots we must take the

the consequence, that they would get no pension, and we have left it open, to see what the result of the Bill would be.

5664. How often do the apprentices become pilots; what are the average vacancies in the course of a few years?—As a pilot comes on the superannuation list, or if anything happens to any of them, if they leave the service, or if they are drowned, then the next apprentices that have served five or seven years at the pilot boats, and have been two years at sea in a square-rigged ship, take the first turn, if they are qualified in passing the Trinity Board.

5665. Have you any account of the average number of those that become pilots in the course of three years?—I have a list in my hand, but it will hardly carry out what you require; there are seven superannuated pilots at this moment; sometimes we have two or three a year, or something of that sort; I am sorry to say that we have had four this last year.

5666. After the apprentices have served their time as apprentices to pilots, their habit is to go to sea as ordinary seamen, is not that so?—Yes; if they are not required as pilots.

5667. And after the two years they remain at sea until they have the chance of becoming pilots?—Yes.

5668. In case the number of pilots be reduced, the effect would be that the apprentices would not lose their calling altogether, but they would simply remain at sea till they would be required as pilots?—It would be a hard case for a man who had hoped to be a pilot, and had served seven years, to be thrown overboard.

5669. Do you consider that their post as pilot is a very much better one than that of able seamen, which they would be at the end of two years?—Yes; sometimes they would be better than able seamen.

5670. I suppose some are promoted to be masters and mates of vessels, and they do not return to become pilots?—As a rule, I believe that the pilots think that they are entitled to claim a right in the service, and the moment there is a vacancy they come to the Trinity Board to continue the arrangement entered into when they were bound as apprentices.

5671. You think they would do that if they became masters of vessels in the meantime?—Yes, they think it part of their livelihood.

5672. And it is a favourite service; they are more at home?—No, they are a fortnight up and a fortnight down; but the up-men have to go to sea every day if wanted.

5673. Are there many collisions on the Humber?—I believe not, as a rule; we see very little of such things.

5674. The channel is not a very narrow one, is it?—It is very narrow in some places; at one particular spot it is not 200 yards wide, but there is not less than six fathoms of water; that is opposite the Burcom Sand; there are no soundings; I have cast a lead at five fathoms, and the next moment I have been ashore.

5675. Supposing an accident happens, and the vessel gets on shore, is she, in consequence of the state of the navigation, liable to interfere with the navigation of other vessels afterwards?—Yes; if a wreck is in the fair-way, she must interfere with the navigation.

5676. Is a wreck in the fair-way sufficient to block the navigation?—Yes; she must be in the fair-way except the man gets on the wrong side of the sand; but we have a conservators' board, and they remove the wrecks as fast as they can.

5677. Does the tide itself frequently remove the wrecks?—No.

5678. It is never strong enough for that, is it?—No; I have heard of the tide tumbling and rolling them over.

5679. Do you find that the smaller class of vessels that draw under six feet of water, which are exempt from compulsory pilotage, often take pilots?—No, not as a rule; I think when a man does not require a pilot particularly, if he is coming constantly into the river, he does not take a pilot.

5680. Have you many foreign going vessels of that light draught of water?—We have many Danish ships of that draught of water.

5681. Do they take a pilot?—No; men who have been in the Humber before do not do so; but as a rule foreigners do take pilots.

5682. Those who do not understand the navigation of the river will take pilots?—It cuts both ways; because if a man is a stranger he cannot find his way up; but if he has been there before, to save expense he would run the risk.

5683. Would you say that a man who was totally ignorant would take a pilot, and that a man with partial knowledge might try to go up without one?—Yes.

5684. That has been the experience of yourself for the last few years?—Yes; my experience is, that if a man does not know the river he takes a pilot.

5685. Is it also your experience that people who are ignorant presume upon their little knowledge, and would go up without a pilot?—No; I should say that a man who knows nothing of the river would hardly face it. The cases that I know are with vessels that come down from Goole; they sometimes take the other side of the river in order to avoid the pilotage; but when they are caught they are brought up.

5686. Would not you think if that was the case with reference to these smaller vessels, that with regard to the larger vessels, people would always take pilots, unless they had adequate knowledge of the river?—I think if the system proposed to be adopted were carried out there would be no pilots to get, and the men who came on as strangers would have to lie outside the Humber till they could get a fisherman to bring them in; that would be a great loss to the trade; our goods would be left outside the Humber for days, and the thing would be very serious.

5687. Supposing the law was altered, do not you think that your present board would continue the present system till they found that there was no work for the pilots?—They could not alter the system unless there was a cause.

5688. Would that cause arise if people took pilots when there was a necessity for it?—My opinion is that it would arise. I think the system is working very well as it is; and I think it is dangerous to meddle with a system that everybody is satisfied with.

5689. I want to press you a little on that point, because it is the key of the whole question; if your experience is that people who do not know the river still take pilots, that those who are under exemptions still take pilots, if they do not know the river, would not that be the case with reference to other vessels if they were all free?—I do not know what would be the case. I know

Mr. A. Bannister.

11 May 1870.

know if I was going up the river, I should tak a pilot whether I was obliged or not.

5690. Have you studied the question of responsibility of pilots and masters with reference to accidents that happen?—Yes.

5691. You have probably heard the strong opinion expressed by the Liverpool witnesses, that it would be very much better, under any circumstances, that the responsibility for accidents should fall upon the owner of the vessel, because it would make the masters more careful?—My opinion is that if a pilot is put on board a ship, he should be considered as a man belonging to the vessel, and that the owner should take the same responsibility as if the pilot was not on board.

5692. You think that the pilot should not take the command of the vessel out of the hands of the master, but simply that he should be a man to show the master the way?—If my master let the pilot take the command out of his hand, he would not have another opportunity of doing so from me.

5693. You think the master ought to know the capacity of the vessel a great deal better than the pilot?—Yes; I think the duty of the pilot is to guard a man against sands, and give him his advice upon all occasions. I think a pilot should be in the vessel, for the master to take his advice or not, as he thought fit; but the responsibility should be with the owner.

5694. You think, whether the law of compulsory pilotage be altered or not, that it would be well to lay down distinctly that the master is responsible for any accidents that may happen?—Yes, I think so; that is my opinion.

5695. Mr. *W. Martin.*] You said you thought that strangers had no right to interfere about this compensation?—I said I thought that the proper authorities to settle the compensation question were the local authorities, who understood the case.

5696. Are you aware that if this Bill passes the moneys for this compensation, under subsection 5, could be provided by money voted by Parliament?—I am aware that it is so stated in the Bill.

5697. Then, if Parliament is to give the money, the Board of Trade ought to have some voice in the matter, ought it not?—There is no objection to their having some voice, but they are not likely to know how to manage it as well as the local commission who have no interest in it; they would not give more than they ought to give.

5698. You would report to the Board of Trade, and if they thought that your demand was not unreasonable, you would get the money?—I think that that is an unsatisfactory way to leave it.

5699. How would you leave it?—I would put a clause in the Bill, that the men should have compensation, over so many years.

5700. You would make a fast line in the Bill, and not leave it optional?—No. I think it is very unfair to leave these men, who have spent their lives in the pilot service, to the tender mercies of the Board of Trade.

5701. You said that it would be impossible to compel them to go outside the Humber, in north-easterly gales; how are they compelled to do it now?—They are compelled in this way: every pilot boat that goes out has to keep a daily log, and that log is not to be posted up every night, but it is to be posted at certain hours of the day. Those logs are brought up to the commodore of the pilot board of the Humber, at the end of a fortnight, and we can see what a pilot boat has been doing during the whole cruise of the vessel. We can tell where that ship has been during the whole time.

5702. If the Bill passes, your authority would not be taken away, and your board would still continue in existence?—We should not have the authority that we now have over the men. Supposing it is blowing a gale from the north-east, that is the time when a pilot is wanted; and if we did not know whether the ships would take pilots or not, the pilots would not go out to sea, and consequently the ships would get ashore, and we should have no end of trouble.

5703. That would be just the time a pilot would have his harvest?—I do not think it would; I think the risk of life is so great that they would consider themselves first.

5704. That would be the only time that a pilot would have a chance of earning money, if he is to be a pilot at all, would it not?—No; he would always be out at sea; and if pilotage was not compulsory, a man might go alongside a ship and say, "Do you want a pilot?" and the master would say, "No, I do not." He would get all his trouble for his pains, and perhaps not get a service at all; it would made him careless; he would say, "People won't take me; I cannot go cruising about in the open sea, and not get anything for it."

5705. You say you know nothing except of your own port?—I only speak with regard to Hull.

5706. I believe they do that in Bristol?—I do not know anything of the Bristol Channel. I think it is common sense if a man is not paid for risking his life, he will not do it.

5707. I am afraid you do not understand what I mean: you say that in bad weather a man cannot come in without a pilot?—Unless he knows the navigation; and I have known it in this way; when the colliers going to the north have been coming in with the wind at north-east, I have seen as many as 300 ships lying in Bridlington Bay, and it is as much as a man can do to clew off the land. Their port is the Humber, and they cannot get in; we cannot board them, and the pilot boats foresail them into the river in safety.

5708. They are not bound to take pilots?—No, because they are coasters; but if a coaster comes and asks for a pilot, we are bound to find him one.

5709. Then you may charge him what you like?—No, you cannot charge him more than the ordinary pilotage set forth in the rates; shipowners would never stand that.

5710. How are the rates settled outside your pilotage limits?—By the bye-laws of the Pilotage Commissioners.

5711. It is outside your limits?—No; our limit is Donna Nook on the south, and Dunlington on the north. They cruise within that limit, and if they go beyond that limit they can only get the same amount of pilotage.

5712. Bridlington is far south of Donna Nook?—If they board them at the extreme limit, the rate is 5*s.*; if they board them in the mouth of the Humber, the rate is 2*s.*; but they do not charge them any more if they board them 20 miles beyond the limits.

5713. Do you mean if they take them up at Grimsby?

Grimsby?—At Grimsby the pilotage is less; but when a ship gets to Grimsby, she is out of danger. In bad weather, if the pilot boat is cruising without the limit, she puts a pilot on board; the vessel does not pay a penny more than if a pilot boarded her within the limits.

5714. Mr. *C. Turner.*] Do not you think it would be fair, if a vessel is not obliged to take a pilot, that if a pilot was out in bad weather he should be able to obtain salvage?—It would lead to endless litigation; I should not like to see that day.

5715. Supposing compulsory pilotage was done away with, that pilotage was voluntary, and that a ship was not obliged to take a pilot, what do you think then?—Then, I think, the rates should be revised.

5716. You would not go so far as to allow the pilots to claim salvage?—As a shipowner, I should say no; but I think a man is entitled to it.

5717. If a pilot goes out in bad weather to the danger of his life, is it not a fair argument that the whole thing should be voluntary on both sides?—I think it is.

5718. You were speaking of Goole; there is not much foreign trade at Goole, is there?—What foreign trade is done at Goole is principally done by steam-boats; the trade to France, Dunkirk, Rotterdam, Amsterdam, is done by that class of small light draught of water steam-boats.

5719. Is there any foreign trade at Gainsborough; is there any custom-house at Gainsborough?—I have heard of timber ships going up.

5720. Do small vessels go up as far as York and Gainsborough on the Trent?—Yes.

5721. Many of the vessels that come from Holland and the lower part of the Baltic are very small vessels, are they not?—From the Danish ports in particular, they are very small.

5722. And those vessels are conducted with the greatest economy as regards expenditure, are they not?—Yes; some of them do not carry more than 400 quarters.

5723. Therefore under those circumstances, the masters of those vessels are anxious to save every farthing they possibly can?—Yes.

5724. And in endeavouring to do that you think they would sometimes run very great risks?—No doubt.

5725. They consider it a very great matter to conduct the voyage as economically as they possibly can?—Yes.

5726. And that induces them to run greater risks than prudence would justify them in doing?—Yes.

5727. And that is one of the reasons why you think that voluntary pilotage would create great risk to life and property?—Yes; supposing a foreigner comes to Hull, and he is used to trading on the lower parts of the Elbe, if he presents himself at the Trinity House and puts himself under examination, he can get the privilege of exemption, the same as an Englishman.

5728. Sir *C. Wingfield.*] You said just now, that in your opinion the master of a vessel should be responsible, and not the pilot?—Yes.

5729. Supposing that a pilot directs a master to take a particular course, and in taking that course the vessel runs aground, in that case the responsibility could not be on the master, could it?—I think under any circumstances the responsibility should be with the underwriters and the master of the ship; the master is responsible to the owner, and he ought not to give up the command of the ship to the pilot.

Mr. *A. Bannister.* 11 May 1870.

5730. And the pilot ought to point out the way, and if on taking the way the pilot points out the master gets into difficulties, you think then the blame ought to rest with the master?—I do not know of any case of that sort in the River Humber; the pilots are very efficient men.

5731. I can understand the master being responsible for working a vessel under the pilot's instructions with regard to the course, and so on, but if on taking that course the vessel gets into difficulties, the pilot must be responsible?—I think the pilot is put there to show the master the course.

5732. Therefore there must be a divided responsibility?—I do not see that.

5733. The master ought to be responsible for working the vessel, and the pilot should be responsible for directing its course?—There is no divided responsibility between master and mate.

5734. The mate is not put on board the ship to tell the master what course to take in a difficult channel?—He is put there to help him.

5735. With regard to the pilot, he is put on board to point out the course in a difficult channel?—Yes.

5736. If he points out the wrong course, and the vessel gets into difficulty, how can the master be made responsible?—I think it is the proper thing to do; the pilot is there as the servant of the owner and underwriter, and I think he ought to take no responsibility. A man gets 30*s.* for bringing a ship up from the Grimsby Roads to Hull; what responsibility can he take?

5737. Then why is there so much stress put on the employment of pilots?—I think people's lives and property would not be safe without pilots.

5738. It must be because he knows the channel better than the master?—If the master sees that a pilot is wilfully going to do a wrong thing, then I think he ought to bring up his ship and get another man; if he sees that he is drunk, he ought to wait until he can get a sober man.

5739. I am supposing a case where a pilot entrusts the master to take a particular course, and the master in following out those instructions, the vessel gets into difficulty; in that case the master cannot be responsible, it must be the pilot; is not that so?—It is an error in judgment, which I think the pilot ought not to be held responsible for; the underwriters ought to be responsible.

5740. Therefore you do have a divided responsibility?—I would not have it so; I heard Mr. Moss's evidence when he said he thought that a master of a ship should not give up his charge; I quite agree with him on that point.

5741. Mr. *J. Stewart Hardy.*] In fact when a voluntary pilot is on board, he has precisely the same duties as a compulsory pilot, and the master is responsible for the acts of a voluntary pilot, and if he goes wrong, the owner is responsible?—If a master of a ship is licensed by the Trinity Board to pilot a ship up the Humber, and he makes a mistake, the owner of the ship is responsible.

5742. And any master coming in to the harbour, or going out, he has no more choice of his pilots under the voluntary system than he has under the compulsory system?—He has no choice whatever.

Mr. *A. Bannister.*

11 May 1870.

5743. And yet the owner is responsible for all his accidents?—He is so now, but I do not think the law ought to be so; it ought to be altered; the underwriters should have the responsibility, and they would put a clause into the policies making it compulsory upon vessels to take pilots.

5744. Mr. *Cave.*] We have had evidence to the contrary; I have asked witnesses whether the underwriters would put a clause into their policies that a vessel must take a pilot; they said no; that if there was an increase of danger they would increase the premium; is that your opinion?—My opinion is, if the underwriters found that ships were coming into the river with valuable cargoes on board (and such cargoes are very valuable), they would take care to ascertain that the owner had a competent master on board before they would take the risk.

5745. With regard to Sir Charles Wingfield's question, I suppose you would say that getting aground was an error of judgment upon the part of the pilot, and was an ordinary risk of the sea against which the owner would insure with the underwriters?—Yes.

5746. And the punishment of the pilot would be by his being struck off the rolls, if he committed an error of judgment frequently?—In Hull, if the pilot did so, the owner would make a complaint to the Commissioners, and the Commissioners would investigate the case; and if they found that the pilot was to blame, they would send him to the Trinity House to be broken, or they would fine him for neglect of duty.

5747. Mr. *Graves.*] I see by the returns that the Trinity Board grant licenses very freely to masters and mates of vessels?—Yes. The Trinity Board consists of masters of ships, and these gentlemen examine the pilots that come up for examination. When they are passed, they come before the Commissioners which were created by this Act of Parliament.

5748. Who forms the Trinity Board, to examine in the first instance?—The Commissioners do. If we find the trade has increased, and that it is necessary to have more pilots, we call a meeting of the Commissioners, and they determine upon the matter. After hearing the evidence of the commodore and pilots, they judge for themselves, and they say, "We will have six more men, and we will write to the Trinity House, through the official clerk, to ask for the appointment of six more pilots." The Trinity House make the pilots, and they come to us to be employed.

5749. The functions of the Trinity House cease when the men are examined?—Yes, with the exception that the Trinity Board are represented on this commission.

5750. When a man is brought up for default or neglect, is the case investigated by the Commissioners or by the Trinity Board?—The case is investigated by the Commissioners under this Act of Parliament.

5751. Do the Commissioners award the punishment, or do the Trinity House award the punishment?—If it is a case of being broken, the Trinity House do break the pilots, and in every case that I have known for the last 20 years they have done so; but if it is a case of neglect, the Commissioners have the power to fine a man a certain amount up to 20*l.*

5752. But the Commissioners, apparently, have recommended the Trinity House to grant licenses very freely to masters and mates of vessels?—You draw a distinction which does not exist; they have granted licenses freely for masters and mates, and not for pilots.

5753. I speak of masters and mates; as far as I understand you, any one who can show that he is qualified as a commander of a home trade passenger ship, or coasting vessel, receives a license?—Any man who is qualified, whether he is an Englishman or a foreigner, can be licensed.

5754. Is it not a misnomer to call such a system of pilotage a compulsory one?—We have no such thing as compulsory pilotage now.

5755. You say that the pilots are regulated, to a great extent, by the requirements of the trade of the port: supposing, as has been proposed, compensation should be arrived at by a system of reduction of numbers, would you consider such a reduction an injury or a benefit to the port?—As the trade of Hull is increasing very materially, I should not like to see a reduction in the number of pilots?—I think it would be detrimental to the interests of the port.

5756. You think it necessary to regulate the number by the greatest requirements, under circumstances of emergency?—Yes, by the supply and demand from time to time. If we were to reduce the number of pilots, and a large influx of ships came into the port, some would have to go without.

5757. I believe you have the apprenticeship system at Hull, and you have young men coming forward to fill up all the vacancies that may occur for some years to come?—Yes; I think we are better situated in Hull than in most towns, inasmuch as the Trinity House have one of the finest schools in the kingdom; and all these boys are trained, under efficient masters, in learning navigation and the use of the globes.

5758. Do you mean that the apprentices of the pilots of Hull must be trained at this particular school?—We take the Trinity boys in preference to all others, and these are the class of boys that are afterwards made pilots.

5759. Do you consider that, under the compulsory system, there is a greater moral obligation upon a pilot to be at his station, and on the look-out for a vessel, than there is under the voluntary system?—Yes, I think so, because a man under the voluntary system can do as he pleases much more than he could if he was under the surveillance of those who had the management of the concern.

5760. Do you consider that a man feels that where a vessel is compelled to pay for his services, there is a moral obligation upon him to be there, to offer his services in return for the payment?—Yes.

5761. Do you think that that moral obligation has a salutary effect upon the system at work at Hull?—Yes, I think it has a good effect.

5762. Is it your opinion that under a one-sided system, allowing the shipowner to take a pilot or not as he likes, that moral obligation would be weakened?—Yes; I have no doubt of it in my own mind.

5763. If I understand you rightly, the Commissioners directly represent the commerce and shipping trade of Hull?—Yes, it is a very large body; it consists of 72 commissioners. The Trinity House are represented, the corporation and the mayor and burgesses are represented, and the whole

whole of the merchants, brokers, and shipowners are represented.

5764. Is that by any popular mode of election?—Yes; any man who is a large shipowner is placed upon the commission, if he desires it; I believe every shipowner who would qualify, and every merchant who would qualify, is put upon that commission.

5765. I believe that commission has a very deep interest in the welfare of the port?—Yes. We get no pay whatever.

5766. Theirs is a greater interest than either Parliament, or the Board of Trade, can have?—I should think so; I think they are better able to manage their own business than Parliament.

5767. You think that in a matter affecting the pilotage of the port, it would be wise to leave the discretion, as to the system to be adopted, to the decision of the Commissioners?—I think that as nobody finds any fault with it, and as it is working perfectly well, it should be left alone. If there were any complaints against the system, it would be another thing; we never have any complaints; everybody is satisfied with the system, therefore what is the use of changing it.

5768. Do you express, generally, the feeling of the majority of the Commissioners?—Yes.

5769. Have you arrived at your views with any amount of unanimity?—I called a meeting of the Commissioners to consider this question, and there was not one dissentient.

5770. And you come here representing the unanimous voice of the commission?—I have no doubt I do. I have been chairman of the commission 20 years, and that is the general feeling.

5771. And the general feeling of the mercantile community of Hull outside the commission, is to let well alone?—The Chamber of Commerce and the Shipowners' Association met, and they agreed to oppose this Bill, and there will be a gentleman here to-day to give evidence on the subject, on behalf of the shipowners.

5772. Who is in favour of it at all in Hull?—I cannot tell you.

5773. Mr. *Norwood.*] We have at Hull a Trinity House of our own?—Yes.

5774. And that is of course a corporation composed of nautical men?—They are all nautical men, except the honorary members.

5775. That is an independent body; I believe your administrative body is totally distinct from it, save and except that the Trinity House have a certain amount of their number upon your board; but that number is small in comparison with the commercial part of it?—Yes.

5776. With reference to the pilotage charges, I believe they vary according to the distance traversed; you have one scale from your extreme north limit, Dimlington, and you have another scale from Kilnsea?—Yes.

5777. And you have another scale when the vessel gets to the New Sand Buoy?—Yes.

5778. And there is another charge when you get to the Spurn?—Yes, another when they get to the Hawk Roads, and another when they get to the White Booth Roads.

5779. So that, in point of fact, some of these pilotages are extremely small, and you charge in proportion to the distance traversed by the ships?—Yes.

5780. Let us clearly understand about the compulsion; you said, in reply to the honourable Member for Liverpool, that it was virtually non-compulsory; it is not strictly so; it is not compulsory so far as the local ships are concerned, which are constantly trading to Hull, because their masters and mates get certificates; but it is compulsory as far as strangers are concerned; any vessel coming within your limits from a foreign port, which does not possess a licensed master or mate, must take a pilot, or pay a fine; is not that so?—If a ship comes into Hull, and has not a licensed man on board, she is bound to take a pilot.

5781. All vessels are bound to take a pilot or to pay a fine, except those vessels which carry a licensed pilot?—Yes, every vessel coming to the port that has not a licensed man on board must take a licensed man.

5782. And the local shipowners, and the owners that trade frequently to Hull, get over the difficulty by getting either a master or mate licensed, and that is done to a very large extent?—Yes.

5783. I believe there are as many as 248 masters and 35 mates licensed, that is, nearly 300 men who hold a license, independently of your pilots?—Yes; but small ships, drawing six feet of water, that are going in and out of the port once a week do not pay; they are not compelled to take a pilot, but we are bound to find them one if they want one.

5784. You gave your opinion with reference to the liability of shipowners with a pilot on board; you think that the shipowner should not be exempt from the act of the pilot?—Yes. He is not exempt with his master and mate aboard; why should he be exempt with the pilot?

5785. He has the choice of master and mate, but he has not the choice of a pilot; is not that so?—We, in Hull, do not allow a man to fix upon a certain pilot.

5786. A man is compelled to take a pilot, is he not?—Yes, if he has not a licensed man on board.

5787. But the pilot is not a servant to the shipowner, to the same extent as the master and mate?—I look upon him in precisely the same light as the master and mate; I call him a third officer.

5788. With reference to the master and mate, you examine into their character and you get testimonials; you deliberate with regard to the engagement of the master and mate, because you are placing a very considerable responsibility in their hands; but you have not the same chance with the compulsory pilot; is not that so?—The Trinity House select the best men.

5789. We are talking of the shipowner's responsibility at present; is there not a very decided distinction between a master and mate, whom the owner has the power of choosing from among a certain number of men, who tender themselves for examination as to their qualifications, and the taking of a man as to whom he has no choice, and who is put upon him arbitrarily?—As a rule, I should think he is better off with the Trinity man than with the master and mate.

5790. Would you think your master justified in countermanding the order of the pilot; supposing a pilot on board one of your vessels was coming up the Thames, and he shouted out "port," would your master be justified in shouting out "starboard"?—It would depend upon circumstances. If the ship was likely to come into collision, and a man who was used to be on the Thames more than the master of the ship saw that another ship had a pilot on board, he would know

Mr. *A. Bannister.*

11 May 1870.

know what that pilot would do; whereas a stranger could not know it.

5791. Supposing you had a properly certified pilot, thoroughly acquainted with the River Thames, and he saw the necessity of giving the order "port," would not it be an extremely dangerous thing for any master of a ship to shout out "starboard"?—As far as I can think of the matter, it would be perfectly justifiable for a master of a ship, if he thought that he was likely to get into danger, to stop the pilot and put the helm starboard instead of port; but as master I should not like to do it.

5792. If the pilot took the command out of the master's hands and got into trouble in consequence, would not you find fault with the man?—I should send him to the Trinity House to be broken.

5793. Supposing that he got you into a loss of 3,000 *l.*, what would you say then?—That is a position in which I have been placed, I am sorry to say.

Mr. Dale Brown, called in; and Examined.

Mr. *D. Brown.*

5794. Mr. *Norwood.*] You were the Commodore of Pilots at Hull from the year 1844 to 1861, were you not?—I was.

5795. Previously to that, you sailed out of the port as mate and master?—No, I sailed out of London as mate; but I commanded a ship out of Hull for 10 or 12 years.

5796. I believe you are now the superintendent of the Dock Company?—I am.

5797. You have the general superintendence of the berthing, and the removal of vessels from the docks, have you not?—Yes.

5798. Have you heard the evidence of Mr. Bannister?—Yes.

5799. Do you coincide with his views as to the working of the pilotage system?—Yes.

5800. Do you consider he is correct in what he has stated?—Yes.

5801. Do you agree in the opinion expressed by Mr. Bannister, that the navigation of the Humber is very difficult?—The upper part of it is extremely difficult.

5802. In the winter time, when you have bad weather, short days and fogs, and so on, it is really extremely dangerous, is it not?—Yes, it is a dangerous river; the rapidity of the tides, and the occasional shifting of the sands, make it at night a most dangerous river.

5803. Is it the fact that there are accumulations of sand completely surrounding the coast north and south. I believe there is a margin of sand on the northern coast which has much increased about the Stoney Binks?—Yes.
